CHRIST, DEATH OF. The death of Jesus of Nazareth by crucifixion is generally accepted as historical fact. The circumstances of his execution admit a variety of questions of a historical character, and the centrality of the event in early Christian belief and practice necessitates theological reflection.

A. The Condemnation of Jesus

1. By Roman Authorities. Although many of the circumstances surrounding the trial and death of Jesus are disputed, there is little doubt that Jesus of Nazareth was crucified under Pontius Pilate, the Roman procurator of Judea from 26–36 A.D. Crucifixion was a Roman penalty practiced upon violent criminals, political rebels, and slaves (Hengel 1977:46–63). Tacitus said it was "the punishment usually inflicted on slaves" (*His.* 4.11), and Cicero referred to it as "the most cruel and disgusting penalty" (*Verr.* 2.5.165). The charge on the cross, "the King of the Jews" (Mark 15:26), and the crucifixion of Jesus between two rebels (Gk *lēstas,* Mark 15:27) suggest that Jesus was put to death by the Romans as a political insurgent.

Precisely why Pilate condemned Jesus as a political rebel is more difficult to determine, especially since the Romans do not seem to have arrested and persecuted Jesus' followers after his death. The clearest expression of the charges against Jesus is in Luke 23:2. From the point of view of the Evangelist, these charges are false, but they may provide a clue to how the Romans viewed Jesus. At the heart of Jesus'

message was his proclamation that the Kingdom of God was at hand (Mark 1:15), and in the final days of his life Jesus made a triumphal entry into Jerusalem and cleansed its temple (Mark 11:1–19). This action, as well as the proclamation of a kingdom, might well have led the Romans to accept Jewish reports about Jesus, given the volatile atmosphere of 1st-century Palestine.

The Gospels portray Pilate as weak and vacillating during Jesus' trial, seeking a way to release him. But this characterization of the governor does not correspond with what we know of him from other sources (*JW* 2.9.4 §175–77). It is probable that the Gospel portrayal of Pilate is part of a Christian apologetic to place the burden of guilt for Jesus' death upon the Jews, especially their leaders. In all likelihood, Pilate assumed a decisive role in the trial, condemning Jesus as a political insurgent. Consequently, the early Church had to deal with the scandal of the cross (1 Cor 1:23): Jesus was a crucified Messiah, condemned to death as a political rebel.

2. By Jewish Authorities. It is even more difficult to identify the precise reason why the Jewish authorities condemned Jesus and handed him over to Pilate. The events surrounding the Jewish trial of Jesus—if indeed there was a formal trial before the whole Sanhedrin—present one of the most complicated problems of NT scholarship (Blinzler 1969: 15–38). Matthew and Mark report a night trial during which false witnesses testified that Jesus threatened to destroy the temple (Matt 26:61; Mark 14:58), but then the Sanhedrin condemns Jesus on the grounds of blasphemy (Matt 26:65–66; Mark 14:64). In Luke the trial takes place in the morning, the temple charge is not mentioned, and the issue is Jesus' messiahship, but there is no formal condemnation (Luke 22:71). John reports only an informal hearing before Annas during which the former high priest questions Jesus about his disciples and his teaching (John 18:19), passing over the trial reported by the Synoptics and focusing upon the trial before Pilate instead. Given the conflicting nature of the Gospel trial accounts, the reason for the Jewish condemnation of Jesus should be sought in the broader context of Jesus' ministry.

Since Jesus was not a scribe by profession and did not belong to the party of the Pharisees or Sadducees, he stood outside the professional religious establishment. Nonetheless the Gospels portray him as one who taught and acted with supreme authority (Gk *exousia*, Mark 1:22, 27; 2:10; 11:28). In the Sermon on the Mount, Jesus pits his interpretation of the Law against the traditional interpretation (Matt 5:21–48), making himself the mouthpiece of God. On several occasions he apparently violated the Sabbath (Matt 12:1–14) and challenged the traditions of the elders (Mark 7:1–23). He assumed the divine prerogative of forgiving sins (Mark 2:1–11), and on a regular basis he shared table fellowship with tax collectors and sinners (Luke 15:1–2; 19:1–10). It is doubtful that Jesus offered the wicked forgiveness without requiring repentance [as E. P. Sanders has argued (1985: 174–211)], but he may well have given the appearance of doing so. Most importantly, Jesus confidently proclaimed that God's Kingdom was at hand, thereby establishing himself as God's eschatological messenger.

Such activity on the part of Jesus would have inevitably raised the question of his authority. Was Jesus an authentic prophet, or was he a false prophet (Deut 18:20–22; Jer 23:9–40), a rebellious son (Deut 21:18–21), a beguiler who led the people astray (Deut 17:1–13)? On several occasions, it appears that the religious leaders viewed Jesus as a false prophet who led the people astray (Schillebeeckx 1981: 312–18). He is accused of being in league with Beelzebul (Mark 3:22) and of being possessed by an unclean spirit (Mark 3:30). In Matt 11:19 Jesus laments that he is viewed as a rebellious son (cf. Deut 21:18–21). And both in Matthew (27:63) and John (7:12, 47), he is described as one who deceives the people. Some of the religious leaders, therefore, must have viewed Jesus as a false prophet and beguiler who assumed authority to himself.

The proximate occasion for the religious leaders to condemn Jesus, however, is related to his temple ministry. The Synoptic Gospels report that, during the final week of his life, Jesus provoked the religious leaders by cleansing the temple. John transposes this incident to the beginning of Jesus' ministry, but notes its intimate connection with Jesus' death (John 2:17). For Jesus, the cleansing may have been a prophetic action pointing to the coming kingdom and a temple not made by human hands (cf. Mark 14:58) which God would establish. But for the religious leaders his action would have been perceived as

an assault upon their authority by one whom some of them already viewed as a false prophet and deceiver. The temple cleansing, then, provided the most important motivation to do away with Jesus.

If this scenario is correct, the religious leaders saw Jesus as a threat to the nation (John 11:45–53) on two counts: deceiving the people and threatening the temple. Since, according to John 18:31, the Jewish leadership did not have the power to inflict the death penalty, they brought him to Pilate as a messianic pretender, who claimed to be the King of the Jews, a political insurgent. It was on the basis of this charge that Pilate condemned Jesus. The Jewish responsibility probably lies with an inner circle of chief priests who viewed Jesus as a false prophet and deceiver rather than with the whole Sanhedrin or people of Israel.

B. Jesus' Understanding of His Death

1. During His Ministry. The writings of the NT provide a comprehensive interpretation of Jesus' death, but the process of interpretation was initiated by Jesus himself. Although he proclaimed the imminent arrival of God's Kingdom, he seems to have reckoned at an early stage with the probability of his own violent death (Léon-Dufour 1986: 49–77). The death of the Baptist must have alerted Jesus that he faced a similar fate. Matthew reports that Jesus withdrew to the wilderness when he heard of John's death (14:13), and Mark narrates a conversation in which Jesus speaks of his death in connection with John's (9:9–13).

The Gospel of John notes that after the feeding of the 5000 in Galilee, Jesus withdrew from the crowd because he knew that they wanted to make him king (6:15). If this remark is correct, it may explain the text of Luke 13:31–33 in which the Pharisees warn Jesus to flee because Herod Antipas, the ruler of Galilee and the murderer of John, sought to kill Jesus as well (Bammel 1984: 211–40). Like John, Jesus attracted large crowds who viewed him as a messianic figure; he was a political threat not only to the Romans but to petty rulers such as Herod. Faced with the growing prospect of a violent death, Jesus seems to have viewed his fate as an inescapable part of his prophetic vocation (Luke 13:32–33; Matt 23:29–36).

Jesus' predictions of his passion, death, and resurrection (Mark 8:31; 9:31; 10:32–34) also witness to a realization on his part that he faced a violent death. Although the predictions, in their present form, were composed in the light of Easter, several authors have convincingly argued that they are grounded in Jesus' own conviction that his death was part of God's plan and that God would vindicate him (Bayer 1986: 149–218; Jeremias 1971: 276–99).

2. In the Face of Death. Jesus' most complete interpretation of his death is given at the Last Supper. The eschatological prospect of Mark 14:25 proclaims Jesus' faith that he will share table fellowship with the disciples in the kingdom of God despite his imminent death. The Eucharistic words, handed down in two different traditions (Matthew and Mark, Luke and Paul) indicate that Jesus attached redemptive value to his death. According to the first tradition (Matt 26:26–29; Mark 14:22–25), the shedding of his blood will establish a covenant on behalf of many (Gk *hyper pollōn*) as was done on Sinai (Exod 24:8). According to the second, the cup is the *new* covenant in Jesus' blood (Luke 22:20; 1 Cor 11:25) promised in Jer 31:31–34. Although scholars dispute Jesus' precise wording, many agree that he understood his death as having redemptive value.

C. Interpretations of Jesus' Death

1. The Gospels. The Gospel passion narratives are the most sustained presentations of Jesus' death. Mark's account appears to be the oldest and Matthew and Luke are dependent upon it. The account of John is remarkably similar to the Synoptics, but not all scholars are convinced that John is dependent upon them.

It is likely that an account of Jesus' passion was composed at an early stage for liturgical usage. Such a composition probably presented Jesus as the righteous sufferer as found in the psalms of lament (e.g., Pss 22, 38, 69) and the book of Wisdom 2:12–20; 5:1–7. By the NT period it was an accepted fact in some Jewish circles that the righteous person is bound to suffer but that God will vindicate him (Ruppert 1972: 23–28). In addition, the servant text of Isa 52:13–53:12 played a role although not as great a role as did the psalms.

In their present form, the passion narratives clearly portray Jesus as more than a righteous sufferer. In Matthew and Mark, Jesus dies as the abandoned Son of God, the crucified Messiah. In Luke, the focus is upon his innocence; he dies as God's righteous Son, and his death leads people to repentance (23:39–43, 48). In John, Jesus' death becomes his exaltation (3:14; 8:28; 12:34), his return to the Father (13:1), and his glorification (17:1–5).

In terms of soteriology, Matthew and Mark view Jesus' death as a ransom (Gk *lytron,* Matt 20:28; Mark 10:45). His death leads to the forgiveness of sins (Matt 26:28). The tearing of the temple veil (Matt 27:51; Mark 15:38) suggests that the Messiah's death replaces the temple cult; there is no need for further sacrifice (Hengel 1981: 47–55). In Luke, Jesus' promise of salvation to the repentant thief (23:43) indicates the salvific aspect of his death. John focuses upon Jesus the Good Shepherd who freely lays down his life on behalf of *(hyper)* the sheep (10:1–18).

2. Pauline Writings. The Pauline corpus focuses more upon the benefits of Christ's death than upon the historical circumstances surrounding it. Employing a number of phrases with the preposition *hyper* ("for," "on behalf of"), the Apostle stresses that Christ died for or was put to death on behalf of us. In two of these texts (1 Cor 15:3; Gal 1:4), he explicitly notes that Christ died or gave himself *for* our sins. In Romans he says that Christ died *for* the ungodly (5:6); he died *for* us while we were still sinners. In Gal 3:13 he notes that Christ redeemed us from the curse of the law, becoming a curse *for* us by being crucified (see Deut 21:23). And in 1 Thess 5:10 he writes that Christ died *for* us that we might live with him.

At other times Paul speaks of God sending or giving up his Son (Rom 8:3). God did not spare his own Son but handed him over *for* us all (Rom 8:32). God sent his Son, born of a woman "to redeem those who were under the law" (Gal 4:4–5). In other places, Paul speaks of Christ giving himself *for* us (Gal 1:4; 2:20).

In addition to these formulas, Paul describes God as setting forth Christ as an expiatory sacrifice, making him the new mercy seat (Rom 3:21–26). The effect of Christ's death is universal in scope (Rom 5:12–21); it overcomes the power of sin which enslaves the whole of humanity.

In the Deutero-Pauline writings of Colossians, Ephesians, and the Pastorals, there is a subtle shift of emphasis, as A. Hultgren (1987: 91–112) has shown. Whereas Paul concentrates upon the redemption accomplished in Christ, making God the active agent, these writings point to the redemption won by Christ, making him a more active agent of salvation. So the authors of Ephesians says that *Christ* broke down the dividing wall separating Gentile and Jew and reconciled them through the cross (2:14–18). He gave himself *for* the Church (5:25). In Colossians we learn that *Christ* canceled the bond against us by nailing it to the cross, thereby disarming the powers and principalities (2:13–15). And the author of the Pastorals says that *Christ* came into the world to save sinners (1 Tim 1:15), giving himself as a ransom *for* all (1 Tim 2:6), giving himself *for* us to redeem us from all iniquity (Tit 2:14).

3. Other NT Writings. Of the remaining NT writings, the most important for understanding Christ's death are Hebrews, 1 Peter, 1 John, and Revelation. Hebrews offers a profound theological reflection on the death of Christ. Jesus is presented as the great high priest who has entered the heavenly sanctuary (6:19–20). The mediator of a better covenant, he has no need to offer daily sacrifice, since he offered himself as a sacrifice once for all (7:27), obtaining redemption through his blood (9:12). This sacrifice has accomplished purification from sins (1:3), the forgiveness of sins (10:12), and is expiatory in nature (2:17). Most importantly, this sacrifice, universal in scope (2:9), need never again be repeated (7:27; 9:12, 26, 28; 10:10).

The author of 1 Peter also states that Christ's suffering need not be repeated (3:18). Comparing Christ to an unblemished lamb (1:19), he reminds his readers that Christ's death has ransomed them from their past conduct (1:18). The most important statement, however, comes in a hymnlike passage (2:21–25) which compares Christ to the servant of Isaiah 53. Christ suffered on behalf of *(hyper)* us (2:21), bearing our sins in his body on the tree of the cross, so that we are healed by his wounds (2:24).

In 1 John the author makes explicit statements about the atoning nature of Christ's death. The blood of Jesus cleanses us from all sin (1:7); he was revealed to take away sins (3:5) and destroy the devil's work (3:8). Most importantly, Christ died as an expiation *(hilasmos)* for *(peri)* our sins (2:2; 4:10).

Like the three writings mentioned above, the book of Revelation focuses upon the redemptive value of Christ's blood shed on the cross (1:5). Comparing Christ to a lamb *(arnion),* the author states that he ransomed "men for God from every tribe and tongue and people and nation" (5:9), making them "a kingdom of priests to our God" (5:10). As the people of the old covenant washed their garments in preparation for the theophany at Sinai (Exod 19:10, 14), so the people of the new covenant "have washed their robes and made them white in the blood of the lamb" (7:14). The scandal of the cross has become the center of NT theology.

CHRISTIAN [Gk *Christianos* (Χριστιανος)]. Although "Christian" is the most common name used today to designate followers of Jesus Christ, it occurs only three times in the NT: Acts 11:26; 26:28; 1 Pet 4:16. Most scholars agree that the formation of this term is Latin in origin. *Christianus* (pl. *Christiani*) is a second declension masculine Latin noun found in Tacitus, Suetonius, and Pliny the Younger. A common practice of the 1st century for identifying adherents was to attach the termination *-ianus* (pl. *-iani*) to the name of the leader or master (e.g., *Pompeiani, Augustiani, Ceasariani*). Early Hellenistic practice paralleled this by attaching *-ianos* (pl. *-ianoi*) to the name of a leader or master (e.g., *Herodianoi,* Matt 22:16; Mark 3:6; 12:13; Joseph. *Ant* 14.15, 10). Hence, whether in Lat *(Christianus)* or in Gk *(Christianos)* the term is formed from Christ and indicates Christ's adherents, those who belong to, or are devoted to, Christ.

The origin of the term, according to Acts 11:26, was in Antioch, dating in the Lukan chronology somewhere between A.D. 40–44: "… in Antioch the disciples were for the first time called Christians" (RSV). The infinitive *chrēmastisai* has been interpreted to mean that the disciples first "bore the title" Christians in Antioch (e.g., Bickermann 1949: 355), suggesting that the term was coined by the church to give expression to their own self-consciousness in the new age of the Messiah. But Haenchen has demonstrated that, while possible, usage in Philo and Josephus shows that the infinitive should be rendered "were called," indicating that the name was coined by those outside of the church (1971: 367–68 n. 3). Of those outside, the Jews were not likely to have referred to the disciples as Christians, *followers of Christos,* the Messiah, since this would have validated Jesus' claim to that title (see the disputed passage in Josephus where *Christos* and *Christianoi* are used in this manner [*Ant* 18.63–64). The Jews instead referred to the disciples of Jesus as "the sect of the Nazarenes" (Acts 24:5). Hence, the name "Christian" must have originated within the Gentile population of Antioch. In the large metropolis of Antioch, with its many competing cults and mystery religions, those who spoke so much about *Christos* were soon called *Christianoi,* Christ's people. The term would have then distinguished the disciples from uncoverted Gentiles as well as from Judaism.

The reason for the origin is problematic. The term *Christianoi* may have been coined by the Antiochian governor's staff to indicate official Roman registry. Or the use of the term may have been intended satirically by the Antiochian people to mock those who believed in Jesus as Messiah, paralleling the mockery directed toward the *Augustiani*, the official enthusiasts of Nero (Mattingly 1958). Or more likely, the term may have arisen generally among the populace as a slang term to indicate those who were followers of their God *Christos,* and who were regarded as a sort of mystery fellowship (Grundmann *TDNT* 10:537). The name *Christos,* Messiah, meant nothing special to the Gentiles, sounding more like a second personal name for Jesus than a religious title.

In all three NT passages the variant *Chrēstianoi* occurs in the uncorrected Codex Sinaiticus; remarkably persistent textual testimony that Gentiles often confused the term *Christos* with the homophone, *chrēstos,* "kind, useful." *Chrēstos* was a common proper name, especially for slaves, and apparently Gentiles tended to think that the disciples were followers of one called *Chrēstos.* This is the likely reason why the Latin historian Suetonius says that Jews were expelled from Rome because of disturbances made at the instigation of one called *Chrēstus* (*Claud.* 25.4). Tacitus, in one of the earliest extrabiblical testimonies to the term (ca. A.D. 115), appears to correct for his readers the common mistake among the Roman populace of A.D. 64 of confusing *Chrēstianoi* with *Christianoi* (*Ann.* 15.44).

While the occurrence of the term in Acts 11:26 indicates, at the very least, the recognition by Gentiles that believers in Christ were an entity separate from both pagan Gentiles and Judaism, the other two occurrences in the NT possibly indicate that elements of contempt (Acts 26:28) and hostility (1 Pet 4:16) were attached to the term by the early use of those outside of the church. There is no NT evidence that the term was commonly used as a self-designation by the early church. Luke's anachronistic reflection in Acts 11:26 implies that the common term for believers at the time of the origin of Christian was "disciples" *(mathētai),* and other terms soon came to be used by the early church, such as "believers" *(hoi pisteuontes; hoi pistoi)* (Acts 5:14; Rom 1:16; Acts 10:45; 1 Tim 6:2), "brothers" *(adelphos)* (Acts 6:3; Jas 2:15), and "saints" *(hoi hagioi)* (Acts 9:13; 1 Cor 1:2).

Christianos appears for the first time as a self-designation in *Did.* 12:4, and is commonly used by Ignatius for a member of the believing community (late 1st/early 2d century), but the name does not occur in abundance elsewhere in the writings of the early church fathers. In the middle of the 2d century, Polycarp calls himself a *Christianos* (*Ep.* 10:1; 12:1), and in the Apologists the term was used as a self-characterization of one who followed Christ into the death of martyrdom. The reason for the scarcity of the term in the early church fathers may be found in a letter by the Roman governor Pliny the Younger to Emperor Trajan (ca. A.D. 112). Those accused of believing in Jesus Christ were asked whether or not they were "Christians." If they admitted to the name, they were put to death, or else, if they were Roman citizens, sent to Rome for trial (*Letters* 10.96). In the days of persecution of the early church, the use of the term was dangerous, because it clearly marked them out in the minds of the Romans as believing in a god who was in opposition to the emperor. But nonetheless, in the church, as early as 1 Pet 4:16, honor was associated with those who suffered because they bore the name of their Messiah, since suffering as a "Christian" glorifies God.

CHRISTIANITY. This entry consists of eight separate articles covering various aspects of the emergence of Christianity in the various regions of the Mediterranean world. The first entry explores the early social life and organization of Christianity, and the second deals with early Jewish Christianity. The subsequent articles generally explore the origin and development of Christianity in Asia Minor, Egypt, Greece, North Africa, Rome, and Syria.

EARLY SOCIAL LIFE AND ORGANIZATION

The movement that emerged around the figure and memory of Jesus of Nazareth did not burst onto the Roman world as a fully developed religious institution, the Church. It began rather as one or more small sects in an out-of-the-way province. Yet within a few centuries the movement would find its way into the very center of Roman society, a process already being recognized, albeit grudgingly, by the Roman historian Tacitus in the early 2d century (*Ann.* 15.44). The course of this growth, viewed by some of the old Roman nobility as a "plague," was seen by Christian apologists and historians as the divinely ordained "triumph of the Gospel" (Eusebius, *Praep. Evang.*) Nonetheless the process was conditioned by the social environment of the Roman world in and through which diffusion and organizational development took place.

———

A. Early Diffusion of the Christian Movement

1. Sectarian Origins of the Jesus Movement. Jesus did not begin as a founder of a new religion, but rather as a reforming preacher within the apocalyptic environment of 1st-century Palestine, while Rome perceived that Jesus was promoting sedition (Matt 10:34–35 = Luke 12:51–53). The group that originated around Jesus, likewise, appears as one among many reforming sects, or splinter religious groups, within the diverse spectrum of Palestinian Jewish society.

The earliest forms of the Jesus movement must have looked much like other Jewish groups known from the time. Much like the picture of disciples at table with Jesus, there were Pharisaic *haburoth* ("fellowships") which met to study and eat together in piety, often in the upper rooms of houses (*m.Shabb.* 1.4; *b.Menah.* 41b; cf. Luke 22:12, Acts 1:13). At the same time, as a reforming sect, the movement would have offered alternative forms of organization and participation to individuals and groups, including dissidents, women, and marginal groups, that would have felt left out of the traditional power structure. Some references suggest that one early form of the Jesus movement was vested in wandering preachers or prophets of the coming apocalyptic kingdom (Matt 10:9–14 = Mark 6:8–11; Luke 9:2–5; 10:4–11). In these passages an ideal of homelessness and poverty is stressed as a reaction against the normal constraints of society (cf. Theissen 1978: 8–16). While the role of men alone has been preserved in the later form of the mission tradition, it reflects a more fundamental renunciation of family and normal social structures as the center for a new self-understanding (Schüssler Fiorenza 1983: 72–76; 144–49). Reflections of this early form of the movement were still visible in the 2d century, probably still

in the Syrian region, in the instructions of the *Didache* on the proper respect as well as caution to be afforded traveling teachers and prophets (*Did.* 11–13). It suggests, therefore, that a fundamental tension persisted from the earliest days of the movement between a traditional familial model of religion and claims to new modes of social relationship based on nonfamilial or antifamilial structures. This tension goes back to early dominical sayings predicated on apocalyptic midrash of Mic 7:6, the shattering of the household (cf. Luke 12:51–53 [Q]).

Initially, at least, the missionary impulse of the Jesus movement was directed toward proclaiming the imminent apocalyptic kingdom exclusively to other Jews (Matt 10:5–6; 22). There was no need for a more firmly established institution apart from the framework of Judaism, it would seem, since the kingdom was expected soon (Mark 9:1 = Matt 16:28). Thus, it was possible for the earliest Christian groups to remain within the bounds of Jewish piety and practice, though they, like the ESSENES and others, might have decried and opposed perceived impiety among other Jews. In the earliest stages there were several different arenas of interaction with the larger Jewish society and its diverse religious spectrum. In addition to the nonlocalized efforts of wandering charismatics, some followers of the Jesus movement maintained traditional temple worship in Jerusalem while at the same time meeting for devotion and study in private homes (Acts 2:46, 5:42, 12:12). Thus, it is likely that there was some tension between the ideals of piety reflected in the homelessness of itinerant prophets and in the localized tradition preserved around the images of women disciples, but tended to be subsumed under household structures (Schüssler Fiorenza 1983: 144–51). In this way they corresponded to the ranges of apocalyptic sectarianism seen elsewhere in Judean society prior to the debacle of the First Revolt (cf. Meeks 1986: 97–107; Cohen 1987: 124–36, 164–68).

In defining the earliest Jesus movement as a sectarian phenomenon, or what some would call a revitalization movement, several cautions must be kept in mind. While Jewish religion and society in the last century of the Second Temple Period were extremely diverse, not all of its groups or currents were sects in the strict sociological definition of the term. A sect, in this sense, refers to a group which separates itself to some degree from the rest of a particular society in order to reform or purify the society from within. Despite passionate denunciation of the ills of society, the sectarian group shares the same basic belief system and values as the parent culture (White 1988: 12–15). This tension over the religious definition of the society produces a conflict of standards, a sense of "two ways" (good and evil, light and dark). They are assumed to determine the fate of the society. From the perspective of the sectarian group, faith, piety, and proper observance are invariable markers of the true "way of God" over against the "way of the world." Within 1st-century Judea, therefore, some groups (like the Essenes) more clearly represent sectarian organization and attitudes, while others (such as the SADDUCEES) do not. Indeed, despite the extreme diversity of religious sympathy and the escalating social and religious protest (cf. Horsley and Hanson 1985: 244–47), the vast majority of Jews would not have been attached to any particular sect. It is also likely that in the earliest period new religious groups, such as the Pharisees or the Jesus movement, might have exhibited greater or lesser sectarian tendencies from cell to cell or time to time. The peculiar features of sectarianism in 1st-century Judea were a result of the dominant apocalyptic milieu, which included, among other things, diverse expectations of an imminent transformation of the present social order and the establishment of a new messianic age on earth (Meeks 1986: 100).

So long as the emergent Jesus sect remained clearly within the realm of Palestinian Judaism, then its message and appeal were determined within this realm as well. Thus, the earliest mission was not to convert the gentiles, but to go instead "only to the lost sheep of the house of Israel … saying, 'The kingdom of heaven is at hand' " (Matt 10:5–7). These were messianic Jews preaching Jesus to other Jews. Consequently, conversion and boundary definition must be thought of differently than for Jews proselytizing non-Jews. The rituals by which one was admitted into membership as well as strict standards of behavior were initially ways of marking off the sect from the "world," meaning the larger Jewish society. Yet the basic criterion of membership in the congregation of the faithful, the eschatological community or new Israel, was held by all Jews by right of birth. Conversion, therefore,

largely meant coming to a reformed vision or understanding of what it meant, at least within the sect's definition of things, to be a true Jew and conforming oneself to this vision.

A sect's religious vision of the new order arises out of its experiences of tension and protest over the perceived ills of its society. Often, it seems, such groups tend to emerge from conditions of social or economic deprivation or from some experience of political oppression. The particular form of disenfranchisement or deprivation, such as in the marginalized position of certain individuals or classes in society, may then be conceived as the embodiment of evil and the symbol of the abuse that needs reform. The group looks for a remedy to these social ills in terms of religious redefinition of the social order. Far from calling for a radical destruction of the society, however, such sectarian rhetoric tends to preserve some of the basic social structures, but with new means of access or empowerment for the previously downtrodden and powerless. The new image embodies some of the resonant sense of tension with the old order as fundamental to the idealization of the new. Thus the language of radical status reversal (Matt 20:26–27, 23:12; Mark 10:43–44; Luke 22:26, 14:11) may reflect some early expectations of the Jesus sect for new social order in a coming earthly kingdom (cf. Luke 4:14–16). At the same time, the tensions with a "worldly" society would not have prevented substantial areas of interaction with the society, depending upon how far any particular sectarian group went in distancing itself from the world. A total renunciation of the world, such as that at Qumran, was rare. Even so, at Qumran the apocalyptic ideal of the pure community retained very traditional priestly categories (see also ESSENES). It would have been more common to seek new ways of working out a life in the world, while maintaining some sense of tension with it. Stricter social ethics (such as those reflected in Matt 5:17–20 and in the following sections for internalizing and strengthening the commands of the Law) are patently Jewish boundary markers for a particular Jesus sect over against the normal patterns of religiously defined Jewish social behavior. Even the ultimate disciplinary sanctions within the Jesus sects could be framed in terms of Jewish identity, since to be "cast out" of the sect was tantamount to becoming no longer a Jew at all, but rather a "Gentile and tax-collector" (Matt 18:17).

2. Early Diffusion: The Jewish Mission. The original social location of the Jesus movement was as diverse sectarian groups within Palestinian Jewish society. They sought to draw adherents exclusively from among fellow Jews, and they expected an imminent apocalyptic consummation of history and the establishment of a new, messianic social order. Even so, there was considerable diversity of expectation possible within different streams of the Jesus movement. Both the timing and the nature of the coming messianic kingdom were open to varying interpretations. Within a relatively short time, however, one finds that the Jesus movement had begun to spread beyond these original bounds. In part, the initial impulse toward diffusion may have come from the activities of the wandering charismatic prophets, who commissioned localized cells as well (Matt 10:11–13). At the same time, it must be recognized that the traditional picture of a unified, concentric mission based exclusively on the Twelve at Jerusalem is an idealization of Acts (cf. Hengel 1979: 65, 75–77). Other references clearly indicate early centers of the movement, such as the Galilee, that were not derivative from Jerusalem (Mark 16:7 = Matt 28:7–10, 16). The early diffusion of the movement was a product of new impulses operating within the diverse social circumstances of individual groups.

One such impulse toward diffusion might have come from an early sense that the imminent expectations for a new social order had failed. On this suggestion, some early Christian groups would have closely resembled adventist millenarian movements, that is, groups which make predictions of the end of the world (Gager 1975: 20–27). A crisis occurs for such groups when their predictions do not come to pass, and this radical disconfirmation tends to produce heightened activity and new directions of outreach (Gager 1975: 37–41). Increasing agitation over the delay of the eschatological consummation began to produce cognitive anxiety among early Christians, especially in the wake of the failure of the First Revolt (cf. Mark 13) and increasingly so in ensuing decades (2 Pet 3:3). Rethinking their eschatological expectations was perhaps a contributing factor in further diffusion of the movement.

Another impulse toward diffusion might have come from the establishment of cells among Jewish communities in urban settings where contact with gentiles would become more of an issue. A number of

cities in the Galilee and the Decapolis were highly hellenized urban centers. In Acts, too, it was among the Jewish communities of Antioch that the disciples first came to be known as "Christians." The name itself seems to reflect a slur on this odd Jewish messianic sect, now promoting a new piety in the syncretistic urban environment of Roman Syria (cf. Meeks and Wilken 1978: 13–15). Paul, too, it would appear, encountered the new directions of the Jesus movement among Jewish communities in Roman Syria, first in Damascus and later in Antioch.

3. Phases of Growth and Paths of Diffusion in the Roman World. By the time Paul began to work out the initial lines of a gentile mission in Antioch, a new phase of diffusion was on the horizon. It would probably be a mistake to try to fix the dates for this change too narrowly, but the circumstances surrounding the so-called Jerusalem Council reflect something of this phase. The greatest danger in using such a dating mechanism lies in the false assumption that all early Christian groups were equally influenced by the circumstances and decisions reflected in the stories of the Council. The accounts of Paul (Gal 2:1–10) and Acts 15 vary sharply regarding the nature of the dispute and its resolution. Clearly, there was great diversity. Yet the accounts of the Jerusalem Council probably do signal a significant parting of the ways in the paths of diffusion for the Christian movement at Antioch. The main question which was being addressed was whether and how gentiles might be brought into the Jesus sect, given its strictures on Jewishness. Some Christians seem to have advocated full proselyte conversion before a gentile could be considered legitimately a Christian, while others began to argue for a less stringent position.

Though he was not likely the first, Paul became one of the chief advocates of the latter position. After a significant falling out with the conservative Jewish faction among the Christians at Antioch, led by Peter (Gal 2:11–16), Paul apparently left Antioch for good to embark on a mission to gentile converts in Asia Minor and Greece. The Council and the beginning of Paul's mission may be dated between 44/45 and 49 C.E., or roughly twenty years after the inception of the sect at the death of Jesus. In his mission preaching to gentile converts in Asia Minor and Greece, Paul did not finally consider the Christian movement as a separate organism from the Jewish religion, even though his synthesis might have helped to induce the rift (cf. Sanders 1983: 207–10). His elaborate use of commonplaces and models from Greek culture and popular philosophy did not force him to abrogate an apocalyptic worldview. Nonetheless, the social location of Christian groups would vary markedly in the urban environment of the Greek east. Paul and others had to begin to work out a synthesis for Jewish and gentile Christians to live within that society. Given this difference, it is better to think of this phase of the Christian movement as a kind of syncretistic Jewish *cult* relative to the larger Greco-Roman culture, while at the same time it maintained its sectarian tensions in relation to traditional Jewish culture (White 1988:16).

The institutional separation of the Christian movement away from Judaism did not really commence until after the failure of the First Revolt against Rome (66–74 C.E.). Simultaneously, then, sectarian tensions with the larger Jewish cultural heritage had continued while Christians (and other Jewish groups) were also forging a cultural synthesis and social self-definition with Greco-Roman culture. The first clear recognition on the part of Roman authorities that Christians marked something of a separate religious group from Jews comes in the letters of Pliny (*Ep.* 10.96) and the histories of Tacitus (*Ann.* 15.44). Both were written after the year 110 C.E. and after recognition of Christian activities in Asia Minor and Rome. Other reflections of this growing tension with its Jewish heritage are found in Christian literature of the post-70 period (including Matthew and Luke-Acts). The tension is also reflected in Jewish traditions concerning the Rabbis of Jabneh (Cohen 1984) and in the introduction of the *Birkhat ha-minim* (or curse against the heretics) into the *Shemonah esre.* Both traditions probably come from the period between 100–150 C.E. in their final form (cf. Schiffman 1981: 115–23; Kimelman 1981: 226–44). In some cases, however, Jewish-Christian groups maintained their place within the Jewish cultural framework much longer, and groups such as the Ebionites were known down to the end of the 4th century. At the very least, it would probably be best to say that the full-scale recognition of a separation of Greek-speaking Christianity from Judaism did not occur until after the failure of the Bar Kokhba revolt (132–135 C.E.), which is in all probability where the Pella tradition (Eus. *Hist. Eccl.* 3.5.3; Epiphanius, *Pan.* 29.7.7, 30.2.7) ought to be dated as well (cf. Lüdemann 1980: 169–73).

This schematic overview of the phases of growth and diffusion suggests that one must keep in mind the diverse nature of Christian groups in the environment of the Roman Levant. In addition to theological areas of self-definition away from Judaism and of synthesis toward Greco-Roman culture, there are several social factors that need to be considered. The first is the diversity itself. The Christian movement was not a unitary religious phenomenon from the moment of inception, and it varied sharply according to the diverse geographical diffusion it enjoyed. Jewish communities, especially in the Greek-speaking Diaspora, were equally diverse both in social location and in social makeup, and relations between Jewish and Christian cells in any given locality would have been determined by a range of local conditions. Second, it must be kept in mind that both Jewish and Christian groups outside the homeland tended to circulate around and settle in major urban centers in the Roman empire. Hence patterns of social life and organization for both groups were largely determined by conditions in the local urban environment.

B. Social Life of Christian Groups

1. Social Location of Christian Groups. While in late Medieval and Renaissance art, the mendicant orders notwithstanding, it was common to portray the 1st-century Christians in Venetian high fashion, since the Enlightenment the vogue has gone in the opposite direction. The Christian movement has typically been portrayed as a movement of the dispossessed, a proletarian revolt, or a social reform. In consequence, the models of institutionalization in the area of church order insinuated the change of social location from a persecuted sect to a state religion and from peasant revolt to aristocratic oligarchy. Most of these have started with the portrayal of Jesus and his disciples as common folk out of the Galilean hills and with the statements of Acts 2–5 that the members of the earliest Jerusalem church sold all their possessions, gave their means entirely to the apostles, and "held all things in common" (Acts 4:32). In addition to such utopian portrayals, older sect typologies tended to portray all such reform movements as located among the dispossessed of society (White 1988: 7–9). Both types of romanticized portrayals have been used to advance theological interpretations (cf. Malherbe 1983: 4–13). The picture in Acts, however, is highly idealized, likely for various apologetic purposes, and cannot be used to create a historical generalization of the social location of the early Christians. The story in Acts itself (5:42; 12:12) presupposes that at least some of those early Christians retained their possessions and used them for hosting Christian assembly in their homes.

As has been suggested, at least some forms of the earliest Jesus movement adopted an ethos of rejecting home, possessions, and society (Gager 1975: 23–37; Theissen 1978: 8–15). On the other hand, it is likely that these do not represent the whole of the early movement, but only some of its nascent forms. Nonetheless, these various forms persisted and grew up alongside one another in the early generations of the movement.

In recent work, focus has shifted to the diffusion of the movement outside of the original Jewish moorings, and here one gets a slightly different perception of its social location (Malherbe 1983: 31–37). In a key statement, Paul alludes to the social status of members of the Christian community at Corinth in such a way that it is clear that at least some were wealthy, educated, and highborn (1 Cor 1:26–28). It is also likely that such status distinctions are correlated with the leadership by house church patrons, both men and women. Rather than a proletarian movement, the urban Christian communities of the Aegean more likely represented a cross section of the highly stratified society in which they lived (Meeks 1983: 51–63).

This recognition has been used to reconsider a number of the issues in the Pauline letters. Travel, letter writing, and hospitality were functions occasioned out of the geographical and social mobility of Roman society in the 1st century (Malherbe 1983: 35–49, 67–70). The divisive circumstances of the several house churches at Corinth (1 Cor 1:11) may be directly attributable to conflicts over wealth and status among its members (Theissen 1982; Malherbe 1983: 71–83). Areas where such status distinctions likely produced dissension and quarreling were in Christian communal dining (1 Cor 11:17–34), in social interaction (dining) with pagans (1 Corinthians 8–10), and in relations to the gifts of house church patrons to other apostles (2 Cor 11:7–11). It has been suggested that the social pretensions of the wealthier members of the Christian communities were in fact heightened by Paul's own preaching of "freedom" in

Christ. Yet in several instances the exercise of individual liberty was at odds with Paul's own sense of solidarity or "fellowship" *(koinonia)* in "the body," that is, the Church (cf. Meeks 1983: 68–73; 157–63).

How far can one go in projecting from the description of Paul's churches onto the general social level of the early Christian movement is problematic. One should guess that local communities faced different socioeconomic circumstances, depending upon the establishment, relations to local Jewish groups, the ability to rely upon or attract wealthy patrons, and competition with other indigenous groups. It is likely that the networks of social interaction by which diffusion occurred had a lot to do with establishing the social placement in the early years for any given locality. For each locality, whether Edessa, Alexandria, Carthage, or Rome, one must attempt to evaluate the social placement and the interaction of Christians on the basis of available evidence for the local conditions. Even the degree of wealth and social pretension at Corinth in Paul's day suggest that the upper reaches were yet below the old Roman aristocracy, the pinnacle of the social pyramid. Christian membership came instead from artisan classes, local entrepreneurs, and at best, the local decurionate, but also contained many from the other end of the social spectrum. Thus, the forms of social organization likely reflect some of this stratified social mix. Ultimately, one does find Christians among the elite segments of Roman society by the end of the 2d century (in provincial cities) and in the 3d century (in Rome itself). The gradual social acceptance of Christians among the population probably did not come from the sheer number of conversions alone, but through a gradual diffusion of Christian affiliations through the networks of power and wealth and a gradual acculturation of Christian practice and social life. At least one area in which such socioeconomic impulses can be seen is in the gradual development of Christian architecture out of the original house church meetings. In such cases patronage continued to play a major role in the process and furthered the public growth and awareness of the Christian movement through the first centuries.

2. Relations to Society. As an apocalyptic sect, the earliest Jesus movement stood in direct tension with its parent culture, since it was viewed as inherently flawed, under the evil forces of Satan and the oppression of outsiders. Being in the "Kingdom of Light" meant preparing to fight (militarily, if necessary) the enemy and removing oneself in some measure from the pollutions of the world, the "Kingdom of Darkness." This sectarian self-consciousness, clearly visible at Qumran, is yet discernible in some of the boundary maintenance language of the early Jesus movement. It may be preserved, for example, in the fragment of apocalyptic exhortation in 2 Cor 6:14–7:1. On the other hand, such sects look toward the moral reformation of society and so seek to enact presently, at least in some provisional way, a future ideal. In the case of the Pharisees, then (though not a sect in all cases in the pre-70 period), democratizing temple purity by making the law livable may be viewed as a sectarian ideal of hasidic reform (see PHARISEES). Likewise, there are vestiges of such an ideal social order in the portrayal of Jesus at table with "sinners and tax collectors" (Matt 9:10 = Mark 2:15 = Luke 5:27) and especially in connection with the wisdom tradition sayings (Matt 11:16–19 = Luke 7:31–35 [Q]). The sense of tension arises in maintaining the proper balance with society, especially as such sects tend, if they survive, to move toward some accommodation to the parent culture (cf. Meeks 1986: 102–4; White 1988: 19).

In the development of the Jesus movement, one sees different attempts to work out such balance depending upon the particular circumstances of each Christian group. For example, the community reflected in the gospel of Matthew, which was probably situated somewhere in the highly acculturated areas of the Galilee or nearer Syria, shows signs of sectarian self-definition over against its pharisaic neighbors (Matt 23:1–36). Part of this debate centers on similarly pharisaic ways of erecting boundaries against the world through patterns of Torah observance, fasting, alms, and prayer (5:17–21; 6:1–8, 16–18). At the same time the Matthean community was attempting to work out the strictures of both an internal church order (18:15–20) and an external gateway for non-Jewish converts (28:18–20) in the period after the First Revolt. Ultimately, the Matthean church retained its essentially Jewish markers of identity and social customs (18:17; 22:1–14).

By way of contrast, Pauline churches situated in the cosmopolitan urban environment of the Aegean effected a different balance with its cultural host. Indeed, the social makeup of Paul's churches moved them more toward a cult-culture self-definition. Thus, at Corinth one finds Paul himself redefining

traditional sectarian boundary markers against society to allow some, though not all, interaction (1 Cor 5:9–11; 6:1–6). Of course, a chief factor in this redefinition came in regard to matters of Torah observance for non-Jews; now they were accorded full status within the community without enforcing circumcision. While still retaining a strict sense of community ethics and moral discipline in terms of apocalyptic ideas (5:1–5; 6:9), Paul nonetheless permitted marriage to nonbelievers (7:13–15) and dining in pagan social contexts (8:10; 10:27) as part of the new social order. It is clear, too, that within the house church context new social relations were being explored, as in the status and leadership of women charismatics and patrons (11:3; 16:19; cf. Rom 16:1–2). Nor is it likely that either Jewish or gentile Christians would have recoiled uniformly from these new freedoms. It would appear, however, that Paul at other times backed down from some of the more radical social implications of earlier preaching (7:1, 21), especially in regard to the sense of new order reflected in the so-called *baptismal reunification formula* (12:12; cf. Gal 3:28; Col 3:11).

In many ways Pauline churches were encouraged to enact a moral paradigm that was very close to that of the surrounding culture. So Christians (perhaps like other Diaspora Jewish communities, but in sharp contrast to traditional apocalyptic rhetoric) were to respect the Roman government and pay proper taxes (Rom 13:1–7) and to practice almsgiving and hospitality (12:13). Indeed, many of the typically Pauline exhortations for the ethical life "in Christ" are built around standard catalogs of virtues and vices (Phil 4:8–9; Col 3:5–17) derived from commonplaces in the Hellenistic moral philosophers (cf. Malherbe 1987: 61–95).

In sum, Pauline tradition began to move the center of Christian social identity much closer to a Hellenistic-Roman cultural ideal, even though Paul himself never seems to have conceived of this shift as a move to a non-Jewish self-definition. Later Pauline tradition, however, appropriated even more of the standard social mores from the larger Roman culture. A good example is the introduction of the *Haustafel* (or "household code"), which derives from Greek philosophy (Col 3:19–4:1; Eph 5:22–6:9; 1 Tim 2:8–15, 6:1–2; Tit 2:1–10; 1 Pet 2:13–3:7). In Aristotle (*Pol.* 1,1253b; *Eth. Nic.* 8,1162a), for example, the order of the family is likened to that of the *polis* or state. Already in Philo one finds it appropriated for Jewish ethics in the Greco-Roman world (*Jos.* 38; *Dec.* 165). The overtly hierarchical and patriarchal order of this paradigm may have been intended (as in Joseph. *AgAp* 1) as an apologetic against pagan claims that Christians disrupted households, as seen in older apocalyptic slogans (so Balch 1981: 65–80). As such it probably facilitated the acculturation of the Christian cult to pagan culture. At the same time, it created new hierarchical orders within the church community and a consequent tightening of leadership roles, especially for women (Schüssler Fiorenza 1983: 251–70). It is noteworthy, too, that this move in the area of social ethics corresponds, both in time and in social impact, to the hierarchical ordering of offices under the bishopric in the area of organization.

By the end of the 2d century, one finds that Christians in most urban areas of the Roman empire were moving more and more into the mainstream of social life. The pace of such acculturation would, of course, be different, owing to local conditions and circumstances relative to each Christian community. Even though there were sporadic persecutions and one hears of pagan charges against antisocial behavior, on the whole these were tensions created as the Christian movement became more acculturated to its host culture. Thus, in Origen's refutation of Celsus, one still finds claims that Christians proselytize only those individuals on the margins of society: women, children, slaves, and illiterate yokels (*Cel.* 3.55; cf. Wilken 1984: 95–100). But in Tertullian (*Apol.* 39) and, to an even greater degree, in Clement of Alexandria (*Paed.* 3), one sees the efflorescence of an active Christian social life that would eventually become a prevalent and fully accepted part of the Roman world.

C. Organization and Development of the Christian Movement

1. Models from the Environment. In order to understand the organization of Christian groups, one may consider their appearance within the context of the urban environment of Greco-Roman cities. It has been suggested that local Christian congregations followed or emulated models of other small cells or associations (Meeks 1983: 75–81; 1986: 108–14). Hence, the household or private house associations

served as one model for organizing Christian groups alongside Diaspora synagogues, voluntary clubs (or *collegia*), and philosophical schools.

Given the sectarian origins of the movement, the synagogue provided a natural avenue of Christian diffusion, once it had moved to urban Jewish centers of the Diaspora. Thus, too, the organization and social experience of synagogue communities paved the way for Christian groups to establish their own identity in the alien environment of the Diaspora. Diaspora Jewish communities are known from literary, epigraphic, and archaeological remains throughout the Mediterranean, especially in the major cities of Egypt, Asia Minor, and Greece, as well as Italy (including Rome and Ostia) and North Africa. Nonetheless, some caution must be exercised in two regards. First, one should not assume as universal fact the presentation in Acts, that the earliest Christian mission commenced in synagogues only to open out to gentiles after being expelled. Second, one should not assume that all synagogues followed the same organization and plan, especially in the Diaspora, or that there was a normative synagogue structure for the first several centuries of the Common Era (Kraabel 1981: 81–91).

The development of the early synagogue owes in large measure to the experience of Jews in the alien environment of the Diaspora. The need to preserve their heritage, the sense of belonging to the heritage of Israel, might result in the formation of a closed cultic community against the alien world outside. At the same time, dealings with their pagan neighbors in business and daily life resulted in social interaction and acculturation. The synagogue served as a way of mediating these tensions with the Greco-Roman culture, especially while the temple still stood at Jerusalem. It is significant, therefore, that most of the earliest synagogue buildings were renovated from private homes which had been owned by leading members of the Jewish congregation, while others also reflect considerable social acceptance and support by non-Jewish sympathizers (Kraabel 1981: 87–90). The social structures as well as the worship and architecture of these early Diaspora synagogues was still very much determined by local conditions and cultural relations. So, too, one finds that women and non-Jews often held substantial positions within the life of these Jewish communities (Brooten 1982: 139–48; White 1987: 153–55). Also, there might have been several synagogue cells or congregations in any of the larger cities differentiated by language, socioeconomic status, relations with locals, or theology.

In many cases local synagogue groups were also organized after the fashion of *collegia.* This common form of social club or voluntary association in Greco-Roman city life would have offered a ready legal model for establishing community organization. The clubs themselves, even the smallest ones, often aped the titles and structures of official municipal organizations. Trade guilds and professional organizations up and down the social ladder followed these lines. In the larger cities one could expect that associates would agglomerate on ethnic lines as well as by trade or craft, all reflecting some need for a community tie, a sense of rootedness, within the pluralistic hubbub of the city. Still, it is worth noting that both house cults and foreign religious groups were often organized after collegial models.

Finally, it has been suggested that early Christian groups also followed the model of a philosophical school. While it is a clearer comparison to make by the middle of the 2d century (as in Justin Martyr, cf. Wilken 1984: 72–83) a similar organization has been suggested for the Pauline mission, at least as regards Paul and his immediate circle of "fellow-workers" (Meeks 1983: 81–83). The comparison is more apt when one looks at the tradition of teaching and pastoral care among the moralist philosophers or at the social organization of Epicurean communities (Malherbe 1987: 7–13, 95–105) (see APOSTLE, CONCEPT OF).

Despite the high degree of acceptance of each of these models, there was great diversity and fluidity in the actual form of communal associations. Synagogues and other cults could be organized as *collegia* and most of the voluntary associations had religious affiliations or patron deities. Yet one of the most significant areas of social intersection lies in the fact that all these groups could use the private home setting or the household model either as the locus of its activities or as the core of its communal organization.

2. The House Church Setting. The picture in Acts (2:42) pushes the communal dining and study of Christians at home back to the very beginning of the movement. Acts then pushes forward in its model of

the mission by following conversions especially through household lines. Both of these features seem to be Lukan idealizations for apologetic interests, which may color over a more diverse social picture. Nevertheless, by the time of Paul's mission in the Aegean region, a standard form of address was to the "church in the house" *(he kat' oikon ekklesia)* of someone (Col 4:15; Rom 16:5; 1 Cor 16:19). It is likely that household networks and organization were already operative in the initial diffusion through Jewish communities of the Diaspora, since synagogues likewise employed the household setting. Thus, despite a high degree of idealization of the picture in Acts, the basic reflection of the setting in Corinth (18:7–8) may be indicative, since it assumes a synagogue in residential areas and under patronage leadership, contiguous to a house where the Christians began to meet. Within the Pauline letters themselves the assumed setting of Christian assembly is even more firmly rooted in private homes and attendant social conventions (Malherbe 1983: 60–91; Meeks 1983: 75–77; 1986: 110–13; Schüssler Fiorenza 1983: 175–84).

The house church setting provided avenues both for diffusion and social organization of Christian communities. Conventions of hospitality were very important in Greco-Roman society. They could be applied to travelers and to the hosting of guests for dinners and other social functions. Thus, the technical language of hospitality is to be found in Pauline usage, especially in writing letters of recommendation for his traveling co-workers, such as Phoebe (Rom 16:1–2; cf. Malherbe 1983: 94–97). Here, Paul was asking that she be received hospitably within the various house church cells at Rome, just as she, as house church patron, had hosted others (including Paul himself) at Cenchreai. Letter writing, hospitality, and patronage were bound up together in the organization of these house church communities.

In Paul's churches, at least, hosting the assembled congregation seems to have fallen to a few leading individuals who would have owned houses large enough for such a gathering. House church patronage and social mobility were exhibited by the artisan couple Prisca and Aquila as they moved about within the Aegean region and eventually to Rome. Paul was heavily dependent upon the financial support of these house church patrons, who not only hosted the congregation but afforded lodging and assistance for Paul and his co-workers (Rom 16:2, 23; Phlm 2, 22; Phil 4:14–19). The house church setting also meant that there were likely several meetings or cell groups in any of the larger urban centers, such as Corinth, Ephesus, or Rome (even though Paul had not organized the community at Rome). Hence diversity or friction could easily develop within a given locale, partly as a result of these house church relations (1 Cor 1:11–16; 2 Cor 11:7–11). Moreover, the household in Greco-Roman urban life comprised a wider circle than the nuclear family. Members of the household also included other relatives, friends in residence, domestic slaves, and clients or business associates. In the structure of the society at large all were attached and obligated to the head of the household, usually meaning the *pater familias.* In growing numbers during the Roman period women, too, held the property and the status of head of the household. Cultic associations, such as that under the household of Agripinilla at Tusculum, reflect the merging of religious organization also under the patronage of women. Likewise, in Jewish groups one hears of women who served as "mother of the synagogue," meaning its patron both in honorific terms and in functional leadership. In the Pauline churches there were not as yet any leadership offices (such as bishops or elders); therefore, one of the natural lines of organization and authority fell to the house church patrons, both women and men. Paul himself as itinerant apostle was dependent upon the patronal beneficence and authority of individuals such as Prisca, Phoebe, Gaius, or Philemon (Schüssler Fiorenza 1983: 181–82; Meeks 1983: 68–69, 134–36).

Numerous features of church life must be understood in the light of this social setting. Paul himself communicated with his congregations by means of letters and emissaries moving within the house church network. Christian assembly meant gathering in the home of a leading member, usually around the dinner table as the center both for a communal meal (1 Cor 11:17–34) and for mutual exhortation (1 Cor 14:26). It is not likely, however, that all Christians in a large city like Corinth gathered in one place on a regular basis, not even for the eucharist. Women and men, drawn from the wider circles of household networks and other social relations, participated equally in these gatherings, depending upon their sense of spiritual gifts (1 Cor 11:5; 14:23–26). Paul himself resisted the tendency to allow such fellowship to replicate the

class structure of the society at large, even though it was based in that structure. This tension could not always be escaped, as Paul had to allow for Christians to continue to associate fully in normal social activities (1 Cor 5:9; 10:24–28), and he did not always go as far as some might have hoped in moving toward radical social change (Gal 3:28; 1 Cor 7:22; 11:27–33; Phlm 17).

3. The Beginnings of Institutionalization: Offices, Orthodoxy, and Heresy. As a sect within the framework and worldview of Judaism, the Jesus movement implicitly held ideas of religious institution from the dominant cultural models, but felt tensions enough to question and in some cases reject them. As a cult phenomenon in the Greco-Roman culture, however, there may have been different impulses at work, since foreign cults tend rather to emulate the organizational models of the host culture and to rationalize assimilation. The Christian movement, in particular cases, likely felt certain internal tensions in this regard, since it maintained much of its basic sectarian attitude toward its Jewish heritage while simultaneously pursuing cultic assimilation toward Greco-Roman culture. Once again, a keynote is the recognition of diversity. In Paul's case there arose several debates over apostolic authority. In the earlier situation at Antioch (Gal 2:11–14), Paul claims to have faced Peter down over issues of communal fellowship with gentiles. Later, the case of the so-called superapostles (2 Cor 11:5–6, 13) further called into question Paul's own apostolic authority in the light of their claims to superlative charismatic gifts and apostolic authority, even though neither party was among the core of original disciples of Jesus (Meeks 1983: 131–34) (see APOSTLE, CONCEPT OF).

While authority questions came out in Paul's day, it is significant that the main sources of debate arose from the power to preach and the governance of Christian ethical behavior. In cases of disciplinary sanctions the extreme action seems to have been focused largely on matters of unsuitable behavior (Matt 18:15–17; Heb 6:4–6, 10:26). As in the case of sexual immorality in 1 Cor 5:1–11, the normal response was to exclude the offender from the communal fellowship. While in later development of penitential discipline this was viewed as a temporary excommunication from the eucharist, in 1 Corinthians it more clearly denotes sanctioning out of the dining context of the house church assembly. There is little or no concern over what could be called orthodoxy in doctrine or liturgy. The need to guard the "deposit of faith" through disciplinary excommunication begins to appear only in the later writings of the New Testament and more consistently in the literature of the 2d century (1 Tim 1:20, 6:3–4; 2 Pet 2:1; 2 John 7–11). Governance over the authority to teach and the power to exercise discipline was viewed in terms of emerging institutional authority structures or "offices" in the communities. Hence apostles, prophets, teachers, *and* patrons in the earliest days gave way to bishops, elders, and deacons by the 2d and 3d centuries (1 Cor 12:28; cf. Eph 4:11; 1 Tim 3:1–13; *Ign. Eph.* 4:1–2; *Ign. Mag.* 6:1).

By focusing on "offices," the traditional pictures of development in early Christian organization have tended to follow one of several straight-line models of development toward hierarchical institutional order. The Great Church model, largely derived from the picture of Jesus commissioning Peter with the "keys of kingdom" (Matt 16:17–19) and preserved in much of Western iconography, asserts the tradition of the twelve disciples as the basic authority structure of the church from the moment of inception. An alternative sociological model, usually associated with Max Weber and Ernst Troeltsch, tries to account for the noninstitutional sectarian origins. It assumes that there was a necessary process of development from the fluid charismatic leadership of the earliest sect toward a routinized leadership in ecclesiastical offices of bishop, elder, and deacon (so von Campenhausen 1969; cf. White 1987b: 209–13). Inherent in both models is an essentially hierarchical and patriarchal notion of authority vested in later notions of ordination and priesthood.

It is possible to suggest that there were really four intersecting lines of authority structures which came into play in diverse combinations depending upon the local circumstances of Christian communities. The first derived from the gradual separation from Judaism in the generations after the First Revolt. Here two factors can be seen. The loss of the temple itself as a central institution created a vacuum in authority structure which had traditionally been lodged in a priestly ideal. The sense of loss called for rationalization, and of course, Judaism itself had to face this same dilemma. Separation from Jewish identity, however, demanded an authority which stood outside of the emerging reconstruction under the

Rabbinic academy (cf. Stendahl 1968). The second derives from the lines of patronal authority seen both in the Diaspora synagogue and in the house church setting, especially in the Greco-Roman urban setting. Here it is worth noting that authority was invested after the cultural model of obligation of a client toward a benefactor as regularly applied both in interpersonal bonds and in the organization of clubs and other cults (White 1987b: 218–21). While it derived much of its symbolism from the paterfamilias, nonetheless women increasingly exercised such patronal roles in cults or associations and even in official civic functions or the imperial cult (Schüssler Fiorenza 1983: 180–83). The third is related but distinct in social application and derives from the metaphorical use of the patriarchal family as a model for understanding the order of the state or society, seen most clearly in the later ethical model of the HAUSTAFELN (or "household duty codes," cf. Eph 5:21–6:9; Col 3:18–4:1; 1 Pet 2:18–3:7). The fourth is charismatic leadership and derives from the apocalyptic sectarian consciousness of challenging worldly authority through the idealized image of inspired prophets, who interpreted the divine will against the prevailing social order.

Gradually, over time and in different combinations one sees the Christian movement adopting an amalgam of these four into the various notions of ordained offices and church order. Gradually, too, there was a sharp diminution in the leadership roles available to women and others who had found expression in the earlier generations, just as Jewish heritage itself was restricted. In particular the role of charismatic power was sharply curtailed since it was increasingly difficult to keep under control, and it was replaced instead with the authority of the episcopal offices as a combination of several lines of power. The continued lines are seen in the so-called "New Prophecy" or Montanist movement in 2d-century Phrygia, since it perpetuated an ideal of female charismatic gifts. What would eventually emerge as the dominant form was a hierarchical church order of offices ranging from the bishop (or priest) to the elder (or presbyter) and to the deacon (1 Tim 3:1–13). In earlier usage bishops and elders were interchangeable, but by the early 2d century (especially in the writings of Ignatius of Antioch) there were indications of a further move toward a single bishop at the top of a pyramidal order. Women (in particular the widows) were placed in a special category which removed them from this dominant hierarchical structure.

The sense of order implied in this organizational development also carried over into two other areas of church life. The first was the ordering of worship and, hence, the development of liturgy. By the early 2d century the free-flowing love feasts of the early period seem to have been more formalized and restricted. Eventually it would lead to a complete segregation of the eucharist (or Mass) from the dinner setting by the beginning of the 3d century. The *Didache*, one of the earliest pieces of church order literature dating from the first half of 2d century, makes special provision for the proper conduct of the eucharistic meal and for who could preside. Second, as time went along, the diversity of traditions became increasingly a problem, at least to some. The result was to delimit more narrowly the range of acceptable teaching and belief, or the beginnings of doctrinal formulation (as seen both in the Pastoral epistles and in Ignatius). It is important to note, however, that regional variations in Christian development (depending in large measure on local social circumstances) tended to be treated as heresy. The result was that an imperialist tradition, under the aegis of Roman authority, actively superimposed a notion of orthodoxy and heresy on these local variations (cf. Bauer 1971; Koester 1972). Notions of apostolic succession were used from as early as the 2d century (Hegesippus, preserved in Eusebius, *Hist. Eccl.* 4.22.1) to claim the authority of bishops in a specific line to govern in such matters of orthodoxy and liturgy.

EARLY JEWISH CHRISTIANITY

When the qualifying phrase "early Jewish" is applied to Christianity, the temptation arises to contrast it with "early gentile" Christianity. This contrast between Jewish and non-Jewish forms of Christianity seems to have arisen later, and was then retrojected into the earlier periods, resulting in an anachronistic distortion of early Christianity. It is only when we understand the earliest Jesus movement and the first post-Easter Christianity as a phenomenon within Judaism that the historical development of Christianity can be clarified.

E. Summary

———

A. Definition

There is little doubt that Jesus himself was firmly rooted within the Jewish faith, and that with him arose a movement that was first and foremost an inner-Jewish phenomenon. But Jesus' idiosyncratic attitudes with respect to fundamental Jewish theologumena like law, sabbath, the traditions of the elders, etc., meant that early Jewish Christianity was, after Easter, a broad movement comprised of (about 500? 1 Cor 15:6) people with very different opinions and likely no generally recognized organization. The idea of a homogeneous primitive church ("*Urgemeinde*") from which Christianity arose (as depicted in Acts) is a simplifying Lukan construct. Thus the term "Jewish Christianity" must be used cautiously when discussing the earliest periods. Groups that gradually contracted toward Jewish thought and emerged in later times as an "Ebionitism" (see EBIONITES) are defined here as "Judaistic Jewish Christianity." Groups which practiced baptism are here defined as "Primitive Baptist." The label "Missionary Jewish Christianity" refers to groups with a program of mission. Most of the traditions that became canonized in

the NT can be assigned to this early "Missionary Jewish Christianity." But even here there is a great difference between groups which addressed gentiles (Paul, most NT writings) and groups which felt particularly obliged to address mainly fellow Jews (Peter, see also Gal 2:8ff. and Matt 10:5–23 and 15:24).

B. Sources and Methods

The NT is our basic source for the origins of Jewish Christianity, but we must keep in mind that most NT traditions have been handed to us from the "missionary" groups. Strictly speaking, "Judaistic" traditions are often preserved only in fragments, or we have to reconstruct them from sources that sought to refute their claims (e.g., Galatians). Our sources for the groups which eventually emerge as Ebionitism are not very reliable. Previous attempts to ascertain the roots of Jewish Christianity have been hampered because scholars tended either to import subsequent distinctions between Jewish- and gentile-Christianity into the earlier period or to rely largely on the book of Acts for a straightforward account of the evolution of the primitive Church. One could support one's conclusions by appealing to the pseudo-Clementines (Schoeps 1949; 1956) or to specific traditions of the Church concerning the alleged Jewish-Christian sources (Danielou 1964). However, the notion of a vast body of ancient Jewish-Christian writings cannot be verified (Torrey 1952–53: 205ff.).

The isolation of the "Q"source as a product of early Jewish Christianity (see Q [GOSPEL SOURCE]) promises to help correct the deficiencies in our earliest sources, but it must not be forgotten that Q is a "hypothesis," not a real source (and may itself contain various layers). But this appeal to Q constitutes a step in the right direction: if we want to identify the beginnings of Jewish Christianity, we must consider the history of the traditions ("*Traditionsgeschichte*") underlying the NT.

Traditionsgeschichte is a complicated method, often leading at best to conclusions that must be properly qualified as to their level of "probability." Redaction-critical research has demonstrated that in this endeavor the topographical references must be considered carefully (Lohmeyer 1936). Topographical statements sometimes have for an evangelist a highly theological importance (e.g., Galilee in Mark). But not all geographical references are charged in this way. A great many of them are deeply rooted in specific traditions; therefore they must be explained in terms of the history of that tradition. When this is done (Schille 1957), we discover that primitive materials oriented more to the north (Galilee and environs) often have "missionary" tendencies, whereas traditions closer to Judea represent a more static Christianity (distinguished by an emphasis on the Jewish cultic calendar).

This is reinforced by an examination of primitive christology. It is noteworthy that christological titles are used differently in the earlier traditions than in subsequent NT traditions. For example, the christological titles "King of the Jews" (Passion tradition) and "Son of Man" (also in Passion tradition, in Mark 13, and in the sayings of Jesus) are connected to "Judaistic" traditions; "Son of God" (traditions about the baptism and temptation of Jesus) are connected to "Baptismal" traditions; and "Lord" (Gk *kyrios;* in Paul and in the miracles traditions) are connected to "Missionary" traditions.

C. Origins and History

Jesus carried out his preaching and his work within the Judaism of his day. On the other hand, he reserved for himself the freedom to eliminate all possible restrictions to religious community. We can see this, for example, in his selection of companions: tax collectors (Mark 2:14ff.), outcasts (5:2ff.), women, and political radicals (e.g., Simon the Canaanean). Similarly, he had little regard for national or ethnic boundaries (Matt 8:5ff.; Mark 7:24ff.). Also, he invoked as a model the child (Mark 10:15), who was not yet granted permission to participate in the orthodox Jewish liturgical ceremonies. Jesus' followers seem to have accepted the main features of his teachings and example. Therefore, we have to consider the Jesus movement as an inner-Jewish phenomenon, taking into consideration the probability that it extended beyond earlier Jewish regions into the Hellenistic Decapolis, Samaria, and beyond the Jordan (where a pre-Easter preaching activity had begun).

Jesus' crucifixion certainly failed to destroy this movement (1 Cor 15:6 attests a mass meeting of Jesus' followers at the time of his resurrection). Visions of the risen Lord likely had the effect of reinvigorating the disciples to their task of proclamation, and of converting the uncommitted and even the occasional

opponent such as Paul. However, what arose was not a uniform "Christianity" but rather a charismatic movement with diverse preachers and different organizations. Individual charismatics or groups would be proclaiming Jesus as Savior in their respective homelands (cf. Mark 5:20). Thus the movement from the very beginning was very diverse, as is evident in the christological titles. Only gradually did certain titles (e.g., "Lord," "Son of God," "Son of Man") rise to predominate over earlier ones ("King of the Jews," *christos* ["anointed one"]). The very earliest christological terms (e.g., "the holy one of God," "prophet") are often mentioned only obliquely in Scripture. That the earliest Christianity was a self-conscious inner-Jewish phenomenon is evident in the fact that initially the mark of a Christian was not membership in an organized body (the church; against this, see Mark 9:38ff.) but rather being a disciple of Jesus the Messiah. This did not preclude "Baptismal" groups (such as those descended from John the Baptist) from continuing to stress baptism (indeed, John's eschatological dipping did not lead him or anyone else away from Judaism). Similarly, it did not preclude "Missionary" groups from crossing over into regions that were not principally Jewish (e.g., Paul was baptized in Damascus; consequently this boundary had already been crossed earlier). Thus, neither baptizing nor preaching outside "proper" Jewish geographical boundaries distinguished early Christianity from Judaism, as long as the focus of these activities was understood as a concentrated appeal to Israel, the people of God.

The christology which is often invoked as the reason for the separation of Jews and Christians did not initially separate anyone from Judaism, since the earliest christological titles describe the person of Jesus within the accepted framework of Jewish messianism. Thus, anyone who believed himself to live in the "messianic age" could (and was in fact allowed to) believe that the Jewish law had been fulfilled in a way consistent with Jewish notions. Similarly, Paul's belief in freedom from the law would not necessarily be inconsistent with basic Jewish thought of his day.

However, it must be conceded that "Baptismal" and "Missionary" groups initially would be more likely to accept the freedom inaugurated through Jesus than those groups advocating a stricter adherence to traditional Jewish norms. It is possible, however, to suggest a "Christian" theological motive behind this more conservative adherence to Jewish norms. While the "Baptismal" tradition might emphasize the Christian as someone saved in the time of fulfillment ("time of the bridegroom" in Mark 2:18–20) and the "Missionary" tradition might stress the miracles and the proclamations of Jesus as a fulfillment of prophecy (of Isa 35:5, for example; see Matt 11:4–5 and par.), for others the turn of the era would be associated rather with the return of the Son of Man. Thus, one interpreting his own time as a period of apocalyptic world travail could certainly see himself approaching the turn of the era without considering the present moment to be that time of fulfillment. Therefore, such a person could legitimately insist on continued obedience to Jewish norms until that time of fulfillment had actually arrived. Thus, in the beginning, the dispute over adherence to Jewish norms was not between Jewish and non-Jewish Christians, but existed entirely within Jewish Christianity itself (see Galatians), although it was this dispute that eventually led to the separation of Christianity from Judaism. But at this early stage we see here only the primary distinction between "Judaizing Jewish Christianity" and "Missionary Jewish Christianity" (which later was identified with gentile Christianity).

This issue soon embroiled the various parties concerned; in the Jerusalem council (Acts 15) the apostles were forced to deal with it (see Bornkamm 1971). The "Missionary" groups (and only these were represented!) united in order to distinguish their respective tasks (Gal 2:7–10): Peter would himself return to preaching among the Jews (the "circumcised"), and the Antiochenes to preaching among the gentiles (the "uncircumcised"). Not long afterward a dispute broke out among the formerly united missionaries (Gal 2:11–14) centering around the question of the kosher table (a ritual norm that had always been a focal point for theological reflection; see Mark 7; Acts 10). Paul claimed freedom from circumcision and from the Jewish law (Galatians). The letter quoted in Acts 15:23–29 proposed a compromise, recommending the Noachic orders (cf. Gen 9:3–4) of the Diaspora (rather than the Mosaic orders of Judea) to facilitate fellowship between Jews and non-Jews.

Radical Hellenistic groups within the Jesus movement apparently contributed to the growing alienation between "Missionary" and "Judaistic" Jewish Christians. Actually, we know too little about the "Stephen

circle" and the "Hellenists" of Acts 6ff. to appreciate fully their historical impact. We cannot be sure whether these groups drew upon religious themes similar to those expressed at Qumran (Cullmann 1955) or upon the traditions of Diaspora Judaism that tended to be more critical of the temple (Simon 1958), if either. The traditions within Acts, however, suggest that these groups tended to proliferate outside the region of Jerusalem (e.g., in Samaria in the south and in Caesarea on the coast; see Acts 8:40 and 21:8ff); only the martyrdom of Stephen is located in Jerusalem.

A Christian enclave was gradually forming within Jerusalem, despite initial difficulties (e.g., the martyrdom at least of James, see Acts 12:1ff.). Owing to the idealized representation of Luke, the size of this Jerusalem enclave has often been overestimated (Paul found in Jerusalem practically nobody except Peter and James, the brother of Jesus, see Gal 2:19). The traditions about Jerusalem contained in Acts are mostly subsequent materials from a later time (although several traditions go back to the time of Peter's leadership; Acts 12:17 describes etiologically the transfer of this leadership from him to James, the brother of Jesus). Here the parish approaches a size (120 people, Acts 1:15) which had allowed the organization its own jurisdiction under Jewish premises. But James, the brother of Jesus, was initially a "Missionary" (see 1 Cor 9:5 for all the brothers of Jesus), and Josephus informs us about his martyrdom in A.D. 62 (*Ant* 20.200). Later, kinsmen of Jesus apparently played a leading role within "Judaizing Jewish Christianity" (Euseb. *Hist. Eccl.* 3.20.6), but this should not be accepted uncritically (Brandon 1957; Elliot-Binns 1956). After the failure of the Bar Kokhba revolt (A.D. 135) there probably no longer existed a Jewish-Christian parish in Jerusalem. Afterward our already deficient data on "Judaizing Jewish Christianity" disappears altogether, and we are left only with marginal notes from the 2d century describing Jewish Christianity, now considered a full-blown heretical movement (see Koester 1982, 2: 86–89, 198–201).

We must regard the earliest theological discussion at the time of Paul as a debate within Christianity. But soon (for the earlier period, see 1 Thess 2:14)—especially shortly before and after the Jewish War (A.D. 66–70)—Judaism itself was influencing developments. A more orthodox Jewish defense was gradually developing against some general Christian theologumena leading finally to the exclusion of Christians from the synagogues (see John 16:1–4). Luke, who retrojected these explanations anachronistically to the earliest days, refers to an original and uncompromising rejection of Christian preaching throughout Judaism. Similarly, the stereotypical opposition of the Pharisees to Jesus depicted in the Gospels probably distorts the facts, reflecting an opposition that existed not so much in the time of Jesus but actually a generation or more later. This finally culminated in the addition of the Christians to the Jewish curse of heretics in the *Shemonah-esre* of the Diaspora.

"Judaizing Jewish Christianity" was devastated by this strong reaction from their non-Christian Jewish brethren, since now one of its essential premises was being denied; i.e., that it was possible to incorporate one's own faith in Jesus within the traditional framework of Judaism (Matt 5:23 presupposes participation in the sacrificial rites of the temple; and Matt 24:20 implies a strong respect for the sabbath ordinances). "Judaizing Jewish Christianity" could only survive by developing its own form of particular norms.

D. Traditions and Theology

In trying to ascertain the traditions and the theology of such a diverse phenomenon as "Jewish Christianity," we must attempt to identify which specific elements derive from which original groups of the Jesus movement. Lohmeyer (1936) tried to distribute the traditions between Jerusalem and Galilee, but now we know that this distribution is overly dependent upon the Lukan view of history. When we move beyond Luke's idealized reconstruction, we can actually distinguish the contributions of the three major groups (see above).

One of these was a "Baptismal" group of Jewish Christians probably located in the Jordan Rift Valley and associated with followers of John the Baptist (John 3:22–30). This group promoted especially the faith in the risen Lord (reflected in the earliest hymns), Christian freedom (rooted in the view that the present age is a time of fulfillment; Mark 2:18), as well as baptism and a few other statements reminiscent of the Qumran beliefs that were being articulated at the same time in the same general area (see, above all, Eph 2:5ff: rising with Christ). The two Jericho narratives (Mark 10:46–52; Luke 19:1–10) possibly belong

to this group. There also seems to be some connection with some of the traditions in the Lukan special material (e.g., the prodigal son parable, Luke 15:11–32).

Another of these was a "Missionary" group of Jewish Christians whose traditions are reflected above all in the call narratives (Mark 1:16–20; 2:14; Luke 5:1–11) and in the miracle and exorcism narratives. Traditions such as these deal with the ever-relevant question concerning the right to cross the boundaries delimiting the people of God (Mark 7:24–30; Matt 8:5–13; and many narratives in Acts). It is possible that the meal narratives (Mark 6:35–44; 8:1–8) also circulated primarily among this group.

The other was a "Judaizing" group of Jewish Christians. To this group belonged above all the tradition of Jesus' Passion, a multitude of Jesus sayings, and the apocalyptic consolation sayings (Mark 13). Here Jesus was called "King of the Jews" and the "Son of Man" (i.e., the coming judge of the world, according to Daniel 7). Mark 14 depicts Jesus in his last night as a prophet making several predictions that were fulfilled immediately, and we might wonder whether the christological title "prophet" (already repudiated in Mark 6:15) is ultimately traceable to this group. This "Judaizing" group was probably most successful in establishing an early Christian regiment of cultic observances (see the criticism in Gal 4:10 and Col 2:16). In addition to participation in the traditional Jewish liturgical order, they gradually established their own festivals, mostly rooted in existing Jewish rites (e.g., the Lord's Supper was one of their earliest creations). Prayer was also formulated by this group with respect to existing Jewish customs (cf. later *Didache* 8). The narratives of the empty tomb and of the Ascension (Acts 1:9–11) as well as the narrative about Pentecost (Acts 2:1–4) also came from this group. The development of such etiological tales to explain liturgical celebrations are characteristic of static groups, since ceremonies and celebrations tend to be stabilizing elements in the life of communities.

In summary, this "Judaizing" group not only "Christianized" the Jewish liturgical calendar but also collected and secured important memories about Jesus (especially the logia as derived from elements of Jesus' teachings). It thus becomes clear that this relatively modest group in the immediate area of Judea, soon to be overshadowed by the "Missionary" groups operating abroad, played an integral role in the development of Christian traditions and theology, an insight that often gets underestimated when our research focuses mainly on Paul.

E. Summary

It should be obvious that these early Jewish Christian groups were instrumental in establishing the Christian Church and in arranging important Christian traditions. But if they were asked to evaluate the overall significance of their special contributions (vis-à-vis those of gentile Christians), the answer would be rather complicated. It is certain that the program of mission to the gentiles led to the formation of fellowship groups and, through that, to the question of what constitutes the unity of the movement.

There is little doubt that the NT canon is essentially a Deutero-Pauline work; its supplementation with the Johannine traditions (with its subsequent baptismal tradition) and several "apostolic" writings took place relatively late. There was practically no "Judean" tradition in the NT canon. If we had to reconstruct the developments of early Christianity by means of this canonical end product, we would be forced to conclude that "Judaizing Jewish Christianity" played, at best, an insignificant role in the history of Christianity and Christian tradition.

But on the contrary, this "Judaizing Jewish Christianity" actually mediated the central theological ideas, without loading on to them more novel ideas about mission and baptism. Being an essentially static group, these "Judaizers" created the worship and liturgical orders (Lord's Supper, prayers) and had initiated theological reflection into the death of Jesus (Passion narrative). Furthermore, this group played an important literary role insofar as it nurtured the sayings tradition that became the primary basis for understanding the teachings of Jesus. Strictly speaking, it was a small and sociologically unimportant group (the "poor" in Gal 2:10) within the rapidly expanding Christian movement; nevertheless it played a critical and decisive role.

Gradually, Christians who were not Jewish had to make a decisive break with the stricter norms of those who were Jewish, eventually relegating Jewish Christianity to the (heretical) fringe. There were logical reasons for this. Evidently restricting the Christian proclamation only to God's elect people Israel came to

be seen as fundamentally incompatible with the freedom inaugurated through Jesus, indeed a freedom that could be found in the very teachings of Jesus that Jewish Christianity had valued and preserved. Thus, limiting the Christian program to the Jews in the name of Jesus had the effect of diluting or annulling the full force of the gospel message and Christian identity. In the long run, the self-imposed limitations of Jewish Christianity had much more influence on the eventual development of Islam than it did Christianity.

CHRISTIANITY IN ASIA MINOR

Asia Minor, the peninsula of the Asian continent bounded by the Mediterranean Sea, the Aegean Sea, and the Black Sea (and today known as Turkey), was an early center of Christianity. The particular character and history of the churches of Asia Minor is considered in this article.

———

A. Introduction

Even though the eastern seaboard of the Mediterranean was the birthplace of Christianity, it was in the region of Asia Minor that this fledging religion of the East experienced growth and maturation. For more than a century (50s–200) this region played host to some of the most significant individuals in the history of nascent Christianity. In addition, Asia Minor served as the land bridge over which the Christian movement passed in its westward expansion as its focus shifted from Syria-Palestine to the imperial capital of Rome. During this period of Asia Minor's apogee in early Christian history, certain unique and irreversible historical events were happening which shook the roots of this new religion. Historical events which ripped the roots of early Christianity from the soil of Judaism include the martyrdom of Peter, James, and Paul; the destruction of Jerusalem and the subsequent diminution of the hegemony of Judaistic Christianity and the Jerusalem church (*pace* Jervell 1984); and the suppression of the Jewish Revolt during Hadrian's reign. This same period also saw the emergence of diverse Christian literary corpora and, as a consequence, a multiplication of theologies and canons. Finally, it was during this time frame that the church became a visible entity to the populace and to Roman administrators and this visibility, in turn, forever changed the State's attitude and behavior toward Christianity.

B. Methods and Sources

1. Methodology. Even though Christian authors provide the greatest number of texts for the study of early Christianity in Asia Minor, these texts are as diverse in occasion, genre, and content as the geography of Asia Minor is in its terrain. Only in recent years have scholars begun to realize the full significance of the fact that all of the documents of the early Christianity are occasional in nature. The necessary consequence of this is that these sources fundamentally defy scholarly attempts to arrange them into homogeneous and well-ordered categories. Complex and often irresolvable issues regarding the dates and authorship of these documents frustrate efforts at exact postulations. In addition, the randomness of the extant corpus of Anatolian texts is so high that this corpus cannot bear the weight of many of the interpretations often foisted upon it by scholars of numerous theological and methodological schools of thought. Methodologies, therefore, which either rely upon anachronistic formulations of later orthodoxy or which project trajectories of evolutionary development in the formation of Christian communities, even by geographical areas, are susceptible to the accusation of subjectivity. Obviously studies of discrete documents or individuals can be quite productive for the reconstruction of various individual facets of Anatolian Christianity. It has been, however, the attempts at a grand scheme or comprehensive synthesis that usually belie the historical evidence and have been, more times than not, guilty of "reconstructing the lion from a single claw."

2. Sources. a. Christian Sources. The majority of the extant primary sources shedding light upon Anatolian Christianity are associated with the names of Paul, John, Peter, Ignatius, and Polycarp. While no scholarly consensus exists regarding the dating, authorship, or occasion of all of the documents associated with these names, most would agree that these documents do shed important light upon Anatolian Christianity, regardless of author. The following table gives, by traditional arrangement, the most prominent texts addressed to individual Christians or Christian communities in Asia Minor.

Paul: Galatians, Colossians, Philemon, Ephesians, 1 and 2 Timothy
Peter: 1 and 2 Peter
John: Gospel of John; 1, 2, and 3 John, Revelation
Ignatius: Ephesians, Magnesians, Trallians, Philadelphians, Smyrnaeans, Polycarp
Polycarp: Martyrdom of Polycarp, Letter to Philippians
Melito of Sardis: Paschal Homily

A corpus of secondary sources related to Asia Minor includes sections of Acts (chaps. 13–14; 16; 19–20) and numerous *fragmenta* of 2d century leaders (conveniently collected in Grant 1946) preserved in Eusebius' *Church History*.

b. Pagan Sources. Unfortunately, there is a dearth of pagan sources for Anatolian Christianity in the early period. The extant sources include the Imperial Rescripts of Trajan, Hadrian, and Aurelius (Coleman-Norton 1966: 1–13). Lucian's accounts of Peregrinus *(Death of Peregrinus)* and Alexander of Abonuteichos explicitly relate to Anatolia (*Alex.* 25; 38), while the comments of Galen (Walzer 1949: 56–

74) and Aelius Aristides (*Orat.* 3.671) probably reflect their respective experiences of Christianity in Asia Minor.

C. Contexts

1. Geography. The term "Asia Minor" *(Mikra Asia)* occurs as early as the 2d century A.D. (Ptolemy *Tetrabiblos* 2.3.17). On occasion the word "Asia" was used as a synonym for Asia Minor in both Greek authors (e.g., Strabo Geog. 2.5.24) and in the New Testament (e.g., Acts 27:2). This region was described in some detail by the ancient authors Aristotle, Strabo and Ptolemy. Modern usage of the term "Asia Minor" usually refers to that peninsula of land bounded on the north by the Black Sea, on the south by the Mediterranean Sea, on the west by the Aegean Sea, and on the east by the upper part of the Euphrates River. This region contained an area of approximately 275,000 square miles, most of which was a central plateau with mountain peaks at its extremities attaining 9000 ft. on the north, 5000 ft. on the east, 10,000 ft. on the south, and 2500 ft. on the west. The diversity between the coastal regions and the extensive interior in regard to topography, geology, climate, and natural resources fostered a long-standing condition of cultural and political heterogeneity of the peninsula. Even the inexorable imperialism of Alexander the Great and the later Roman Caesars could not totally overcome the physical realities of nature and geography. As was the case with all the continents surrounding the Mediterranean Sea, the greatest extent of Roman influence upon Asia Minor was on the edges which touched the Mediterranean itself. Even more than the great highways of antiquity, the sea enhanced the possibility of intercourse between Rome and its various provinces and allies, and thereby promoted cultural homogeneity, understood in a broad sense, in seaboard areas. If the survival of indigenous languages is any indication (*ANRW* 2/29/2: 565–70 see also LANGUAGES [INTRODUCTORY SURVEY]), the farther eastward and toward the interior one traveled in Asia Minor, the less the penetration of Greco-Roman influence would be found (Tarn 1952: 160). David Magie's observation that "the veneer of Hellenism tended to grow thinner in proportion to the distance from the Aegean seaboard or from the great routes which led into the interior" (Magie 1950: 120) holds true likewise for Roman influence in Asia Minor at the period of nascent Christianity, though Roman influence was more pervasive than earlier Greek influence had been.

The following is a listing of the names of the Roman provinces, geographical regions and prominent cities located in this peninsula.

Provinces: Asia, Cappadocia, Cilicia, Galatia, Lycia, Pamphylia, and Bithynia-Pontus

Regions: Caria, Commagene, Ionia, Lycaonia, Lydia, Mysia, Paphlagonia, Phrygia, and Pisidia

Important cities: Alexandria Troas, Amastris, Amisus, Ancyra, Apamea, Attaleia, Byzantium, Caesarea, Comama, Cyzicus, Ephesus, Heraclea, Iconium, Melitene, Miletus, Nicea, Nicomedia, Pergamum, Prusa, Rhodes, Samosata, Selinus, Smyrna, Tarsus, and Tyana

Many of these names are well known to the student of early Christianity. It must be kept in mind that the letter to the Galatians, the Revelation of John, and 1 Peter were explicitly designated as circular letters, thereby increasing the number of Christian sites that can be inferred from early Christian literature. In addition to the primary evidence of these documents, there is also the invaluable geographical material preserved in the accounts and sources incorporated into both the Acts of the Apostles and the *Church History* of Eusebius. The tabulation of Anatolian cities available from combining the evidence of both the histories of Luke and Eusebius on the one hand and the letters of Ignatius and the Revelation on the other hand produces an impressive list of cities. In addition, there were scores of cities whose names were never mentioned in the ancient sources even though one could find Christian communities there (e.g., those referred to in Paul's Letter to the churches of Galatia and Pliny's comment to Trajan that Christians had infected the cities, villages, and farms of Bithynia-Pontus [*Ep.* 10.96]). The following is a list of Anatolian cities of the 1st and 2d centuries where Christian communities were established (Meer and Mohrmann 1958, map no. 5).

Amastris	Iconium	Perge
Ancyra	Ionopolis	Philadelphia

Antioch of Pisidia	Laodicea	Philomelium
Apamea	Lystra	Sardis
Byzantium	Magnesia	Scepsis
Caesarea (Cappadocia)	Miletus	Sinope
Chalcedon	Myra	Smyrna
Colossae	Nicomedia	Tarsus
Derbe	Otrus	Thyatira
Ephesus	Parium	Tralles
Eumenea	Pepuza	Troas
Hierapolis	Pergamum	Tymian
Hieropolis		

2. History. In viewing the history of ancient Anatolia, one must not overlook the clear fact that in the 1st millennium B.C., the indigenous alphabets, languages, and cultures of Asia Minor (e.g., Lydian, Lycian, Carian, Neo-Hittite) were as diverse as in any Mediterranean region. In addition to this fact, one must also reckon with the imposition of various immigrant as well as occupation cultures, the most important of which included the Greek, Celtic, Persian, and Roman. Since each of these left its own indelible mark on the character of the area where it dwelt, no one of these cultures can be ignored in tracing the historical and cultural patterns which formed the backdrop of early Christianity in Asia Minor.

Significant Greek influence in Anatolia began with the colonization of the western seaboard in about 1000 B.C. By the 7th century B.C., the most important Greek cities of western Asia Minor (e.g., Miletus) were already sending Greek colonists to other regions to spread Greek culture (Boardman 1980). The Ionian seaboard nurtured outstanding Greek philosophers and littérateurs in the classical period, presaging a similar zenith of rhetoric and erudition in the Sophistic movement of the 1st and 2d centuries A.D. The city of Troy, immortalized in Greek literature by Homer, brought fame to Anatolia by its location on the northwestern coast. The political and military impact of Greece on Anatolia was no less profound than its cultural influence. Not only were the Greeks responsible for the "liberation" of Asia Minor from a Persian occupation, but the later victories of Alexander the Great were to set in place the political structures which were to foster rapid urbanization and to stabilize the new régime of Hellenism until the arrival of the Romans approximately two centuries later in 133 B.C. Although several indigenous tongues were still in use in both the early (Acts 14) and late Empire, Hellenism provided the area with a lingua franca which served all participants of Anatolian civilization, pagan, Jew, and Christian alike. In addition, the veneration expressed toward the political successors of Alexander the Great was to have a strong influence centuries later upon the Roman ideas of emperor worship. The eventual Roman assimilation of these notions of ruler veneration was to set in motion great forces of conflict between Christianity and devotees of the imperial cult.

The true impact of the imposition of Persian rule from 546 B.C., the capture of Sardis, to the advent of Alexander the Great in the early months of 334 B.C. is debated by scholars (*CAH*^{2} 4:211–33). Some opine that Persian hegemony consisted of "no more than military and administrative control" (H. Metzger 1969), while others have assembled a rather impressive group of archaeological and literary data that suggests Persian influence was neither superficial nor ephemeral (*CHI* 2:292–391; *CHI* 3/1:100–15). The fact that the residual influence of Persian cult and mythology centuries after Alexander's victory over the Persians in Asia Minor should not be discounted is evident in the remains, from extreme east to extreme west respectively, at Nemrud Dagh (Dörner 1975) and in the early imperial Sardian epigraphy regulating worship in the Persian cult of Ahura Mazda (Robert 1975; *NDIEC* 1:21–23).

The Celtic invasion of Asia Minor in the early 3d century B.C. was a major event in the political history of the region. The Celts' domination of the area was severely curtailed, however, when Attalus I of Pergamum (230 B.C.) defeated them. Thereafter their influence was limited primarily to the central

Anatolian region of Galatia. In all probability, this Greek victory over the barbaric Celts provided inspiration decades later for the construction of the magnificent Altar of Zeus at Pergamum in the early 2d century B.C. (Havelock 1981: 192). The eastward expansion of Rome and its ability to consolidate its influence in the east was greatly accelerated by the acquisition of the Pergamene empire in 133 B.C., fully 150 years prior to the advent of Christianity there. The inestimable possession was acquired with little effort at the death of the last king of the Pergamum empire, Attalus III, when he bequeathed his entire nation to the Romans in his will. While this was not by any means Rome's first involvement in Asia Minor, this gift gave the Romans an unquestioned hegemony in the peninsula and a base for further implementation of its manifest imperialism in the East. As is often noted, Rome's unique contribution in the East was its military, legal, and administrative genius, but the spirit and soul of the culture was that of Hellenism. Accordingly, the most important impact of Rome upon Asia Minor was its attempt to administer this culturally and geographically diverse region which was both rich in natural resources and, equally important, served as a strategic buffer between Rome and the ever threatening Parthian Empire to the east. Building upon the efforts of previous Hellenistic urbanization, the emperors established strategically located colonies, e.g., Pisidian Antioch, which were established "primarily for security reasons" (Levick 1967: 187). Consequently, the early generations of Anatolian Christianity transpired in the context of Pax Romana and, historically viewed, relative cultural euphoria (e.g., for Aelius Aristides' praise of Rome see Oliver 1953).

3. Religions. The religious situation of Anatolia was a true microcosm of the entire eastern Mediterranean, with a rich mixture of Greek, Roman, Anatolian, Jewish, Persian, and other Eastern cults represented. Notwithstanding the potential dangers of "parallelomania" (Sandmel 1962; B. Metzger 1955), one may not ignore the analogies and parallels between numerous institutions, values, and formal beliefs of early Christianity and contemporary Anatolian piety. The number of similarities abounds, in part, because nascent Christianity in this region was itself so diverse and, when taken as a whole, possessed a plethora of religious institutions, values, and beliefs. From this multifaceted background to Anatolian Christianity, three components of Anatolian religious life are especially important to highlight, i.e., folk religion, pagan religious associations, and Jewish religion and institutions.

a. Folk Religion. In many ways this term defies precise definition. It connotes an ethos of religious values and beliefs rather than one particular mythology or cult. Moreover, folk religion was not idiosyncratic to any region or to any established social, economic, political, or religious stratum of antiquity. Nevertheless, this folk religion worldview germinated and thrived with special vigor in Asia Minor (*GGR* 2: 578–81). This worldview was frequently designated by ancient writers as *deisidaimonia* (Koets 1929; Theophr. *Char.;* Plut. *De Superst.;* Meijer 1981: 259–62; *GGR* 2: 102–120; Hadas 1972: 182–211). *Deisidaimonia* was a superstitious, even magical, approach to the gods which influenced every religion and cult in the Greco-Roman world, and had had its detractors since Plato's criticism of Orphic evangelists of his own day (*Resp.* 364B–365A). The hallmarks of this religious outlook, particularly in Eastern cults, were its emphases upon the "fear of God" and upon achieving superior religiosity through supererogative rituals and ascetic practices (*Superst.* 166A–B; 168D; 171B; *RAC* 1: 753–58), sometimes in conjunction with long-established shrines, and sometimes not. Spiritual tranquility was predicated upon such things as public confession of sins *(hamartia)* committed against the deity (*Superst.* 168D, 171B; Pettazzoni 1937; Steinleitner 1913; Hermann 1986). Terms such as "ransom" and "sinner" were not unknown in this context (*NDIEC* 1:32–33; 2:90, 100f; 3:20–31) and immersion rites in water abounded (*Superst.* 166A, *baptismous*). Sins often consisted of violating taboos regarding what one ate and drank (*Superst.* 168D; 170D), in lying to the deity (Malay 1988: 150; MacMullen 1981: 58), in sexual immorality (Petzl 1988), or in the failure to worship properly on a holy day (*Superst.* 169D–E). Inordinate, some would say pathological, interest in the performance of punctilious acts of asceticism to prepare one for a mystical experience of the deity were typical (Behr 1968; e.g., glossolalia *Superst.* 166B). The superstitious devotee was especially desirous of prophetic oracles and their correct interpretation. *Deisidaimonia* was also characterized by a concern about the spirit world and attacks from spirit beings and the heavenly hosts (*Superst.* 168C). Divine retribution, threats of eternal punishment

(*Superst.* 167A), and punitive miracles from particular gods and goddesses were of the gravest concern to this religious type of personality. Individuals, and their number was legion, caught in the web of *deisidaimonia* tended to be ecumenical in outlook. They were driven by a pragmatist's approach to religion and consequently imbibed the strangest concoctions of syncretism.

b. Religious Associations (Poland 1909: 173–270; 499–513). Anatolia during the Roman era was replete with formal and informal guilds and associations *(synodos, thiasos, collegium).* Typical were the labor guilds which provided comradeship in the midst of the harsh realities of everyday life and offered some social services for its members (Dill 1964: 251–86; Wilken 1971: 279–88; Meeks 1983: 77–80). Beyond the labor unions, there were the religious associations which focused their attention more narrowly on religious ceremonies. They often existed under the tutelage of a particular god or goddess, perhaps related to a common trade (e.g., the Dionysiac guild of performers and entertainers), would use their particular deity as one avenue to the world of Greco-Roman religious life, experiences, and benefits (e.g., safety, morality, answered prayers, protection from Fate). Of special interest in this regard is a religious association that existed in the city of Philadelphia in the Roman province of Asia. The epigraphic testimony of this association is especially didactic in demonstrating the existence of pagan associations which placed an emphasis upon morality. This association was created and regulated by the divinely revealed statutes of Zeus. It met in a patron's house, was open in its membership to both male and female, free and slave, and its members committed themselves by oath to eschew acts of sexual immorality, murder, abortion, etc. (Horsley and Barton 1981). On occasion, these private associations might be viewed as competitors to the longer established public temples where, in some cases, the same deity was worshiped (cf. Serapis on Delos, *SIG* no. 664; cf. Pl. *Leg.* 909e). Like the large temples, these private pagan associations would often have officers such as prophet (ess), deacon (ess), herald, and preacher of the divine story. These *collegia* often maintained a common treasury and held regular gatherings for worship and communal meals. It is not to be overlooked that in many instances a private religious association would assemble in the house *(oikos)* of one of its members. Consequently, matters such as the Greco-Roman concept(s) of household religion, personal relationships in the family, social functions of homes, etc. (Malherbe 1983) become relevant for the background to the ubiquitous institution of religious "house assemblies" (Klauck 1981).

c. Jewish Religion and Institutions. Recent years have witnessed new and vigorous discussion regarding Judaism and its relationship to Christianity in the Roman era. The points under consideration include the nature and activity of Jewish Christianity, the attraction to synagogues of gentiles who remained uncircumcised, and the existence and extent of pagan anti-Semitism. All of these bear directly upon one's view of Anatolian Christianity since these areas relate directly to issues such as continuing gentile attraction to Jewish Christianity, Jewish-Christian heterodoxy (Klijn and Reinink 1973 for patristic references; Daniélou 1964), Christian evangelism among synagogues, gentile churches drifting from their Jewish roots because of anti-Semitism, and Jewish collaboration with pagans in the harassment of Christians (Frend 1965).

A storm center of current debate centers on the meanings and use of the Greek words *theosebes* and *sebomenoi* (and *phoboumenoi*) and what, if anything, these phrases depict about gentile sympathizers toward Judaism. A. T. Kraabel is a proponent of a new view that is characterized by questioning the very existence of the ancient gentile group known as "God-fearers" (Kraabel 1981). The traditional view maintained that "God-fearers" were gentiles who were not yet proselytes, i.e., circumcised, to Judaism, but who were very sympathetic to many of the beliefs of ancient Judaism. This group, it was said, provided the pool from which early Christianity drew many of its synagogue converts. It is Kraabel's conclusion that such a group was a fiction created by the author of the Acts of the Apostles (MacLennan and Kraabel 1986). This effort to discount both the Lukan view as well as the view traditionally supported by many ancient historians experienced a setback with the recent discovery of an inscription at the Carian site of Aphrodisias (Reynolds and Tannenbaum 1987, esp. p. 47 and text B *l.* 34 *theosebeīs*) that seems to substantiate the more traditional reading of the Greco-Roman literature and archaeological data regarding the existence and vitality of the "God-fearers." Even though this new perspective of Kraabel's is not

likely to win the day in completely changing the mind of the majority of those in the scholarly community, it has correctly demonstrated that the traditional view has been naïve at times in both its philological analysis of the terms *theosebes* and *sebomenoi* (and *phoboumenoi*) as well as its monolithic reconstruction of ancient Judaism and its "missiology" (cf. Cohen 1987: 419). Regardless of the precise labels used to refer to these adherents, most scholars will probably continue to agree that the "evidence shows beyond reasonable doubt that Judaism in the Roman Diaspora did win adherents who stopped short of circumcision" (Collins 1985: 183–84; Cohen 1987: 419).

Another important topic that has emerged in recent scholarship relates to the topic of anti-Semitism in antiquity. John Gager (1983), according to whom anti-Semitism was not primarily a pre-Christian phenomenon as has been thought by most scholars, argues that the literary evidence shows that virtually all the pogroms against ancient Jews were isolated and should not be used as a foundation upon which to formulate a widespread anti-Semitism. His conclusion is that it was Christianity, and not paganism, that initiated thoroughgoing anti-Semitism in antiquity. Once again, this attempt to recast the numerous historical sources in a totally new light has not appeared cogent to many scholars (Goldenberg 1985: 335–36). Gager's work has correctly highlighted some of the popular misconceptions regarding the nature and extent of anti-Semitism in the Greco-Roman world, but it has not been able to explain away the fact that the Jewish apologists of antiquity themselves, prior to the advent and dissemination of Christianity, surely thought that they were the object of widespread, though not continual or universal, discrimination (e.g., Josephus *Ant* 14.213–44ff).

The salient facts of Anatolian Judaism (Appelbaum 1974; Tcherikover 1970; Kraabel 1968 must be used carefully since it encompasses evidence two and three centuries later than the period under consideration in this article) for the period of the early empire include the following: (1) what was true of Anatolian Judaism may not have been true of Judaism in its environment at Rome or at Alexandria; (2) the cultural origins of Anatolian Judaism were largely Babylonian and not Palestinian; therefore, one must not read it necessarily in light of ostensibly conservative Palestinian Judaism; for example, certain Anatolian Jewish women served as head of the synagogue (Smyrna *CIJ* 741 = Brooten 1982: 5); (3) its commitment to send the temple tax to Jerusalem evidences a recognition of the hegemony of the Jerusalem cultus; (4) its legal status as an ethnic and religious *collegium* was recognized and protected by the Romans; (5) some Anatolian Jews were participants in urban civic and political institutions, thereby providing evidence of partial assimilation to Greco-Roman culture (Kraabel 1968; Ramsay 1895–97: 621–76); and (6) though certain gentiles were sympathizers and adherents (for a variety of reasons) to Anatolian Judaism, there were, nevertheless, underlying currents of anti-Semitic prejudices in some quarters.

D. General Characteristics of Anatolian Christianity

1. Heterogeneity. Although Paul has often been viewed as the founder of the Christian mission outside Palestine, that could hardly be the case. Neither Acts nor the Pauline Corpus even suggests such. On the contrary, the Pentecost discourse (Acts 2:9–10) states that Jewish pilgrims from Asia Minor were among the first to accept Jesus as the Christ. Moreover, the Acts of the Apostles makes it abundantly clear that Paul was not the first to bring the Gospel to sites such as Ephesus, Corinth, or Rome. The realization that Paul was neither the first nor necessarily the premiere missionary in Asia Minor also affords optional explanations for the existence of "non-Pauline" churches in Asia Minor (e.g., those of Revelation and 1 Peter) without resorting to "early Catholic" theories, which are essentially anachronistic and Protestant (Murray 1982: 197). From the outset the Christian communities of Asia Minor were filled with converts whose beliefs and practices bore the almost indelible imprint of their pre-Christian worldview. One cannot truly understand the genesis of the heterogeneity of early Anatolian Christianity without first recognizing the steadfast influence of the cultural heritage of each convert. This influx of religious variety led the Christian movement, in a quantum step, into a world of new challenges. To be sure, this step was not synchronized throughout Asia Minor, nor was it always a step in the same direction. Some congregations and regions took this step later than others. It was, nevertheless, because of both the

frequency and the magnitude of the new challenges that Anatolian Christianity encountered that in the decades of the 50s to 200 this region was without peer in its historic significance.

2. Households. The household was a basic social context for the early Christian communities. This is seen in references to the Anatolian assemblies occurring in the homes of Aquila and Prisca (1 Cor 16:19), Nympha (Col 4:15), and Philemon (Philemon 2). By extension, the entire Christian community was embraced in a metaphorical sense in the phrases "household of faith" (Gal 6:10) and "members of the household of God" (Eph 2:19; 1 Pet 4:17). The *Haustafeln* ethical paradigm (in general Balch 1981; Col 3:18–4:1; Eph 5:21–6:9; 1 Pet 2:18–3:7) points to the same domestic social realities. As a place of Christian instruction the home had to be protected from serving as a channel for the propagation of heterodox teaching (2 John 10; 2 Tim 3:6; Malherbe 1977). In the same line of thought, the properly ruled "household of God" imagery of 1 Timothy is clearly employed as a defensive strategy against unsound doctrine (1 Tim 3:14–15) and is constructed as a metaphor on the basis of the Greco-Roman household (cf. 1 Tim 3:4–5, 12; 5:14; 2 Tim 2:20). The significance of the household stands out in the references to them in the later Ignatian corpus. Among the Smyrnaeans, Ignatius "greets the households of my brethren with their wives and children" (13:1) as well as the "household of Tavia [a woman]" (13:2). In his letter to the bishop of Smyrna (*Polyc.* 8:2), Ignatius greets "the wife of Epitropus with her whole household and her children." Interestingly, the phrase "corrupters of houses" is a designation for false teachers (*Eph.* 16:1), thereby highlighting the household as an important locus for Christian teaching.

3. Heresy. One's knowledge of Anatolian Christianity is primarily dependent on contemporary sources that were written by leaders engaged in battles to correct aberrant views and/or practices. While these early contemporaneous sources are not without difficulties, they are far superior to later heresiological summaries by writers such as Eusebius (Lawlor and Oulton 1954, vol. 2; Grant 1980; Barnes 1981). When one focuses upon the occasion of these documents themselves, it becomes immediately clear that any history of Anatolian Christianity must be conducted in light of the endemic controversies there. The standard works of A. Hilgenfeld (1884), W. Bauer (1934; ET 1971), and H. E. W. Turner (1954) represent significant investigation into ancient issues of orthodoxy and heterodoxy, including those issues as they were manifest in Anatolia. In this century Bauer in particular has set the tone for discussion of heresy and heresiology in Asia Minor. His goals, methods, and general characterizations of the evidence are still attractive to many scholars (e.g., Koester 1971; in general, Strecker and Kraft 1971: 286–316), but clearly not to all (Turner 1954; Hawkin 1976). Unfortunately, the infrastructure of much of Bauer's work belongs to a scholarship of an earlier day, particularly reflecting the presuppositions and schematizations of German Protestant theology of the late 19th and early 20th century. A chief concern of Bauer was to overthrow the naive view of the evolution of the Christian mission and history which affirmed that the "development takes place in the following sequence: unbelief; right belief, wrong belief" (Bauer 1971: xxiii). Most New Testament scholars today would agree that Bauer's conviction at this point could be supported easily by even an elementary reading of the New Testament. A misfortune of Bauer's work was that in order to reach his goal he forced many texts into Procrusteans beds, a procedure which resulted at times in a distorted and truncated reconstruction of Anatolian Christianity (Norris 1982: 365–77 and 1976: 23–44; Robinson 1988). One of the legacies of Bauer's work is the current sympathy, at times apologetic zeal, toward early Christian heterodoxy. Some scholars appear to be "enamored of ancient heresies" (Henry 1982), and others believe that generally the orthodox characterizations of the opponents were, in fact, often only caricatures (Wisse 1971; Karris 1973; Grant 1981).

When examining the matter of orthodoxy and heterodoxy in Anatolian Christianity, it is extremely important to include in one's taxonomy of the "orthodoxy-heresy" phenomenon the matter of whether attacks against heterodoxy by soon-to-be "canonical" writers were primarily defensive or offensive. The epistle to the Galatians is instructive in this point. It was patently Paul's opponents who were the first to invoke the concept of "orthodoxy" against fellow believers. The only plausible explanation for the circumcision of Paul's converts after his departure was that they were convinced by "those from James" that their standing with God and their reception of Abraham's blessings were in doubt because they were failing to carry out the scriptural requirements of circumcision, feast days, Sabbaths, etc. (4:10). It was

Paul's opponents who introduced the concept of the imprecation (3:10–14) upon those who disagreed with their own Jerusalem standard of orthodoxy. Like his opponents, Paul held to orthodox convictions, the truth of the Gospel (2:14), as he called it, but thought that orthodoxy excluded, rather than included, the requirements of circumcision, feast days, Sabbaths, etc., for gentile believers. Another example of a defensive concern for orthodoxy is found in Colossians. The internal evidence for this polemical milieu includes the following:

1. The conditionality of salvation: "*If* you continue in the faith … *not shifting* from the hope of the gospel which you heard" (1:23).
2. The cluster of pejorative terms used to depict the slogans and views of the heterodox teachers:
   a. Beguiling speech (2:4).
   b. Philosophy and empty deceit (2:8).
   c. Human tradition not according to Christ (2:8).
   d. Elemental spirits of the universe (2:8, 20).
3. Statements of concern.
   a. Warning and teaching every man (1:28).
   b. I say this so that no one may delude you (2:4).
   c. "See to it that no one makes a prey of you" (2:8).
   d. Why do you live as if you still belonged to the world (2:20)?

It is clear that the false teachers were demanding submission to ascetic dietary rules (2:20), viewed by the author as a worldly and carnal demand (2:20, 23). Furthermore, they were making religious judgments against the nonconformists who did not submit to "holy days" religiosity (2:16) and they were denigrating, if not negating, the spiritual status of their nonconformist fellow Christians (2:18). Based upon the historical reconstruction made possible through the details of 2:1–23, it appears that the author's point of departure for attacking the Colossian opponents was a defensive one in response to the opponents' prior offensive initiative when they declared that their own spiritual understanding and devotional practices were the standards for orthodoxy.

A similar pattern of the use of orthodoxy in self-defense is apparent in sections of the Pastorals which either combat asceticism or emphasize confidence in one's salvation in the light of detractors (2 Tim 2:18–19). Similarly in the Johannine epistles (Bogart 1977; Brown 1979), the attacks upon those who both voiced perfectionistic slogans and advanced aberrant Christology were constructed out of a sense of self-defense. It would be a distortion to suppose that the gnostics of the 2d century were only a group of unassuming intellectuals attacked preemptively by orthodox "witch hunters." One ought not forget that even in the 2d century and later, the soon-to-be "orthodox church" was accused by various sectarian and gnostic Christians as being itself heretical (Koschorke 1978). In fact, it may well have been the case that the orthodox canon (Campenhausen 1972; B. Metzger 1987), the ultimate weapon of the Great Church, was in part compiled, particularly in Asia Minor, out of self-defense against Marcion, Montanus, and Gnostic leaders. A frequent topic for research into Anatolian heresiology is the issue of church government, especially the bishopric, and its duties to oppose heresy. While the household supplied the social and liturgical framework for Christian congregations and some of the church's vocabulary for its self-identity, the titles for the congregations' rulers seemed to have originated in other spheres. The information, admittedly sparse, points to the existence of various religious offices in the Christian communities of Asia Minor, some of which may have been modeled, at least in name, on synagogue practice, or on existing urban models of government (Hatch 1882), or upon organizational structures present in Greco-Roman *collegia* (Meeks 1983: 80). Moving beyond the issue of nomenclature to the issue of the matrix of the increasing authority and regimentation in the bishopric, there is renewed effort to locate this development in the social structures of the household (Schöllgen 1988). Since Philippians (1:1) testifies to the early presence of bishops *(episkopos)* and deacons within Pauline communities, there are no grounds for an *a priori* rejection of the Lukan reference to the appointment of elders *(presbuteros)* in the churches of central Asia Minor (Acts 14:23). At Acts 20:17 "The same persons who are here called *presbuteroi* are described in vs. 28 as *episkopoi*" (Lake and Cadbury 1932: 259) and later (20:28) are

associated with the ministry of shepherding *(poimaino).* The charismatic nature of this ruling ministry is attested in the Lukan account (Acts 20:28) as well as in Eph 4:11. In other Anatolian literature a synonymous use of the terms "elder" and "shepherd" is seen in 1 Pet 5:1–5, while *presbuteroi* and *episkopoi* are tightly knit in 1 Timothy's description of the rulers of the community (1 Tim 3:1–7; 5:17–22). J. B. Lightfoot's argument that the terms "elder" and "bishop" were used "in the language of the New Testament" to refer to "the same officer in the Church" is still cogent (Lightfoot 1913: 95). The Apocalypse of John is not particularly informative in this matter. Since the term "elder" in Revelation is used regularly in the idiom "twenty-four elders" (e.g., 4:4; 5:8; 11:16; 19:4), it is not likely that this use mirrors any particular practice within Anatolian Christian communities. With the Ignatian correspondence the use of the terms *presbuteroi* and *episkopoi* undergoes transformation. By the time of the journey of Ignatius from Antioch via Asia Minor to Rome in 110, each church of Asia Minor, at least those addressed by Ignatius, was governed by a single bishop (e.g., *Magn.* 6:1). In the Ignatian hierarchy a council of presbyters served under the single bishop, and below the presbyters served the deacons. In more than one letter Ignatius sets forth a church polity wherein "The bishops are regularly compared with God or Christ" and "The presbyters or elders are regularly compared with the apostles" (Schoedel *Ignatius* Hermeneia, 112).

Scholars have not agreed on how the office of the bishop evolved in relationship to the control of heterodoxy. That is, was the development of the monarchical episcopacy an inexorable process (Hatch 1882: 83–111) or was it a regional ad hoc response to acute heresy? The texts of Acts are extremely difficult to interpret since that work is notoriously silent in general regarding even the existence of heresy in the early communities of faith. There are only two texts in Acts that mention elders in Asia Minor, namely, 14:23 and 20:17–35. The first text is totally silent on the anticipated function of the eldership, but the second text reveals clearly that the bishops are to oppose lupine heretics who will attack the flock. Even the eldership itself will engender errorists who will teach perverse doctrines. Ephesians also portrays the pastor in a role which promotes doctrinal stability in the congregation (Eph 4:11–14). A somewhat different picture is seen in the treatment of the bishops in 1 Timothy. While that text gives numerous qualities for those in the bishopric, there is no mention of their role as preservers of the faith and promoters of sound doctrine (cf. Tit 1:9), though some have suggested that heresy in the Ephesian eldership was the occasion for the writing of 1 Timothy (Fee 1984). In any case, it is Timothy who is given the duty of constraining false teachings (1 Tim 1:3–7). If the rather unique use of the term "elder" in 2 John 1 and 3 John 1 is viewed in light of its milieu of opposing antichrists, then the author may have chosen the word "elder" intentionally because of its authoritative connotations (Smalley *1, 2, 3 John* WBC, 316–18). When turning to Ignatius, his voice is clarion in the matter of the bishop's unique role in achieving unity and attacking heterodoxy (e.g., *Eph* 3:2–6:2; *Mag* 3:1–2, 6:1–2, 7:1–2, 13:1–2; *Trall.* 2:1–3; *Phil* 3:1–3; *Poly* 6:1–2). The implication and impact of Ignatius' belief regarding the singular role of the bishop is preserved in the following thoughts: "All of you are to follow the bishop as Jesus Christ follows the Father … Apart from the bishop no one is to do anything pertaining to the church. A valid Eucharist is to be defined as one celebrated by the bishop. … It is not right either to baptize or to celebrate the agape apart from the bishop; but whatever he approves is also pleasing to God, so that everything you do may be secure and valid … It is good to know God and the bishop. He who honors the bishop has been honored by God; he who does anything without the bishop's knowledge worships the devil" (*Smyr.* 8:1–9:1, trans. by Grant 1966, *ad loc.*). These pronouncements mirror Ignatius' strategy of maintaining the churches' orthodoxy by comprehensively controlling its liturgy and activities through an orthodox episcopacy (Wiles 1982). Though not a shepherding office, the ministry of deacons is also documented in various Christian communities in Asia Minor. Deacons (1 Tim 3:8–10, 12–13) as well as deaconesses (1 Tim 3:11; Pliny *Ep.* 10.96) are mentioned.

E. Major Issues Facing Anatolian Christianity

The collection of Anatolian Christian sources reveal at least four salient and recurring issues of conflict. These are: (1) folk religion and superstition, (2) Jewish issues, (3) Christian Gnosticism, and (4) persecution and harassment.

1. Folk Religion and Superstition. The general theme of the epistle to Colossae has been generally summarized as the "all sufficiency of Christ." Although most would fundamentally agree with this summary, the historical background to the occasion of Colossians remains hotly disputed. One scholar has championed the view that there were no false teachers (Hooker 1973), but others, the vast majority, have argued that the opponents were influenced either by the religious outlook of Essenes, or gnostics, or devotees of mystery religions, or Jewish Christian mysticism (O'Brien *Colossians, Philemon* WBC, xxx–xxxviii).

Although the language of Colossians is not as vituperative as Galatians, the letter is clearly concerned to correct heterodoxy and heteropraxy at Colossae, which the author had probably heard about from Epaphras (2:8). The Colossian opponents surely included Christians. It is doubtful that they would have understood and granted Paul's working assumption that their approach to spiritual growth and attainment to the fullness of God encroached upon an orthodox christology. Although the Colossian heresy manifested itself partially in OT acts of piety (2:16), it was clearly not the same cluster of issues which Paul attacked in Romans or Galatians or which Luke depicted in Acts 15. Colossians lacks all of the lexicographic and rhetorical resources necessary to carry out attacks against Judaizers. It lacks, for example, both the usual diatribe and numerous terms such as Law, commandment, covenant, Abraham, Moses, righteousness, to justify, and Israel. Moreover, certain aspects of the opponents' practices and theology were not rooted in Jewish Scripture or in distinctive Jewish practices (2:18). Even the veneration of angels need not be Jewish since it was a part of pagan Anatolian piety in the Roman era (Sokolowski 1960; Sheppard 1980–81). The foundational worldview that animated the ritual and ascetic approach of the Christian heresy at Colossae was neither classic Gnosticism nor the stereotypical Jerusalem Judaizers, but rather *deisidaimonia.* The outline of the opponents in Colossians fits perfectly Plutarch's description of superstition, with its attentiveness to ways to achieve piety and superior religiosity through channels of prescribed rituals, ascetic practices, and divine revelations. It was this punctilious ceremonial approach to spiritual attainment, to purification from sins, to divine wisdom, to revealed knowledge, and to the experience of the fullness of deity which had attacked the Pauline view of the gospel. *Deisidaimonia* could not tolerate the *all sufficiency* of God's work through Christ as affirmed by Paul.

The fight against superstitious asceticism was not limited in Asia Minor to the evidence of Colossians. The Pastoral letters indicate the presence of related issues in the churches where Timothy worked (1 Tim 1:3). In particular, 1 Tim 4:1–10 highlight three areas of asceticism about which Timothy should be concerned. These are: (1) prohibition of marriage and sexual relations in it, (2) dietary asceticism, and (3) ascetic mistreatment of the body under the guise of "training" (cf. Epictetus, *Diss.* 3.12). The first two issues are condemned outright as being demonic in origin, and caution is expressed concerning the third. All three of these approaches to spirituality were evident in the superstition of Greco-Roman Anatolia. An Anatolian Christian leader of the 2d century, noted for his mercurial piety, was Peregrinus Proteus (Lucian *Peregr.*) In light of his abiding interest in piety (some would say notoriety) through asceticism, punishment of the body by flagellation, and Cynic self-denial, it is significant that Proteus, at one time in his life, felt at home among and was a hero to the Christians of Asia Minor. The attitudes and demeanor that served as the common denominator throughout his public life, irrespective of his religious affiliation, were his total commitment to departure from the status quo,his desire for imprisonment, and his demonstration of his indifference to his own physical comforts. His life ended with a suicidal leap onto a pyre shortly following the Olympic Games. Peregrinus' attraction for suicide was not without parallel. Anatolian Christianity of the 2d century was itself involved in the debate over the virtue of a form of suicide, namely, voluntary martyrdom. That a Christian theology of martyrdom could have been influenced by pagan *deisidaimonia* is not beyond probability. Since the veneration of the relics of Christian martyrs began quite early in Asia Minor (*Martyr. Pol.* 18.3) and was very widespread there, this aspect of Christian martyrdom may reflect pre-Christian concepts of superstition and hero veneration (modern discussion given by Baumeister, *RAC* 14:102–35). The martyrdom of Polycarp, bishop of Smyrna, has been investigated in regard to the question of whether his death was voluntary or not (Tabbernee 1985). In the account of Polycarp's death (*Martyr. Pol.* 4), there is an interesting reference to

the fact that some Christians, though later changing their minds, pursued martyrdom "of their own free will." The particular group mentioned was from Phrygia. For the author of the *Martyr. Pol.* to mention that "we do not praise those who surrender themselves [for martyrdom], since the Gospel does not teach us this," this question was surely already a matter of theological reflection at the time. Perhaps the physician Galen of Pergamum (ca. 125–200) had ascetic Christians from Asia Minor in mind when he made his remarks about Christians having contempt for death and exercising great self-control in matters of food and drink. The late 2d century (ca. 170, Barnes 1970) Anatolian schismatics known as Montanists (after their founder Montanus) or Cataphrygians (after their Phrygian provenance) have been a constant enigma to modern historians (Klawiter 1975). Consequently, many attempts have been made to locate the religiohistorical matrix of this Anatolian Christian movement. Scholars have sought to discover whether its origins and theology were rooted in Anatolian, specifically Phrygian, pagan cults. Although some scholars continue to look for partial Phrygian influence (Freeman 1950; Daunton-Fear 1982), most have abandoned this perspective based upon the earlier conclusions of Schepelern (1929). Some have seen Montanism as an antagonist to Gnosticism, while others (Froehlich 1973) have viewed it as quite similar to Gnosticism. A Jewish or Jewish-Christian matrix for this movement has also been advocated (Schwegler 1841; Ford 1966). Even though this schism endured several centuries (the most complete collection is that of de Labriolle [1913]; the best critically evaluated and arranged edition is Heine [1989]), it is its first generation that pertains distinctively to an Anatolian situation (Aland 1955). When dealing with Anatolia, it is crucial not to confuse the mutation of Montanism in Rome (Heine 1987–88: 11–16) or its appearance in Tertullian (Powell 1975) with the first generation of 2d century Montanists (Grant 1946: 94–108) who were Anatolian and whose history and beliefs are best reconstructed from quotations and *testimonia* preserved in Eusebius (*Hist. Eccl.* 5.16.1–5.19.4) and Epiphanius (*Haer.* 48.1–13). The so-called "Christians for Christians" inscriptions (Gibson 1978) from Anatolia are both later than the scope of this study and very probably "there is no argument in favour of a Montanist interpretation" (Pleket 1980: 198) of these epigraphical documents. Even though any conclusion about the origins, practices, and beliefs of Montanism ought to be stated with caution, it is necessary to point out that many of the traits and theological convictions that separated later Montanism from the Great Church (e.g., penchant for martyrdom, eschatology, emphasis upon the Paraclete) cannot be reliably documented from the sparse records of 2d-century Phrygian Montanism. What does seem to characterize the early Anatolian Montanists (Heine 1987–88) was their predilection for uncontrolled and ecstatic prophecies and oracles ("abnormal ecstasy, insomuch that he became frenzied and began to babble and utter strange sounds," anonymous in Euseb. *Hist. Eccl.* 5.16.7). The orthodox writers of the time had no problem with prophecy itself, just its misuse characterized by techniques of pagan oracles and prophecy. Another manifestation of the falseness of the prophecies of Montanus was his practice of engaging in this spiritual gift in exchange for remuneration. Finally, the orthodox church attacked the Montanists because they *mandated* spiritual ascetic disciplines ("Montanus taught dissolutions of marriages" … and "laid down laws on fasting," Apollonius in *Hist. Eccl.* 5.18.2) rather than allowing or suggesting them. In light of these traits of Anatolian Montanism, it seems that *deisidaimonia* (whether mediated through Jewish, Christian, or pagan media) offers a plausible matrix for the emphases of Montanus and his followers. If the emphases of Montanus (i.e., frenzied oracles, rigid asceticism, and paid thaumaturgy) had been recounted by the pagan authors Juvenal, Lucian, or Plutarch rather than Eusebius, they would have been clearly labeled as superstition and *deisidaimonia* rather than false doctrine or heterodoxy. Modern authors have also noted the similarities (Klawiter 1975: 130–55).

Various documents of Anatolian Christianity reveal a seemingly widespread problem among Christian communities with another component of superstition, namely, magic and the occult. The condemnation of this quintessential dimension of folk religion is evident in the list of the works of the flesh given to the numerous (Gal 1:2) Christian communities in central Asia Minor (Gal 5:20) when Paul mentions *pharmakeia.* Turning to other regions of Asia Minor, the oracles of judgment found with the Revelation of John contain several references to the divine wrath awaiting those who work magic (*pharmakeia* and cognates, e.g., 9:21, 18:23, 21:8, 22:15). The city of Ephesus provides a clear example of a society (Acts

19) where pagan magic had penetrated into Christian faith and practice. It is significant that the generic name for the collection of magical spells and incantations in the Roman period was Ephesian Letters *(Ephesia grammata).* The Pastoral epistles reflect a similar interest in condemning the practice of magic by Christians. Since the names "James" and "Jambres" were associated in Jewish tradition with the magicians who opposed Moses (Exod 7:11), it is highly probable that they were used in 2 Tim 3:8 as a prototypical opponents in order to combat magical practices associated with heterodox teachers. This interpretation is supported by the occurrence of the Greek term *goes* (lit. magician) in the same context (2 Tim 3:13). Acts 19:11–20, esp. 19:18, depicts the strong grip that folk religion had on many believers there, even influencing the interpretation of the Pauline miracles (19:11–12). Moreover, it is noteworthy that the Ignatian collection of letters uses the term *mageia* (magic) only once, and that in his letter to the Ephesians (19:3, Christ destroyed all magic). An indication of the continuing struggle against the influence of *deisidaimonia* among the Christian communities of Anatolia is reflected in the content of the two mid-4th century Anatolian Councils of Gangra and of Laodicea (Hefele 1876). Both of these attest the ongoing belief among Anatolian Christians in ascetic spirituality achieved through dietary and sexual deprivation.

2. Jewish Issues. There is an increasing awareness of the social and theological diversity that existed among Greco-Roman Jews in general and Anatolian Jews in particular (cf. Kraabel 1968; *HJP²* 3/1). Judaism did not, even in Palestine, possess only one self-definition (Sanders et al. 1981; Hengel 1974). In all probability the first Christians in Asia Minor lived, worshiped, and studied Torah in the context of Anatolian synagogue congregations. In the case of Paul's efforts as an *apostolos,* his foremost energy was spent in fulfilling an Isaianic missiology that led him to gentiles through restored Israelites (= "converted" Jews). This is the only plausible explanation for the habitual Pauline modus operandi best captured in the phrase "to the Jew first" (Rom 1:16, 2:9–10; 1 Cor 9:20; Acts 17:2). In line with this outlook, there was the conviction that the Israel of God consisted of those who were, by faith, heirs of Abraham, irrespective of their race (Gal 6:16). Regarding the synagogue attitude toward circumcision, which was the essence of the problem among churches in central Anatolia in the mid-1st century, there was no standard practice. The fact that as a Jewish boy Timothy had not been circumcised (Acts 16:1) provides an Anatolian example of a fact already known from Hellenistic Jewish authors, namely, that the issue of the requirement of circumcision for membership in Israel, both for Jews and proselytes, was unsettled among 1st-century Jews. Evidence of diversity in other matters is seen in the coexistence of a Samaritan/Gerizim synagogue and a Jewish/Jerusalem synagogue on the nearby island of Delos in the Hellenistic period (White 1987). It is quite natural to assume that this ubiquitous Jewish theological diversity had an appreciable impact on Christian believers both before and after the major rift between the church and synagogue. For example, this type of Jewish diversity regarding the necessity of circumcision provides a significant context for early Christian struggles with the same issue (e.g., Galatians). It is quite evident that the theology of Anatolian Judaism contributed to the theology of Anatolian Christianity, its offspring. Even after the Jewish faith had reluctantly given birth to the church, the church's umbilical cord to Judaism was never entirely severed, with the possible exception of the Marcionite churches. The most obvious example of this would be in the heavy dependence upon the Jewish Scriptures (e.g., Acts' depiction of the Pauline sermons in Asia Minor, Galatians, Ephesians, 1 and 2 Timothy, Revelation, 1 Peter, Ignatius of Antioch, Justin's *Dialogue with Trypho*). It is equally important to observe the reverse side of this relationship, namely, that many of the schisms, aberrations, and heresies occurring within Anatolian Christianity can be traced to the abiding influence of Jewish faith and practice, especially among gentile converts. The list of Christian authors who deal with this issue of Jewish influence and competition is impressive and reflects the strength of the attraction that Jewish ceremonies and faith had for many gentile converts. The internal debate with stereotypical Judaising Christians in Asia Minor is well known and well documented in the texts of Galatians and Acts 15. The epistle to the Colossians explicitly labels as aberrant the requirement of Sabbath observance by the Christian community there.

1 and 2 Timothy, however, are not as significant in this regard as is often assumed. It is routine for scholars to point out that the epistles of 1 and 2 Timothy contain censure against Jewish intrusions into

the Christian community in Ephesus by its reference to those who "want to be teachers of the law, but do not know what they are talking about" (1 Tim 1:7). However, this is not *necessarily* the case. When all the characteristics of the opposition to Paul's gospel are taken from all three Pastoral Letters and are put into one lump, "the effect is to rob each letter of its distinctiveness. Specific and difficult texts are replaced by an easy generalization" (Johnson 1987: 8). Unless one subscribes to a theory of synoptic harmonization among the Pastorals, and thereby harmonizes 1 and 2 Timothy with Titus, even though they are addressed to different geographical regions (Ephesus and the island of Crete), then it is not a foregone conclusion that "teachers of the law" (1 Tim 1:7) should be equated with "those of the circumcision" (Tit 1:10). In fact, 1 Tim 1:8–11 makes it clear that the author's use of the term "law" points to an almost generic moral meaning of the term. Furthermore, even though the genealogies of 1 Tim 1:4 *could* be Jewish, they need not be since the use of genealogies was widespread in antiquity (*RAC* 9: 1145–1268).

Turning to the Johannine materials, it is usually acknowledged that there is cogent evidence for locating the origin of the gospel of John in Asia Minor, at least in its final form (*RGG*^{3} 3:849; Martin 1975: 282; Robert and Feuillet 1965: 648). It is likewise clear that the fourth gospel reflects, in part, the church-synagogue debate of the late 1st century (Pancaro 1975). This debate is reflected in the gospel's redaction of Jesus' frequent statements regarding the Jews (in the third person, passim) and in the use of the phrase "your Law" and "their Law" (8:17; 10:34; 15:25). The Revelation of John also mirrors the fierce competition between the churches and synagogues of western Asia Minor. When John denounces the Jewish synagogues at Smyrna and Sardis (Noakes 1975) with references to "those who claim to be Jews and are not" and to the "synagogue of Satan" (2:9, 3:9), it is obvious that at least in these two cities the churches' self-identification and survival depended in part on its ideological victory over the local synagogue. Particularly revealing in this regard are the comments of Ignatius that reveal, a decade or so later than the Apocalypse, the abiding influence of Jewish ceremonial practices upon certain Christians in western Asia Minor. In his communication with the Magnesians, one discovers the continuing threat of Jewish ways in remarks such as "It is stupid to speak of Jesus Christ and to practice Judaism. For Christianity did not rely upon Judaism, but Judaism upon Christianity" (10:3; cf. 8:1; 9:1). In another text Ignatius portrays a peculiar situation wherein the presence of both orthodox Jewish Christians and uncircumcised advocates of non-Christian Judaism are mentioned (*Phil.* 6:1). This somewhat enigmatic and provocative text (Barrett 1976) reads, "It is better to hear Christianity from a man who is circumcised (= Jewish Christian) than Judaism from one who is uncircumcised." An equally intriguing text is found later in this Philadelphian correspondence. It is not known whether Ignatius' opponents mentioned in *Phil.* 8:2 are Christians or non-Christians. What is noteworthy is that he admits the hermeneutical problems he encounters when attempting to argue with these individuals from the OT. These people apparently do not accept the presuppositions which allow Ignatius to discover Christ's cross, death, and resurrection in the Jewish Scriptures (cf. *Phil.* 9:1–2).

Melito of Sardis (annotated bibliography, Drobner 1982) castigates with trenchant invective (*Pass.* 72–99) the unbelieving Jews who crucified the Lord. Little is known of the church in Sardis before the writings of Melito, though unquestionably it was significantly smaller than the synagogue community there (Josephus *Ant* 12.147–53). Since, however, Melito is consistent in his pejorative use of the term "Israel" and his belief that Israel had "been replaced by the church, as the Law has been replaced by the Gospel" (Noakes 1975: 249), some argue that the affluence and superior social influence of Sardian Judaism precipitated Christian reaction (and perhaps anti-Christian persecution) which in turn ignited vitriolic Christian fulminations like that of Melito's (Kraabel 1971; Manis 1987). Some, however, have not yet been convinced by what appears to be a "sociopolitical" interpretation that is remiss about Melito's theological concerns (Norris 1986).

The Quartodeciman controversy, which continued for over two centuries in Asia Minor (Canon no. 7 of the Synod of Laodicea, ca. 350), testifies with clarion voice to the perennial desire of many Anatolian Christians to maintain the Jewish heritage of the Christian observance of Easter/Passover. Easter was celebrated in the earliest church at each and every Sunday assembly (*RGG*^{3} 4: 1960). While the Sunday liturgical ceremonies from Asia Minor recorded in Acts 20:7 and Pliny's description of Christian worship

(*Ep.* 10.96) both point to nocturnal celebrations (Staats 1975), this need not have been the normal procedure on each Sunday. It is in the 2d century that the annual celebration of Easter began. At that time some Christians, primarily from Asia Minor and Syria, believed that they should keep the annual Easter/Passover celebration in accordance with the Jewish reckoning of the Passover, while Christians in Italy and Egypt preferred to celebrate this annual rite on the following Sunday. Moreover, those who preferred the Jewish calculation of the 14th (= *quartusdecimus* = Quartodecimans) of Nisan for Easter also accompanied it with a fast, which caused conflict with those wishing to observe Easter on the following Sunday (von Campenhausen 1974). In this context it is not germane to delve into the intricate arguments concerning the origin, date, literary references, and distinctiveness of the Quartodeciman celebration of Easter in the 2d century (Huber 1969) or whether it was in part "an anti-Marcionite and anti-gnostic institution" (Hall 1984) or if in fact there were distinct groups within the Quartodeciman camp (Richardson 1973). What is noteworthy is the number of significant church leaders and bishops in Asia Minor (e.g., Melito of Sardis; Irenaeus; Apollinarius of Hierapolis; Polycarp, Bishop of Smyrna; and Polycrates, Bishop of Ephesus) who were Quartodecimans and thereby advocated a liturgical calendar which had not yet given in to gentile Christian pressure to jettison older Jewish dimensions of the annual Easter/Passover rite.

In a similar fashion, the widespread advocacy of chiliasm (*RAC* 2:1073–78) in Anatolian Christianity is most likely a reflection of the impact of Jewish apocalypticism upon Christianity there (Daniélou 1964). Although the idea is still undeveloped, the terminology of the 1000-year reign first occurs in Anatolian literature in the Revelation of John (20). Though it later fell into disrepute (e.g., Eusebius's disdain for it), the millennial age concept had among its proponents in Asia Minor the following Christian luminaries: Papias of Hierapolis (Euseb. *Hist. Eccl.* 3.39); Irenaeus (*Haer.* 5.35); Justin Martyr (*Dial.* 80); Cerinthus (Euseb. *Hist. Eccl.* 3.28); John's followers (Iren. *Haer.* 5.33.3); and Montanus (Euseb. *Hist. Eccl.* 5.18.2; Tertullian *Adv. Marc.* 3.4.5). Still in the 3d century traces of this doctrine's influence are seen in Anatolian authors such as Methodius (*The Banquet* 9.5).

Though one cannot be certain, the tone heard in Justin Martyr's extended exegetical arguments and counterarguments, even over textual variants (Skarsaune 1987), with the Jewish Rabbi Trypho *(Dial.)* may reflect the situation in mid-2d century Anatolia. With the passage of time and a shift in the missiological outlook of later Christian leaders, the church's interaction with Judaism had become less and less intramural. Conversions, which were occurring in both directions, took place in an increasingly trenchant context. The active involvement of Jews in the harassment and occasionally in the public clamor against Christians in Asia Minor is incontestably attested in the Christian sources of the 2d century (Wilde 1949: 141–47; Frend 1965). A significant testimony to the enduring influence of Judaism upon the churches of Anatolia is easily seen in the regulations from the 4th-century Council of Laodicea. At this council the Christian leaders of Anatolia believed it necessary, still in ca. 350, to prohibit Christians from keeping the Passover/Easter feast according to Quartodeciman ordinances (Canon 7), honoring the Sabbath rather than Sunday (Canon 29), attending a Jewish festival with a Jew (Canon 37), and accepting unleavened bread from Jews or heretics (Canon 38).

3. Christian Gnosticism. Since the study of Christian Gnosticism is beset with numerous methodological problems regarding definition, sources, and chronology (*TRE* 13: 535–50), it is no wonder that at times speculation (e.g., Bultmann 1956) has outrun the evidence. Even the discovery of the Nag Hammadi texts has not always clarified the issues. In fact, it is not completely clear to all scholars that these texts are even gnostic. As one writer observed, these "individual tractates can no longer be assumed to be Gnostic … Thus a significant number of Nag Hammadi texts can no longer serve as primary evidence of Gnosticism" (Wisse 1983: 138). A more sober estimation of the possible significance of Gnosticism upon the theology of Paul, John, and the documents of the New Testament in general and its supposedly early date (Yamauchi 1983) is now forming among scholars. Since occurrences in the New Testament of the word *gnosis,* or other later gnostic technical vocabulary, are alone no longer regarded as adequate evidence for the presence of Gnosticism understood in its 2d-century sense, scholars are not so ready to posit automatically this phenomenon as the background of the opponents of the Prison Epistles or

even the Pastorals. For example, the unsound doctrine of a Hymenaeus and Philetus (2 Tim 2:17–18) which emphasized the present reality of the resurrection can be explained in terms of the similar eschatological error in 2 Thess 2:2 or in terms of a misunderstanding of the resurrection accomplished in baptism (e.g., Eph 2:6) rather than by relying facilely upon later gnostic views of the resurrection (Fee 1984, *ad* 2 Tim 2:17–18). The fact that a later Christian writer such as Irenaeus quotes the Pastorals and assumes that their author was fighting heretics identical to those he was fighting hardly proves the case for 1st-century Gnosticism, unless one wishes to assume that later Christian authors were never guilty of employing anachronisms. With justification, scholars no longer allow later Christian writers, whether it be Marcion, Irenaeus or Heracleon, to pronounce themselves, without cogent demonstration, as the spiritual successors of NT authors.

The evidence for signs of embryonic Gnosticism is stronger, however, when the materials in the Johannine Gospel and epistles are investigated (cf. Yamauchi 1981 with MacRae 1986). The term "docetism" is the most frequently used label to identify the heretical group against which the Johannine author writes, though scholars still debate whether its origins are Jewish or not (Davies 1962). Although docetism is neither a synonym for Gnosticism nor a necessary criterion to establish its presence, this christological heresy is normally regarded as evidence for the presence of certain strains of Gnosticism. In brief, docetic Christology advocated a rather "high" christology, based upon a stark contrast between the Redeemer from heaven and the earthly man Jesus (*TRE* 16: 726–28), while stressing the glorification and divinity of Christ at the expense of his humanity and his full participation in the flesh. Once it has been established that the community which John addressed in the gospel was also among the recipients of the epistles, it is fairly easy to detect polemic against a heretical christology throughout much of the Johannine corpus (Brown 1979; *Epistles of John* AB). This docetic background of the Johannine material makes the best sense out of the unique *logos* christology in the fourth gospel's prologue (1:1–18) and explicitly fits into the doctrinal denunciations of 1 John 4:1–3 and 2 John 7–11 where the bearers of this doctrine, denying that Jesus came in the flesh, are attacked as *antichristoi.* Regardless of whether the vignette regarding the encounter between the "gnostic-docetist" Cerinthus (Iren. *Haer.* 1.26.1) and the Apostle John (Iren. *Haer.* 3.3.4) is factual, the letters of Ignatius, written within approximately a decade of the Johannine letters, document the growing problem the churches of western Anatolia were having with docetic christology. Ignatius' antidocetic polemic is implicit in affirmations such as God's manifestation in humanness (*Eph.* 19:3) and in references to Christ's being *truly* crucified and *truly* partaking of food (*Trall.* 9:1–2; *Smyrn.* 1:2). Explicit indications of the presence of docetism are contained in his allusions to heterodox slogans that Christ only seemed *(dokein)* to suffer (*Trall.* 10:1; *Smyrn.* 2:1; 3:1–3; 4:2). At one point Ignatius argues, "For how is one assisting me, if he praises me but blasphemes my Lord by denying that he is a bearer of the flesh *(sarkophoros)?* And the one who does not make this confession has completely denied him [Christ], and made himself a bearer of a corpse *(nekrophoros).*" Years later the Asian bishop and martyr Polycarp also identified the antichrists as those who did not confess that the Christ came in the flesh (*Phil.* 7:1).

Even though Italy and Egypt provided the context for most of the major Gnostic teachers and schools of the 2d century, the early role of Asia Minor should not be overlooked. Later orthodox authors such as Irenaeus saw Asia Minor as a battleground where the true tradition and gospel of the church were vigorously maintained through the efforts of the apostles and their pupils (Zahn 1900). Irenaeus, whose theological roots were planted deeply in the soil of his native Anatolia (Euseb. *Hist. Eccl.* 5.20.5), is exemplary in his many arguments against the Gnostics (Vallée 1981) that "all the Asiatic churches testify" (*in Asiae Ecclesiae omnes* 3.3.4) to orthodox doctrine and apostolic parentage. Later comments by Eusebius provide little substantive information previously unknown on this matter since he basically knows only what is available in the sources he quotes (e.g., Irenaeus) and was himself "no student of heresy" (Grant 1980: 86–87).

4. Persecution and Social Harassment. Several of the leading personalities associated with Anatolian Christianity were criminals. A list of these offenders would include Paul, the author of the Apocalypse, Ignatius, and Polycarp. Behind these few names stood scores of unnamed Christian convicts whose

crimes and capital punishment are mentioned in works such as the Apocalypse of John and the correspondence between Pliny and Trajan. Furthermore, the majority of the literature pertaining to early Christianity in Asia Minor was penned by authors after their arrests (e.g., Prison Epistles, Pastoral Epistles, and Ignatian Epistles). In a less extreme form, Anatolian Christians knew of sporadic outbursts of social and legal harassment which might or might not have eventuated in imprisonment. The Lukan account of Paul's work in Asia Minor (Acts 13–14; 19–20) reflects the presence of opposition and pogroms against the Christian mission through use of phrases such as "through many tribulations we must enter the kingdom of God" (Acts 14:22) and "… with tears and with trials which befell me through the plots of the Jews" (Acts 20:19) and through vignettes such as the urban protest against Christianity engendered by a discontented labor union (Acts 19).

The epistle of 1 Peter is directed to Christian communities in Asia Minor (1:1) and gives significant attention to the matter of Christian suffering (2:11–4:19). Scholars are not of one mind regarding this epistle's historical matrix. Contemporary scholarship is less sympathetic with the earlier view of, among others, F. W. Beare (1947), who postulated that the situation depicted by the Pliny-Trajan letters (A.D. 110–15) was one of imperial persecution and that this was the appropriate context in which to interpret the epistle of 1 Peter. It is no longer evident to many scholars (Talbert 1986: 13–14) that the situation depicted in the Pliny-Trajan letters is one of official persecution or that this Christian epistle, whenever penned, should be read against the background of any supposed official persecution, whether instigated at either the imperial or provincial level. Scholars also differ on whether or not 1 Peter was exhorting the Christian communities to maintain themselves in times of harassment through means of sectarian principles such as internal group identity, cohesion, and boundary maintenance (Elliot 1981), or whether 1 Peter represents, at least in its Household Codes, a more open and assimilated posture (Balch 1981). In terms of the development of anti-Christian harassment, several points stand out in 1 Peter, particularly in regard to its place in the history of Anatolian Christianity. Of particular interest is the awareness that the "name of Christ" is a source of animosity and also that individuals are suffering *as Christians* (4:14–16), a situation already present in Rome under Nero. Possible arrests and incarcerations are implied by statements in 1 Peter (2:12, 16; 4:15). The rhetoric of the epistle is cast in dualistic e.g., Babylon, 5:13) and eschatological tones (4:17), but there is no general designation of the State or emperor cult as Satanic (*ANRW*2/23/1: 205), nor are there any allusions to the imperial cult. In fact, both the emperor and his minions are granted the status of authority and honor (2:13–17), and the author indicates that the fiery ordeal and sufferings that the Christians are experiencing are part of the normal Christian life throughout the empire (4:12; 5:9b). The immediate source of the Christians' suffering seems to come from pagan outrage (4:4) at the sectarian lifestyle and ideology that is typified in the Christian demeanor (Goppelt 1978).

Several important developments both in the relationship between "Church" and "State" and in the suffering of early Christians appear for the first time in the Apocalypse of John (*ANRW* 2/23/1: 215–26). Among the new developments is the presence of a large number of martyrs. No longer is it just a matter of tribulations and suffering, but now John refers to those "who had been slain for the word of God" (6:9) and to "the blood of the prophets and of saints" (18:24) and to "the souls of those who had been beheaded for their testimony to Jesus and for the word of God" (20:4). A second development is the explicit evidence that a Christian's impious attitude toward the cult of the emperor (bibliography on imperial cult in *ANRW* 2/16/2: 833–910) was grounds for martyrdom (13:15). This is not at all surprising in light of the long-standing presence in Asia Minor of cults to the goddess Roma (Mellor 1975), in light of the rapid reception of Augustus as a deity in Asia Minor (Bowersock 1965), and in light of the ubiquitous and beneficent presence of the imperial cult in Roman Asia Minor (Price 1984). The architecture, the rituals, the festivals and games, the swearing by the divinity of the emperor (Hermann 1968), and the pledges of allegiance to the imperial family (Weinstock 1962) all make it very clear that in Asia Minor "the imperial cult was not simply a game to be played in public" (Price 1984: 120). Rather, it "was a major part of the web of power that formed the fabric of society … [and] along with politics and diplomacy, constructed the reality of the Roman empire" (Price 1984: 248). Accordingly, the persecution of the Christians was a

response not only to their antipathy toward concerns of Roman jurisprudence but also to their violation of matters of Roman religion and piety (*RAC* 2: 1159–1208; Vogt 1962). A third development was the dualistic framework in which the author of the Apocalypse perceived the Roman State and provincial government. Even though contemporary pagan authors could use animal epithets (Pliny *Pan.* 48.3 *immanissima belua,* fearful monster) to describe Domitian or to state that Domitian "was in reality an evil demon" (*daimona poneron,* Dio Chrysostom *Orat.* 45.1), these do not approach the dualism employed in the Apocalypse (chap. 13). Clearly John views the government and imperial cult as a manifestation of Satanic oppression and influence. Of course, the State's estimation of John would not be much higher. In light of the early imperial policy to destroy prophetic books which contained damning and foreboding oracles (e.g., Suet. *Aug.* 31), one can anticipate how the government would look upon the sedition reflected in the prophecies of the fall of Babylon (Revelation 18), especially penned by an exiled dissident (in general MacMullen 1966; cf. Juvenal *Satires* 6.553–564). In order to contextualize more accurately the church's treatment by the Roman State at that period, it must be observed that Christians were not the only group regarded as a counterculture which was to be harassed by Domitian and his policies (Cuss 1974). For example, Domitian's pogroms against individuals, even family members, guilty of adopting "Jewish ways" is well attested in ancient literature (Smallwood 1976: 376–85). Domitian also banished philosophers and moral preachers from Italy, at least those whom he perceived to be seditious, and "put many Senators to death" (Suet. *Dom.* 10). Disdain for Domitian was so intense that after his assassination his name was erased from many Anatolian monuments (Suet. *Dom.* 23; Magie 1950: 1440–41 n. 30). Given the general cruelty and paranoia which characterized Domitian's reign of terror, one should regard the State's active persecution against Anatolian Christianity in the light of numerous barbaric idiosyncrasies of Domitian rather than as a manifestation of constant imperial policy.

In less than two decades after Domitian's pogrom against the churches of western Asia Minor, the Pliny-Trajan *Letters* (10.96–97) detail occurrences of the sufferings and criminal punishment of Christians in the Roman area of Bithynia-Pontus. This official exchange enhances the picture of the State's comportment toward Christianity under Trajan, but reveals little of the attitudes held by the diverse Christian population of north-central Anatolia (Keresztes *ANRW* 2/23/1: 273–87 surveys various schools of interpretation of the Pliny-Trajan *Letters* and their reflection of current Roman law). Pliny reports that the Christians were accused by public detractors, probably on two counts. The first point of accusation was that of crimes associated, at the very least by rumor, with the name of Christian *(flagitia cohaerentia nomini).* These crimes were in all probability the disgusting and bizarre accusations discussed by the 2d-century apologists (*ANRW* 2/23/1: 579–604; Henrichs 1970) rather than the more mundane crimes of theft and murder mentioned in 1 Peter. The second point of accusation, and one that seemed quite enigmatic to a legal mind like Pliny's (10.96.1), was that the "name of Christian" was illegal. Whether Roman jurisprudence could *legally* approbate such evidence in a court of law was the question which motivated the governor Pliny to inquire of the emperor. No clear answer was given, in part because other legal issues surfaced between the time of the original accusations and the end of Pliny's legal examination of the accused. In particular, criminal contumacy, as Pliny defines the attitude of numerous believers he questioned (10.96.3), was a serious crime (Sherwin-White 1966: 699, 784). The point that Pliny makes to Trajan is that he had these Christians executed, in part, because of their "stubbornness and unshakeable obstinacy" (10.96.4). As in the case of the martyred Christians of the Apocalypse, these Christians were summarily executed by decapitation. Pliny employs the use of oaths to the gods, sacrifices to the cult statue of the emperor (Scott 1932; Kruse 1934), and denunciation of Christ to distinguish between those who were real Christians *(vera Christiani)* and those who were only nominal, or in some cases former, believers (10.96.5). In his response, Trajan supports the governor's previous actions (10.97.1) and also through his counsel reveals his convictions about the potential danger of this depraved religion. The emperor's prime directive to Pliny is that Christians must *not* be sought out by the government *(conquirendi non sunt).* Moreover, when they are accused, their trials must be conducted within the guidelines of enlightened Roman jurisprudence, a policy not followed by his predecessor Domitian. Moreover, if they repent of their Christian past, all must be forgiven.

Contemporary with Pliny's treatment of Christians in northern Anatolia is the famous journey of Ignatius. Since he was arrested in the province of Syria and not the region of Asia Minor, the details of his arrest are not germane. It is instructive, however, to observe that the Roman guards who were accompanying him had ample opportunity to arrest or accuse numerous Christians en route with whom Ignatius shared fellowship and social intercourse. Even though Ignatius was soon to be martyred, it is patently evident that neither he nor his guards believed that the dozens of Christians whom he calls by name in the numerous Christian communities he addresses are in any danger legally. Clearly, there is no evidence in the Ignatian correspondence to support the idea that it was a crime to be a Christian or that there existed legislation, either in the provinces or in Rome, that outlawed Christianity (Millar 1973: 145–75). A decade following the official exchange between Trajan and Pliny, the emperor Hadrian sent official correspondence about the same matter. Silvanus Granianus, governor of Asia, wrote Hadrian about the "Christian problem" (A.D. 121–22), and the emperor's reply was sent to the governor's successor Minicius Fundanus (A.D. 122–23) and later preserved in Justin's *1 Apology* (68). Hadrian's reply "denounced informers, eager to blackmail their victims, and insisted that charges had to be proved in court, not simply initiated by petitions or popular clamor," while at the same time, it "did not revoke the penalties against convicted Christians but did require orderly procedure" (Grant 1988b: 34).

Fragments of Anatolian Christian writers of the late 2d century depict a new development in the Church's effort to carve out a workable peace with the Roman State. Two prominent apologists who articulated a theology of a synergistic relationship between the Roman State and the Christian Church are Apollinaris, bishop of Hierapolis, and Melito, bishop of Sardis. In approximately 176 both men wrote to the emperor Marcus Aurelius, writings now partially preserved in Eusebius' *Church History* (Apollinaris, 5.5.4; Melito, 4.26.5–11). It was during the Marcomannic Wars that the troops of the emperor engaged the Quadi, a Germanic tribe. The Quadi's siege machine was destroyed by lightning. Later a miraculous rain storm invigorated a fatigued Roman army and helped them become victorious. Virtually every one, except the Germans, regarded these miraculous occurrences as the providential intervention of deity. For example, the pagan miracle worker Alexander of Abonuteichos, an Egyptian priest named Arnuphis, Roman priests, Christian soldiers, and others all claimed some type of credit for these miracles. The Christian bishop of Hierapolis, though partially misrepresented by Eusebius, apparently used this miraculous event a part of an apology. Specifically, he argued that the victory was given to the Roman troops because a legion of Christian soldiers had been prayerful on behalf of the empire. Needless to say, this was also a way to demonstrate to the emperor and his provincial leaders that the church was not seditious. The thrust of the apology of Melito was that the proof of the divine origin of Christianity is demonstrated by the fact that it appeared simultaneously with the advent of Augustus. Christianity, according to Melito, was nursed in the cradle of the Roman Empire. Moreover, the general prosperity and longevity of the Roman Empire can only be attributed to the peaceful coexistence (with a few exceptions) of Rome and the church, both created and protected by the Christians' God. The historical realities of the late 2d and 3d centuries indicate that the apologetic efforts of these two Anatolian bishops was not particularly effective. According to R. M. Grant, the greatest effectiveness of these apologetic pleas was within the Christian community itself as a means to undergird the Christian's theology of culture, morality, and politics (Grant 1988a: 14).

F. Conclusion

Since the content of the historical sources themselves are controlled by specific occasions, one should not expect to arrive at more than a partially distorted reconstruction. Working within the boundaries of this fact, one can, nevertheless, conclude that the first two centuries of Anatolian Christianity demonstrated several important features. An obvious feature is that Christianity in Asia Minor, at least in the eyes of its leaders, was characterized by conflict. The sources of the conflict were at times internal and at times external; there were few times, however, when there was not an open conflict. A second feature was that the conflicts were often accurate reflections of the points of collision between the Christian gospel and various facets of Anatolian culture. Another characteristic of the early history of Christianity in Asia Minor is its dynamic development. Whether it be orthodox or heretical developments, the

Christian churches were, though not always consciously, adapting and modifying its message and teaching. The final feature is the dominant role that Anatolia played in providing the regional context for the growth and training of prominent Christian individuals and in setting the stage for the occasions, developments and articulation of most of the important issues and doctrines of early Christianity throughout the Roman world.

A. Eusebius on Christian Origins in Egypt

The earliest historical treatment of Christianity in Egypt of any consequence is that of Eusebius of Caesarea in his *Ecclesiastical History* (first edition ca. 311 C.E.). To be sure, Eusebius does not concentrate in any way on Egypt; instead he intersperses his discussion of the developments in Egypt with his discussion of events, persons, etc., elsewhere. Even so, one can string together Eusebius' isolated reports so as to get a running account of his version of the origins and development of Christianity in Egypt. That account, tendentious as it is, can be condensed and paraphrased as follows (ending at the beginning of the 3d century):

1. Eusebius' Account. Mark, after recording in his gospel Peter's teaching in Rome (2.15), was sent to Egypt to proclaim this gospel and was "the first to establish churches in Alexandria itself" (2.16; trans. Lake 1926: 145). The ascetic and philosophical lifestyle of Mark's converts is described at length by the Jewish philosopher Philo, who is also reported to have visited Peter in Rome in the days of Claudius (2.16.1–17.1). Philo refers to the Alexandrian Christians as "Therapeutae" (2.17.3–24; cf. Philo *Vit. Cont.*). It is clear from his description that Philo "welcomed, reverenced, and recognized the divine mission of the apostolic men of his day, who were, it appears, of Hebrew origin, and thus still preserved most of the ancient customs in a strictly Jewish manner" (2.17.2).

"In the eighth year of the reign of Nero (62 C.E.) Annianus was the first after Mark the Evangelist to receive charge of the diocese of Alexandria" (2.24). The bishops who succeeded Annianus were Abilius (85–97/98), Cerdo (98–109), Primus (109–20), Justus (120–31), Eumenes (131–44), Mark (144–54), Celadion (154–68), Agrippinus (168–80), Julian (180–89), Demetrius (189–232; Eusebius 3.14, 21; 4.1, 4, 5, 11, 19; 5.9, 22; 5.26). (There are some minor discrepancies in the datings of some of these bishops between Eusebius' *Ecclesiastical History* and his earlier *Chronicle.* The dates are established with reference to regnal years of the emperors.)

During the eighteenth year of Emperor Trajan (115 C.E.), "the tragedy of the Jews was reaching the climax of successive woes." A rebellion broke out in Alexandria and in the rest of Egypt and Cyrene, bringing great devastation to the Jews there (4.2).

"Like brilliant lamps churches were now [in the time of Hadrian, 117–38 C.E.] shining throughout the world," but the devil was also "turn[ing] his devices against the church" by fomenting heresies. From the teachings of Menander (cf. 3.26) there developed in Antioch the sect of Saturninus, and in Alexandria that of Basilides. Basilides' mythology was met with rational refutations on the orthodox side in Alexandria, of which a most powerful example was that of Agrippa Castor (4.7.1–8).

Carpocrates, a contemporary of Basilides, was father of the so-called "Gnostic" heresy. The Carpocratians engaged in shocking obscenities, and it is on their account that calumnies have been spread about Christians among the unbelievers (4.7.9–11).

Valentinus, the founder of a special heresy, came to Rome in the time of Bishop Hyginus (138–41). (Eusebius does not say where Valentinus came from, but he was presumably not unaware of his prior activity in Alexandria.)

In the days of Emperor Commodus (180–92) and Bishop Julian (180–89), the famous Pantaenus was a leader among the Alexandrian faithful in the school of sacred doctrine that had existed there from ancient times. Pantaenus, formerly trained in Stoic philosophy, had gone on a missionary journey as far as India. There he found a copy of the gospel of Matthew in Hebrew, left among the Indians by Bartholomew. Pantaenus was head of the school in Alexandria until his death (5.10).

The famous Clement was a student of Pantaenus (5.11), and succeeded him as head of the school, serving in that capacity into the reign of Emperor Severus (193–211; 6.6). Another student of Pantaenus' was Alexander, who later became Bishop of Jerusalem and was involved in the ordination of Origen to the priesthood (6.8.4, 7; 11.1–2; 14.9). Among Clement's pupils were Origen (6.6) and the aforementioned Alexander, also a student of Origen's (6.14.9). Origen became head of the catechetical school at the age of eighteen (in 204), during a time of persecution (6.3.3).

During the Easter controversy many conferences of bishops were held in various places, including one in Palestine over which Bishop Theophilus of Caesarea and Bishop Narcissus of Jerusalem presided. A letter was formulated in the conference defending the view that Easter should be celebrated only on a Sunday (5.23). In that letter, meant to be read in all the churches, it was reported that the Alexandrian church also celebrated on the same day as the Palestinians, and that letters had been exchanged between Alexandria and the Palestinian churches on the question (5.25).

The persecution of the Church under Severus (203 C.E.) was especially severe in Alexandria, where many martyrdoms took place. "God's champions" were brought there from Egypt and the whole Thebaid for torture and death. Among the martyrs of that persecution was Leonides, father of Origen (6.1).

2. Eusebius' Sources. Where did Eusebius get his information, and how reliable is it? We shall for now skip over the Mark legend (see below). Eusebius' equation of the Jewish Therapeutae with the earliest Alexandrian Christians, and the story of Philo's visit with Peter in Rome, could have been based on his own reading of Philo and/or on a local Alexandrian tradition. In either case there is no real substance to this account.

Eusebius' information on the early bishops of Alexandria is based on a list of Alexandrian bishops probably taken from the lost *Chronographies* of Julius Africanus (Harnack 1897: 123–40). Those named between Mark and Demetrius are mere ciphers; no information is related about them, for none was available to Eusebius. Demetrius (189–232) is therefore the first Alexandrian bishop of whom anything concrete is known. Julius Africanus had visited Alexandria (6.31.2) and presumably got his list of Alexandrian bishops during that visit, either from Demetrius or his successor Heraclas (232–247/48). The original source of the list is unknown, and nothing can be ascertained as to its historicity.

While Eusebius has a good deal of information about Bishop Demetrius, particularly on his stormy relationship with Origen, Eusebius says nothing of the pivotal role apparently played by Demetrius in the development of the Egyptian hierarchy. An interesting detail is provided in a much later source. Eutychius, a Melchite patriarch of Alexandria who wrote in Arabic in the 10th century, reports in his *Annals* that until the time of Demetrius there was no other bishop in Egypt than the one in Alexandria. Demetrius appointed three bishops, and his successor Heraclas (232–247/48) appointed twenty more (*P.G.* 111: 982; cf. Kemp 1955: 138).

Eusebius' account of the Jewish revolt under Trajan (115–17) seems to be based on solid sources. The "Greek authors" he mentions (4.2.5) are now unknown (but cf. Cassius Dio 68.32 and the commentary in Stern 1980: 385–89). The virtual annihilation of the Jewish communities in Alexandria and elsewhere in Egypt must have had a profound effect on the development of Christianity there, but we have no knowledge of what role, if any, was played in the events by Christians, Jewish or gentile.

Eusebius names his sources for his discussion of the heretics: Agrippa Castor for Basilides (4.7.6), Irenaeus for Carpocrates (4.7.8; cf. *haer.* 1.25) and Valentinus (4.10.1; cf. *haer.* 3.4.3). We know nothing more of Agrippa Castor's refutation of Basilides than what is reported by Eusebius, nor do we know when it was written.

It should be noted that Eusebius had at his disposal little reliable information on the Alexandrian church for the period before ca. 180, when Pantaenus was flourishing as head of the Christian school (5.10; cf. 5.9). Of the persons named in the earlier period, it is only the aforementioned heretics concerning which we have any solid information. For the time from Pantaenus on, Eusebius had at his disposal the writings of Clement, Origen, and other Alexandrian churchmen; other sources may have come from the libraries of Caesarea and Jerusalem, such as the letters of the former Alexandrian, Bishop Alexander of Jerusalem, and the letter from the Palestinian churches on the question of Easter.

It is also to be noted that, in his discussion of people and events in Egypt, Eusebius deals exclusively with Alexandria until he comes to the persecution under Severus (203), when suddenly Christian martyrs are named whose home territory includes "Egypt and the whole Thebaid" (4.1.1). That Christianity had expanded as far as Upper Egypt by the end of the 2d century is likely. Unfortunately Eusebius is not able to tell us the story of that expansion. (On the expansion of Christianity in Egypt up to 325 C.E., see Harnack 1924a: 705–29).

B. The Mark Legend

Until the publication of the fragmentary letter to Theodore by Clement of Alexandria (Smith 1973), Eusebius was our earliest extant source for the tradition that connects Mark with the early history of the Alexandrian church. According to Clement's letter, whose authenticity is widely but not unanimously accepted, Mark came to Alexandria after the martyrdom of Peter. There he expanded the gospel that he had written earlier, during his sojourn with Peter in Rome, producing a "more spiritual gospel" for use in the Alexandrian church (the *Secret Gospel of Mark*). Unfortunately the Carpocratian heretics eventually acquired this gospel and falsified it for their own purposes (text and translation in Smith 1973: 446–52).

Clement's letter says nothing of Mark's role as founder of the Alexandrian church. Indeed, it implies that the church there was already in existence when Mark arrived from Rome after Peter's death. Nothing is said of any earlier sojourn of Mark in Alexandria, though the wording of the fragment does not exclude that possibility. Eusebius, in his *Chronicle*, dated Mark's arrival in Alexandria to the third year of Claudius, i.e. 43 C.E. (Jerome's Latin version, Helm 1956: 179). Did Mark make more than one visit to Alexandria? (cf. Pearson 1986a: 139). In any case, the Mark legend as reflected in Eusebius, who probably got it from Julius Africanus, goes back at least to the 2d century, to the time of Demetrius or earlier.

The Mark legend is filled out in the *Acts of Mark* (*Passio,* April 25). In the *Acts,* which is preserved in two Greek recensions (see *P.G.* 115, 164–69; *Acta Sanctorum* 12: April, 3:xxxviii–xl) and several versions (for an English translation of the Ethiopic version see Haile 1981: 117–34), Mark's first convert was a cobbler named Ananias (Annianus), whom he eventually ordained as bishop. Three presbyters were also ordained by Mark: Milius, Sabinus, and Cerdo (cf. the episcopal succession list: Annianus, Abilius, Cerdo, Primus). According to the *Acts,* the first church in Alexandria was located in a place called Boukolou (later associated with Arius), where Mark was buried following his martyrdom. The *Acts,* which goes back to the 4th century, preserves some local Alexandrian traditions, but the material is essentially legendary (for discussion see Pearson 1986a: 140–44). Whether or not Mark's association with the Alexandrian church is a historical fact remains an open question (cf. Smith 1973: 279–81). The exact nature of that association, if it is a fact, is impossible to ascertain.

C. Miscellaneous Traditions and Allusions

The New Testament provides few hints of a Christian mission to Egypt. One does find references in the book of Acts to persons from "Egypt and the parts of Libya belonging to Cyrene" in the Pentecost narrative (Acts 2:10), and a Jerusalem synagogue of Alexandrians whose members disputed with Stephen (Acts 6:9). There is also, more importantly, the description of Apollos: "A Jew … a native of Alexandria … an eloquent man, powerfully trained in the scriptures" (Acts 18:24). According to the Western text, Apollos "had been instructed in the word in his home country." Something of the nature of Apollos' teaching can probably be extrapolated from the apostle Paul's comments in the early chapters of 1 Corinthians (Pearson 1983: 81–83; 1986b: 215).

Mark's cousin Barnabas (Col 4:10) is associated with the earliest history of the Alexandrian church in the Pseudo-Clementine literature. In the first *Homily* the young Clement, newly arrived from Rome, is instructed in the Christian faith in Alexandria by a Hebrew from Judea named Barnabas (*Hom.* 1.8.3–15.9). It is possible that this story of Barnabas' preaching in Alexandria is somehow related to the diffusion of the *Epistle of Barnabas,* which is probably of Alexandrian origin (Pearson 1986a: 136–37; cf. Trevijano 1975).

A well-known document bearing upon Judaism in 1st-century Alexandria, Emperor Claudius' letter to the Alexandrians (*PLond.* 1912, dated 10 Nov. 41 C.E.), has sometimes been thought to allude to the coming of Jewish Christian missionaries to Alexandria. In his letter, Claudius prohibits the Alexandrian Jews from inviting into Alexandria "Jews coming from Syria or Egypt." If such Jews included Jewish Christians from Palestine, Claudius' letter would constitute "the first allusion to Christianity in history" (Reinach 1924). However, most scholars reject such an interpretation of the letter (Tcherikover, Fuks, and Stern 1960: 36–55; cf. Pearson 1986a: 134–35).

D. Early Alexandrian Christian Literature

The best possibility for understanding the nature of early Egyptian Christianity in its various manifestations is to examine the literature produced by Christians there. Unfortunately the evidence is ambiguous, for it is not easy to determine the provenience of early Christian writings, and scholarly opinion is in many cases divided. (For more detailed treatments, see the articles on these early Christian writings.)

1. Noncanonical Gospels. The early Christian writings for which an Egyptian (Alexandrian) provenience can be established with relative certainty are noncanonical gospels: the *Gospel of the Hebrews,* the *Gospel of the Egyptians,* and the *Secret Gospel of Mark.* None of these gospels is fully

extant; they are known only through quotations by Clement of Alexandria and other writers within the Egyptian church. Another gospel, represented by Papyrus Egerton 2 (see Koester 1982: 181–83; 222), could have been brought into Egypt from somewhere else, as is the case with numerous other canonical and noncanonical writings (e.g. the *Gospel of Thomas*).

The three Alexandrian gospels mentioned represent various traditions and could be taken to reflect the existence, already at the end of the 1st century, of different Christian groups. The *Gospel of the Hebrews* has a strong Semitic flavor and, as its name suggests, circulated among the Jewish Christians (Christian Jews) for whom the symbolic authority of James, brother of Jesus, was an important feature. It contained both narrative and sayings material, the latter representing sayings found also in the *Gospel of Thomas* (cf. Hennecke and Schneemelcher 1963: 158–65; Koester 1982: 223–24).

The *Gospel of the Egyptians* (not the writing with the same title in the Nag Hammadi corpus; cf. Hennecke and Schneemelcher 1963: 166–78), of which only sayings material is preserved, shows a strong encratic flavor and, like the *Gospel of the Hebrews,* contains tradition that overlaps with the *Gospel of Thomas* (cf. Koester 1982: 230). Its name indicates that it circulated among (Greek-speaking) native Egyptians, and it was probably first compiled for Christians living in the Rhakotis district of Alexandria (Pearson 1986a: 150).

Of the *Secret Gospel of Mark,* one complete pericope is preserved, a story about a young man raised from the dead by Jesus. According to Clement's letter, *Secret Mark* was intended to be read "only to those who are being initiated into the great mysteries" (Smith 1973: 446). This "more spiritual gospel" was therefore intended to be understood as a cultic allegory, symbolically associated with the sacramental life of the Christian community (cf. Smith 1973: 167–85). Presupposed in Clement's letter is the public use in Alexandria of canonical Mark, as well as a later heretical expansion of *Secret Mark* by the Carpocratians. Whether or not Clement's understanding of the development of these various "Markan" gospels is historically accurate is still under debate (see e.g. Schenke 1984).

2. Miscellaneous Nongnostic Writings. It should be stressed that, at the same time as the aforementioned gospels were being used in Alexandria, other literature, including literature later canonized in the Catholic church, was being introduced to the Christians in Alexandria. By the time that the heretics mentioned by Eusebius were flourishing in Alexandria during the time of Hadrian (see above), a substantial number of Christian writings were already in use there. The heretics themselves freely used Christian writings later accepted in the Catholic church as canonical. For example, the extant fragments of Valentinus, which presumably stem from his Alexandrian period, reflect not only the use of gnostic mythological writings but also of the epistles of Paul and the gospel of Matthew (cf. Layton 1987: 229–49). Basilides knew and used the epistles of Paul and, perhaps, 1 Peter (fragments in Layton 1987: 427–44).

Returning now to other early Christian writings composed in Egypt, at least two would seem to qualify as coming from the time before (or at least during) the *floruit* of the aforementioned heretics: the *Kerygma of Peter* and the *Epistle of Barnabas.* The former is an apologetic work, pseudonymously attributed to the apostle Peter, which characterizes the people of the "New Covenant" (Christians) as a "third race" (cf. Hennecke and Schneemelcher 1964: 94–102). The latter is charged with apocalyptic fervor and devoted to a specifically Christian reinterpretation of older Jewish exegetical and ethical traditions (Kraft 1965: cf. Pearson 1986b: 211–14).

Other (nongnostic) Christian writings probably composed in Egypt during the first half of the 2d century are *2 Clement* (Koester 1982: 233–36), the *Apocalypse of Peter* (not the writing with the same title in the Nag Hammadi corpus), and the *Protevangel of James.* It is also possible that the canonical epistles of Jude and 2 Peter were written in Egypt (Gunther 1984). It is quite probable, too, that Christian redactions of Jewish pseudepigrapha were already being made in Egypt during this period, e.g. the *Ascension of Isaiah,* the *Testaments of the Twelve Patriarchs,* the *Sibylline Oracles,* the *Apocalypse of Elijah,* and the (lost) book of *Jannes and Jambres.* Of the Christian literature now lost to us, I would mention here especially the *Traditions* (or *Gospel*) *of Matthias* (Hennecke and Schneemelcher 1963: 308–13) and the letter of Paul to the Alexandrians named in the Muratorian canon list (Hennecke and

Schneemelcher 1963: 44; cf. 1964: 91). The latter is said to have been forged by the Marcionites, and may have been used in the early states of a Marcionite mission to Alexandria (Harnack 1960: 134*). *Pace* Koester (1982: 236–38) and others, I would regard the *Epistula Apostolorum* as a product of Asia Minor rather than Egypt (cf. Pearson 1986a: 149).

Two writings probably composed in Egypt shortly after the middle of the 2d century should also be mentioned here: the *Sentences of Sextus* and the *Teachings of Silvanus,* two of the nongnostic tractates included among the Coptic papyri discovered near Nag Hammadi in Upper Egypt in 1945. The *Sentences of Sextus* (NHC XII,*1*), a collection of gnomic sayings, is strongly influenced by Greek ethical philosophy and is marked by a mild asceticism (cf. Edwards and Wild 1981). The *Teachings of Silvanus* (NHC VII,*4*) is a book of Christian wisdom akin to the Wisdom of Solomon both in form and content. Explicitly antignostic, it is an important link in the chain of tradition that runs from Philo, and probably Apollos, to the great Alexandrian teachers Clement and Origen (cf. Pearson 1986b: 211–15).

3. Gnostic Writings. Turning now to the writings of the Gnostics, we now have a whole "library" of gnostic works discovered in Egypt, the NAG HAMMADI CODICES. The problem we confront in this case, however, is how to determine which of the tractates, all of them composed originally in Greek, are of Egyptian provenience, and when they were written. Can any of the Nag Hammadi writings be dated to the time of Basilides and Valentinus or before? Were they produced in Egypt, or brought there from somewhere else?

The *Gospel of Truth* (NHC I,*3*; IXX,*2*) is the only Nag Hammadi tractate which can safely be attributed to one of the great heresiarchs, viz. Valentinus (Layton 1987: 250–64). This marvelous work of Christian mysticism could either have been written in Alexandria, or in Rome after Valentinus' departure from Egypt.

Valentinus, as a Christian "reformer" of the gnostic religion, certainly based his mythology on a previously existing gnostic myth (cf. Layton 1987: 5, 217–27). There can hardly be any doubt that the myth found in the *Apocryphon of John* comes closest of any of the Nag Hammadi writings to the one used and modified by Valentinus and his disciples. The same myth is also partially represented in Irenaeus, *haer.* 1.29. However, that is not to say that Valentinus, or even Irenaeus, knew and used the *Apocryphon of John,* which in its extant form is a composite document probably later than Valentinus (cf. Pearson 1986c: 19–25). The myth in question, therefore, is a common source used by the author of the *Apocryphon of John* and by Valentinus.

Where did that myth originate, Egypt or Syria? Syria is often regarded as the birthplace of Gnosticism, and some scholars even locate some of the most important Nag Hammadi texts there, including the *Apocryphon of John* itself (e.g. Koester 1982: 209–14; the others named by him are *Apocalypse of Adam* [V,*5*], *Hypostasis of the Archons* [II,*4*], *First Apocalypse of James* [V,*3*], and *Second Apocalypse of James* [V,*4*]). It should be noted that the system of Saturninus summarized by the heresiologists (Iren. *haer.* 1.24.1–2) evidently presupposes the same myth as that of the *Apocryphon of John* (Layton 1987: 159–62). Saturninus was active in Syrian Antioch. It is therefore likely that the myth used by Valentinus was brought to Egypt from Syria early in the 2d century, if not before.

However, there is also good reason to posit an Alexandrian origin for some of the early Nag Hammadi texts, both Christian and non-Christian. The most important one in the latter category is *Eugnostos* the Blessed (III,*3*; V,*1*), a theological treatise of Jewish gnostic origin. Its version of the Anthropos-Sophia myth probably contributed to Valentinus' doctrine of the Pleroma (van den Broek 1986: 195–201). The Christianized expansion of *Eugnostos*, the *Sophia of Jesus Christ* (III,*4*; BG,*3*), was also, no doubt, produced in Egypt. Another Christian text, the *Apocryphon of James* (I, *2*), preserving valuable gospel tradition, reflects the kind of Jewish Christianity that is also found in the *Gospel of the Hebrews* (Koester 1982: 224–25). Its relationship to Gnosticism is difficult to ascertain, though it is sometimes thought to reflect some Valentinian influence (cf. Williams 1985).

The origins of Egyptian Gnosticism are just as obscure as the origins of Egyptian Christianity, and this is not the place to discuss Gnosticism and the Nag Hammadi texts. (See GNOSTICISM; NAG HAMMADI [Codices].) Suffice it to say here that the Nag Hammadi corpus does not provide us with

much information on the origins either of Egyptian Christianity in general or of Egyptian Gnosticism. It does serve as evidence of the proliferation of Gnosticism in Egypt in the 2d century and its persistence into the 4th century in upper Egypt. It is clear from such evidence that definite borderlines between "orthodoxy" and "heresy" were established in Egypt rather late (cf. Koester 1982: 239).

The last observation implies, of course, that no clear borderlines between "orthodoxy" and "heresy" existed in the early period either. The basic question at issue here is the relative strength and antiquity in Egyptian Christianity of those varieties of the Christian religion that later came to be identified as "heretical" or "orthodox." Very different answers have been put forward by scholars in attempting to answer this question.

E. Christian Origins in Egypt: Two Theories

1. Originally "Heretical": Walter Bauer. In his pioneering work, *Orthodoxy and Heresy in Earliest Christianity* (1934, ET 1971), Walter Bauer subjected to vigorous critical scrutiny the ancient and still common view that "orthodoxy" always preceded "heresy" in the history of the church, and was inevitably invincible in theological struggles over belief and practice as they broke out in the church. The method Bauer used was to examine the available evidence for the development of Christianity in various geographical areas. What he found was that "heresies," as later defined in ecclesiastical circles, were often the original and only forms of Christianity in many areas. The "orthodoxy" that eventually came to prevail in such areas did so under the later influence of the Roman ecclesiastical establishment.

While Bauer's views have often been criticized, particularly with regard to certain geographical areas, it is fair to say that they have gained most acceptance in the case of Egypt. Bauer starts with the assumption that the very absence of solid evidence for the earliest history of Egyptian Christianity in ecclesiastical sources is itself suggestive. Evidence there must surely have been. The question is: "What reason could [churchmen] have had for being silent about the origins of Christianity in such an important center as Alexandria if there had been something favorable to report?" (Bauer 1971: 45). Answer: The earliest form of Christianity in Egypt was not "orthodox" but "heretical," specifically "gnostic." The only representatives of early Alexandrian Christianity of which we have any solid knowledge are all gnostic heretics: Basilides and his son Isidore, Carpocrates, and Valentinus (48).

According to Bauer, the ten bishops enumerated by Eusebius after Mark "are and remain for us a mere echo and a puff of smoke" (1971: 45). As for Mark, it was probably the Roman church that lent to orthodox Alexandria the figure of Peter's "interpreter" as a church founder and an apostolic initiator of a succession of bishops (60, 117). The earliest real glimpse that we get of "ecclesiastical" Christianity in Alexandria is with Demetrius, under whose episcopal rule (189–232) an "orthodox" form of Christianity first developed (53–54), and to whom the succession list of Alexandrian bishops must be attributed (55).

In order for him to maintain his theory of the heretical ("gnostic") origins of Egyptian Christianity, Bauer must assess the earliest Egyptian Christian literature consistently with that theory. Thus, the *Gospel of the Hebrews* and the *Gospel of the Egyptians* both become products of "movements resting on syncretistic-gnostic foundations" (1971: 50–53). The *Epistle of Barnabas*, given to "a thoroughly grotesque allegorization," is essentially "gnostic" (47), with a Christology that "seems docetic" (48). These characterizations, when compared with the evidence (the texts themselves!), are enough to cast a large shadow of doubt over Bauer's entire reconstruction of early Egyptian Christianity. (Cf. discussion of these and other texts above.)

2. Originally Jewish: C. H. Roberts. A different approach is taken by C. H. Roberts in his important study, *Manuscript, Society, and Belief in Early Christian Egypt* (1979). Roberts, an eminent papyrologist, bases his study on evidence not taken into account by Bauer, viz. early Christian papyri. Since documentary papyri provide no useful evidence before the 3d century (on the 3d and 4th century documents see Judge and Pickering 1977), Roberts concentrates his attention on the earliest Christian literary papyri.

Roberts' survey of the extant Christian manuscripts discovered in Egypt that date to the 2d century (there are none earlier) yields very significant results. Ten "biblical" manuscripts are listed: seven Old Testament (Genesis, Exodus, Numbers, Deuteronomy, Psalms) and three New Testament (Matthew,

Luke, John, Titus). Four "nonbiblical" manuscripts are listed: the Egerton gospel, *The Shepherd of Hermas,* P. Oxy. 1 = *Gospel of Thomas* (possibly early 3d century), and Irenaeus, *Adversus Haereses* (Roberts 1979: 12–14; all are codices, except *Hermas* and Irenaeus). Manuscript finds are, of course, haphazard, but it is worth noting that this evidence provides no support whatsoever for Bauer's view that Gnosticism was the earliest and, for a long time, most dominant form of Christianity in Egypt.

Roberts' most important contribution is his discussion of *nomina sacra* in early Christian manuscripts, i.e abbreviations, with superlineation, of "sacred" words such as *Iesous, Christos, kyrios, theos,* and others (fifteen in all, 1979: 26–27). The starting point for the development of *nomina sacra,* a Christian scribal invention, is the name *Iesous.* Early forms of the *nomen sacrum* are *IE* (a suspended form), and *IES* and *IS* (contracted forms, the latter becoming standard). The form IE occurs in the Egerton gospel and is presupposed in the *Ep. Barn.* 9.8 (35–37). Roberts argues persuasively that the use of *nomina sacra* in Christian manuscripts originated in the Jerusalem church (41–46). The choice of "sacred" words to be specially treated in manuscripts as *nomina sacra* reflects a primitive Jewish Christian theology such as is found in early Alexandrian Christian literature. The conclusions to be drawn from this are that Jerusalem is the source of the earliest Egyptian Christianity, a Christianity which was essentially Jewish. The earliest Christians in Egypt would have been an integral part of the Jewish community of Alexandria (49–73).

Roberts points to the Jewish war of 115–17 C.E. as a watershed in the history of Egyptian Christianity. After 117, "there is good reason to think that the Egyptian Church was assisted from without and looked less to Jerusalem and Syria, as it probably had earlier, and more and more to Rome" (1979: 59). Aside from the regular contacts existing in all areas of life between Rome and Alexandria, Roman Christianity itself, which then was "strongly Jewish," can be expected to have exerted its influence. This observation is reinforced by the 2d-century Fayum fragment of the *Shepherd of Hermas* and the 2d-century fragment of Irenaeus' *Adversus Haereses* found at Oxyrhynchus (59,53).

Roberts has abandoned his earlier view that the adoption of the papyrus codex for Christian literature in place of the scroll was associated with the production and propagation of the gospel of Mark, a view which also took into account the tradition of the founding of the Alexandrian church by Mark (Roberts 1954: 187–89; cf. 1979: 59 n.5; Roberts and Skeat 1983: 54–57). He now looks to Jerusalem or Antioch as the place where the codex was adopted for Christian literature. This development undoubtedly occurred already in the 1st century, and would have spread early to Egypt, where our evidence begins with the 2nd century examples cited. Indeed, the Christian codex and the *nomina sacra* should probably be considered as related developments (Roberts and Skeat 1983: 57–67).

F. Summary and Conclusions

How, then, do we finally assess the evidence for the origins and development of Christianity in Egypt? As we have seen, it is scanty and ambiguous, and has been subjected to diametrically opposed interpretations.

Roberts is undoubtedly correct in stressing the Palestinian and Jewish origins of Christianity in Egypt, something that was intuitively affirmed by Eusebius (2.17.2, above). The earliest Christianity in Egypt was certainly not "gnostic," as Bauer argues. Nor is it useful to apply to earliest Christianity, whether in Egypt or elsewhere, the categories "heresy" and "orthodoxy." Something of the flavor of Jewish Christianity in Alexandria can be extrapolated from *Barnabas* and the *Gospel of the Hebrews.* The writings of Philo were probably utilized early by philosophically oriented Christians, and resulted in the kind of Christianity that is later exemplified by the *Teachings of Silvanus* and Clement of Alexandria. Probably already in the 1st century early Jewish forms of Gnosticism were being adapted to the Christian message by some Alexandrian Christians.

The war of 115–17 resulted in the final break of Christianity from the larger Jewish matrix. From that time on, Gnosticism became a powerful influence in Alexandrian Christianity, as is illustrated especially by the activities of Valentinus and Basilides, who were quite willing to appropriate to their own purposes the Christian books used by nongnostic Christians. It is to be stressed that the very structure of Valentinian and Basilidian ecclesiology presumes the numerical superiority of ordinary, nongnostic

Christians. Even so, Gnosticism gained a very strong foothold in Alexandrian Christianity during the 2d century, and certainly dominated its intellectual life until the time of Pantaenus.

Bauer is correct in stressing the pivotal role played by Demetrius in the development of an orthodox ecclesiastical establishment. Properly called "the Second Founder of the church of Alexandria" (Telfer 1952: 2), he was clearly the first "monarchical" bishop of Alexandria. However, it is doubtful that the impetus for this development came from Rome, for the monarchical episcopacy was as late in coming to Rome (with Victor, bishop 189–99) as it was in coming to Egypt (cf. La Piana 1925). The writings of the Gallican bishop Irenaeus (himself a native of Asia Minor) would certainly have served Demetrius well in the promotion of orthodoxy (the Oxyrhynchus fragment of Irenaeus already cited dates to the time of Demetrius), and were probably transmitted to Alexandria via Rome. But there must presumably have been sufficient "orthodoxy" in Alexandria before Demetrius for Irenaeus, writing about 180, to include the church in Egypt among the churches scattered throughout the world that preserve the catholic faith with "one heart and one soul" (*haer.* 1.10.2).

It is probable that the catechetical school of Alexandria played a large role in the development of a theological orthodoxy, at least from the time of Pantaenus. Roberts suggests that it was Pantaenus who purged the school of the influence of the Gnostics (1979: 54). It was, of course, under Demetrius that the school came under the control of the bishop.

Finally, the expansion of Christianity in Egypt outside of Alexandria, implicit in Eusebius' report of the Severan persecution (6.1.1, above), is documented by the 2d-century manuscript evidence already cited. The places where the manuscripts have turned up include, in addition to Oxyrhynchus and the Fayum, Qarara (Hipponon), Antinoopolis, and Coptos in Upper Egypt (in several cases the provenance is unknown; cf. van Haelst 1976: nos. 462, 33, 12, 52, 179, 224, 151, 336 + 403, 534, 372, 586, 657, 594, 671; and Roberts 1979: 13–14). The expansion thus documented applies only to Greek-speaking Christianity. The expansion of Christianity among Egyptian-speaking natives is documented from the 3d century on, though it can be presumed to have begun earlier. The development of a native Egyptian Christianity is coterminous with the development of the Coptic language, the latest form of the tongue of the ancient Pharaohs.

A. Sources

The primary sources which deal with the development of Christianity in Greece are quite limited, especially before the time of Constantine. The scriptural sources which focus almost exclusively on the ministry of Paul in Greece include Acts 16–20, the epistles of Paul to the churches at Corinth, Philippi, and Thessalonica as well as a few brief references in other NT epistles (Rom 15:26; 16:1; Titus 1:5; 3:12). Scholars do not agree on the historical reliability of those sources, especially in the case of Acts and the epistle to Titus, but the chronological sequence of the journeys of Paul in Greece in Acts is not in doubt, nor that he was the first to found churches in the places mentioned in Acts. The epistle to Titus, which in its present form did not come from Paul, nevertheless gives a reliable tradition that Paul had some influence on the starting of the churches in Crete (1:5) and that he spent a winter in Nicopolis in Epirus (3:12). This information is not such that would be fabricated in the ancient sources.

Besides these scriptural references, there are a few brief comments, mostly incidental, from the Church Fathers indicating the presence of churches in Greece before Constantine, but they are not sufficiently detailed to provide a clear picture of the size or impact of those churches. These references, however, do permit us to see that Christianity not only was still growing in Greece in the first four centuries, but also had become fairly widespread among the local people without much opposition from them. It is also clear that the churches had organized themselves into a strong episcopal body which included parts of Macedonia, Thessaly, Epirus, Thrace, most of the southern province of Achaia, and many of the Greek islands. The primary sources for reconstructing the history of Christianity in Greece before the time of Constantine include Eusebius' *Historia Ecclesiastica* (ca. 330–40) and also his *De Vita Constantini*, Hippolytus' *Philosophoumena* (ca. 220–30), the ecclesiastical histories of both Socrates (ca. 439–50) and Sozomen (ca. 435), the various collections of the accounts of martyrdoms in the ancient churches (especially the *Acta Sanctorum*), and Jerome's *De Viris Illustribus* (ca. 392–95). References to the growth and development of the church in Greece are also found in incidental comments from *1 Clement* (ca. 95), the so-called *2 Clement* (ca. 120–70), *The Apostolic Constitutions* (ca. 350), Polycarp's letter to the church at Philippi (117–20), the writings of Origen, especially *Contra Celsum* (ca. 230), and Porphyry, *Philosophy from Oracles* and *Against Christians* (ca. 260–63).

B. The First Century

The Christian proclamation first came to Greece through the missionary activities of the Apostle Paul (Acts 16:9–40; 2 Cor 2:12–13) ca. 50. After landing at Neapolis (Acts 16:11), Paul began his first church in Greece at Philippi (Acts 16:12–40), a Roman colony where Latin was the official language of the courts and the common people. Paul's reception at Philippi was mixed, but an important church was started there which later contributed to his needs while he was ministering elsewhere in Macedonia, especially in Thessalonica (Phil 4:15–16). After a brief imprisonment in Philippi, Paul departed for Thessalonica, passing through Amphipolis and Apollonia (Acts 17:1–9), but again he encountered strong opposition. This time, however, it was the Jews who opposed his ministry and for safety's sake he had to leave the city (Acts 17:5–7, cf. 1 Thess 2:14–16), but not before he started an important church. In a matter of months the Thessalonian Christians were evangelizing the Macedonian province and had even become an example to the churches in Achaia in the south (1 Thess 1:7–8). From Thessalonica he went southwest some forty-five miles to Beroea and enjoyed considerable success before a Jewish contingent of opponents from Thessalonica came and again forced him to leave (Acts 17:10–13). According to the *Apos. Con.* 7:46, the first bishop of Beroea was Onesimus, the runaway slave of Philemon (cf. Phlm 10). After leaving Beroea, Paul went to Athens, but had little success in his mission there (Acts 17:16–34). One of his Athenian converts was Dionysius the Areopagite (Acts 17:34), who later was called the first bishop of Athens by bishop Dionysius of Corinth (Eus. *Hist. Eccl.* 4.23.3). Departing from Athens, Paul went to Corinth (ca. 51–52, depending on the dating of the famous inscription from Delphi which locates Gallio in Corinth for a brief stay, cf. Acts 18:12–17) and founded his most significant and influential church in Greece (Acts 18:1–17). Almost from the beginning this church had problems and even serious divisions (see 1 Cor 1:11–15; 3:1–3), but there was an important response to the Christian proclamation at Corinth. After some eighteen months of ministry in Corinth (Acts 18:11), Paul departed through the seaport village at Cenchreae, where he completed a Jewish vow (Acts 18:18). Acts does not say whether Paul founded a church there, but in the appendix of his letter to the Romans, he commends Phoebe, a deacon in the church of Cenchreae, and encourages the Romans to help her along her way (Rom 16:1–2). According to the *Apos. Con.* 7.46, Lucius was appointed by Paul as the first bishop of Cenchreae.

In Titus 1:5 we read that Paul founded churches on the island of Crete and left Titus behind to give leadership and direction to the churches. Those churches included at least the ones at Knossos and Gortyna. Also in that epistle there is a brief reference to Paul's plans to spend the winter in Nicopolis. It may be that Paul started a ministry there, but it cannot be confirmed. It is also possible that he stayed the winter at Nicopolis in preparation for his ministry in Illyricum (Rom 15:19). If one were to include the impact of Christianity on the whole of the Hellenistic peninsula, then Illyricum on the northwestern part of the Grecian peninsula must also be added to the missionary activities of Paul. The departure of Titus

from Paul to the province of Dalmatia in Illyricum (2 Tim 4:10) also implies the presence of a church there, though nothing more is known of either his or Paul's labors in that region.

Besides the Apostle Paul, the most influential companions who were involved with him in his mission in Greece were Timothy, Silas, Luke (probably), Priscilla and Aquila, and Apollos. Dionysius, bishop of Corinth, claimed that the Apostle Peter joined with Paul in founding the church at Corinth and labored side by side with him (*Hist. Eccl.* 2.25.8), but this has no other ancient support. The problem of the division of loyalties in Corinth (1 Cor 1:12) has suggested to some commentators that Peter actually ministered in Corinth; however, this could mean simply that Peter, as a founding pillar of the church, was appealed to for justification for some form of Jewish Christianity present in Corinth. Finally, there is a strong multiple tradition from the 2d to the 6th centuries which points to the ministry of the Apostle Andrew in Scythia, Thrace, Epirus, Macedonia, and Achaia. That tradition also reports that Andrew was crucified in the Achaian city of Patras at the direction of the proconsul Aegeas (see *Acts of Andrew, Passio, AcApos* 56:586; Philasterius *De Haeresibus* 88; Jerome *Ad Marcellum, Breviarium Apostolorum, Martyrologium Romanum;* and Epiphanius *Haer.* 61.1, 63.2). According to Jerome, Andrew's bones were transferred from Patras to Constantinople by Constantius II, Roman emperor 337–61 (*De Vir. Ill.* 7).

At the end of the 1st century, Corinth is mentioned again because there was quarreling going on in the church which led to the expulsion from office of several of its presbyters. Clement of Rome wrote to them encouraging them toward peace, humility, and obedience to their leaders (*1 Clem.* 4–20, 44–46).

It is likely that there were other churches in Greece in the 1st century at Larissa, Patras, and Aegina (according to *Apos. Con.* 4.46, Crispus, presumably of 1 Cor 1:14, was the first bishop of Aegina), and probably elsewhere owing to the evangelistic spirit of the churches in Macedonia (1 Thess 1:7–8).

C. The Second Century

Because the sources for understanding the development of Christianity in Greece in the 2d century are more limited than those for the 1st, even a broad outline of the church's activity in Greece for that era is difficult to produce. The following references, though limited, are essential for any description of the ecclesiastical climate in 2d-century Greece.

1. Polycarp. Around 117–20 Polycarp, bishop of Smyrna, wrote a letter to the Christians at Philippi partly to prepare them for an impending visit of Ignatius of Antioch, who was on his way to Rome for martyrdom, but mostly to warn them against disorders and apostasy *(Ep. Pol.).* He rejoiced with them that their faith had deep roots and that it was still bearing fruit (1:2).

2. The Greek Apologists. At nearly the same time Quadratus of Athens, the first Christian apologist, wrote a defense of the Christian faith to the Emperor Hadrian (ca. 124–25), answering the objections of both Jews and pagans (*Hist. Eccl.* 4.3.1–2). Aristides, also from Athens, sent another apology to Hadrian (ca. 125), defending both the existence and eternity of God as well as the superiority of the Christian understanding of God (*Hist. Eccl.* 4.3.3). Some scholars locate both of these apologists' writing careers ca. 160 during the reign of Antonius Pius (138–61), but that view is difficult to establish. The most distinguished 2d-century apologist from Athens was Athenagoras (ca. 170–80), who set forth the earliest defense of the Christian doctrine of God as three in one. Whether there was a Christian philosophical school in Athens during the 2d century which trained these apologists is not known, but the fact that they all came from Athens in the 2d century is suggestive.

3. Dionysius of Corinth. The most influential bishop in Greece in the 2d century was Dionysius (ca. 170), who wrote letters to several churches and individuals encouraging them in the Christian faith. Among the eight letters referred to by Eusebius, he wrote to the churches at Athens, Lacedaemon, and to Gortyna and Knossos in Crete (*Hist. Eccl.* 4:23). He rebuked the Christians at Athens for their tendency toward apostasy following the death of their bishop (Publius), but rejoiced that their new bishop (Quadratus—not the apologist) had brought them back to the faith. The church in Lacedaemon shows that the Christian message had reached the southernmost part of the Peloponnese by 170. The significance of this city is not known during the 2d century—it may have been a small country community and may also have been an alternative name for Sparta, as some have suggested—but by the 4th century its importance both socially and politically is seen by its inclusion, along with Corinth and Athens, in the request from

the emperor Julian to help him in his political reforms. Dionysius' exhortation to Pinytus, the bishop of the church at Knossos in Crete, to cease imposing his strict views of continence on the church there shows an early tendency toward asceticism in the churches of Greece (*Hist. Eccl.* 4.23.7). After mentioning his letter to Soter of Rome, Eusebius calls attention to Dionysius' complaint about the altering of some of his letters by his opponents, possibly the Marcionites, whom he condemned in his letter to the church at Nicomedia (*Hist. Eccl.* 4.24.4).

4. Bacchyllus. Following Dionysius, Bacchyllus became bishop of Corinth (ca. 185–90) and was an active participant in the Easter (Quartodecimian) Controversy, writing an influential letter on the matter (*Hist. Eccl.* 5.22.1; 5.23.4; see also Jerome *De Vir. Ill.* 44).

5. Melito of Sardis. Eusebius tells of a letter from Melito of Sardis (ca. 180) to the emperor Marcus Aurelius, or Antonius Verus, (emperor, 161–80) and his son Commodus, imploring them to send a letter to the magistrates of Asia not to take further actions against the Christians. He reminds the emperor that his father, the emperor Antonius Pius (138–61), had written similar letters to the cities of Larissa, Thessalonica, and Athens directing them to do no further harm to the Christians (*Hist. Eccl.* 4.26.7–11).

6. Theodotus. Among the defectors from the Christian faith during the 2d-century persecutions (probably those of Marcus Aurelius, 161–80), Theodotus of Byzantium was condemned by Hippolytus of Rome (ca. 190) for his denial of the faith (*Philosophoumena* 7:7). He was later excommunicated by Victor of Rome (192–202) for his Arian doctrines about Christ (Epiph. *Haer.* 54.1).

7. The Letters of Serapion. A final witness to the growth and development of the church in Greece in the late 2d and perhaps early 3d centuries comes from Eusebius. While describing the letters of Serapion of Antioch against heresy, he mentions the names of various bishops who signed Serapion's letters, signifying approval of the contents. Among these bishops was Aelius Publius Julius, bishop of Debeltum, a colony of Thrace (*Hist. Eccl.* 5.19.3). This story also provides evidence that a Thracian provincial synod was held toward the end of the 2d century in order to discuss the Montanist controversy, showing the kind of cooperation existing among the various churches both in and outside Greece.

D. The Third Century

The few ancient sources that do exist for the reconstruction of the growth and development of Christianity in Greece in the 3d century are mostly concerned with the persecutions initiated by Decian. About all that is otherwise known is the visit of Origen to Nicopolis near Actium in Epirus (ca. 230), where he found a copy of the Scriptures (presumably the OT). Both his stay there and his finding a copy of the Scriptures obviously suggests that a Christian community was situated in Nicopolis (*Hist. Eccl.* 6.13.2). About the same time, Origen also spent some time in Athens in order to finish his commentary on Ezekiel (*Hist. Eccl.* 6.32.2). He described the church in Athens as a "peaceful and orderly body, as it desires to please Almighty God" (Origen *c. Cels.* 3.30). He also spoke along similar lines about the church at Corinth.

The life of the churches in Greece in the middle of the 3d century was dominated primarily by the Decian persecution. The Roman emperor Decius saw the Christians as a threat to the unity of the empire. They were emerging as an empire within the empire, and they were even referred to as a "nation" (Gk *ethnei*) by Jovius Maximinus Augustus in a letter to Sabinus (see *Hist. Eccl.* 9.9a.1, 4). The text (written ca. 312–13) clearly shows the perceived threat Christianity posed to the Roman Empire. The growing number of Christians and the consequent abandonment of the state religion by many was taken with utmost seriousness. With his edict in January of 250, Decius began the first empire-wide persecution of the Christians, starting with the execution of Fabian, bishop of Rome. The persecution lasted about eighteen months until Decius was killed. Valerian, his successor, resumed the persecutions in August of 257 and they continued until his capture by the Persians in June of 260. His son, Gallienus, reversed the edict of Valerian in July of 260 and for the next forty years the Christians throughout the empire lived in relative peace and freedom to practice their religion (*Hist. Eccl.* 7.11–13). Our information about the persecutions from 250–60 is more complete for cities like Rome, Carthage, and Alexandria, where the full force of the persecutions and executions was felt, but there were many other Christian martyrs throughout the empire during this period of which only a few names have survived. The fragmentary literature that

has survived this era is indicative of the severe nature of the persecutions which the Christians endured in Greece and especially in Achaia. Among the Greeks known to have been martyred are Leonides, bishop of Athens, and his eight companions from Corinth (*ActSS* April 2; *Bibliotheca Hagiographica Graeca [BHG]* 2:54–55); Quadratus and his Corinthian companions (*BHG* 1: 119); and Irene and Adrian from an unnamed city in Achaia whose feast day was kept on March 10 (*ActSS* March 2). Unfortunately, there is no surviving evidence that the churches in Greece produced any great leaders, scholars, writers, or spokespersons during this time comparable to those found elsewhere in the Roman Empire in the 3d century (e.g., Origen, Ambrose, Fabian, Dionysius of Alexandria, and Cyprian). Eusebius is usually quite detailed in his descriptions of the most prominent persons in the church, but is silent about church leaders from Greece during this period. See *Hist. Eccl.* 6–7, where he focuses on this period of the church's life, but says almost nothing about the church in Greece or its leaders.

Throughout the 3d century, apart from the period of intense persecution, there was essentially complete freedom to preach the Christian message. It is clear from the catalog of bishops from Greece representing their churches at the Council of Nicea (see the lists below) that significant evangelization had taken place throughout Greece, especially in Achaia. (See Sozomen *Hist. Eccl.* 7.7 for further evidence of numerous well-organized Greek churches in the 4th century.) Eusebius also makes it clear that the period of relative ease for the church also produced a time of moral laxity which, he believes, led to the Diocletian persecution in the early 4th century (*Hist. Eccl.* 8.1.7–8.2.3).

E. The Fourth Century

By the 4th century, much of Greece was already Christianized and evidently without significant opposition from the local residents. The Greeks in the Peloponnese, by and large, had embraced Christianity, and as can be seen from the number of bishoprics there, their churches were well organized. Churches elsewhere in Greece were also apparently numerous and well organized as the large number of bishops at the Council of Nicea in 325 from both prominent and insignificant Greek communities suggests. Sozomen gives evidence of the strong organization of the Greek churches when he describes the Macedonian christological controversy in the 4th century. He relates how the Macedonian bishops rejected the notion that the substance of the Son was the same as that of the Father and they exhorted their churches not to conform to the doctrines of Nicea (*Hist. Eccl.* 7.7).

Probably as a result of the rapid growth of the church both in Greece and elsewhere, the church was set on a collision course with Rome.

1. The Diocletian Persecution. On February 23, 303, after some forty years of peace and prosperity for the church, Diocletian, the Roman emperor, launched the last great empire-wide persecution of the Christians. In a series of four edicts between 303 and 304 Christianity, in effect, became an outlawed religion in the empire. Its Scriptures were destroyed, its properties destroyed or confiscated, and its ministers were imprisoned and forced under penalty of death to offer sacrifices to the pagan gods. The causes for the persecution are not given in the edicts, but the social context of the day gives a major clue.

First, the Christian community had increased considerably in the pagan world in the last quarter of the 3d century. Porphyry wrote fifteen volumes against the Christians because he saw them as a major threat to the empire. He feared that none of the Christian converts could be reconverted to the state-recognized religion (*Philosophy from Oracles,* ca. 263), and he was especially concerned about the influx of educated women into the church. He spoke with alarm and disappointment that the Christians were building up their "great houses" to assemble for prayer (*Against Christians* 2.63–64). Eusebius agrees with such claims and speaks with pride of the growth of the church and its rising prestige in the last decades before the Diocletian persecution. He gives several examples of the many Christians who held high offices in the imperial service (see *Hist. Eccl.* 8.11.2; 8.6.1; and 8.9.7–8).

Second, at the same time that the Christians were improving their image and gaining converts almost everywhere, Rome, its government, and its religion, were clearly on the decline in public sentiment. Disloyalty and disrespect for the government was on the rise. This was due in part to the many foreign invasions in both Britain, Germany, and elsewhere, as well as the consequent need for heavier taxation to support an even larger military necessary to suppress the unrest in the empire. Both the Decian and

Diocletian persecutions as well as their reforms had little effect on bringing the necessary changes in the empire. The immorality of the higher classes continued to undermine the people's confidence in Rome. Lack of loyalty for the empire can be seen in the fact that the majority of the Roman army was made up of mercenaries, and neglect of paying one's taxes was praised among the common people. Further, unequal distribution of justice, i.e., the rich were getting richer and the poor poorer, along with a moral laxity especially among the highest leaders of the empire, led to a growing lack of respect for leadership. The opulence of the emperors and their favored lieutenants came at the expense of the already increasingly poor population. (See Finlay 1877: 1.99–114 for a detailed discussion of the social climate of the Roman empire in the late 3d and early 4th centuries.)

The empire was deteriorating and Diocletian was painfully aware of it. Before him, Aurelian (270–75) and Probus (276–82) had tried to reform the empire, but without success. Diocletian, in the same spirit, tried to set the clock backward, and again it did not work. His solution was to return to the stability of the former generations through loyalty to the gods of the state and unity within the empire brought about by a stronger military. Eusebius indicates the Roman concern that the Christians were not loyal citizens (*De Vita Constantini* 2:50), and also that the Christians were excluded from military service at the beginning of the Diocletian persecutions (*Hist. Eccl.* 8.1.7).

The Christians, on the other hand, assumed that the empire would not and could not last because it had stood for evil, unequal justice, promiscuity, and immoral behavior in the upper classes. The Greeks, long imbued with a sense of equality and the feeling of a moral code which applied to both superiors and inferiors, generally embraced Christianity because it enforced the observance of the moral duties on every rank of society without distinction. The general demoralization of women in the empire compared to the morality taught by the Christians with respect for women led many women to convert to Christianity. It is not surprising, therefore, that the Roman emperors should have seen Christianity as a threat. The church stood for the morality that the populace was coming to appreciate. The loyalty and fervency of faith common among the Christians were sorely lacking in the Roman hierarchy and in their religious practice. The church was well established and highly organized in the early 4th century and their political clout was doubtless a key factor in their being persecuted. The fear of the continued growth of the Christians is noted in the letter of Jovius Maximinus Augustus to Sabinus in which he justified the persecution of Christians because "almost all men had abandoned the worship of the gods and associated themselves with the *nation* of the Christians" (*Hist. Eccl.* 9.9a.1). The term "nation" (Gk *ethnei*) suggests the solidarity with which the emperor viewed the Christians and not without reason. The authority of the bishops over the people in their congregations was powerful and effective not only in the church's ministries, but also in daily social discourse.

The exact reason for the Diocletian persecution is not clear, but the hatred for the Christians by one of his closest lieutenants, Galerius, is well known and both were together in Nicomedia at the time of the outbreak of hostility toward the church. At any rate, the Diocletian persecution was quite severe and lasted for some ten years. In Greece especially, where Galerius had a home in Thessalonica and exercised great influence, the persecution was carried out with extreme cruelty as the various accounts of the martyrdoms there show.

2. The Martyrs. Evidence for a strong church in Greece in the early 4th century can be found in its lists of martyrs. One of the most dramatic examples shows that young and even pregnant women were not immune from torture and death by the Roman authorities (*ActSS* April 2: *Agape, Irene, and Chione at Thessalonica* sec. 4). The notices of martyrs in Adrianopolis, Drizipara, Epibata in Thessaly, Buthrotum in Epirus, and Pydna testify to the vibrant faith of the Christians in Greece. These persecutions also included the burning of sacred Christian literature and the destruction of their properties and places of worship (see *ActSS* March 2 and April 2, and *Hist. Eccl.* 8.2.1–5). The destruction of Christian literature no doubt had a severe effect upon the Christians' ability to keep accurate records of the growth of their mission (see the solicitation of Christian books in *Gesta apud Zenophilum* 26), especially in Greece, where Galerius resided and was actively involved in the persecution of Christians until shortly before his death in 311 (*Hist. Eccl.* 8.17.1).

3. The Conversion of Constantine and the Edict of Milan. Without question the most important event for Christians throughout the Roman Empire in the early 4th century was the conversion of Constantine to the Christian religion and his subsequent Edict of Milan in 313, which gave complete religious freedom to the Christians. Even before the edict was issued, Constantine had given Christians freedom to worship in safety in Macedonia and Illyria (Sozomen *Hist. Eccl.* 1:2). After the Edict of Milan, there were only a few months of persecution by Licinius in the East and again just briefly during the reign of Julian (361–63).

4. The Council of Nicea (325). The listing of the names and home cities of the bishops who attended the Council of Nicea offers evidence for the considerable number of churches in Greece by the early decades of the 4th century. According to Sozomen there were three hundred and twenty bishops attending the council (*Hist. Eccl.* 1:17). Those from Greek cities of which we are aware include Bishop Pistus of Athens, Bishop Strategius of Hephaistia on the island of Lemnos in the Aegean Sea, Bishop Claudian of Larissa in Thessaly, Bishop Eustathius of Beroea, who was voted by the other bishops to fill the apostolic throne at Nicea (Sozomen *Hist. Eccl.* 1:2), Bishop Paederus of Heraclea of Thrace, Bishop Budius of Stobi in Macedonia, Bishop Cleonicus of Thebes in Thessaly, Bishop Ballachus of Pele and also of Thessaly, Bishop Dakos of Scupi in Dardania, whose bishopric included Macedonia, and Bishop Marcus from Chalcis on the island of Euboea. Eusebius, commenting on the wide representation at the council, claims that "those in the remotest districts of Thrace and Macedonia, of Achaia and Epirus … were in attendance" (*De Vita Constantini* 3:7). There was no mention of representative churches in Crete at Nicea, which was probably an oversight since churches were known to have been established there in the 1st century at Knossos and Gortyna. There were also other representatives from the Christian communities on several Greek islands such as Corcyra, Cos, Lemnos, Rhodes, and presumably Patmos. It is clear that by the 4th century, Christianity had reached the Greek settlements on the northern coasts of the Black Sea and in the Crimean settlements since two bishops from that region (Theophilus of Gothia and Cadmus of Bosphorus) were also in attendance at the council.

5. The Churches in Greece. Both before and following the Diocletian persecutions, the churches in Greece were stable and well organized. That continued to be the case up to the time when the emperor Theodosius I (The Great, 379–75) established Christianity as the religion of the empire. There was solidarity not only within Greece, but also with other churches throughout the empire. The episcopal form of church government also seems to have taken hold throughout Greece, and as is clear from the correspondence of Dionysius to Soter, bishop of Rome, there was a growing appreciation of the value of ancient correspondence in the churches. This was especially so after the edicts to burn this material. The reading of Clement of Rome's letter to the Corinthians in worship as a means of drawing admonition from it, even some seventy years after it was written, was the very practice which led ultimately to the recognition of Christian writings themselves as Scripture (*Hist. Eccl.* 4.23.11).

In the 4th and 5th centuries, Athens continued to be the stronghold of the non-Christian philosophies long after Constantine had declared that the city corrupted the people who continued to flock from all over the empire to its teachers of philosophy. Later, during the reign of the emperor Julian (361–63), pagan sacrifices at Athens were still tolerated, but by the middle of the 6th century, Justinian closed the philosophical schools in Athens and discontinued the pagan sacrifices. The Athenian philosophical schools nonetheless continued to have an important influence on the people centuries later, not only in pagan communities, but also in the Christian church. It is important to note that the Christian doctrine of the Trinity was framed within Platonic philosophical categories. Both Plato and Aristotle had a significant impact on the theologies of the Church Fathers, especially Boethius (480–524) and Thomas Aquinas (1225–74). Although Athens never had a prominent Christian church, it continued to be revered by the Romans and the entire Hellenistic world for its focus on education and philosophy. However, whatever the strength or character of the church in Athens, it had little impact upon the moral and social climate of its day.

Corinth, on the other hand, was the ecclesiastical metropolis of Achaia, having preeminence over the church in Athens well into the 4th century. While Corinth was one of the most flourishing commercial

centers of antiquity, the church there was composed primarily of lower-class individuals (1 Cor 1:26–29), at least at first. It was also concerned with the evangelization of the Peloponnese (*Hist. Eccl.* 4.23.1–8).

6. Constantinople as the "New Rome." In the early part of the 4th century, Heraclea, which had been the metropolis of Thrace, was surpassed by Byzantium, which became the capital of the Eastern empire and was renamed Constantinople in 326. The removal of the capital from Rome was an astute move on the part of Constantine. Since Greece was already predominately Christian and Rome was not, the Hellenistic peninsula was a much more favorable climate to relocate the capital of the empire, especially when the emperor wanted to wed the empire with the church. Finlay has rightly observed that "when the emperor, by becoming a Christian, was placed in personal opposition to the Roman Senate, there could be no longer any doubt that Rome became a very unsuitable residence for the Christian court. Constantine was compelled to choose a new capital" (Finlay 1877: 1.139). The power the church had acquired in Greece no doubt influenced Constantine's choice of relocation, but the strategic location of Byzantium must also have influenced his thinking. From there he was able to solidify the Eastern empire and organize the whole of it into four major sectors with the leadership of each reporting to Constantine in Constantinople. The problems of the empire were not fully solved by this move, but to Constantine's credit, there was once again widespread unity in the empire. When he became the recognized head of the church, he also involved himself in its affairs to the point of calling church councils and settling disputes of doctrine. His overriding passion for the empire was unity and conformity and this affected his dealings with the church (see examples of this in Eusebius, *De Vita Constantini* 2.61, 3.6–18, 37; 4.41–43). When Constantinople became the "New Rome," Latin was the official language of the city, but Greek was still the dominant language of the people. Only later when the problem of communication persisted between the two great centers in Rome and Constantinople was the separation between the Eastern and Western empires completed. After Constantinople became the capital of the Eastern empire, it also became the focal point of church hierarchy in the East, which has lasted unto this day.

Elsewhere in Greece, pagan temples were converted by Christians for use in worship and ministry. Many monks also took possession of pagan shrines after Constantine had declared that full restitution be paid to the Christians for their suffering and loss during the persecutions. Nowhere else in the ancient world is there so much evidence of Christians building their churches on the sites of pagan temples and shrines than in Greece. An ancient mausoleum in Thessalonica, for example, which was originally built for the emperor Galerius (d. 311) to entomb his body and to be a pantheon, was converted into a church no later than the last quarter of the 4th century. It is still standing and is now called the "Rotunda" or "Agios Georgios Church."

LEE MARTIN MCDONALD

NORTH AFRICAN CHRISTIANITY

It is one of the ironies of history that although Christianity in the Roman West is defined by such African luminaries as Clement of Alexandria, Origen, Tertullian, Cyprian, and Augustine, its introduction to and earliest development on that continent remain hidden. The first indications of contact are found in

the book of Acts. According to Acts 2:10, the witnesses to Pentecost include "Jews and proselytes" from "Egypt and the parts of Libya belonging to Cyrene." The historicity is questionable for, in addition to the doubtfulness of the event, the list of nationalities presented anticipates the later church universal. Alexandrines and Cyrenians are also mentioned at Acts 6:9, as opponents of Stephen. Acts 18:24 speaks of a certain Apollos, who is called a native of Alexandria; 5th-century Codex Bezae Cantabrigiensis (D) adds an interesting gloss, stating that he was "taught the word of the Lord in his native country." If Bezae's report is correct, then it would mean that Christianity was already winning converts in Egypt by the middle of the 1st century. Philip's baptism of the Ethiopian eunuch (Acts 8:26–40) represents another link (probably symbolic; cf. v. 39b) with Africa. Our survey concentrates on Egypt (centering on Alexandria) and North Africa (centering on Carthage).

No single person is linked with the founding of Egyptian Christianity until the 4th century, when Eusebius (*Hist. Eccl.* 2.16) states that Mark the evangelist was "the first man to set out for Egypt," and was "the first to establish churches in Alexandria itself." In his *Chronicle,* Eusebius says Mark arrived in Alexandria in 43 C.E. The report of Marcan foundation must, however, be read in light of the well-known propensity for important sees to claim foundation by an apostle or evangelist. Mark's connection with Alexandria may be nothing more than another example of this mythmaking. While not linking him with the introduction of Christianity in Alexandria—its existence prior to his arrival is implied—a recently discovered letter (Smith 1973) attributed to Clement of Alexandria (and thus dating from ca. 200 C.E., if genuine) states that after Peter's martyrdom, Mark went to Alexandria. Opinion on the question of Marcan foundation is divided: W. Bauer (1977: 53–58; 60) felt that Eusebius' story was a fabrication, introduced in the late-2d century to support the founding of an "orthodox" monarchic episcopate; recently, B. Pearson (1986: 137–45), while not giving credence to the story, has been reluctant to dismiss it out of hand: *in dubito pro traditio.*

If one probes behind piety and examines the literary remains and theology, one fact emerges from recent studies of earliest Egyptian Christianity: it was dominantly Jewish, essentially another sect within Judaism. Therefore, it seems only natural to assume that the channels through which Christianity first spread beyond Palestine were Jewish. Trade, professional, and family connections would have carried this new Jewish sect of Christianity to the various Diaspora communities. These included, of course, the old, well-established Jewish communities in Africa. Eusebius also supports this analysis, for elsewhere he ascribes the origins of Egyptian Christianity to "the Jews" and states that, "for the greater part," it followed "ancient Jewish customs" (*Hist. Eccl.* 2.17.2–3; cf. Klijn 1986: 164).

Part of the difficulty in discerning traces of early Christianity in Egypt stems to the fact that the earliest Christians still regarded themselves as Jews. The writings of Philo (10 B.C.E.–50 C.E.) evidence the diversity of Jewish thought present in Egypt in the 1st century. As elsewhere, the estrangement between Christian and Jew developed incrementally, and only became final and decisive—manifesting itself in recoverable evidence—after the end of the 1st century. Second-century Egypt yields a rich trove of canonical as well as noncanonical Christian literature: papyrus fragments of Matthew and John (but not Mark!), as well as the "unknown gospel" of the Egerton Papyri (Bell and Skeat 1935), the *Shepherd of Hermas* and portions of the *Gospel of Thomas* (in the Oxyrhynchus Papyri). These findings confirm the pluriformity of early Egyptian Christianity, its eclectic tastes, and its close relationship with Alexandrian Judaism, especially as reflected in Philo. Gnostic currents are evident, probably related to or parallel with similar tendencies within Philonic Judaism. Traditional Jewish motifs, such as the "two ways" teaching, are also evident. Another sign of the link with Judaism is the fact that the two earliest Alexandrian Fathers of note, Clement (*Str.* 2.9.45) and Origen (*Io.* 2.12; *Hom. Ier.* 15.4; cf. Jerome, *de vir. inl.* 2), both know and cite without prejudice the Judaic-Christian *Gospel according to the Hebrews.*

The role of Alexandrian Christianity in the development of Christian literature, thought, and doctrine cannot be overemphasized. Because of its library (founded by Ptolemy Soter I), the literary arts of editing and interpretation reached heights unequaled in the ancient world (Reynolds and Wilson 1974: 5–15). The most polished recension of the NT gospels, the so-called "Alexandrian" text, exemplified in Codex Vaticanus (B) and P^{75}, is the work of Christian scribes of the generation of Clement of Alexandria.

Hellenism was the dominant cultural influence in Egyptian life during this period; Greek was the dominant language. Clement himself is a sophisticated, urbane writer, who attempted to meld Greek philosophy and Christianity. His successor in the catechetical school in Alexandria, Origen, became one of the most famous scholars in antiquity. Pagan scholars in Alexandria had developed the art of allegorical exegesis for interpreting portions of Homer and Hesiod deemed "offensive" to current tastes; later, the Jew Philo borrowed the technique and applied it to embarrassing or awkward portions of the OT. Clement and Origen borrowed the technique and applied it to the Gospels (see ORIGEN).

In addition to the likes of Clement and Origen, 2d-century Alexandria also produced Valentinus, Basilides, and Carpocrates, all later deemed heresiarchs. In the 3d and 4th centuries, Alexandria was home to Arius, leader of the Arians, as well as his opponent, Athanasius. This unparalleled crop of theologians represents leaders on both sides of the two major heresies of the early church: Gnosticism and Arianism; it is proof of the diversity and fluidity of early Christianity in Egypt.

Egyptian Christianity is characterized by its intellectual activity, relative openness, and syncretistic speculation. Whether gnostics working with Greek or Jewish ideas, or Clement and Origen adapting Greek philosophy and exegetical methods, it was an intellectual enterprise. Clement reflects that view when he defends philosophy ("it is impossible for a man without learning to comprehend the things which are declared in the faith," (*Str.* 1.6) and disparages those who "demand bare faith alone, as if (it were possible) without bestowing any care on the vine, straightway to gather clusters from the first" (*Str.* 1.9).

Klijn (1986: 170–75) has pointed to certain theological themes which emerge in early Egyptian Christianity: a logos christology, in which Jesus is the intermediary between God and man; the immutability of the *logos;* an interest in the wonders worked by the incarnate *logos,* which demonstrate that his powers are not mitigated by his having taken on flesh. This "high" christology, emphasizing the divinity of the incarnate one of his immutability, distinguished the so-called "Alexandrian School," as opposed to the "Antoichene School," which sought to preserve the humanity of Jesus (Sellers 1954). These differences set the stage for the christological and trinitarian controversies which were to follow, in which Alexandria and its theologians played such key roles.

Moving west from Egypt along the coast of the Mediterranean Sea, one encounters the Roman provinces of Cyrenaica (roughly corresponding to present-day eastern Libya), Tripolitana (western Libya), Africa (Tunisia), Numidia (eastern Algeria), Mauretania Caesariensis (western Algeria), and Mauretania Tingitana (Morocco). Research into the introduction of Christianity in these regions centers on Carthage, the capital of the Roman province of Africa. Here, too, the imprint of Judaic Christianity is found. It seems reasonable to assume that Jewish lines of communication first brought word to Jews that their Messiah had come in the person of Jesus; the large Judaic-Christian community in Rome may well have been the source of this datum.

Documentary evidence begins in the 2d century, with the *Acts of the Scillitan Martyrs.* These twelve martyrs, from the obscure village of Scillium, near Carthage (or, perhaps, Scilli, in Numidia), were executed in Carthage on July 17, 180 C.E. Their Punic and Latin names are taken as indicators of their backgrounds: they are rustics, from the small villages, Latin-speaking, with ethnic ties to the land. Perhaps the most striking detail is that when they are questioned by the Proconsul Saturninus about the contents of a satchel, one of the martyrs, Speratus, states that it contains, "Books and letters of Paul, a just man." Hence, we know that portions of the Pauline corpus had reached North Africa by 180; furthermore, it is presumed that the documents were in Latin, for it is doubtful if the education of a commoner would have included Greek. (It is often argued that one of the first Latin translations of the Gospels was done in North Africa; the "afra" family of mss in the Vetus Latina are representatives of this effort.) Implicit in this first notice of Christianity in North Africa is a period of development: time for converts to be made in rural areas and among the indigenous population, for literature to be translated and disseminated, and for friction to arise with the authorities, necessitating persecution. We have no sources, however, to take us behind these events of July 180.

Already at this date, the Scillitan Martyrs display a Latin practicality and stubbornness which will become a hallmark of North African Christianity. They are absolutely unwavering in their devotion to the

faith, and seem almost eager to die a martyr's death. There is no second-guessing, no philosophical hairsplitting or reflection. About twenty years later, Tertullian will echo this stolid piety by asking: "What has Athens to do with Jerusalem? What concord is there between the Academy and the church? … Away with all attempts to produce a mottled Christianity of Stoic, Platonic and dialectic composition. We want no serious disputation after possessing Christ Jesus" (*De praescr. haeret.* 7.9–11). Despite such sentiments, the view that North African Christianity was wholly anti-intellectual is confounded by the carefully styled, philosophically slanted writings of scholar-churchmen such as MINUCIUS FELIX (if an African), Augustine, and Tyconius.

If heresy was the plague of the Egyptian church, then schism was the bane of the North African church. The same rigorist tone noted in the *Acts of the Scillitan Martyrs* and Tertullian later manifests itself in the Donatist schism, which split the church in 312. The Donatist party consisted of those who had survived the Diocletian persecution (303–305 C.E.) without recanting the faith. They objected to the readmission of *traditores* into the church, especially the installation of Majorinus, who had allegedly surrendered Scriptures during the persecution, as bishop of Carthage.

Christian inroads in North Africa during Roman times seem to have been limited to the coastal regions—in other words, to the territory within Roman frontiers. Converts seem to have come largely from the two uppermost layers of society, the Greco-Roman population and the Punic "middle class." The lowest stratum, the Berbers, remained largely untouched (Groves 1948: 64–65). The death of Augustine (430) and the establishment of a Vandal kingdom in Africa (442) mark a watershed in the history of North African Christianity. After that point, the transition from the early period to the middle ages has begun. The Vandals were Arian Christians; consequently, the stage was set for new conflicts between the "old" church of Tertullian, Cyprian, and Augustine, and the "new" Arian church brought by the conquering Vandals. After a period of decline under the Vandals, Christianity experienced a renaissance when Byzantium gained control over North Africa in the 530s. This relative calm was shattered by the appearance of Islam, which once again put the church into a period of decline, commencing with the conquest of Egypt in the 640s; Carthage fell in 698. Although the Coptic church survived in Egypt, the North African church appears to have virtually vanished with the arrival of Islam.

The introduction of Christianity into the sub-Saharan regions of the African continent did not commence until the Portuguese voyages south, along the West coast of Africa, on their way to India and the Spice Islands in the 15th century.

CHRISTIANITY IN ROME

The presence of Christianity in Rome goes all the way back to the 1st century. Rome eventually became the most significant city for the growth of Western Christianity.

———

A. Origins

The presence of a sizable Jewish community in Rome made it inevitable that Christianity would appear there quite early. Possibly as many as thirteen synagogues existed in primarily the Trastevere (west across the Tiber River) area of Rome. Presumably the first Christian house churches began in these Jewish sectors. It is not known when this occurred. According to Acts, Jewish visitors from Rome were present at Pentecost, but the narrative does not imply that the new faith was carried back to the Roman Jewish community (Acts 2:10).

Whatever the means by which Christianity was introduced to Rome, it is widely assumed that it was already known there by the middle of the 5th decade. Suetonius (*Claud.* 25) tells us that the emperor Claudius "expelled the Jews from Rome because they were continually rioting *impulsore chresto.*" If *Chrestus* actually refers to Christ, the agitation may have been caused by the incipient Christian community or, perhaps, preaching about Christ. The date of the expulsion of the Jews has minimal attestation, but the relationship of Acts 18:2 with the fairly firm date for the arrival of Gallio in Corinth (Acts 18:12) indicates some time during or prior to the year 49 C.E.

Paul's letter to the Romans reflects the condition of the Roman church about 56 C.E. The church at Rome met primarily in its house churches. Priscilla and Aquila utilized their house for that purpose (Rom 16:3–5). Verse 16:15 may refer to yet another location. It is not clear when, if ever, the local house churches met as a metropolitan unit (note Col 4:16). The house churches involved both Jewish Christians (Rom 4:16) and gentile Christians (Rom 11:13). An onomastic analysis of Romans 16 indicates the presence of all levels of Roman society: slave and/or freed (e.g., Ampliatus [in Roman nomenclature a virtue name, like "ample," usually referred to a slave], Urbanus); Jews, Romans, and Greeks (e.g., Andronicus, Junia, Mary); and male and female.

1. Paul at Rome. The church at Rome claims as its apostolic foundation the two apostles, Paul and Peter. The presence of these two apostles at Rome has become a highly complex problem in which traditional, historical, and archaeological data are intertwined. Paul first came to Rome as a result of the decision of Festus (Acts 25:11–12). Paul must have arrived in Rome about the year 61. Some traditions would have Paul write the so-called Captivity Epistles while imprisoned at Rome and, after a missionary journey to Spain, the Pastoral Epistles during yet another imprisonment. Other sites (Ephesus, Caesarea Philippi) have been suggested for the provenance of the Captivity Epistles. The Pastoral Epistles are not generally considered original letters of Paul. Paul was likely martyred under Nero about the year 63. The first veneration of Paul occurred at the *memoria apostolorum,* "the memorial of the apostles," on the Via Appia (present-day S. Sebastiano). There on the graffiti (east) wall of the *triclinium,* or eating room, can

be found numerous prayers to Paul and Peter (ca. 250 C.E.). Whatever happened between 250 and ca. 330, the veneration of Peter shifted to the Vatican site and the veneration of Paul shifted to Via Ostia (S. Paolo fuori le Mura).

2. Peter at Rome. According to tradition, Peter also spent the last days of his life in Rome. Tradition places his martyrdom to the northwest of the city at the circus of Nero, but the apostle Peter also was venerated at the *triclinium* on the Via Appia. Only after the accession of Constantine did the veneration of Peter at the *memoria apostolorum* cease. Yet even prior to the construction of the *triclinium* Peter was honored (with no sign of cultic veneration) at the Vatican site near the Neronian circus. A monument had appeared at the Vatican cemetery (a niche in the red wall of Campo P) about the year 160. Shortly thereafter an *aedicula* or small monument was built into the niche. Its exact date cannot be determined but about 200 a presbyter Gaius wrote, "I can show you the monuments *[tropaia]* of the apostles, for if you will go to the Vatican or to the Ostian Way, you will find the monuments of those who founded this church" (Eusebius, *Hist. Eccl.* 2.25.6,7). Though no signs of Christian cultic activity appear at the Vatican, eventually the emperor Constantine built the edifice S. Pietro over the *aedicula.* In one wall (the graffiti wall) of the *aedicula* was placed a marble box which presumably held the remains of the apostle.

According to tradition, the letters of Peter were written by him from Rome (1 Pet 5:13). More likely 1 Peter comes from a Petrine group in Rome, perhaps the first attempt of certain persons in the Roman church to advise the church catholic. 2 Peter was written much later in the 1st century.

B. Rome in Early Christian Literature

Tradition placed the NT book of Hebrews from Rome (13:24) near the end of the 1st century, though its similarity to Hellenistic Jewish thought makes Egypt attractive as the provenance, or an Alexandrian as the author. About 98 C.E. Clement of Rome wrote to the church at Corinth on behalf of the church at Rome (*1 Clem.*, Salutation). Clement does not claim authority to intervene at Corinth, nor does he evoke the power of the two apostles. See CLEMENT, FIRST EPISTLE OF. But Ignatius, writing to the church at Rome about 117, speaks of the church there as presiding over the Christians of Italy (*Ign. Rom.*, Inscription). Eventually the authority of the capital of the empire shifted to Rome as the central city of the universal church. And apostolic authority fell on the leader, Peter, rather than the theologian, Paul.

Much of the literature emanating from Rome does not actually reflect, it would appear, the condition of the church at Rome. A Gnostic school was formed in Rome before the middle of the 2d century. Its most famous scholar was Valentinus (in Rome ca. 136–60), quoted frequently by Clement of Alexandria and Irenaeus. His (or his followers') *Gospel of Truth* was a key find in the Nag Hammadi Library. Another school was formed by JUSTIN MARTYR. His two Apologies were written in Rome and addressed to the emperor Antoninus Pius (136–61). His description of the sacraments and Christian life in the first Apology (64–67) probably reflect the situation at Rome during the middle of the 2d century. The *anamnesis* or remembrance-style eucharist reflects the urban tradition of Rome in contrast to the more suburban, popular "agape" of Hippolytus *(The Apostolic Tradition).*

Literature from Rome during the first three centuries was written primarily in Greek, but the shift toward Latin can be seen in the writing of Minucius Felix. His remarkable apology, *Octavius,* written in Latin about 240, defends the Christian faith just prior to the Decian persecution (249–59). *Octavius* was used by another Roman, a pupil of Hippolytus, Novatian, in his *de trinitate* (ca. 250). Hippolytus himself, however, the most prolific of Roman writers prior to Constantine, wrote in Greek.

C. Key Issues in the Church at Rome

During the 2d and 3d centuries serious issues of the Christian life were addressed at Rome. In about 140, MARCION of Sinope came to Rome and proposed a radical ethic of love based on an attenuated "New Testament" canon. The church responded with a canon which included the Old Testament, with judgment as well as love. Incorrectly labeled a gnostic, Marcion was expelled from Rome in July 144. By the end of the 2d century the Roman church itself responded with a fuller canon which probably formed the basis for the Muratorian Canon. About the same time the author of the *Shepherd of Hermas* proposed a system of penance and at least a modicum of leniency in the readmittance of repentant apostates to the faith community. The issue of apostasy continued to plague the Roman community. At the end of the 2d

century a powerful deacon named Callistus also favored a more lax attitude toward those who sinned or left the faith under pressure (the origin of John 7:53–8:11?). Callistus was opposed by the more demanding Hippolytus (*Philosophumena* 9). The issue was postponed by the failure of the Hippolytan group to elect a dissident bishop once the persecution of Decius had started, though the followers of Novatian continued to oppose leniency for those who apostasized during the persecution. Bishop Fabian (martyred under Decius on January 20, 250) took the opportunity to initiate veneration of the bishops of Rome instead of the martyrs. This shift in power toward the urban, pastoral types vis-à-vis the more unbending, populist type resulted finally, under Damasus, in a hierarchical Roman Christianity centralized under an episcopal authority based on the dual apostolic authority, especially that of St. Peter (*Hic habitasse prius sanctos cognoscere debes; nomina quisque Petri pariter Paulique requiris,* "You who seek the names of both Peter and Paul, you should know that these saints once dwelled here" [inscription of Damasus at S. Sebastiano]).

D. Onomastic Data

The later Roman church understood itself to be the heir of some early well-placed patrons. At the end of Domitian's reign a number of noble families were banished or put to death (ca. 95). A consul, Flavius Clemens, cousin of Domitian, was executed. His wife, Domitilla, was sent into exile. The catacomb of Domitilla is reputedly named for this noblewoman. A former consul, M. Acilius Glabrio, was also executed, and the catacomb of Priscilla reputedly derived from his wife.

It is not known how many house churches were formed in Rome. Eventually the later church claimed twenty-five titular churches which reputedly came from the earlier centuries. For example, the title church S. Clemente presumably evolved from the domicile of the so-called successor of Peter, Clement. These connections have not been proved. Nevertheless onomastic studies of early Christians in Rome do indicate that a broad spectrum of society adhered to nascent Christianity. One sample survey of inscriptions (*StadtrChr*) shows that before Constantine 10.5 percent of Christian men were designated by a tria nomina system; 32 percent of the men and 50 percent of the women were designated by a duo nomina system; and the rest were known only by a cognomen. Persons with two or three names must have been from Roman families, while the single-named persons (ca. 50 percent) must have been slaves or freed. After the "peace," Roman family names nearly disappeared. The Roman church participated in, or perhaps facilitated, an increasing democratization of Roman society. A similar phenomenon is observable with respect to slave names. While 3 percent of Roman inscriptions mentioned the status of slavehood, practically no such inscriptions can be found among Christian collections, even though 50 percent or more of the Christian population either were slaves or had been slaves. Christian or biblical names (e.g., Agape or Paulus) appear late (middle 3d century). Until that time Christians were primarily converts. There was little use of Christian birth names prior to Constantine.

E. Organization

The earliest organization of the church at Rome can only be ascertained obliquely. There are remarkably few references to offices in the inscriptional data. *Shepherd of Hermas* (8.3) refers to presbyters, apostles, bishops, teachers, and deacons (some still living) who formed the foundation of the church. Near the end of the 2d century a system of organization becomes evident. Bishop Victor (189–99) emerged as a very strong monarchical bishop. In the controversy over the date of Easter (Rome and others held to the first Friday through Sunday after the 14th of Nisan; the church of Asia kept the 14th of Nisan regardless of the day of the week), Victor even attempted to excommunicate the Asian churches. The next bishops of Rome, Zephyrinus (199–217) and Callistus (217–22), followed the same pattern.

About the turn of the century the deacon Callistus was given supervision of the catacombs. Underground Christian burials were legally registered by this time, so the Roman organization took on an institutional character. At the same time (ca. 200) the *fossores,* catacomb diggers, formed a legal society. Their insignia can be seen on a number of marble slabs from the catacombs. It was the bishop Zephyrinus, an opponent of Hippolytus (*Philosophumena* 9), who appointed Callistus as bishop of Rome. During that time a few people, likely connected with the suburban cemetery group, elected Hippolytus bishop. The schism continued through Urban (222–30), Pontianus (230–35), and Anteros (235–36). In August 236 or

237 the opponents Pontianus and Hippolytus were buried as martyrs in Rome, apparently reconciled. In any case, a process of replacing sporadic martyrs with church leaders had begun. In addition to presbyters and *fossores* there may have been a women's organization. The *Shepherd of Hermas* (78–110) mentions women Christians as if they performed certain pastoral functions; one Roman inscription (*SICV* no. 166; Snyder no. 3) hints at a nurturing function of women (*nonnae dulcissima* "most sweet nurse").

The church at Rome was much occupied with persecution from the beginning of the Decian attacks in 249 through that of Diocletian (starting February 23, 303). Pressured by a fatal illness, the emperor Galerius issued an edict of toleration in April 311. The churches moved from toleration to acceptance when Constantine received his famous vision at the Milvian bridge on October 26, 312. In June 313 the Edict of Milan, granting full benevolence to Christians, was published under the names of both Constantine and Licinius.

F. Theology

Unlike other urban Christian centers, no distinctive theology appeared in Rome before Constantine. The *Shepherd of Hermas* reflects a popular two-way or, more specifically, a two-spirit theology. In either case, like the authors of *Didache* and *Barnabas*, Hermas calls (*Shep. Herm.* 35–39) for the local Christian to choose between the way of righteousness and the way of evil. Marcion presented a radical ethic opposing grace and love to judgment, while Valentinus held to a sharp gnosticism with its dualistic view of the world. Both Justin Martyr and Minucius Felix defended Christianity in terms of Greek philosophy. At the time of Victor, a theology of Modalism (the trinity represents God the Father in three different historical modes) appeared in Rome, but the great writer Hippolytus described the trinity with an emphasis on function.

The intellectual energy of the church at Rome involved order. Its literature reflects primarily issues of rigidity and laxity in regard to church order. On the other hand, the popular material (such as art) reflects a theme of deliverance from threatening circumstances (Hebrew Scripture scenes such as Noah, Daniel, Jonah, and the three young men in the fiery furnace). The deliverer is portrayed as a young Jesus who functions as wonder worker (New Testament scenes such as healing miracles and the resurrection of Lazarus). There are very few allusions to a kerygmatic theology (death and resurrection of Jesus) or a creation theology (the ordering function of God).

CHRISTIANITY IN SYRIA

This branch of the Christian tradition is identified through the predominance of the Syriac language (a form of Aramaic developed primarily at Edessa) in theological and liturgical expression. The geographical boundaries of Syriac-speaking Christianity have varied with the vicissitudes of Middle Eastern history. Centering in what is now northern Iraq and eastern Turkey, Christians with this linguistic and cultural identity were active in areas now denominated by Syria, Lebanon, Iran, India (especially South India), China, parts of Georgia and Armenia, and the Gulf States. This article indicates the early development of Syriac-speaking Christianity with special attention to the history of exegesis.

———

A. The Mythology of Origins

Theories about the origins of Christianity in Syriac-speaking regions have focused on Edessa. Most scholars suspect that some Christian evangelistic activities were carried out there during the 1st century of the Christian era. Edessa was at that time capital of Osrhoene, a buffer state between the Parthian and the Roman empires. The theory recurring in early Syriac literature is that Edessa and territories to the east (as far as India) were evangelized by the Apostle Thomas. This datum is found in various 4th-century writers including Ephrem of Syria (*Hymn on Nisibis* 42), Cyrillonas (*Hymn of the Huns*, written ca. 396 C.E.), Gregory of Nazianzus (*Oration* 33.11), and Ambrose (*Narration on the Psalms* 45.21). The tradition, which apparently originated at Edessa during the early 4th century when major cities of the Roman Empire were attempting to achieve legitimation and stature by claiming apostolic origins for their Christian communities, is developed most extensively in the anonymous *Acts of Thomas.*

The second theory, not necessarily at odds with the Thomas tradition, is that of Addai, the Thaddaeus of the gospel narratives. In a tradition canonized by Eusebius (*Hist. Eccl.* 1.13), an exchange of letters took place between King Abgar V of Edessa and Jesus. Abgar begged Jesus to visit Edessa and offered him refuge there from his Jewish persecutors. Jesus gave Abgar a portrait and eventually sent Addai to become court evangelist and healer. This correspondence is extant in Syriac, Greek, and Armenian and has been noted by various early historians. This tradition has provoked much scholarly debate. Drijvers (1984) suggested it is a late 4th-century forgery used to fight the Manicheans (see below). Others, especially Chaumont (1988), have suggested there may be some historical basis to the story. The problematic *Doctrina Addai* is at the center of the controversy as are the *Acts of St. Mari the Apostle*, the reputed successor of Addai. At present, there is little contextual material by which to evaluate the claims of the documents or their interpreters. Most probably, both traditions, in the form now extant, are of late 4th-century provenance, written on the basis of oral traditions, and tell us little about the actual origins of Christianity in Syria.

Another theory (Vööbus 1958; Neusner 1971, and others) suggests that Christianity in Northern Mesopotamia first developed within the Jewish community. This theory would appear to find support in the *Chronicle of Arbela* which describes a Christian presence in the city of Arbela from ca. 100 C.E.

However the *Chronicle of Arbela* (see below) is of disputed authenticity and one must hesitate to use its contents for information about the early 2d century.

Once again there is little data from earlier than the 4th century with which to test this theory. Probably the position of Edessa and Nisibis as important points on the "Silk Road," the main artery of commerce between the Roman Empire and the East (China, India, Parthia) and the involvement of Arameans in that commerce meant that Christianity traveled with the traders from Antioch toward the East. The demographics of Christianity within the Roman Empire would make it very plausible that the earliest converts were from Judaism. It is also probable that Christianity traversed the "Silk Road" at an early date. It is unclear whether Christianity in the Syriac-speaking areas was first structured in Aramaic (Syriac) or in Greek. Certainly at Dura Europas, the Christian community of this Roman military center appears to have been Greek-speaking; the 3d-century fragment of the *Diatessaron* found there is written in Greek.

B. The Earliest Evidence for Christianity in Syria

There is a paucity of documentation for Christianity in Syria before the 4th century. The most important documents are the Aberkios Inscription, the works of Tatian, the Socratic dialogue attributed to Bardaisan, the *Chronicle of Edessa*, and the problematic *Chronicle of Arbela.* There is some evidence regarding the Marcionites in Northern Mesopotamia.

1. The Aberkios Inscription and the *Life of Aberkios.* The earliest evidence for the development of Christian communities in Northern Mesopotamia is the Aberkios inscription from Asia Minor. This burial inscription, datable from before 216 C.E., recounts the visit of Aberkios to Nisibis where he encountered Christian co-religionists. The text recounts, "My name is Aberkios, the disciple of the chaste pastor who pastures his flock on the mountains and in the plains … I saw the plain of Syria and all the villages, Nisibis across the Euphrates. Everywhere I found people with whom to speak … the faith preceded me everywhere" (Abel 1926). This inscription, without doubt authentic, provides no information as to the identity of the Christian groups in Syria, no indication of theological persuasion, and no names of persons met during the journey. On the basis of this inscription, a late 4th- or 5th-century writer composed a *Life of Aberkios* (edited by Nissen 1912) which provides a detailed account of the travels, miracles, exorcisms, struggles, and victories of the peripatetic sage as well as a purported verbatim of a discussion between Bardaisan (see below) and Aberkios. In this dialogue, Bardaisan's words as recorded in *The Book of the Laws of the Countries* are placed in the mouth of Aberkios. Drijvers (1966; 1984) has argued that the account of the meeting between Aberkios and Bardaisan is historically accurate but such an optimistic assessment of the *Life of Aberkios* is clearly unwarranted (Bundy 1990).

2. Tatian. Tatian, author of *Oration to the Greeks* (Whittaker 1982) and compiler/translator of the *Diatessaron,* was born in Assyria (*Oration* 43.10–11). He studied in Rome (*Oration* 37.1) and was active in the church there before returning to Mesopotamia, perhaps to Palmyra or Adiabene, ca. 172 C.E. probably because of a dispute with that church over its disregard for rigorous asceticism (Eusebius, *Eccl. Hist.* 4.9). It is unclear when the *Oration* was written, but its perspective is remarkably congruent with later Syriac thought and with the tendencies of interpretation in the *Diatessaron.* He presents a vision for an intellectual tradition "unmarred by party divisions" (*Or.* 27.3–5). He describes the church: "we reject all that is based on human opinion [and] taboo" (*Or.* 33.4–11). Within the church, the individual must strive to "obey God's word and not dissipate ourselves" (*Or.* 30.20–21), "lest the constitution of wickedness … grow strong" (*Or.* 30.18–19). It is the world which "drags us down, and it is weakness which makes me turn to matter" (*Or.* 22.10–11). Mankind is to "advance beyond his humanity towards God himself" (*Or.* 16.14–16). The divine spark in humans, aided by God, disciplined by the free will, arrives at a knowledge of God (*Or.* 14.12–16) as well as of "the precepts and doctrine of a single ruler of the Universe" (*Or.* 30.10–11). The theological analysis is aimed against both Greek pagan and Marcionite theology.

The life which will nurture the spirit is characterized by sexual rectitude (his main critique of Greco-Roman society), by trust in God for all needs, including healing, and by study of the Scriptures. There is to be a rejection of Greco-Roman values and culture in favor of Scriptural values. This rigorous

asceticism probably forms the ideological base for "Sons and Daughters of the Covenant," a group of perfectionistic Christians who by their spirituality, celibacy, and asceticism attempted to live the "ideal" Christian life. The celibacy and other encratic practices of self-denial for spiritual development, as expressed in known *Diatessaron* fragments, have been discussed by Vööbus (1951a), Messina (1943), and Leloir (1956).

The *Diatessaron* was Tatian's most influential work. This effort to harmonize the divergent and contradictory accounts of the life of Jesus as recounted in the four canonical Gospels circulated in both Greek and Syriac. Because of later Manichean use of the text, it was first corrected on the basis of the Greek gospels and then abandoned and systematically destroyed. It was translated into Arabic, Persian, as well as Western European languages (Metzger 1977). It provided the early Syriac church with a unique Scripture and certainly aided the process of development of the Syriac-speaking Christian subculture. The only extant remains in Syriac are in Ephrem's *Commentary on the Diatessaron* (Leloir 1963) and occasional citations in early Syriac language writings.

3. Bardaisan. Bardaisan is known from a dialogue recorded by his disciple Philippus, *The Book of the Laws of the Countries* (*BLC*) (Nau 1907), a reference to his skills as an archer by Sextus Julius Africanus (Thee 1984: 147–48), the approbation conferred by Eusebius for his erudite anti-Marcionite texts (*Hist. Eccl.* 4.30.1–2), and the angry diatribes of Ephrem of Syria about Bardaisan's syncretism and expensive clothes and jewels *(Prose Refutations; Hymns against Heresy).*

He was born at Edessa, ca. 155 C.E., into the royal family of Osrhoene. Educated under a pagan priest at Mabbug (Hierapolis), he became the first author of whom it is certain that he composed his writings in Syriac. According to legend, he and his son Harmonius wrote hymns which Ephrem and others felt obliged to counter with hymns of their own. Although writers centuries later would cast aspersion on Bardaisan's orthodoxy, he was presented by Phillipus as an apologist for an understanding of Christianity which stood over against Marcion, regional astrological systems, and Greek theologies.

In *BLC,* Bardaisan argues against determinism and for freedom of the will. This freedom and the dominion of creation constitute the image of God (*BLC* 11). After recounting the divergent customs and laws of various countries to prove their diversity, he characterizes Christians as "the new people … that the Messiah has caused to arise in every place and in all climates by his coming" (*BLC* 58–60). They are called Christians after the Messiah, on the first day, "we gather together," on appointed days they fast (*BLC* 60). He provides a list of examples where Christian ethics differ from un-Christian ethics (seven of nine deal with sexuality). "But in whatever place they are … the local laws do not force them to give up the law of their Messiah, nor does the fate of guiding signs force them to do things which are unclean for them" (*BLC* 60.12–15). Bardaisan insisted, as did all Syriac writers, that sexual rectitude was essential to the Christian life. However, Bardaisan did not see sex within marriage as illegitimate or indicative of an inferior level of spirituality as did others such as Tatian (*BLC* 34.15–25, see Bundy 1985a).

References to the changes of laws in Edessa after the conversion of King Abgar (*BLC* 58.21–22) suggest that Bardaisan's church was sanctioned by the government. The relatively upper-class nature of the church is evident from Ephrem's attacks on the "worldliness" of the Bardaisanites (*Hymns against Heresy* 1.12) of the late 4th century. After the conquest of Osrhoene by Rome, Bardaisan and others appear to have taken refuge in Armenia.

The interpretation of Bardaisan in Christian history has been prejudiced by his inclusion in early Western lists of heretics and by Ephrem's scathing analyses. Modern discussion has focused on his adaptation of indigenous philosophical structures to articulate Christian doctrine. His syncretistic tendencies have been viewed positively (Drijvers 1966) and negatively (Jansma 1969). However, the question of Bardaisan's intellectual structures has not been definitively resolved.

4. The *Chronicle of Edessa.* This text is a chronological listing, composed sometime during the 6th century from earlier sources, of the most significant events of Edessa and surrounding towns, especially Nisibis. It notes that a "Church of the Christians" was destroyed in 201 C.E. by flood waters. The next reference is to the "foundation of the church in Edessa" by Bishop Kune in 313 C.E. which was completed

by his successor, Bishop Scha'ad. Bishop Aithallah who represented Edessa at Nicea is said to have built the cemetery and expanded the east side of the church in 324–25 C.E.

The validity of this data was rejected by Bauer (1934; ET 1971) and accepted at face value by Turner (1954) and Segal (1970). It would appear that Bauer's devaluing of the *Chronicle of Edessa* is too severe. It is probable that, with royal patronage or at least tolerance during the last decades of the Kingdom of Osrhoene, a church building did exist at Edessa before 201 C.E.

5. The *Chronicle of Arbela.* This chronicle is devoted to the city of Arbela in the buffer state of Adiabene, which was ruled by a Jewish monarchy until the invasion of Trajan, 115/16 C.E. It recounts the lives, in later hagiographical form, of the early bishops of Arbela, beginning in about 100 C.E. The second bishop, Bishop Samson, was martyred by the Parthian king Xosroes, during a period of Parthian occupation. The first publication of the text (Mingana 1907) produced a flurry of scholarly activity. Assfalg (1966) and Fiey (1967) argued against its authenticity and suspected it to be a forgery of the editor. Brock (1967) was less certain that it was not a medieval composition. The most recent editors, Kawerau (1985) and Chaumont (1988), believe it to have historical value, as did Neusner (1966) and Sachau (1915).

If the *Chronicle of Arbela* gives an accurate rendition of earlier sources, it may mean that Christianity in Syriac-speaking areas first developed in Arbela and that Syriac (or a related form of Aramaic) began to be used as a liturgical and biblical language there. Even if the dates and names are accurate, the interpretive framework of the *Chronicle* is of a later century, certainly no earlier than the 6th or 7th.

6. Marcionite Christianity. The importance of the Marcionite tradition in the evangelization of Syria is well known. Much of the literature of other Christian groups, from Bardaisan to Ephrem, was written to counter Marcionite influence (Bundy 1988). In many areas of northern Mesopotamia, Christian meant Marcionite. The emperor Julian mentions (*Letter* 41) pogroms by his predecessors against Marcionite villages after the advent of imperial Christianity. Unfortunately, there is no data about the beginnings and development of this tradition.

7. Other Early Documents of Syriac-speaking Christianity. There are a variety of undated (and perhaps undatable) documents which circulated early in Syriac-speaking areas. These include the *Odes of Solomon,* the *Gospel of Thomas* (here the evidence is less than clear), the Pseudo-Clementine corpus, the *Didascalia Apostolorum* (and perhaps the *Didache*), the *Acts of Judas Thomas,* and the intriguing but relatively unexamined *Apology* of Pseudo-Melito. The use of these texts to illumine the early period of Syriac-speaking Christianity is problematic. For example, Murray (1975) suggested the *Odes of Solomon* are the earliest extant Syriac sources. Drijvers (1981; 1984), on the other hand, argues that the present form of these hymns dates from the 3d or 4th century and reflects the struggle with Manichaeism. Lattke (1986) rejects Drijver's theory, arguing for an earlier date. The issues of date and provenance of this collection of hymns (and of the other texts mentioned) are far from settled.

8. The Early Syriac-speaking Church before the 3d Century. The chronological and prosopographical data about the origins of Christianity in Syriac-speaking areas of northern Mesopotamia are uncertain. The religious vision is not uniform, vacillating between the poles of Tatian's rejection of Greco-Roman culture and Bardaisan's acceptance of contemporary science and cosmology. Each text is fraught with interpretive and/or authenticity problems. It is not possible to construct a traditional historical narrative of the early development of Christianity in this region.

C. Early Biblical Texts

The Syriac versions of the Bible have posed many scholarly problems. These concern the relationships between the various translations, their places of origin, and their exegesis. The primary efforts at biblical translations include the Peshitta of the Old Testament, the *Diatessaron,* the Old Syriac *(Vetus Syra),* the Peshitta translation of the NT, the Philoxenian and/or Harklean version, and the Palestinian version. A discussion of the NT versions can be found in Metzger (1977).

1. The Peshitta of the OT. The origin of this translation is unknown. Its connections to Jewish targumic literature suggest that it evolved in a Jewish milieu. Kahle (1959) argued that it was made in Adiabene as an effort to adapt the Palestinian targum for new converts. This theory has been accepted by

Murray (1975: 10), *inter alia.* The problem is that there are also readings shared with the *Targum Onkelos* of Babylon. The Adiabene theory is plausible, but with no philological or historical evidence. In addition to the problem of provenance, there is no possibility of dating the translation with any precision. The earliest citations are from 4th-century texts.

The text is remarkably consistent throughout its transmission history as has been demonstrated by Koster (1977) and Dirksen (1972). A definitive critical edition, *Vetus Testamentum Syriace* (1972–), is being published by the Peshitta Institute of Leiden. Later commentators would indicate variant readings with the LXX traditions and occasionally the Hebrew text, but it appears that little emmendation was attempted.

2. The *Diatessaron.* This harmony of the gospel composed by Tatian has been mentioned above. The original language (Greek, Syriac, or Latin), theological tendencies, and function in the churches has been extensively discussed. For a summary of the various points of view, see Metzger (1977). There are witnesses to the text in Old Dutch, Old Italian, medieval German, Persian, and Arabic. In Greek there is only the fragment found at Dura Europas (see above). In Syriac and Armenian, the most extensive witness is the *Commentary on the Diatessaron* attributed to Ephrem of Syria (306–73). Lyonnet (1950) has demonstrated that the earliest translations of the Gospels into Armenian owed much to the Syriac *Diatessaron.* Extensive quotations are found in such writers as Aphraates, Ephrem, Eznik, Marutha Maipherkatensis, Agathangelos, Rabbula, and the author of the *Liber Graduum.* See also DIATESSARON.

3. The Old Syriac *(Vetus Syra).* This version is known primarily from two manuscripts. Both contain only the four canonical Gospels. No Old Syriac of the Pauline or general epistles has been found, although citations of those texts in Armenian translations of Syriac literature suggest these may have existed. The first is in the British Library (B.L. 14451). Discovered by William Cureton, it was definitively edited by F. C. Burkitt (1904) with additional pages of the same manuscript found in the Royal Library of Berlin. The second manuscript was discovered by Agnes Smith Lewis and Margaret Dunlop Gibson at St. Catharine Monastery on Mt. Sinai. The manuscript had been reused, as a manuscript for lives of women saints, by imperfectly cleaning off the biblical text. After two less than adequate efforts by scholars to decipher the manuscript, A. S. Lewis made several trips to Sinai and was able to publish what remains the best edition (1910).

The text of the Curetonian and Sinaitic manuscripts do not agree at all points, although they clearly stand alone and close together in the larger world of Syriac NT translations. Scholars have generally assumed either that the two are revisions of a common source or that they are independent translations made during the same period. Linguistic peculiarities shared by the two manuscripts suggest that they may be the effort of individuals to gain access to the Greek tradition which lay behind the Syriac *Diatessaron.* Matthew Black (1972) argues for dating these efforts to the 4th century. For a detailed survey of the discussion of scholarly work on the Old Syriac, see Black (1972) and Metzger (1977). The effort of Vööbus (1951b; 1951c) to marshal evidence from the *Letter of Aithallah* in support of his theory of early 4th-century prominence of the *Vetus Syra* at Edessa has been demonstrated to be incorrect (Bundy 1987).

4. The Syriac Peshitta. The word "peshitta" has generally been understood as "simple" or "clear," not unlike the term "vulgate" applied to the received Latin translation. This version of the New Testament is used by both East Syrians (Nestorians) and West Syrians (Jacobites) and therefore certainly predates the division of the Syriac church along political, geographical, and theological lines during the mid-5th century. More precise dating of the translation has provoked controversy. Some have dated it as early as the late 1st or early 2d century. Burkitt (1901) argued that it was from the early 5th century and later suggested that it was translated by Rabbula of Edessa (Burkitt 1904). This conclusion has been contested by Vööbus (1951b), who argued that it was much older although slow to achieve dominance in the Syriac-speaking church.

The manuscript tradition is quite uniform. There are remarkably few variants in the Peshitta as compared to the Old Syriac or Greek versions. Its textual tradition is well documented by the hundreds of

manuscripts preserved, the earliest manuscript (ca. 460–464) probably being *Paris Syriac 296.1* in the Bibliotheque Nationale which contains *Luke* 6:49–21:37. No adequate critical edition of the entire NT in the Peshitta version has been published despite the fact that the first printed edition was done at Venice as early as 1555. The best text available, based on earlier editions which were themselves only partial collations of the manuscript evidence, is published by the Bible Society as *The New Testament in Syriac.* This printing has no critical apparatus. It also contains the Apocalypse and General Epistles, which were not part of the Peshitta translation, but based on the Philoxenian version.

5. Later Syriac Translations. The Philoxenian version was prepared at the direction of Philoxenos of Mabbug (Hierapolis) by a certain Polycarp in 507–8 C.E. An effort to bring the Syriac more in line with the Greek, it also provided, probably for the first time in Syriac, 2 Peter, 2 and 3 John, Jude, and the Apocalypse. A century later (616 C.E.) the version of Thomas of Harkel, assistant to the famous translator of the OT Paul of Tella, was produced. The Harklean version has been variously considered either a revision of the Philoxenian or a new translation. For a history of this debate, see Metzger (1977).

The Palestinian Syriac version is actually a different version of Aramaic. It is closer to Jewish Palestinian Aramaic than to the Syriac of Edessa and northern Mesopotamia.

6. The Early Versions. Apart from the *Diatessaron,* the early Syriac biblical texts are difficult to date. There is no concrete evidence of their existence before the 4th century, although it is probable that at least the OT was available in Syriac early in the Christian period. The *Diatessaron* exerted a strong influence on the development of early Syriac theology and praxis. The Peshitta displaced the *Diatessaron* slowly at first because of pressure from the Greek church and the problems posed by Manicheans finding readings that lent support to their understanding. The major blow came in the late 4th century when Theodoret of Cyrus, because of Tatian's reputation as a heretic in the Western church, gathered and destroyed over 200 copies after replacing them with copies of the individual Gospels.

D. The Third Century

There was significant sociopolitical upheaval in northern Mesopotamia during the 3d century. Rome continued to push its interests eastward. Trajan had conquered Adiabene in 115/16 C.E. as well as Osrhoene. The local dynasty has been allowed to remain in Osrhoene (Abgar et al.) but as tributary clients of the Roman state. Lucus Verus (165–66) had extended Roman control at least as far east as Nisibis. Dura Europos came into Roman hands and was made a frontier fortress city. Septimius Severus (d. 211), mentor of the Christian scholar Sextus Julius Africanus, married Julia Domna, daughter of the high priest of Emesa.

After 226 C.E., the Sassanid Empire, which replaced the Parthian, began to look westward. Shapur I (240–72) set out to reduce Roman influence in the eastern provinces. A series of campaigns allowed him to incorporate Roman fortifications on the Euphrates (including Dura Europos, 256), Emesa, and parts of Cilicia as well as Antioch, which appears to have been occupied in 256 C.E. Many Greek and Aramean/Syriac-speaking Christians were among the many thousands of civilians deported to weaken the economic and military base of Roman Syria and strengthen that of the Persian Empire. The Christians among the exiles brought with them their ecclesiastical structures, and in several villages, both Syriac and Greek languages churches were organized (Chaumont 1988). From this series of deportations comes one of the traditions of the ecclesiastical identity of Mesopotamian leaders, namely that early on they were ordained by and in submission to the Bishop of Antioch.

Palmyra, a city-province to the south of Edessa, took advantage of the power vacuum in Syria to assert its independence and to expand its influence toward Palestine and Egypt. This brought Palmyra into direct confrontation with Rome and the emperor Aurelian conquered Palmyra in 271 and sacked the city, after a revolt, in 272. Among the advisors *(Procurator Ducenarius)* of Queen Zenobia of Palmyra was Paul of Samosata, Bishop of Antioch from 260 until his removal in 268 by a synod of Antioch for supposed heretical teachings which were later, anachronistically, credited with being foundational to Nestorianism. His civil power was probably the main root of the theological controversy (Eusebius, *Eccl. Hist.* 7.27–30). None of his writings have been preserved.

Probably because of the social and theological turmoil, no Syriac language documents have survived between the writing of Bardaisan (ca. 212 C.E.) and the early decades of the 4th century.

Religious life in northern Mesopotamia was complicated by the arrival of Manichaeism with the Persian armies. See also MANICHEANS. Manichaeism was a result of the "mission" of Mani, who understood himself as the Paraclete promised in the Gospel of John and as an "apostle of Jesus Christ." Mani was apparently part of the entourage of Shapur I and used his travels to spread his religious perspective. He left behind a vigorous movement. From ca. 240 C.E. Manichaeism became a powerful contender for the minds of the inhabitants of northern Mesopotamia. It appealed to people because of its rigorous asceticism with respect both to food and sexuality (not unlike Tatian), a clearly defined cosmology and divinization program (which drew on Bardaisan and popular philosophy), and its carefully crafted hymnody and liturgy which were not unlike the established Christian patterns.

Several of the texts mentioned above including elements in the *Odes of Solomon*, the Abgar correspondence, and the *Doctrina Addai* may be efforts of established Christian groups to use the language, imagery, and history of Manichaeism against it (Drijvers 1984).

Manichaeism was not the only competitor for what would be recognized as imperial Christianity in the 4th century. The Marcionite communities continued to wield influence and attract the attention of apologists (Bundy 1988). Roman, Greek, and regional pagan cults continued to flourish. There was also influence from astrological myths and science.

E. The Fourth Century

At the turn of the 4th century, there is once again evidence of Christian activity in Edessa, Nisibis, and the Persian Empire. The earliest data is of Nisibis. Ephrem (306–73 C.E.), writing at Nisibis, describes the life and work of James of Nisibis, who served as Bishop from 308–38. He attended the Council of Nicea as did Bishop Aithallah of Edessa.

1. Nicea. The Council of Nicea changed the balance of power within Syriac Christianity. Imperial Christianity, that is, one version of Christian doctrine and praxis as the unifying ideology of empire, determined and enforced from the center of political power, authenticated the tradition of Palut (the earliest "orthodox" bishop) rather than that of Bardaisan. The Marcionites were now prescribed. Christian emperors would actually eradicate Marcionite villages in northern Mesopotamia. It is no accident that the *Ecclesiastical History* of Eusebius was almost immediately translated into Syriac.

2. *De Recta Fide* of Adamantius. The earliest text is, probably, the dialogue of Adamantius, *De recta fide* (for centuries mistakenly thought to be by Origen) against two disciples of Marcion, Megethius and Marcus (parts 1–2) and against Marinus, a contrived follower of Bardaisan (parts 3–4). The essay cites Methodios of Olympus (d. ca. 311) and was translated into Latin by Rufinius. It is uncertain that it existed in Syriac but definitely seems to be from northern Mesopotamia. It is possible that parts of Bardaisan's dialogues against Marcion are preserved in this text.

3. The Anti-Marcionite Commentary on the Lukan Parables. Also from the first 3d of the 4th century is the anti-Marcionite apology which is a commentary on the Lukan parables, known as *Pseudo-Ephrem A.* It has been attributed to Ephrem but was definitely not written by him (Bundy 1988). The chosen ground of discussion is the parables found in the Gospel of Luke discussed (with the exception of one reversal) in the order they appear in the *Diatessaron.* The author cites, on occasion, Matthew and John but is aware that they are not in the Marcionite canon. Only Pauline texts accepted by Marcion are cited. The piety, ecclesiology, and spirituality are not attacked. The issue is one of scriptural interpretation (with more than Luke's gospel, one can know more) and belonging to the author's ("true" Christian) community. The tone is respectful and moderate.

4. Aphraates, Persian Theologian. The same can be said of the works *(Demonstrations)* of Aphraates, a Persian writer who wrote in Syriac. An unverifiable tradition recorded in the title of *Demonstration* 23 says he was known as Jacob and that he was from the Mar Mattai Monastery east of Mossul. Nothing is known of his life but he did write a letter on behalf of a Synod (*Dem.* 14). The dates of several of the essays are known: *Dem.* 1–10 (336–37 C.E.); *Dem.* 11–22 (344 C.E.); and 23 (344–45 C.E.) during the persecution of Shapur I. Aphraates is aware of the Marcionite church but is more concerned with

Valentinianism, Manichaeism, and Judaism. The latter is viewed as potentially most seductive to his co-religionists. Discussions of Judaism and the Jewish understanding of the OT dominates *Dem.* 11–13, 15–19, 21, and 23. Neusner (1971) has argued that Aphraates' debate with the Jews is remarkably free from anti-Semitism and that the argument is conducted around the focus of arguments about the interpretation of biblical-historical data rather than about theological concerns.

The other *Demonstrations* offer explanations of Christian life and theology. It is a perspective distinct from that found within the church inside the Roman Empire of the period. Christological debates provoked by the Arian controversies are absent. Instead the effort is to argue that the concepts of God and Son are not incompatible with monotheism. The Creed of Aphraates (*Dem.* 1.19) is unique among early Christian creeds: "The faith is, when one believes: in God, the Lord of all, who made the heavens, the earth, the sea and all that they encompass; He made Adam in his image; He gave the Law to Moses; He sent his Spirit upon the prophets; He sent moreover his Christ into the world. Furthermore, that one should believe in the resurrection of the dead; and should furthermore believe in the sacrament of baptism. This is the faith of the Church of God." In addition to this positive statement, there is a series of negative statements which insist the believer avoid astrology, numerology, "Chaldean arts and magic," adultery, fornication, and lying.

Aphraates provides the earliest references to an institutional feature of early Syriac Christianity, the "Sons of the Covenant" *(benai qyama)* and "Daughters of the Covenant" *(benat qyama).* The exact nature of these groups of believers within the Church has perplexed scholars. Some (e.g., Vööbus 1958) have wanted to see it, anachronistically, as a precursor to monasticism because of the solitary living, abstinence from sexual relations even within marriage, and ascetic food practices. Others (e.g., Brock 1973) have more plausibly argued that they functioned as diaconal clergy or as ascetics within everyday society. Without doubt, this structure for Christian spirituality antedated Aphraate, but its origins are unknown. It would appear that Ephrem of Syria, our next subject of discussion, was a member of the "Sons of the Covenant."

5. Ephrem of Syria, Theologian at Nisibis and Edessa. a. Nisibis. Nisibis during the 4th century had the dubious advantage of being situated on the frontier between the Roman and Persian empires as the most significant trading center between those two usually hostile states. Situated on the so-called "Silk Road" over which goods and people traveled between the Roman Empire and China and India, there were economic benefits as the anonymous northern Mesopotamian writer of *Expositio totius mundi et gentium* (written ca. 359 C.E.) explains: "They [Nisibeans] are rich and supplied with all goods. They receive from the Persians that which they sell in all of the lands of the Romans and that which they purchase, they in turn sell to them, except bronze and iron, because it is forbidden to give bronze and iron to the enemies."

Ephrem provided an interpretive analysis of life and morality in Nisibis. His *Hymns on Nicomedia,* ostensibly written as reflections on the earthquake of Nicomedia (358 C.E.), are actually a detailed portrait of Nisibis. They provide insights into the nature of the cultural and social pressures which Ephrem and his co-religionists were facing. Ephrem describes the fields, vineyards, gardens and farms, as well as the artisans, weavers, metal workers, and tailors and notes the governmental infrastructure. The prosperity described reflects the observation of the author of *Expositio totius mundi et gentium* that "… they lead a good life." Ephrem is less sanguine about the nature of religious life in Nisibis. He condemns the avarice of businessmen and government officials. He discounts the results of pagan science and culture, scorning those Christians who consult magicians and astrologers for help in healing illnesses and sterility. He criticizes the husbands of "pious women" who refuse to accept their wives' vows of celibacy and turn to Arab women as concubines and prostitutes. Socially, Nisibis is portrayed as a quintessential frontier commercial center.

The major drawback to the location is seen in the siege of Nisibis by the Persians in 338. The city resisted the siege. Ephrem attributed this to the prayers and leadership of Bishop Jacob of Nisibis. Jacob became a legend in Syriac, Armenian, and Greek Christianity and paradigmatic of the ascetic, devout, politically active Christian bishop. Little is known of his career except for the fact of his participation at Nicea and the narratives of his pastoral activities and prayers for the deliverance of Nisibis recorded in

Ephrem's *Hymns on Nisibis.* The data in Armenian sources and in Theodoret of Cyr are unreliable. Even less is known of the other three 4th-century bishops mentioned by Ephrem: Babou (d. 346), Vologese (346–61), and Abraham (361–?).

b. Who Was Ephrem (306–73)? Ephrem's influence in the Syriac-speaking churches was perhaps the most important factor in their intellectual and spiritual development. His work largely determined the relationships between theological investigation, spirituality, and liturgy. His poetry, written exclusively in Syriac, was translated into Armenian, Georgian, Arabic, Ethiopic, Paleo-Slavic, Latin, and Chinese. No other writer is as extensively represented in the Greek manuscript tradition. Despite his fame and influence, little is known about him. Supposedly a student, a certain Symeon of Samosata, wrote a biography, but if so, it is lost. All we have are the accounts of Palladius and Sozomenos, which have served generations of hagiographers. From the Syriac world, the earliest is a eulogy by Jacob of Serug, delivered more than a century after Ephrem's death and devoid of detail. The only authentic sources are the occasional autobiographical allusions in his own work. The fact that these contradict the traditional stories of Ephrem's life adds credibility to the statements.

From comments in Ephrem's works, it appears that he was born into a Christian family, became a Christian believer at an early age, and was baptized, probably in his early teenage years. He was a participant in the "orthodox" church of Nisibis. He was not ordained, but was a member of the lay order, the *benai qyama* (Sons of the Covenant), which required vows of asceticism, poverty, and contemplative lifestyle. The oft-cited date of his birth, 306 C.E., cannot be verified.

After the surrender of Nisibis to the Persians by the emperor Jovian in 363 C.E., Ephrem became a war refuge. He apparently made his way to Edessa, where he entered the service of Bishop Barses. There he wrote extensively, taught choirs of women to sing his hymns against heresies, and involved himself in relief work. He died in the famine of 373 C.E. on June 9. On Ephrem's life, see Brock (1975) and Bundy (1986).

c. Ephrem as a Writer and Theologian. Ephrem was a prolific author. He used several genre: prose (commentaries on the Bible, sermons, letters refuting heresies); *memre* (verse homilies), and *madrase* (hymns).

(1) Commentaries. Of the prose works, the commentaries are important for our discussion. The *Commentary on the Diatessaron* (Leloir 1963) quotes extensively from the *Diatessaron* and preserves more of the text of the Syriac *Diatessaron* than any other source. Ephrem's commentary was translated into Armenian, probably during the 5th century.

The exegesis of the commentary reflects several of Ephrem's concerns. First, there is both a level of linear historicity and the level of symbolism. In many passages there is the recognition that the basic data of the life of Jesus and others as encountered in the text are phenomena to be examined, systematized, and clarified. However, the focus is on the significance of the Gospel text in what Brock (1985) has described as "sacred time." Second, there is an effort to balance the OT and NT images and symbols to demonstrate the convergence of the OT toward the NT. Third, it reflects Ephrem's conviction that nature is revelatory of God and of God's intention for the world.

The same pattern is seen in the *Commentary on the Pauline Epistles.* This corpus is preserved only in an Armenian translation. The structure of the commentaries is scholiastic. That is, a Pauline phrase is quoted and then followed immediately by an explanation. Because of the provisional nature of the edition and the linguistic difficulties, this text has been rarely studied.

The *Commentary on Genesis and Exodus* preserved in a single Syriac manuscript from the Vatican Library *(Vat. Syr.* 110) is an important witness to early Christian exegesis. As with Ephrem's other commentaries, it reflects a tradition of exegesis with significant divergences from the Western tradition. It reflects an awareness (probably indirect) of the results of Rabbinic exegesis of *Genesis* and *Exodus*. Hidal (1974) and Kronholm (1978) have demonstrated the congruence of this commentary with the rest of the Ephrem corpus.

Other commentary material attributed to Ephrem preserved in Syriac, Armenian, Ethiopic, Arabic, and Georgian has not been definitively examined, but is probably not directly from Ephrem although it may

depend on his work or be part of the production of the so-called "School of Ephrem." This corpus of *dubia* includes commentary on the entire OT and the separate Gospels.

(2) Prose Sermons, the Letter to Publius and Refutations of Heresies. The magnificent, magisterial *Homily on Our Lord* is the only prose homily attributed to Ephrem which is certainly authentic. Other sermons preserved under the name of Ephrem are highly dubious or spurious. Brock (1976), who provided an edition and translation of the *Letter to Publius*, argued that it is probably authentic. It discusses eschatology and judgment and offers surprising divergences with Western views on these subjects.

The prose *Refutations of Heresies*, written in the form of letters, provide insights into the debates in which Ephrem engaged. He argued against four primary competitors: the Marcionites, Bardaisanites, Manicheans, and Arians. Against the Marcionites he contended that their dualism and determinism (Ephrem was a firm believer in freedom of the will) led to an understanding of matter and humanity as inherently evil. This led Marcionites to a docetic christology and denial of the resurrection of the human body, soul, and spirit. The critique of Bardaisan was at two levels. He found their lack of asceticism and confidence in northern Mesopotamian science unfortunate. More serious was the conception of monotheism with attendant ideas of emanations which he felt verged on polytheism.

The Manicheans were radically dualistic and deterministic. Both of these concepts were alien to Ephrem as was the Manichean ascription of a revelatory role to Mani. Ephrem accused Mani of having taken over the Greek understanding of matter and Indian dualism. Arians were criticized for having accepted a Greek philosophical framework for articulating the gospel message and for abandoning faith in scriptural testimony. This resulted, according to Ephrem, in excessive speculation about God, Christ, and the world. The most dire consequence of their "deviation" was understood to be its effect on the mission of the church, the dissension which makes the church appear ridiculous to the "pagans" outside.

(3) Hymns (Madrase) and Metrical Homilies (memre). From Ephrem's pen about 450 *madrase* have been preserved. These were gathered into loosely defined cycles: *On the Nativity* (28 hymns), *On Faith* (87 hymns), *On Virginity* (52 hymns), *On the Church* (52 hymns), *On Nisibis* (77 hymns), *Against Heresies* (56 hymns), *On Unleavened Bread* (21 hymns), *On Paradise* (15 hymns), *On the Fast* (10 hymns), *Against Julian* (4 hymns), and 51 hymns preserved only in Armenian. In many cases the hymn tune name has been preserved, but there is no evidence about the music. Other hymn cycles existed at an earlier date but have been lost through the vicissitudes of northern Mesopotamian history.

The *memre* include at least 27 items which are of reasonable authenticity: *On Nicomedia* (16 *memre*), *On Faith* (6 *memre*), *On Reprehension* (4 *memre*), and *On Nineveh and Jonah* (1 *memra*). Other *memre* attributed to Ephrem are probably inauthentic. The authentic *madrase* and *memre* reflect an exegetical method congruent with the authentic commentary material discussed above. On the theology of Ephrem, see Beck (1949), (1980), (1981), and (1984).

6. Ephrem's Disciples. Works by several disciples of Ephrem are found in the literary fragments of late 4th- and early 5th-century Syriac Christianity. From the pen of Zenobius there are three sermons preserved in Armenian: two on the traditions of the Jews and one in praise of Melitius, the martyr. Fragments of a verse homily or homilies by Aba is preserved in a Sinaitic Syriac manuscript. Six hymns attributed to Cyrillonas have survived. These deal with a variety of topics including the invasion of the Huns (396 C.E.), the conversion of Zacchaeus, the anointing of the feet of Jesus, the passion of Christ (2 hymns), and the "Wise Ones." An anonymous vita of Eusebius of Samosata (d. 380) is dated by Ortiz de Urbina (1965) to this period. The exegetical traditions of Ephrem continued to be used and preserved and expanded as can be seen from the Severian catena. The rest of the writings from what appears to have been a rich literary period have been lost.

F. Subsequent Development of Syriac Exegetical Traditions

After the division of Syriac Christianity into two competing traditions ca. 428 C.E., owing to sociopolitical and theological considerations, the exegetical traditions of East (Nestorian) and West (Jacobite) Syrians developed with different influences. In the West, the main sources were Cyril of Alexandria and Chrysostom translated from Greek with Ephrem of Syria and scholia attributed to him.

These have been preserved most extensively in the *Exegetical Catena* of Severus of Edessa, compiled in 861 C.E. The influence of this material would extend into Cilician Armenia. Most notably this catena served as a source for the huge commentary of Gēorg Skewṛaçi on *Isaiah* (Bundy 1983a). After Ephrem, the most influential West Syrian exegetes included Jacob of Edessa, Moses bar Kepha, Dionysius bar Ṣalibi, and Barhebraeus.

In East Syrian exegesis, the commentaries of Theodore of Mopsuestia, translated from Greek ca. 428, served as models and sources. The East developed a rich exegetical tradition, some of which (e.g., Mar Aba, Seharbokt, Henanišo, Gabriel Qatraya, Daniel bar Tubanita, Sabrišo´ bar Paulos) is known only from fragments preserved in the large *Gannat Bussame (Garden of Delights),* a collection of biblical exegetical material organized around the liturgy (Reinink 1979). Significant amounts of material of Theodore bar Koni, Išo´ bar Nūn, and Išo´dad of Merv have been preserved. For trends in the development of Syriac exegesis, see Bundy (1983b).

G. Texts

Editions of Syriac texts may be found, usually with translation, in the *Patrologia Orientalis, Corpus Scriptorum Christianorum Orientalium,* and the *Patrologia Syriaca.* Here one can find texts of Aphraates, Bardaisan, and Ephrem mentioned above. Ephrem's *Prose Refutations* are available, with English translation in C. W. Mitchell (1921). Bibliography and articles about personages and events in early Syriac Christianity can be found in Baumstark (1922), Ortiz de Urbina (1965), *Dictionnaire de Spiritualité, Dictionnaire d'histoire et de géographie ecclésiastiques,* and Assfalg and Kruger (1975). For extensive, more recent bibliography see Bundy (1985b), Brock (1981–82), and Brock (1987).

_____

A. Introduction

1. Aim. Prior to Jesus' ministry, we can speak only of a diverse Jewish hope of a new age often involving one or more intermediary or redeemer figures—messiah, prophet, exalted hero, archangel, even God himself. A century later all these categories and more were either superseded or focused in one man, Jesus Christ. Ignatius spoke of Jesus in straightforward terms as "our God, Jesus (the) Christ" (*Eph.* 18:2; *Rom.* 3:3), and showed how Christology was well on the way toward the classical credal statements of the ecumenical councils. "There is one physician, who is both flesh and spirit, born and yet not born, who is God in man, true life in death, both of Mary and of God, first passible and then impassible, Jesus Christ our Lord" (*Eph.* 7:2). In the course of that hundred years, the claims of Christianity appeared and began to take definitive shape. The NT contains that first flowering and enables us to appreciate a good deal of how and why it came about and took the forms it did.

2. Method. Since a transition is involved, at the very least, from Jewish expectations to Christian faith, a developmental approach has been chosen. This assumes that a tradition-history analysis is able to uncover the main outlines of Jesus' own convictions and teaching, and similarly that sufficiently reliable information can be had about the beliefs of the earliest Christian congregations. Thereafter we can trace the teaching and emphasis of the individual NT writers themselves, following consensus dating and location where necessary. This approach, of course, will not reveal all that Christians said about Christ during that period, but the NT writings were obviously regarded as of more than passing significance

from the first and therefore can be said to have preserved the most influential material from the foundational epoch.

NT christology could properly confine itself to a description of the christology of each individual document, seeking to demonstrate such correlation and coherence as seems appropriate. Several standard treatments have focused on titles; and though titles cannot tell the whole story, the emergence and use of certain titles can tell us a good deal. Dissatisfaction with an excessive emphasis on titles has more recently resulted in calls for different approaches—motif-centered, transformation of categories, conceptual trajectories, and the like. The following analysis will use all these methods, as seems appropriate.

Most attempts to write a NT christology also use the benefit of hindsight and global perspective to trace the larger patterns and developments of which individuals were a part. They describe the process by which the earliest christological formulations came to expression, as it were, from "outside." The danger of such an approach is that it reads back later developments into the earlier material; it fails to respect the inevitably more limited horizons of the writers themselves. We will attempt the more difficult task of describing the process from "inside." That should not prevent us from recognizing any new or previously unexpressed formulation. On the contrary, we should be better able to distinguish the genuinely new from mere variation or transfer categories.

3. Chief Impulses. The principal stimulus in the formulating of NT christology was threefold: (1) the impact of Jesus, including the impact of his ministry in style and content as well as of his teaching in particular; (2) the impact of his death and resurrection; (3) the experience of (many of) the first Christians in which they recognized further evidence of Jesus' power and status.

The material with which NT christology worked was again primarily the first Christians' memories of Jesus and their own experience. But a principal tributary was the various main features of Jewish hope seen to cohere in Jesus. Also of increasing importance over the hundred-year period under review were various categories of wider currency in the Greco-Roman world.

B. Christological Claims Attributed to Jesus

Did Jesus have a christology? That is, did he make significant claims regarding himself? The Synoptics and John's gospel are most markedly different at this point. Whereas in the latter Jesus' claims for himself are a prominent feature chapter after chapter, in the former he seems on the contrary to want to avoid drawing attention to himself. Since John's christology is so distinctive in comparison with the others, it is best to confine attention here to the Synoptics and treat John separately below.

1. Jesus and Jewish Expectation. At the time of Jesus, Jewish hope embraced a variety of messianic and/or prophetic categories.

a. Royal Messiah. Son of David (as in Isa 11:1–5; *Pss. Sol.* 17:23; 4QFlor 1:10–13). This was probably the figure of the popular hope—a new king to restore Israel's independence and greatness. It is likely that anyone who roused the sort of popular interest and excitement which John the Baptist and Jesus provoked would have been regarded as a candidate for such a messianic role (cf. John 1:20, 6:15). And a basic fact is that Jesus was executed as a messianic pretender—King of the Jews (Mark 15:26 pars.). In the hearing before Caiaphas the question was also probably raised, "Are you the Messiah, son of the Blessed?"—on the basis of the accusation about destroying and rebuilding the temple seen in the light of 2 Sam 7:13–14, interpreted messianically (as in 4QFlor). The distinctive features of Jesus' entry into Jerusalem and of his symbolic action in the temple ("the cleansing of the temple") would almost certainly have raised the same issue in broad (eschatological) or specific (royal messiah) terms. It would hardly be surprising then if his closest followers had themselves raised the question at an earlier stage of his ministry, particularly in the light of the success and popularity it clearly enjoyed (so Mark 8:27–30. pars.).

The key question, however, is how Jesus reacted when this option was put to him. And the answer of the earliest traditions seems to be, not very positively. He never once laid claim to the title on his own behalf or unequivocally welcomed its application to him by others. Mark 6:45 strongly suggests that he rejected the messianic role of popular anticipation (cf. John 6:15), and Mark 8:30–33 and the entry into Jerusalem portray a rather different model. So far as we can tell, he did not reject the title "Messiah" outright when put to him (Mark 8:30, 14:62, 15:2), but as currently understood it was evidently unsuited

to describe the role he saw for himself. It needed the events of the cross and resurrection to reshape and fill the title with new content for the first Christians.

b. Priestly Messiah. In one or more strands of pre-Christian Judaism a priestly messiah was accorded greater significance than the royal messiah (e.g., *T. 12 P.;* 1QSa 2:11–22). But apparently this was never seen as an option for Jesus, presumably because he was known to be of a tribe other than the tribe of Levi.

c. The Prophet. Jewish expectation took various forms here—the return of Elijah (Mal 4:5; Sir 48:9–10), the prophet like Moses (Deut 18:15, 18), and an unnamed or eschatological prophet (Isa 61:1–2; 1QS 9:11; 11QMelch). Whether these were different expectations or variants of a single expectation is not clear, and probably was not clear then either. What is clear, however, is that there was a readiness to recognize Jesus as a prophet or the prophet (Mark 6:15 par.; 8:28 pars.; John 6:14; 7:40, 52), though it should not be forgotten that others were accorded the same title in this period (Mark 11:32; John 1:21; Joseph., *Ant* 18:85–87; 20:97f., 167, 169–72, 188).

Jesus himself seems to have accepted the designation in some degree (Mark 6:4 pars.; Luke 13:33) and in particular to have used Isa 61:1–2 as a program for his mission (Matt 5:3–4 = Luke 6:20–21; Matt 11:5 = Luke 7:22; Luke 4:18–19). He also seems deliberately to have engaged in prophetic or symbolic actions (particularly the action in the temple and the Last Supper). But at times there are hints that he saw his role as transcending that of the normal prophetic figure—Mark 12:1–9, the claim, "I came," rather than, "I was sent" (as in Mark 2:17 pars.); and the use of the formula, "But I say," rather than the more typically prophetic, "Thus says the Lord."

d. Healer. Although miraculous restoration of physical faculties was expected to be a mark of the new age (Isa 17–19, 35:5–7), it was not particularly associated with any of the above figures. Healings and exorcisms were widely practiced in the ancient world, by pagans and Jews (Mark 9:38–39, Acts 19:13–19; Josephus, *Ant* 8:45–49). So although it is beyond dispute that Jesus was known as a successful healer and exorcist, it is not clear whether much significance would have been read into this activity by his contemporaries.

Jesus himself, however, seems to have seen in his own ministry clear evidence that God's final rule was already beginning to operate through his exorcisms (Mark 3:23, 27; Matt 12:28 = Luke 11:20; Luke 10:18) and healing (Matt 11:5–6 = Luke 7:22–23). This self-estimate included a claim to a plenary anointing by God's spirit, which marked out his ministry as distinctive and which should have been sufficiently clear to his critical onlookers (hence also Mark 3:28–29 pars.). Also distinctive was his exorcistic technique, since he seems neither to have used physical aids nor to have invoked some higher authority in a formula of adjuration. We may properly infer a consciousness on his part of his own authority or of an immediacy and directness of empowering from God (Mark 11:28–33 pars.).

e. Teacher. Jesus is regularly called teacher in the tradition (Mark 5:35; 9:17, 38; 10:17, 20, 35; etc.), and his characteristic style as a "parabolist," one who spoke in parables and pithy sayings, is clearly enshrined in the Synoptics. This would be relatively unremarkable in itself, except that the authority with which Jesus taught seems to have provoked surprise and question (Mark 1:27 par., 6:2 par., 11:28 pars.). In a large part this must have been because of the same immediacy and directness which his teaching style embodied—the lack of appeal to previous authorities, the typical "Amen" with which he often began a saying, and not least his readiness to dispute established rulings even if given by Moses himself (as in Matt 5:31–42).

As Jesus evidently saw himself as God's ambassador and spokesman (Mark 9:37 pars.) and as the climax of the prophetic tradition, so he may have seen himself not simply as a teacher of wisdom but as the eschatological emissary of divine Wisdom (Luke 7:31–35 par.; 10:21–22 par.; 11:49–51 par.). Such self-understanding must lie behind his pronouncement of sins forgiven without reference to the sacrificial cult (as in Mark 2:10) and the exclusiveness of the claim he made for his teaching and call (Matt 7:24–27, 10:32 pars., 10:37 par.).

In short, none of these various categories available or applied to Jesus seem to have proved entirely suitable to describe the role Jesus saw for himself. Four of the five caught aspects of his work, but only aspects.

2. Jesus' View of His Own Role. The evidence reviewed above indicates that Jesus saw his ministry as having a final significance for his hearers. He saw himself as the eschatological agent of God. This self-understanding seems to have been encapsulated in two modes of self-reference.

a. Son of God. This title, which eventually became *the* title for Christ in the classic creeds (God the Son), at the time of Jesus had a much broader reference and simply denoted someone highly favored by God. Hence it could be used of Israel (as in Exod 4:22), of angels (as in Job 1:6–12), of the king (as in 2 Sam 7:14), of the righteous man (as in Wis 2:13–18), or of (other) charismatic rabbis (*m. Ta*ʿ*an.* 3:8). The process by which the first Christians commandeered this title and gave it exclusive reference to Jesus is reflected in its increasing significance in the Gospel traditions during the second half of the first century—as indicated by the number of times Jesus speaks of God as his father (Mark 3 times, Q 4, Luke's special material 4, Matthew's special material 31, John over 100).

There is sufficient indication that the process that permitted Christians to call Jesus Son of God had already begun with Jesus himself. The basic data is Jesus' habit, as it appears to have been, of addressing God as "Father" in his prayers (as in Matt 11:25–26 = Luke 10:1–22; the only exception being Mark 15:34). The word used was almost certainly the Aramaic ʾ*abbā* (so Mark 14:36), since it was evidently remembered and treasured in the Greek-speaking churches as characterizing the sonship of Jesus (Rom 8:15–16; Gal 4:6). The point is that "abba" is a family word, expressive of intimate family relationship. So the deduction lies close to hand that Jesus used it because he understood (we may even say experienced) his relationship to God in prayer in such intimate terms. And though he evidently taught his disciples so to pray (Luke 11:2), the same Pauline passages clearly indicate that this mode of prayer was seen as something distinctive of the Christians in their dependence on the Spirit of the Son. To that extent at least we can say that the process of narrowing the concept of divine sonship by reference to Jesus did indeed begin with Jesus. Whether Jesus made this a subject of explicit teaching, however, may be doubted, since Matt 11:27 and Mark 13:32 in particular may already evidence some of the christological intensification which comes to full expression in the fourth gospel. But at least we can say that the directness and immediacy of his relationship with God noted above seems to have cohered for Jesus in his "abba" prayer.

b. Son of Man. As our records stand, this seems to be the most obvious example of a self-chosen self-designation (e.g., Mark 2:10, 8:31, 14:62). But the significance of the phrase has been disputed in NT scholarship throughout this century.

Certainly the phrase must go back to Jesus in some form. It belongs almost exclusively to the Gospels (82 out of 86 times), and in the Gospels it appears in effect *only* on the lips of Jesus. Apart from Acts 7:56 we cannot speak of a "Son of Man christology" outside the Jesus tradition. The most consistent explanation is that the usage originated in the Jesus tradition, and that means, in this case, with Jesus himself. That is not to exclude the likelihood that a number of particular examples within the Jesus tradition reflect some editorial reworking of the tradition (as in Matt 16:28). But even that reworking follows what was probably the established and therefore original pattern of a speech usage confined to Jesus' own words. It must have been a firm and clear characteristic of Jesus' speech.

In some instances at least he seems to have used the phrase in the normal Aramaic idiom—"son of man" = man (cf. Ps 8:4), though with something of a self-reference (the polite English style of referring to oneself by the general "one" is a useful parallel). This usage is probably reflected in such passages as Mark 2:10 (the use of the phrase occasions no surprise or offense in the story) and 2:28, and the variant traditions of Mark 3:28–29 pars. are best explained by an ambiguous son of man/man formulation in the original Aramaic. It would also explain why "I" appears in place of "the Son of Man" in other parallel traditions (as in Luke 6:22 = Matt 5:11; Luke 12:8 = Matt 10:32). In such cases, of course, the phrase would not have had a titular significance to start with.

The alternative suggestion that the phrase was already firmly established in Jewish thought as a title for a heavenly redeemer figure is not securely grounded. In Dan 7:13 it is not title: the manlike figure represents Israel over against the beastlike figures which represent Israel's enemies in a creative reuse of the familiar creation mythology—the saints of the most high fulfilling Adam's role of dominion over the

rest of creation. Jewish apocalyptic writers certainly interpret the Dan 7:13 vision with reference to a heavenly redeemer, but in each case (Similitudes of Enoch and *4 Ezra*) the implication is that this is a fresh interpretation of the Daniel passage. The date of the Similitudes is disputed but a date prior to Jesus cannot be assumed, and *4 Ezra* is certainly later than A.D. 70 (see ENOCH, FIRST BOOK OF; EZRA, GREEK APOCALYPSE OF). Nor is there any indication whatsoever that Jesus was thought to have identified himself with an already known redeemer figure of Jewish expectation or that such an identification needed to be confessed or defended. The likelihood that it was Jesus himself who first drew upon Dan 7:13 to interpret his own role is part of the larger question which follows.

3. Jesus' View of His Death. It is highly probable that Jesus foresaw the likelihood of a violent or ignominious death. This was the typical fate of prophet and righteous man in Jewish tradition (Wis 5:1–5, Matt 23:29–37 par.), as his immediate predecessor (John the Baptist) showed all too well. The hostility which resulted in his eventual crucifixion must have been evident some time before that (cf. Mark 3:22 pars., 14:8 pars., Matt 23:37 = Luke 13:34), and the prophetic action in the temple certainly invited the retaliation which soon followed. The sayings tradition which can be traced back to Jesus with some confidence suggests that Jesus saw a fuller significance in his death. The "cup" sayings (Mark 10:38 par., 14:36 pars.) evoke the OT image of the cup of God's wrath (as in Isa 51:17–23), and the "baptism" and "fire" sayings (Mark 10:38, Luke 12:49–50) probably take up the Baptist's metaphor of a fiery baptism to represent the final tribulations which would introduce the end. In applying such images to himself, Jesus presumably implied that his death was to have some sort of representative or vicarious meaning.

If, in addition, the Son of Man passion predictions (Mark 8:31, 9:31, 10:34) already contained, in their original form, an allusion to the manlike figure of Daniel's vision, an even more explicit representative significance would be hard to exclude (= "the saints of the most high"). Similar implications are involved in Mark 10:45 and 14:24, though a more direct allusion to the suffering servant of Isa 53 is harder to sustain at the earliest level of the tradition.

It is also highly likely that Jesus expected to be vindicated after his death. The pattern was already well established in Jewish reflection on the suffering of the righteous (Isa 53:10–11; Dan 7; Wis 5:1–5; 2 Macc 7:23), and hope of vindication after enduring the eschatological tribulation would be an obvious way to correlate his expected suffering with his confidence in God's coming reign (as Mark 14:25 confirms). If he did express this hope in terms of resurrection (Mark 8:31; 9:31; 10:34), it would presumably be the final resurrection he had in mind, since the concept of the eschatological resurrection of an individual seems to have emerged as a Christian perception of what had happened to Jesus.

In short, while we cannot say that Jesus placed himself at the center of his own message or called for faith in himself as such, neither can we say that Jesus simply saw himself as the eschatological proclaimer of the kingdom of God. The claim to be the medium of God's rule, the sense of an immediacy and directness in his relation with God, and the expectation of representative death and vindication is well enough rooted in the Jesus tradition. It is also the sort of base we both need and anyway expect if we are to explain the subsequent development of christology.

C. The Beginnings of Christology Proper

Despite what has just been said, it is highly doubtful whether the movement begun by Jesus during his lifetime would have amounted to anything without the resurrection and the experience of the Spirit.

1. The Resurrection of Christ. The belief that God had raised Jesus from the dead was clearly foundational in shaping christology. It is the most prominent feature in the sermons in Acts, reflecting the emphasis both of Luke and of the material he uses (Acts 2:24–32; 4:1–2, 33; 10:40–41; 13:30–37; 17:18, 30–31). The pre-Pauline formula, "God raised him from the dead," may justly be described as the earliest Christian creed (Rom 10:9, 1 Thess 1:10, Rom 8:11 (twice), Gal 1:1, Col 2:12, Eph 1:20, 2 Tim 2:8). The centrality of Christ's resurrection for Paul himself is underlined in 1 Cor 15:12–20, particularly 15:17, and Phil 2:9–11. In all the Gospels the resurrection forms the climax to the whole presentation of Jesus. Its watershed character in determining christology is indicated variously: in Mark it resolves "the messianic secret" (Mark 9:9); similarly it is the hermeneutic key in John (John 2:22); Luke carefully monitors his use of the title "Lord" in reference to Jesus in acknowledgment of the fact that the title only became his by

reason of the resurrection; and in Matthew it is only with the resurrection that the commission of Jesus becomes universal (Matt 28:18–20; cf. 10:5–6).

Even where the concept "resurrection" is not prominent, the significance of what happened to Jesus after his death is central in assessments of Christ and his significance, as in Hebrews (e.g., 9:11–12) and Revelation (e.g., 5:5). And elsewhere there seems to be no attempt to distinguish resurrection from exaltation (e.g., Acts 2:32–33; Phil 2:9; 1 Pet 3:21–22; John 12:32). Nevertheless, it remains a striking fact that the concept of "resurrection" became established from the first, rather than what might otherwise have been the more obvious and recognized category of vindication in heaven of the dead hero (see 2:2b above). Indeed the earliest formulations seem to have assumed that Jesus' resurrection was the beginning of "the resurrection from the dead" in general (1 Cor 15:20; cf. Matt 27:51–53).

2. The Experience of the Spirit. That the outpouring of the Spirit expected for the last days was already a factor of their experience seems likewise to have been a basic and unifying claim of the earliest Christians. What is most relevant here is that the perceived influence of the Spirit seems also to have been a determinative factor in shaping christology. The Baptist's prediction that the coming one's ministry would be characterized by baptizing in Spirit is retained by all forms of the Gospel tradition (Mark 1:8 pars.). The Pentecost outpouring is attributed explicitly to the exalted Jesus (Acts 2:33). The identification of the Spirit as "the Spirit of Christ" evidently became soon established (Acts 16:7, 1 Pet 1:11, on Paul see below). So, too, the understanding of the Spirit as witness to Christ (Acts 5:32, Heb 2:4, 1 Pet 1:12, 1 John 5:7, Rev 19:11; on John see below). In Revelation the seven spirits of God (= the Holy Spirit) are depicted as the eyes of the Lamb (Rev 5:6).

3. Other Features of Early Christology. The search for scriptural explanations of what had happened must inevitably have been a primary objective for the first Christians. To show that Jesus was Messiah despite his shameful death would have been an urgent necessity, reflected in such passages as Luke 24:26, 46 and Acts 3:18, in the early formula "Christ died" (Rom 8:34, 14:9; 1 Thess 4:14), and in the established Pauline emphasis on "Christ crucified" (1 Cor 1:23, 2:2, Gal 3:1). Isaiah 53 undoubtedly came early into play (as in Rom 4:25, 1 Cor 15:3, 1 Pet 2:24–25), though allusions in Acts 3–4 highlight the suffering-vindication theme rather than that of vicarious suffering.

On the theme of Jesus' exaltation, Ps 110:1 quickly became a basic proof text (as, e.g., in Acts 2:34; Rom 8:34; 1 Cor 15:25; Heb 1:3, 13; 1 Pet 3:22). Also, to lesser extent, Ps 2:7 (as in Acts 13:33, Heb 5:5). The consequence of such usage was to give what could be later regarded as an "adoptionist" ring to some early formulations (Acts 2:36, 13:33, Rom 1:4). More important, however, was the fact that these texts gave added impulse to the two titles for Jesus which were most capable of providing a bridge of communication for the Gospel from Judaism to the wider Hellenistic world—Jesus as Lord (1 Cor 16:22, Jas 5:7–8, and Acts 11:20, Rom 10:9 = pre-Pauline baptismal confession; Phil 2:9–11), and Jesus as Son of God (Acts 9:20, 1 Thess 1:9–10, Heb 4:14).

The early Christian use of these same texts left its mark on the Jesus tradition itself (as in Mark 1:11, 12:35–37, 14:24, 62, Luke 22:37), obscuring the issue of whether Jesus himself referred to them. The transformation of various "son of man" sayings within the Jesus tradition into full titular self-references with consistent if often implicit reference to Dan 7:13 must also have happened early on.

At the same time the use and reuse of the Jesus tradition throughout this whole period is sufficient indication of a lively desire to recall the words and character of Jesus' ministry because of their continuing relevance. This remains a compelling deduction despite the relative lack of interest shown in the content of the Jesus tradition outside the Gospels. The Q collection, for example, reflects a strong concern to present Jesus as (eschatological) teacher of wisdom (particularly Luke 7:35; 10:21–22, 11:31, 49; 13:34). Besides this, it is inconceivable that substantial elements of the Jesus tradition were not passed on to newly established congregations (cf. Acts 2:42; 1 Cor 11:2; Col 2:6; 2 Thess 2:15). Such traditions must have provided a common ground between writer and readers to which allusion need only be made (e.g. Rom 13:8–10, 2 Cor 10:1, 1 Thess 5:2, Jas 5:12).

A strong feature of the earliest period was also the expectation of the imminent return of Christ. It was the corollary of the belief that Christ's resurrection was the beginning of the final resurrection (see

above), and is reflected in such early formulations as Acts 3:19–21, 1 Cor 16:22, and 1 Thess 1:9–10. The Son of Man material used by Q also reflects a keen interest in his coming in glory and judgment (Matt 19:28 par.; 24:27, 37, 44 par.). Such imminent expectation was slow to disappear, as the early letters of Paul demonstrate (1 Thess 4:13–18, 1 Cor 7:29–31), and retained a particular vitality in Jewish-Christian circles (Jas 5:7–8, Rev 22:20).

The short time lag anticipated between Jesus' exaltation and return may be sufficient to explain why no interim function in heaven seems to be attributed to Jesus in the Acts material. On the other hand, the understanding of Jesus as heavenly intercessor must have emerged early, prior to its development in Hebrews (Rom 8:34), since the idea of heavenly intercession was already well established in Judaism (e.g. Tob 12:15; *T. Levi* 3:5, 5:6–7).

While it is impossible then to gain a detailed picture of this earliest stage of christology, a sufficiently clear and coherent outline can be reconstructed.

D. The Christology of Paul

The background of Paul's christology has already in effect been given above. The impact of the Damascus road experience should not be underestimated (in view of 2 Cor 4:6 and Gal 1:16), though it can as easily be exaggerated. Likewise his continuing experience of being "engraced" or "enChristed" was fundamental (see section D.3. below). The most important other influences came through Hellenistic Judaism (see section D.2.). The 20th-century entrancement with the hypothesis that Paul adopted an already widely spread Gnostic redeemer myth is neither justified by the pre-Pauline sources nor necessitated by the Pauline material itself.

The distinctive Pauline contribution can be summarized under three heads.

1. Adam Christology—Christ as Man. It is a fundamental conviction of Paul that in his life and death Jesus was one with humanity in his fallenness and that his resurrection inaugurated a new humanity. The latter is explicit in the passages in which he sums up the whole sweep of human history in the two epochs of Adam and Christ (Rom 5:12–21; 1 Cor 15:20–22, 45–49). The former is implicit in his use of Ps 8:4–6 (1 Cor 15:27, Eph 1:22, Phil 3:21), as its fuller exposition in Heb 2:6–9 indicates. But it also comes to expression in Rom 8:3 ("the actual likeness of sinful flesh"), Gal 4:4 ("born of woman, born under the law"), 2 Cor 8:9 ("his poverty"), and Phil 2:7 ("form of a slave … as man"), though the majority of scholars would question whether these last verses are properly to be seen as expressions of Adam christology.

As many of the above references also indicate, this representative function of Christ's life achieves its point particularly in his death; if this one man dies, then all die (2 Cor 5:14). This dovetails with Paul's readiness to interpret Christ's death under the category of "sacrifice" or "sin-offering" (Rom 3:25, 1 Cor 5:7). As several passages clearly imply, Paul saw the "mechanism" of sacrifice in terms of representative "interchange" (2 Cor 5:21; Rom 8:3; Gal 3:13, 4:4–5). That is, the sinless one suffers the full effects of human sin (death) in order, not that death might be escaped (= substitution), but that the finality of death might be broken through a sharing in his death leading to resurrection (Rom 6:5–8, 8:17, Phil 3:10–11).

Since the obedience of his death was primarily an undoing of Adam's disobedience (Rom 5:19, Phil 2:8), a voluntary embracing of the human lot which was the consequence of Adam's folly, it is more accurate to speak of Christ's role as inaugurator of a new humanity as stemming from the resurrection (1 Cor 15:21–22, Rom 8:29, Col 1:18). It is as resurrected, as "spiritual body," that Christ is "last Adam" and pattern of the humanity which at last fulfills the divine purpose in creating humankind (1 Cor 15:45–49).

Somewhat surprisingly, some of Paul's other distinctive emphases can be included under this head. In particular, his intensive use of "Christ" (already established as a proper name) in corporate imagery—the characteristic "in Christ" (about 80 times), "into Christ" (as in Gal 3:27), "with Christ" (as in Gal 2:20), and "through Christ" (more than 20 times), not to mention the "body of Christ" (as in Romans 12 and 1 Corinthians 12). The language refers to the identification with Christ made possible by Christ's identification with fallen humanity—the process of salvation understood as a growing participation in Christ's death with a view to a complete participation in his resurrection as the final goal (Rom 6:3–6;

hence also the creation motif of "old nature/new nature" in Col 3:9–11, Eph 4:22–24). The Adam christology corresponds with the understanding of the process of salvation as corporate, more than individual (cf. Eph 2:15, 4:13).

Other facets of Paul's christology also cohere effectively under Adam christology. For obvious reasons this applies to the relatively less important theme of Jesus as God's Son, as the prominence of this title in some of the material reviewed above makes clear (Rom 8:3, 15–17, 29; Gal 4:4–7; Col 1:13)—the risen Christ as the eldest brother in the eschatological family of God. But it applies even more to an important aspect of Paul's most prominent designation for Jesus, that is "Lord," since it is only as risen Lord that Christ fulfills God's original intention in creating the first human—"to put all things under his feet" (1 Cor 15:25–27 referring to Ps 8:6). This may include the "Christus victor" theme of Col 2:15.

2. Wisdom Christology—Christ as Divine. Perhaps the most enduring development was the application of Wisdom categories to Jesus. Divine wisdom had long served as one of the most important bridge concepts for a Judaism seeking to present itself intelligibly and appealingly within the context of the wider religiophilosophic thought of the time. Within Judaism itself, Wisdom (along with Spirit and Word) was one important way of speaking of God in his creative, revelatory, and redemptive imminence (Proverbs, Sirach, Wisdom, Philo). Judaism's distinctive claim was that this wisdom was now embodied in the Torah (Sir 24:23; Bar 4:1).

Already with Paul the equivalent association is being made between Wisdom and Christ (1 Cor 1:30)—that is, Christ as the embodiment of divine Wisdom and thus as the definitive self-expression of God (Col 1:19; 2:9). He uses Wisdom terminology boldly of Christ, particularly in speaking of his role in creation (1 Cor 8:6; Col 1:15–17). Whether he means by this that Christ himself was preexistent, as most conclude, or, more precisely, that Christ has assumed the role of preexistent Wisdom without remainder, is less clear. At all events, he has no doubt that it is Christ crucified who is the definition of divine Wisdom (1 Cor 1:24), the determinative revelation and redemptive act of God (2 Cor 5:19).

The element of ambiguity here is not resolved by other references. The concept of Jesus' divine sonship provides an important bridge between Adam and Wisdom christologies, but the usage in Rom 8:3 and Gal 4:4 seems as close to the imagery of Mark 12:6 as to that of the Fourth Evangelist. Potentially more revealing is the title "Lord," since it was such an important indicator of Christ's status for Paul (note particularly Rom 10:9 and 1 Cor 12:3; well over 200 times in reference to Christ). Its use in Hellenistic religion for the cult god made it an important evangelistic and apologetic tool. Over against Hellenistic tolerant syncretism Paul claimed exclusivity for Christ's Lordship (1 Cor 8:5–6, Phil 2:9–11, 1 Cor 15:25). In so doing he did not hesitate to apply OT texts referring to Yahweh to the Lord Christ (Rom 10:13; 1 Cor 2:16; Phil 2:10–11—using the strongly monotheistic Isa 45:22–23). Yet, at the same time, Paul evidently did not see such usage as an infringement on traditional Jewish monotheism (1 Cor 8:6; also 3:23; 11:3; 15:24, 28). To call Jesus Lord was as much a way of distinguishing Christ from the one God as of attributing him to God's agency. Hence the frequent reference to "the God and Father of our Lord Jesus Christ" (Rom 15:6; 2 Cor 1:3, 11:31; Eph 1:3, 17; Col 1:3).

The question whether Paul called Jesus "God" does not provide much help on this point. For one thing, "God," like "son of God," did not have such an exclusive reference at this stage, even in Jewish circles (cf. Ps 45:6; 82:6; Philo, *Sacr* 9; *Quaes Gen* II. 62). And for another, the only clear occurrence comes in the late or Deutero-Pauline literature (Tit 2:13). In the strongly Jewish context of the earlier Rom 9:5 it is unlikely that any Jew would have read the benediction as describing "the messiah" as "God over all." The fact that Paul evidently offered his prayers to God "through Christ" (Rom 1:8, 7:25; 2 Cor 1:20; Col 3:17) confirms that for Paul Christ's role is characteristically as mediator. In other words, neither Adam christology nor Wisdom christology should be emphasized at the expense of the other.

3. Spirit Christology—Christ as Spirit. Although "Spirit" was virtually synonymous with "Wisdom" in pre-Christian Judaism (as in Wis 9:17), Paul did not take what might have appeared to be the logical step of identifying Christ with the divine spirit in the same way as he had identified Christ and Wisdom. The identification with Wisdom took in Wisdom's role in creation; but the identification with Spirit is dated only from Christ's resurrection (Rom 1:4, 1 Cor 15:45; but not 2 Cor 3:17, where "the Lord" is the

Lord of Exod 34:34). Hence the strong degree of synonymity between Christ and Spirit in passages dealing with Christian experience (particularly Rom 8:9–11 and 1 Cor 12:4–6): it is in Christian experience of the divine that Christ and Spirit are one; Christ experienced not independently of the Spirit but through and as the Spirit.

This also means that for Paul christology becomes a controlling factor in pneumatology. Paul takes it for granted that the Spirit of God is known now only by reference to Christ—"the Spirit of sonship" voicing Jesus' prayer, "Abba, Father" (Rom 8:15), the Spirit known by the confession "Jesus is Lord" (1 Cor 12:3), the Spirit who transforms us into the image of Christ (2 Cor 3:18). The Spirit can now be defined as "the Spirit of Christ" (Rom 8:9, Gal 4:6, Phil 1:19), and spirituality must be measured against the pattern of Christ crucified (2 Cor 4:7–5:5, 13:4; Phil 3:10–11). The Spirit is thus redefined as the medium of Christ's relationship with his people (1 Cor 6:17). Beyond that it is much less clear that we can properly speak of an identification between Christ and Spirit. The Spirit is still preeminently the Spirit of God (Rom 8:9, 11, 14; 1 Cor 1:11, 14; etc.) and given by God (1 Cor 2:12; 2 Cor 1:21–22, 5:5; etc.). To speak of Christ as Spirit was evidently not the same as speaking of him as Wisdom and Lord. Judging by the convoluted syntax of Rom 8:11, Paul did not perceive the relation between Christ and Spirit in such clear-cut terms as that between Christ and Wisdom. In other words, even at this early stage, the redefinition of God in his immanent self-revelation, which developing christology was already occasioning, was throwing up factors which were not going to find easy resolution either in simple polytheism or in some more sophisticated "binitarianism" (the worship of two of the persons of the trinity).

E. Varied Emphases in Second-Generation Writings

1. Deutero-Pauline Letters. In Ephesians a distinctive note is struck immediately in the long opening benediction focusing on the theme of Christ as the predetermined redeemer and focus of cosmic unity in "the fullness of time" (Eph 1:3–14). The idea of Christ as the revelation of God's hitherto mysterious purpose, already developed in Colossians (1:26–27, 2:2), is taken further and spelled out in still more emphatic terms (Eph 2:11–3:13). All this is a variation of Paul's Wisdom christology (Col 2:3, Eph 3:10), integrating it more fully with Paul's central concern as apostle to the Gentiles. Note also the fuller confessional material in Eph 4:4–6 and the more elaborate images of the body of Christ (4:15–16) and of Christ as husband of the church (5:23–27).

The Pastorals do not mark much further development in ways of speaking about Christ. The talk is still of Christ's predetermined appearing to fulfill God's purpose of salvation (2 Tim 1:9-10, Tit 1:2–3), and in Tit 2:13 the reference is not to Jesus as a second God but rather to "the appearance of the glory of our great God and Savior"—Jesus' coming as the manifestation of the glory of the one God. The title "Savior" is much more prominent than in the earlier Paulines and is used equally of Christ as of God (especially Tit 1:3–4; 2:10, 13; 3:4, 6). But otherwise the christology is characteristically contained in what are already well-established credal and hymnic formulae (1 Tim 1:15, 2:5–6, 3:16, 6:13; 2 Tim 2:8; Tit 3:5–7), "the teaching which accords with godliness" (1 Tim 6:3). So, too, the talk of the second appearing has already assumed the more measured tones of a hope which no longer expects imminent fulfillment (1 Tim 6:14; 2 Tim 4:1, 8; Tit 2:13).

2. The Wider Circle of Pauline Influence. In 1 Peter we find the same conviction that Christ had been "predestined before the foundation of the world" and "manifested at the end of the times" (1:20)—clearly a widespread christological emphasis at this period. But distinctive of 1 Peter is the continual focus on suffering, and this determines the main christological concern. The Spirit is designated "the Spirit of Christ" as having predicted the prophecies of Christ's sufferings (1:11). Christ was the spotless sacrificial lamb (1:19). In the fullest use of Isaiah 53 in the NT, Christ's patience in suffering is held up as an example (2:21–25; similarly 3:17–18). In echo of the characteristic Pauline emphasis, experience of "the Spirit of glory" is linked with sharing in Christ's sufferings (4:13–14). The vicarious effect of Christ's suffering and death, however, was evidently linked in the author's mind with Christ's resurrection, which he also regards as a medium of salvation (1:3, 3:18–21). At the same time he gives evidence of the earliest speculation about Christ's ministry between death and resurrection—preaching to "the spirits in prison"

(3:18–20, 4:6). 1 Peter also contains one of the best examples of a collection of OT texts used for evangelistic or apologetic purposes—the "stone testimonia" (1:6–8).

Next to the Fourth Gospel, Hebrews has the most carefully worked out and sustained christology in the NT. It includes two of the most developed expressions of Wisdom and Adam christologies (1:2–3; 2:6–17). But its main objective is to present Christ as superior to all other potential mediator figures—superior as Son to the prophets (1:1–2), to the angels (1:4–16), and to Moses (3:1–6). The principal thrust, however, comes in the presentation of Christ as High Priest—not of Aaron's line, though sharing the very human characteristics required of a good high priest (5:1–10), but of the order of Melchizedek (Ps 110:4) "by the power of an indestructible life" (7:16). As such he is superior to the Levitical priesthood as a whole.

This central thesis is worked out in 8–10 by means of a magnificent blend of Platonic idealism and Hebraic eschatology. As also in Philo, the earthly world of everyday perception is only a shadow and imperfect copy of the real heavenly world. So the tabernacle with its priesthood and sacrifice is only a shadow of the real heavenly sanctuary, and Christ is the real High Priest and his sacrifice (of himself) *the* sacrifice which alone suffices to purify the conscience and make the worshiper perfect. In the blend with Hebraic eschatology, the shadowy "here below" is identified with the preparatory "then" of the old covenant, and the heavenly real with the eschatological "now" of the new covenant. Thus priesthood and cult are shown to belong to the outmoded age of imperfect and preparatory shadow. Christ has opened the way once for all into the real inner sanctum of God's presence. By such sophisticated means the writer clearly hopes to discourage his readers from harking back to the tangibility of the Jewish cult and to persuade them of the virtues of a Christianity whose only priest and atoning sacrifice is Christ, even if it means social ostracism (13:8–16).

Of the Gospels, Mark most closely shares Pauline concerns. His aim is to present Jesus as Christ, Son of God (1:1, 11). But if this claim is understood in terms simply of mighty works (as in 3:11 and 5:7), it is misunderstood (so also 13:22). Hence the secrecy motif (as in 3:12 and 5:43) and the theme of the disciples' dullness (as in 4:13 and 8:14–21). Hence, too, at what is obviously the center and turning point of the gospel, Jesus responds to Peter's confession, "You are the Christ," by repeating the call for secrecy, and immediately goes on to teach that the Son of Man must suffer and be killed (8:30–31). The second half begins with the heavenly voice once again hailing Jesus as God's Son (9:7), giving the stamp of divine approval to the christology and its consequences for discipleship just expressed (8:31–9:1). Thereafter the movement of the narrative is all toward Jerusalem, with repeated predictions of the imminent passion (9:12, 31; 10:33–34, 38–39, 45; 12:8; etc.). In the climax to the whole, the high priest poses the question of Jesus' messiahship and divine sonship only to reject him (14:61–64), whereas, with supreme dramatic effect, it is the Roman centurion who at last makes the right confession, "Truly this man was God's Son"—speaking of the crucified Jesus who has just died (15:39). In the light of this, several have concluded that Mark wrote his gospel with an object similar to that of Paul in 2 Corinthians 10–13—to correct a christology of glory (a so-called "divine man" christology), which emphasized too much the mighty works of Jesus, by means of a christology of the cross.

3. Luke-Acts. Any study of the theology of Luke must take account of the fact that he wrote two volumes. The significance of this fact is not reducible to the tracing of structural parallels (e.g. the two prologues and inaugural Spirit anointings—Luke 1–2 = Acts 1 and Luke 3:21–22 = Acts 2:1–4; the journey framework for narrative). Rather it implies that there is a continuity and interconnectedness between the two parts of Luke's twofold composition which should prohibit us from drawing conclusions regarding Luke's christology from only one part, or from one part independently of the other. So, e.g., Luke evidently did not think it necessary to include much reference to the ministry of Jesus in the sermons in Acts (only 2:22 and 10:36–39), since he could presume that his readers already knew the gospel.

In particular, the two-volume scope of Luke's theology enables us to recognize the governing claim of his christology: that Jesus Christ is both the climax of God's purpose through Israel and the center of history. Hence the counterpoint themes of continuity and discontinuity by which Jesus both links and

separates the epochs which precede and succeed him. On the one hand, the climactic note of fulfillment which marks not least the periods of transition from one epoch to the other (from Israel to Jesus—Luke 1:67–79, 3:4–6, 4:16–22; from Jesus to church—24:26–27, 44–48; Acts 1:16–20; 2:16–21, 25–36). Likewise the subtle evocation of the Exodus theme in Luke 9:31 and 11:20, and the maintenance of a Moses/prophet christology across the divide of his two volumes (Luke 24:19; Acts 3:22, 7:37). With similar effect, and even more marked, his emphasis on the spirit, as both heralding the coming of the Christ (Luke 1:15, 41, 67; 2:25), as distinguishing his ministry in special measure (3:22; 4:1, 14, 18; 10:21; Acts 1:2, 10:38), and as poured out in eschatological fullness on the first believers (Acts 1:5, 8; 2:4, 17–18, 33; etc.).

On the other hand, the period of Israel becomes increasingly superseded. The Jerusalem temple, which provides an important focus of continuity (Luke 1:8–23; 2:22–51; 24:52–53; Acts 2:46; 3:1–10; 5:20–21, 42), is attacked by Stephen as "made with hands" (7:48; cf. v 41) and becomes the occasion for Paul's final rejection and arrest (21:7–36; 26:21), a development complemented by Paul's own increasing turning away from "the Jews" and to the gentiles (9:15, 13:45–50, 22:21–22, 28:25–28). The discontinuity between epochs is also marked christologically, in the depiction of the successive modes of relationship between Jesus and the Spirit—first, as the one whose human life is created by the Spirit (Luke 1:35), second, as the one who is uniquely anointed by the Spirit (3:22, 4:18; Acts 10:38), and third, as the exalted one who in his exaltation has received divine power to bestow the spirit (Acts 2:33), so that, as with Paul, the Spirit can be designated "the Spirit of Jesus" (Acts 16:7). The attempt to mark off the epoch of Jesus from the epoch of the Spirit by limiting the resurrection appearances to forty days so that there is a ten-day gap between ascension and Pentecost (Acts 1) is particularly noticeable.

An important factor in this reshaping of the christological focus of salvation history is the delay of the parousia. The extent of the delay envisaged by Luke should not be exaggerated: he still uses the language of imminent expectation in Luke 10:9, 11, 18:7–8, and 21:32. Nevertheless he does inject clear warnings of delay into the earlier tradition at Luke 19:11, 20:9, and 21:8, and in Acts a longer time scale does seem to be envisaged for the mission (Acts 1:6–8), with the talk of Christ's parousia reading more like a doctrine of the last things than a threat pressingly close (Acts 10:42, 17:31, 24:25). This stretching out of the period between exaltation and parousia reinforces the impression that Acts has an "absentee christology," with no further activity predicated of him other than through his name (Acts 3:6, 16; 4:10–12, 30; 10:43) or in visions (Acts 9:10, 18:9, 22:17–21, 26:13–19), in some contrast to the more intimate "in Christ" and mutual indwelling emphases of Paul and John.

Other distinctive features of Luke's christology include his focus on "salvation." Of the Synoptic Evangelists, only Luke calls Jesus "Savior" (Luke 2:11; in John only at 4:42) and attributes "salvation" to him (Luke 1:69, 2:30, 3:6, 19:9). The same emphasis is continued in Acts, in the use of both nouns (Acts 4:12; 5:31; 13:23, 26; 28:28) and of the verb (particularly 2:21, 4:12, 15:11, 16:31). Equally striking is the surprising lack of any clear atonement theology in Luke-Acts. As already noted, the references to the death of Christ in the Acts speeches, including the allusions to Jesus as "Servant," emphasize the suffering-vindication theme rather than the motif of vicarious suffering (Acts 3:13, 26; 4:27, 30; 5:30; 10:39–40; 13:29–30). The impression that this feature may be indicative of Luke's own theology of the cross is strengthened by the absence of the clearest Markan expression of atonement theology (Luke 22:27; cf. Mark 10:45) and by the textual confusion at the other two most sensitive points in the narrative (Luke 22:19b–20, Acts 20:28). Finally we may note that Luke's depiction of the substantial and objective nature of Christ's resurrection appearances (Luke 24:39–43; Acts 1:3), which in part at least may be simply the result of his own perception of the tangible character of spiritual phenomena (e.g., Luke 3:22; Acts 4:31, 8:18–19, 12:9), enables him to emphasize still further the contrast between the epoch of Christ and that of the Spirit and marks off the ascension from the resurrection in a way that is unparalleled elsewhere in the NT.

4. Outside the Circle of Pauline Influence. James almost seems to lack any christology worth speaking of, Christ being explicitly referred to only twice (1:1; 2:1), though the ambiguous "Lord" of 5:7–8 probably also refers to Jesus. But he does draw directly on the Jesus tradition (e.g., 1:5, 22–23; 4:12;

5:12) and may refer to Jesus as "the righteous one" (5:6) in a fine blend of Jewish wisdom teaching and prophetic fervor against social injustice. This can quite properly be called an implicit christology, since it shows how these emphases of Jesus' ministry were maintained, without necessarily having to be held all the time within a Markan passion framework (as in all the Gospels).

The two-fold emphasis of the birth narratives also provides Matthew with his principal christological themes—Jesus as Son of David and messiah (1:1, 17, 20; 2:4), but also Son of God (1:18, 20; 2:15). Evidently within a more Jewish context the assertion of Jesus' messiahship was still a matter of apologetic importance (hence the redactional insertions at 11:2, 16:20, 23:10, 24:5). Matthew also makes more use of the "Son of David" title than any other NT writer (9:27; 12:23; 15:22; 20:30–31 pars.; 21:9, 15). But "Son of God" is clearly the more important designation. For Matthew not only retains the high points of Mark's presentation (3:17, 8:29, 17:5, 26:63, 27:54) but takes pains to extend the motif (14:33; 16:16; 27:40, 43; 28:19).

On the one hand, this means that Christ recapitulates Israel's history to complete God's purpose for Israel (2:15; 4:3–6 = midrash on Deuteronomy 6–8)—an Israel christology rather like Paul's Adam christology. Hence also the implicit Moses typology (Jesus gives the first of five blocks of teaching on a mountain) and the sustained fulfillment of prophecy theme (1:22–23; 2:15, 17–18, 23; 4:14–16; 8:17; 12:17–21; 21:4; 27:9–10). But even more, this means that Jesus, Son of God, is the divine presence among his people (1:23; 18:20; 28:20). The process whereby "Son of God" gains in christological significance is already well advanced—as reflected also in the marked increase in Jesus' reference to God as "Father" (as in 7:21; 10:32–33; 12:50; 16:17; 18:10, 19). Hence, too, the evidently deliberate Matthean redaction whereby Jesus is presented not merely as the eschatological emissary of Wisdom but as Wisdom herself (11:19, 25–30; 23:34–36, 37–39).

The most striking feature of the christology of the Revelation of John is the relation envisaged between God and the exalted Christ—although the full force of the christology involved remains unclear since the apocalyptic imagery is open to diverse interpretations. The description of the initial vision of Christ is a fascinating mixture of elements drawn from previous apocalyptic visions (particularly Ezek 1:24, 8:2; Dan 7:13, 10:5–6), and is of a piece with the tradition of Jewish apocalyptic (or merkabah mysticism) in which a glorious angel seems to have the appearance of God (as in *Apoc. Abr.* 10). The difference is that elsewhere in the tradition the angel forbids the offer of worship, whereas in Revelation, Christ is as much the object of worship as God (5:13, 7:10).

Christ, initially introduced as the Lion of Judah and Root of David, conqueror of death and lord of history (5:5), is referred to thereafter as the Lamb once slain (5:6, 8, 12–13; 6:1; etc.), whose blood enables his followers to conquer and who is the executor of divine wrath (6:16, 7:14, 12:11). More significant is the fact that the Lamb is also said to be "in the middle of the throne" (5:6; 7:17), whereas elsewhere it is God who is described as "he who is seated on the throne" (4:9–10; 5:1, 7, 13; 6:16; 7:10, 15; 19:4; 21:5). The one throne is evidently shared by both God and the Lamb (22:1). So, too, each can equally be called "the Alpha and the Omega" (1:8, 21:6, 22:13). In other words, Christ has not simply been exalted alongside God as a second divine power in heaven, but in the visionary imagery of the seer is somehow merged with God. This makes the promise of salvation as a being given to sit on the same throne and as a being given in marriage to the Lamb all the more profound (3:21; 19:7–8; 21:2, 9–14).

F. The Christology of John

The Fourth Gospel has the most fully developed christology in the NT. The contrast with the Synoptics is at once apparent in the public roll call of titles which climaxes chap. 1 ("Lamb of God," "Messiah," "Son of God," "King of Israel," "Son of Man"). The style and content of Jesus' teaching is strikingly different: in the Synoptics, Jesus speaks in epigrams and parables, principally about the kingdom of God/heaven and very little about himself; in John, Jesus speaks in long, often involved discourses, principally about himself and very little about the kingdom. Jesus' consciousness of having preexisted, as Son with the Father, as Son of Man descended from heaven, as the eternal "I am," confronts the reader throughout. There is sufficient evidence that John's presentation is rooted in good tradition (cf., e.g., John 6:20 with Mark 6:50; John 6:51–58 with Mark 14:22–24 = Luke 22:19–20; John 10 with Luke 15:4–6),

but the above emphases are so consistent in John and so lacking in the earlier Jesus tradition that they have to be attributed to a developed reflection on that earlier tradition.

The chief objectives of the Fourth Evangelist are clearly marked in the Prologue, which must have a programmatic function since it matches the subsequent emphases so closely, and in 20:31.

1. The Word Incarnate. In the Prologue the line of the earlier Wisdom christology is extended. The concept "Word" is given preference over "Wisdom," perhaps simply because the masculine concept seemed more appropriate, but probably mainly because "Word" was the more serviceable concept to provide a bridge of communication between Jewish monotheism and Greek religious philosophy (as with Philo). In the line of Jewish Wisdom theology, the Word is not thought of as being other than God, but as God in his self-revelation, God insofar as he may be known by man. The Word was not a redemptive "afterthought" but was "in the beginning" (1:1–2), God's own power put forth in creation and revelation (1:3–5, 9–10). Jesus Christ is this Word become man, embodying the divine glory (1:14). He alone reveals God (1:18).

Although the concept "Word" disappears after the Prologue, what follows is in effect a massive elaboration of Word/Wisdom christology. In varied ways the message is constantly repeated—Jesus is the one who has finally and definitively revealed God. Nathanael is a "true Israelite" (= "one who sees God") because he will see the Son of Man as the ladder between heaven and earth (1:47–51). No one has ascended to heaven; only the Son of Man who descended from heaven can bear witness to heavenly things (3:11–13). He who comes from above is above all whose witness is from God (3:31–33). Only he who is from the Father has seen the Father (6:46). The "I am" statements unique to John pick up Wisdom language (shepherd, light, etc.) and in echoing the "I am" of Yahweh (Exod 3:14; Isa 43:10; etc.) make the claim even more emphatically—Jesus is the self-revelation of the covenant God (John 6:35; 8:12, 24, 28, 58; etc.), the definitive manifestation of that divine reality (1:14, 17; 14:6). Isaiah saw Christ because he saw God in his glory, God as manifested to man (Isaiah 6; John 12:41). Hence the charge leveled against the Johannine Jesus by "the Jews": he made himself equal with God, made himself God (5:18; 10:33). John does not dispute the charge; rather he makes it an article of faith on his own account (1:18; 20:28); only, Jesus as God must not be understood as another, a second God, but as God himself incarnate, God making himself present and known to man so far as that was possible within the confines of human experience.

This also is the function of the dominant category of John's christology—Son of God. Although the designation "Messiah" is still important (note 1:41 and 4:25), it is clear that he wants the Christ title to be understood in the light of the Son of God title (11:27; 20:31). The reason is also clear from the characteristic Johannine elaboration of the Son language: "Son" expresses well the intimate relation between Jesus and God and the authority of Jesus' revelation of God. As "Son of God," Jesus is unique: he is the *monogenēs,* "one of a kind" (like no other son), (1:14, 18; 3:16, 18); his sonship cannot be shared (he alone is "son"; believers are "children"; contrast Paul). As "the Son," he is not a different divine being from the Father, but God making himself visible to men: he and the Father are one (10:30); to have seen him is to have seen the Father (14:9). Hence also the repeated note usually taken subsequently as emphasizing the Son's subordination to the Father, but better understood as highlighting the continuity between Father and Son and the authority of the Son's witness on the Father's behalf (e.g., 5:19–23, 26–27; 6:35–40, 57; 10:25, 37–38; 14:25–31; 15:26).

With this as the chief emphasis of John's christology, the Christian redefinition of Jewish monotheism can be said to be already well under way. Clearly evident, too, are the strains which caused rabbinic Judaism to reject such redefinition as in effect an abandoning of the unity of God. The danger of an overemphasis on Jesus as God on earth is also evident, but John was aware of it and took steps to guard against it.

2. The Son Glorified. Although the Fourth Evangelist has nothing like the Adam christology with which Paul balanced his Wisdom christology, a somewhat different balance is nevertheless provided by important other strands of the gospel. In particular, John takes pains to exclude the impression that Jesus was simply God in human appearance, not really part of the human species. The Word became "flesh"

(1:14), that which constitutes the human born (1:13; 3:6). To have eternal life one must believe in Jesus, that is, must accept his fleshliness in all its earthliness (6:53–56). He really died on the cross, as eyewitness testimony confirms (19:34–35). The emphasis is not prominent, but it does come at critical points in the gospel, and John presumably thought the line was clearly enough drawn.

The subject of Jesus' rejection and death is, in fact, more intensively elaborated, in its own way, than in any other gospel. The theme of the light opposed by the darkness, of the Word rejected by his own, first announced in the Prologue (1:5, 11), becomes a leitmotif of the whole gospel. The light inevitably has a critical or divisive role, since some accept it but many hate it (3:19–21). "Judgment" as a sifting process separating into "for" and "against" is the thread which holds together the central section of the gospel (6–12), with only the inner circle left before Judas, too, goes off into the night (13:30). The mention of "the hour" sounds a steady drumbeat throughout the heralding of the coming passion (2:4; 7:30; 8:20; 12:23, 27; 13:1; 17:1). The soteriological significance of Jesus' death is still prominent (1:29, 6:51, 12:32, 13:10, 19:34), but more prominent is the christological point that his death forms a theological unity with his resurrection and ascension—a single act of being "lifted up" (3:14, 8:28, 12:32), of ascension (3:13, 6:62, 20:17), and particularly of glorification (7:39; 12:16, 23; 13:31; 17:1). As with Paul, the glory of Christ does not come into focus apart from the cross.

As with Paul, the concept of the Spirit is drawn into close correlation with christology. Despite the powerful Word/Wisdom christology, the Spirit is still depicted as given to Jesus at Jordan, but given to "remain on him" and "without measure" (1:32; 4:34). More to the point, the Spirit is now clearly a gift to be given by Christ (1:33; 4:10, 14; 4:34(?); 7:39; 15:26; 16:7; 19:34); and here, too, the unity of the salvation climax of Jesus' ministry is underlined, since Jesus "hands over" the Spirit on the cross (19:30) and the (Pentecostal) bestowal of the Spirit for mission is effected on the day of resurrection (20:21–23). Most distinctive of all, the Spirit is described as the "Paraclete" or Counselor, or more precisely, as "the other Paraclete" (14:16). That is to say, the Spirit is Jesus' successor and takes Jesus' place, so that the promise of Jesus' return to dwell in his disciples can be immediately linked to the coming and indwelling of the Paraclete (14:15–26)—one of the most striking features of John's "realized eschatology." Significantly, the Paraclete's primary role is to maintain and complete the revelation of Christ (14:26; 15:26; 16:7, 10), to glorify Christ by taking what is Christ's and reproclaiming it to his disciples (16:12–15). Yet once again, as with Paul, all this does not mean that John's christology has absorbed the concept of Spirit without remainder, as it has the concepts of Wisdom and Word (see PARACLETE). For distinct functions are still attributed to both—to the Spirit in worship and to Christ apart from the Spirit: despite his realized eschatology, John retains the promise of a still future parousia (14:3); and despite having already given the Spirit and ascended Christ reappears to Thomas a week later (20:26–29).

3. 1 and 2 John—Crisis over Christology. 1 John was probably written after the gospel and reflects a situation of some crisis in the Johannine congregations which the gospel and its presentation of Christ may have helped bring about. A number of erstwhile members had evidently left (1 John 2:19), and the breaking point seems to have been a matter of christology, since they are described as "antichrists" and accused of failing to confess or acknowledge Christ (2:18, 22; 4:3; 2 John 7). In particular, they claimed that Jesus Christ had not come in the flesh (1 John 4:2–3; 2 John 7), a form of docetism which, conceivably, they may have derived from or defended by means of a lopsided reading of the gospel (cf. 6:1 above). Consequently this second member of the Johannine school draws back somewhat from the bolder synthesis attempted in the gospel. The opening verses clearly recall the prologue to the gospel, but they also recall the older idea of Christ as the content of the word of preaching (cf. 1 John 1:1–3 particularly with Luke 1:2 and Acts 10:36). And 1 John 5:20 probably refers to Jesus as "the true God" (cf. particularly John 1:18). But the balancing emphasis is more clearly and sharply drawn: the word of life had a tangible historicity (1 John 1:1); the confession that "Jesus Christ has come in the flesh" is the key criterion for testing the spirits (4:1–2); any suggestion that the Christ did not really die is emphatically ruled out (5:6–8).

In short, 1 and 2 John provide vivid indications of the hazardous frontiers of reproclamation which christology at the end of the first century was beginning to explore.

G. Conclusions

1. Continuity with Judaism. Throughout the various NT writings there is never any slackening of a central claim: Jesus was a Jew and must be understood within the terms provided by Judaism and its sacred scriptures. Most striking is the way in which a range of diverse categories is focused on Jesus—Messiah and son of man, Lord and son of God, Wisdom and Word, atoning sacrifice and priest, Adam and Spirit, Servant and Lamb, Savior and God. Of course, most of the categories are redefined in one degree or other—son of man becomes Son of Man, son of God becomes only-begotten Son of God, Spirit becomes Spirit of Christ, and so on. But the categories remain essentially Jewish, even when they had wider currency in the Greco-Roman world, and it was evidently understood to be important, even if not stated explicitly, that Jesus should continue to be comprehended in Jewish terms—important that Jesus should be seen in continuity with the purposes of God from creation and in the calling of Israel. Clearly then the first Christians felt that Jesus was so much the decisive and definitive fulfillment of Israel's hopes that his significance could not be adequately expressed without pulling in all available categories provided by Jesus' own Jewish faith.

2. Continuity with Jesus' Own Self-Understanding. This second aspect is not so easy to recognize. The important reason is that so much of NT christology turns on the event of the cross and resurrection. That event so decisively reshaped the categories applicable to Jesus that their occurrence on either side of that event is not strictly comparable. For example, it is only as Christ crucified that the Messiah claim can be incorporated into christology. It is only as priest "in the order of Melchizedek," "by the power of an indestructible life," that the category of priest can be taken over. It is only as the man whose obedience in death reverses the disobedience of the first man that the title "Adam" can be given to the exalted Christ. Nevertheless, there are sufficiently clear antecedents within the historical Jesus tradition itself that a continuity can properly be claimed—particularly in Jesus' consciousness of intimate sonship, his premonition of suffering in a representative capacity, and his hope of vindication following death. Consequently the claim can justly be made that the cross and resurrection was not a distortion of Jesus' own claims for himself but an appropriate outworking of them. So also the subsequent claims of NT christology can fairly be seen not as a wholly new departure without foundation in Christ's own ministry, but a fuller insight into the reality of that mission in the light of the cross and resurrection.

3. Unity and Diversity in NT Christology. At the heart of NT christology is the claim that the man Jesus was raised from the dead to a status of supreme exaltation. This is the most constant element throughout all the NT documents. In its more expanded form, it takes on a double aspect—Christ as the culmination of God's purpose for man (and Israel) in creation and salvation, and Christ as the definitive revelation of God to humankind. The latter comes to increasing prominence in the later writings, explicitly as a doctrine of incarnation in John's gospel, but not at the cost of removing the earlier emphasis on Jesus' death and resurrection as a decisive moment not only for Christ's work but also for his person. Neither aspect can be neglected and neither emphasized at the expense of the other in any christology which claims to be rooted in the NT, but consistently in the NT writings it is the fact and character of Christ's death and resurrection which provided the criterion and control for christology.

Particular emphases of the individual writers by no means reflect a uniform expression and weighting of this central core. Even the core itself is something of an abstraction, since no two writers express it in precisely the same terms. The differences of the writers themselves and the differences of the situations they addressed inevitably made for a rich diversity of expression of what nevertheless can be called a common faith in Christ. But beyond that core the range of presentations includes a wide-ranging diversity of motif, form, and image—wide enough to include the differences of Mark and Matthew, the absence of significant christological features in James and Acts, and the idiosyncratic elements in Hebrews and Revelation. Evidently the individual writers felt free to reexpress ("reproclaim" is John's word) the gospel that is Jesus in different ways and with different emphases to speak more pertinently to their own diverse situations. In all cases that included a concern to be true to the insights which had already become established. In some cases that concern dominated largely to the exclusion of all else (particularly the Pastorals). For the most part, however, christology was seen as no mere transfer of set traditions from one

church to another, but as a creative response to the exalted Christ and his Spirit, which could sometimes have unpredictable results. But that, too, is part of NT christology.

4. The Foundation for Subsequent Christology. The context-specific and at the same time developing character of so much of NT christology made it inevitable that not all elements within NT christology would be carried forward—particularly the "adoptionist"—like notes in some of the earliest formulations, and idea of Wisdom as created which came in as part of the pre-Christian Jewish Wisdom tradition. Some elements were caught up spasmodically—Paul's Adam christology is taken up in Irenaeus' doctrine of "recapitulation," Luke's schematization of the epoch of Christ followed by the epoch of the Spirit reappears in corrupt form in Montanism and modern dispensationalism, and the visionary magnificence of the Revelation of John retains its impact in the Byzantine Pantocrator. But the main highway into the future was provided by the Wisdom/Word christologies of Paul and John. That way was by no means smooth. The concept of Christ as God's self-revelation not only had to skirt around docetism (already in 1–2 John), but also resulted in an outright breach with Judaism over the question mark it seemed to pose to the unity of God (already foreshadowed in John), and it also gave scope to a modalist interpretation later in the second century. In the event, as it happened, the NT writing contained sufficient safeguards to prevent Christianity from abandoning monotheism (Christ as God incarnate), but also sufficient dynamic in the relationships implied between God, the exalted Christ, and the Spirit of Christ to require redefinition of that monotheism in a trinitarian direction. Whether subsequent formulations managed to take sufficient account of all the balancing elements in NT christology, however, remains an open question.

JAMES D. G. DUNN

CHRONICLES OF THE KINGS (ISRAEL/JUDAH), BOOK OF THE

[Heb *sēper dibrê hayyamîm lĕmalkê* (סֵפֶר דִּבְרֵי הַיָּמִים לְמַלְכֵי)]. A book or books not extant but cited by the author of 1–2 Kings. The term literally means "the daily affairs for [or belonging to] the kings of [Israel/Judah]," but it is most often translated as either the Chronicles of or the Annals of the Kings of Israel/Judah. The Chronicles of the Kings of Judah is mentioned fifteen times (1 Kgs 14:29; 15:7, 23; 22:46—Eng 22:45; 2 Kgs 8:23; 12:20—Eng 12:19; 14:18; 15:6, 36; 16:19; 20:20; 21:17, 25; 23:28; 24:5) in reference to every post-Solomonic ruler except Ahaziah, Athaliah, Jehoahaz, Jehoiachin, and Zedekiah. The Chronicles of the Kings of Israel is mentioned eighteen times (1 Kgs 14:19; 15:31; 16:5, 14, 20, 27; 22:39; 2 Kgs 1:18; 10:34; 13:8, 12; 14:15, 28; 15:11, 15, 21, 26, 31) in reference to every king of Israel except for Jehoram and Hoshea. These citations include a standard formula: "… the rest of the acts of ___ how he [or "and all that he did"] ___, behold, they are [or "are they not"] written in the book of the Chronicles of the Kings of Israel [or Judah]."

The author of Kings also refers to a book of the Affairs of Solomon (Heb *sēper dibrð šĕlōmōh*), which is normally translated as the book of the Acts of Solomon (1 Kgs 11:41). Among the numerous sources mentioned in the OT book of Chronicles are "the book of the kings of Israel and Judah" (2 Chr 27:7), "the book of the kings of Judah and Israel" (2 Chr 16:11), "the book of the kings of Israel" (2 Chr 20:34), and "the chronicles of the kings of Israel" (2 Chr 33:18). Most scholars agree that these probably are descriptive terms rather than titles and most likely all refer to the same work. Disagreement exists as to whether these are the same books mentioned in 1–2 Kings. In addition, a book of chronicles (Heb *sēper dibrð hayyamĦm*) is mentioned incidentally in Neh 12:23 as being a book in which the heads of Levite families are registered, but few scholars have connected this to the books mentioned in 1–2 Kings. The only other use of a similar term in the OT occurs in Esth 10:2 which, using the same formula used in 1–2 Kings, refers to the book of the Chronicles of the Kings of Media and Persia.

Though the author of Kings specifically refers to the books of the Chronicles of the Kings only as sources for further information, it is widely assumed that he used these books as sources for his own writing (*NDH*, 57). Scholars who do not make this assumption generally conclude, on the basis of the titles, that they were the official court annals of the two kingdoms. For four of the kings of Judah and seven of the kings of Israel, the formula includes amplifying information ("how he ___") which would then be the only basis for judging what might have been their content. Indeed, ten of these eleven cases refer specifically to military campaigns, "conspiracies," or building projects. This corresponds well to known Mesopotamian court annals which typically include brief, highly stylized reports of military campaigns, building projects, and hunting exploits.

The majority of scholars who assume that the author of Kings utilized these chronicles as a primary source for his own writing note that although certain idiomatic phrases suggest derivation from official annals (Montgomery 1934), much of the material in Kings is clearly not of the sort included in official annals. Thus they conclude that the Chronicles of the Kings must have been unofficial histories based on official annals but with substantial amplification.

Prominent hypotheses regarding the Chronicles of the Kings include the following: (1) They were unofficial histories composed by prophets based upon official annals and prophetic writings (Keil 1876: 12–14). (2) The chronicles for both Israel and Judah and the Acts of Solomon were probably a single annalistic work written by a priest of Jerusalem in the time of Manasseh (Jepsen 1956: 54–60). (3) They were unofficial histories based on official annals: the author drew upon the Judean chronicles for information about the temple, royal succession, and political events, but took little from the chronicles of Israel apart from its chronological framework (*NDH*, 63–74). (4) They were the official annals of the court of Jerusalem—a single work in two columns, one for Israel and one for Judah (Mettinger 1971: 36–42). (5) If official annals of the court of Israel ever existed, the author of Kings did not use them. The Chronicles of the Kings of Judah included the core of the material attributed to the Acts of Solomon. These three titles should not be viewed as actual works, but as a literary device representative of the author's historical perspective (Garbini 1981).

3. Attitude toward the North

A. Name

In the Hebrew Bible this work carries the title *dibrê hayyāmîm*, "the events of the days." The title "Chronicles" can be traced back to Jerome, who, in his *Prologus Galeatus* (a preface to the Books of Samuel and Kings), provided a more appropriate title, *Chronicon Totius Divinae Historiae,* or Chronicle of the Entire Divine History. In his German translation of the Bible, Luther called the book *Die Chronik,* which led to the familiar "Chronicles" in English Bibles. In the LXX, Chronicles is called *Paraleipomena* (hereafter *Par.*), that is, "the things omitted" or "passed over." The church father Theodoret interpreted this to mean that Chronicles assembled whatever the author of 1–2 Kings omitted, though this view does not indicate that Chronicles has also omitted much of what is contained in the biblical books of Kings. The division into two books appears first in the LXX and has been standard in Hebrew Bibles since the 15th century.

B. Canonicity

It is frequently asserted (e.g., Curtis and Madsen *Chronicles* ICC, 3), apparently incorrectly, that the position of Chronicles at the end of the Hebrew Bible indicates its late acceptance into the canon. Actually, there does not seem to have been much discussion about canonicity, perhaps because Chronicles included so much material found elsewhere in the canon (Willi 1972: 179); the book may have been granted canonical status at the same time as Ezra-Nehemiah. In some Hebrew manuscripts from Spain it appears as the first book among the Writings, where its worship emphases provide a fitting introduction to the following book of Psalms. Its now standard position at the end of the canon follows the practice of the Jewish community in Babylon. In the Septuagint and associated translations (e.g., Vulgate, Ethiopic), the order is Kings, Chronicles, 1 Esdras, 2 Esdras (= Ezra-Nehemiah).

C. Extent of the Book

1. Relationship to Ezra-Nehemiah. Since the time of Leopold Zunz (1832), Chronicles has been considered by the majority of scholars to be part of the Chronicler's History, consisting of (all or most of) Chronicles and (all or parts of) Ezra-Nehemiah. Because this hypothesis has important implications for the date and meaning of Chronicles, and because it has been sharply called into question in recent years, the arguments for and against it must be reviewed and assessed. Arguments for the unity of Chronicles-Nehemiah include (Japhet 1968: 331–32): (a) The presence of the first verses of Ezra (1:1–3a) at the end of Chronicles (2 Chr 36:22–23). (b) The book of 1 Esdras, which duplicates 2 Chronicles 35–36, Ezra 1–10, and Nehemiah 8. (c) The linguistic resemblance of the three books, e.g., their common vocabulary, syntactic phenomena, and stylistic peculiarities. (d) The common point of view from which the history is treated, the method followed in the choice of materials, and the preference demonstrated for certain topics.

While in argument (a) the overlap may indicate where the story is continued, it does not in itself demand unity of authorship. The overlap can be understood equally well as support for diversity of authorship of Chronicles and Ezra-Nehemiah (Welch 1935: 186).

1 Esdras, as noted in argument (b), is a fragment that breaks off in mid-sentence (= Neh 8:13); it probably once began at a point other than 2 Chr 35:1 as well. Those who argue that it is a translation of an earlier version of the Chronicler's History, to which the Nehemiah Memoirs had not yet been added, posit a beginning at 1 Chronicles 1 (Pohlmann 1970) or at 1 Chronicles 10 (Cross 1975). Williamson (1977b: 12–36; criticized by McKenzie 1985: 20–23) holds that 1 Esdras is both a fragment and a secondary compilation, and he argues that the text of 1 Esdr 9:37 shows knowledge of Neh 7:72—Eng 7:73. Hence the compiler, in his judgment, was following a *Vorlage* in which Nehemiah 8 followed Nehemiah 1–7, not Ezra 10. He also maintains that it is unlikely that *Par.* and 1 Esdras, which derive from the same time (2d century) and place (Alexandria), would both include the entire text of Chronicles. One can, of course, still argue from 1 Esdras that at least a part of Jewish tradition in the 2d century associated Chronicles, Ezra, and Nehemiah 8 with one another and interpreted them along the lines of a Chronicler's History.

Japhet (1968) focused her attention on the linguistic differences between Chronicles and Ezra-Nehemiah while acknowledging general linguistic similarities. She found differences that could be classified as linguistic opposition, variation in technical terms (with Chronicles showing a stage in the use of these terms later even than the latest stratum of Ezra-Nehemiah), and stylistic traits peculiar to Chronicles and to Ezra-Nehemiah respectively. Cross (1975: 14, n. 58) and Polzin (1976: 55), however, hold that much of the linguistic opposition can be accounted for by arguing that the scribal tradition lying behind Chronicles was more consistent than that lying behind Ezra-Nehemiah (Throntveit 1982a: 203–4). Mosis (1973: 215, n. 23) believed that Japhet did not distinguish adequately between the linguistic usage of the *Vorlagen* taken over by the Chronicler, the pieces composed by the Chronicler himself, and secondary additions to his work.

Williamson (1977b: 37–59) investigated a list of 140 items (first drawn up by S. R. Driver [1913: 535–40] and later expanded by E. L. Curtis and A. A. Madsen [*Chronicles* ICC, 27–36]) that show similarities in style between Chronicles and Ezra-Nehemiah (the third argument for the unity of these books) and was able to eliminate all but six of these stylistic features as either irrelevant to the question of unity of authorship or as actually favoring *diversity* of authorship. In a recent study, Throntveit has shown that Polzin was only able to add two additional grammatical or syntactic features to the evidence for similarity of authorship. He concluded, "While Japhet and Williamson have provided strong arguments against the ability of linguistic analysis to prove common authorship, they have not shown separate authorship on these grounds" (1982a: 215).

While the priestly point of view, a focus on the temple and the cult, and a favoritism toward the Levites are among the themes shared by Chronicles with Ezra-Nehemiah, recent discussion has also identified possible theological differences between the two works, among which the following seem most convincing: (1) The concept of retribution and the terms related to it in Chronicles are almost entirely lacking in Ezra-Nehemiah (Braun 1979: 53–56; Williamson 1977b: 67–68). (2) The two works differ in their attitude toward the northern tribes, and in particular the Samaritans (Braun 1979: 56–59; Williamson 1977b: 60–61). (3) Chronicles places a greater emphasis upon the Davidic monarchy (Braun 1979: 63). (4) In Ezra-Nehemiah there is mention of the election of Abraham and the Exodus, while in Chronicles there is a concentration on the patriarch Jacob (who is always called Israel) and a deemphasis on the Exodus (Williamson 1977b: 61–66). (5) The frequent references to prophets in Chronicles make it a prophetic history; in Ezra-Nehemiah, by contrast, the prophetic influence has virtually ceased (Williamson 1977b: 68). (6) The *nĕtînîm* ("temple servants") and the sons of Solomon's servants appear throughout Ezra-Nehemiah, but are absent from Chronicles, with the exception of 1 Chr 9:2 (Japhet 1968: 351–54; Williamson 1977b: 69). (7) In Chronicles, Israel comprises all twelve tribes, whereas in Ezra-Nehemiah Israel is Judah and Benjamin (Williamson 1977b: 69).

Three main positions are held today on the existence of the Chronicler's History: (a) Some affirm it, including all or parts of Ezra-Nehemiah within the history (e.g., Ackroyd *CHJ* 1: 130–61; Clines *Ezra, Nehemiah, Esther* NCB; Cross 1975; Freedman; Mosis); (b) others (most notably Japhet and Williamson) believe that Chronicles and Ezra-Nehemiah are separate works by separate authors; and (c) still others (e.g., Welten, Willi) believe that the books are separate works by the *same* author. The ideological or theological differences between the books are perhaps the most convincing argument for diversity of authorship. While the question is by no means closed, the discussion that follows will assume the diverse authorship of these books.

2. Secondary Elements within Chronicles. Since M. Noth's seminal work in 1943 (*ÜgS*) the dominant opinion has been that one author was responsible for the book of Chronicles with some subsequent glossing of the text (Noth *NCH* 29–42; Rudolph *Chronikbücher* HAT, 1–3). Much secondary Levitical material has also been detected in 2 Chronicles by Willi (1972: 196–204). Major passages still in dispute include the following:

a. The Genealogies in 1 Chronicles 1–9. Welch (1939: 185–86) and Cross (1975: 4–18; cf. McKenzie 1985: 30, n. 32) have proposed that the entire genealogical preface is secondary. Noth and Rudolph argued for the originality of a basic genealogical scheme later enriched with various secondary additions.

In Rudolph's case the secondary materials amounted to more than 75 percent of the text. Williamson, however, defends the substantial unity of 1 Chronicles 1–9 as part of the original book of Chronicles, though he does detect a few additions (e.g., 6:35–38—Eng 50–53). These genealogies, like the rest of the book, show a concern for all Israel, for David and his dynasty, for the centrality of Judah and Jerusalem, and for immediate retribution. They call the patriarch Jacob "Israel" and show little interest in Moses and the Exodus.

b. Portions of 1 Chronicles 15–16. Rudolph considers 15:4–10, 16–21, 22–24; and 16:5b–38, 42 secondary (*Chronikbücher* HAT, 2; cf. Noth *NCH*, 35). Williamson (*Chronicles* NCB, 122–32) finds a priestly, secondary redaction in parts of 15:4, 11, 14, 18, 24 and 16:6, 38, 42.

c. 1 Chr 23:3–27:34. Noth (*NCH*, 31–33) and Rudolph (*Chronikbücher* HAT, 3) dismiss all of this material dealing with David's organization of the Levites. Williamson (*Chronicles* NCB, 158) detects a primary stratum in 23:3–6a, 6b–13a, 15–24; 25:1–6; 26:1–3, 9–11, 19, 20–32, assigning the rest of chaps. 23–27 to a pro-priestly reviser who flourished about a generation after the original author.

d. 2 Chr 36:22–23. Japhet retains this doublet of Ezra 1:1–3a, but Williamson declares it secondary (NCB, 419) and so argues that the original book ends with 2 Chr 36:21.

D. Date and Place of Authorship

Jerusalem is clearly the place of authorship. If there was a Chronicler's History, including all or parts of Chronicles, Ezra, and Nehemiah, then the Chronicler must be subsequent to the work of Ezra (458 or 398 B.C.E. [7th year of Artaxerxes I or Artaxerxes II]) and Nehemiah (445–432 B.C.E.). Internal clues in Ezra-Nehemiah, such as the list of high priests in Nehemiah 12, also figure in this argument, unless this list or the Nehemiah Memoirs in general are held to be supplementary to the original Chronicler's History. Those who find the genealogical preface of 1 Chronicles 1–9 secondary (e.g., Welch, Cross), or who find at least chap. 3 secondary, are not bound by the chronological implications of 3:17–24, which includes the exilic and postexilic line of David.

The evidence for dating the books of Chronicles apart from Ezra-Nehemiah rests on the following types of evidence. (1) The mention of the rise of the Persian kingdom (2 Chr 36:20) makes 539 the earliest possible date. (2) *Par.* is cited in Eupolemus, ca. 150 B.C., and the translation of 1 Esdras, containing 2 Chronicles 35–36, also dates to the 2d century. Since some time would elapse between the composition of a book and the need for a Greek translation, a date of composition after 200 would seem to be impossible. Note also that Sir. 47:8–10 (ca. 190 B.C.E.) presupposes Chronicles' description of David. Decisions on the following evidence can narrow this three-century range:

1. Internal Clues. a. 1 Chr 3:17–24. This genealogy of the sons of Jeconiah (= Jehoiachin, exiled in 597 B.C.E.) extends for six generations following MT or eleven following *Par.* (see the commentaries). Depending on how many years one allows per generation, MT suggests a date between 400–350, and the LXX a date about 250. The assumption is that the author recorded the genealogy down to his own day.

b. 1 Chr 29:7. The mention of *darics*, a Persian coin not minted before 515 B.C.E., in the reign of Darius I, is here used anachronistically of contributions for the temple in the time of David. Presumably enough time would have to pass after 515 for an author to employ this anachronism. Mosis (1973: 105–6) and Throntveit (1982b: 128), however, believe this verse is secondary.

c. 2 Chr 16:9. The clause "The eyes of the Lord run to and fro throughout the whole earth" appears to be a citation of Zech 4:10. Since the prophet flourished in 520–518, a date for Chronicles must be somewhat later, though it is a matter of judgment as to how much time would have to elapse before the prophet could be referred to in such an authoritative manner.

d. The Language of the Book. Polzin (1976: 27–75) classifies the language of Chronicles, Ezra, and Nehemiah (exclusive of the Nehemiah Memoirs) as Late Biblical Hebrew, subsequent to P. However, it is doubtful whether the language by itself can be dated precisely within the postexilic period since he has only shown similarity of language, rather than similarity of authorship, in the three documents (Throntveit 1982a: 215). The absence of Greek words and Hellenistic influence might favor an earlier date within this period.

2. Historical or Theological Situation. a. The Schismatic Samaritan Community. Noth believed that the rival Samaritan cult was set up about the time of the fall of the Persian Empire and that the Chronicler's work was a response to this in the 3d century. Recent studies, however, have changed the understanding of the Jewish and Samaritan schism. First, it is now widely held that the decisive break between the Jerusalemite and Samaritan communities did not take place before the time of John Hyrcanus at the end of the 2d century (Cross 1966; Purvis 1968; cf. Coggins 1975). Hence, to call the Chronicler anti-Samaritan is anachronistic. Secondly, the questioning of the unity of Chronicles-Nehemiah has led to the observation that the more exclusivistic claims are contained in Ezra-Nehemiah and not in Chronicles. Coggins has proposed that even in Ezra-Nehemiah we can detect only an anti-Samarian, rather than an anti-Samaritan attitude. Thirdly, the attitude toward the North in Chronicles is positive.

b. The Era of Zerubbabel. Freedman proposed that the Chronicler structured his history around the figure of David and his dynasty and defended the claims of the house of David in its authoritative relationship to temple and cult. The occasion for the book was the return from exile and the rebuilding of the temple under the leadership of Zerubbabel and Joshua (parallel to David and Zadok respectively). Though the exact ending of the Chronicler's History is unknown, according to Freedman, it included at least Ezra 1–3 and possibly Ezra 6:19–22 (1975: 183). The narrative of Zerubbabel and the temple has been supplanted by an Aramaic record (4:6–6:18) in the present work, which brings the picture down to 515 (1961: 441).

Cross (1975) proposed a modified version of this reconstruction, which postulates three editions of the Chronicler's History. The first edition (1 Chronicles 10 through 2 Chronicles 34 plus the *Vorlage* of 1 Esdr 1:1–5:65 [= 2 Chr 35:1–Ezra 3:13]) was composed in support of the restoration of Davidic rule, the building of the temple, and the establishment of the cult shortly after the founding of the temple in 520 and before its dedication in 515. The second (1 Chronicles 10–2 Chronicles 34 plus the *Vorlage* of 1 Esdras [2 Chr 35:1–36:23; Ezra 1–10; Nehemiah 8; and the story of Zerubbabel's wisdom and piety in 1 Esdr 3:1–5:6]), was written after Ezra's mission, in 450. The final edition (1–2 Chronicles; Ezra-Nehemiah), dated to 400 or a little later, incorporated the genealogies of 1 Chronicles 1–9 and the Nehemiah Memoirs, but suppressed the title "servant of the Lord" for Zerubbabel in Ezra 6:7 and the story of Zerubbabel's wisdom and piety (= 1 Esdr 3:1–5:6). The 400 date is established by the Davidic genealogy in 1 Chr 3:17–24, the reference to Darius II (423–404) in Neh 12:22, and the references to the high priests Yohanan II and Yaddua II (late 5th century) in Nehemiah 12–13. McKenzie (1985: 189–206) suggests that the earliest edition (= Chronicles 1) was based on Dtr 1, the preexilic version of the Deuteronomistic History (hereafter DH).

c. Conditions of the 4th Century. Japhet (*EncJud* 5: 533–34) points to the absence of Greek influence in the books of Chronicles, but also holds that they were composed *after* Ezra-Nehemiah. Williamson relates the emphasis on faith in Chronicles to the aftermath of the Persian suppression of the revolt led by the Sidonian Tennes (351–348 B.C.E.), though he admits the dating is only probable. Since he dates the pro-priestly reviser of Chronicles to very late in the Persian period (1979: 268), the original Chronicler may be placed a generation earlier.

d. Conditions of the 3d Century. Welten (1973) and Willi (1972), who believe that Chronicles and Ezra-Nehemiah were written by the same person but not as one work, are forced to a date after Ezra. Welten points to the growing tensions between Jerusalem and Samaria in postexilic times and claims that the time of Ezra and Nehemiah was far in the past when Chronicles was written (1973: 200). The war reports, in his judgment, reflect the conflicts between the Ptolemies and the Seleucids in the first half of the 3d century. His appeal to the use of catapults in 2 Chr 26:14–15 as a war machine first in general use in the 3d century is mistaken since the passage in question refers to a platform on city walls from which stones and arrows could be fired (Williamson *Chronicles* NCB, 338).

The suggested correlations with historical periods either seem tenuous or presuppose highly debatable literary-critical judgments (such as the original connection of part of Ezra with 1–2 Chronicles). The three internal clues from 1 Chr 3:17–24; 29:7; and 2 Chr 16:9 are more specific, suggesting the late 5th or 4th century. This fits well with Chronicles' relationship to the Dtr, which underwent its final redaction in the

mid 6th century and must have passed through several manuscript generations before it was used by the Chronicler. Hanson (1975: 270) has argued for a date around 400 to account for the book's evenhanded approach toward the Levites following a period of great hostility in the 6th and 5th centuries.

Though a 4th-century date seems likely, the uncertain nature of the evidence suggests caution when tying one's interpretation to anything more historically specific than the general situation of postexilic times.

E. Text

1. Text of Chronicles. Since only four complete words from Chronicles are preserved in the Dead Sea Scrolls, the primary witnesses to the text, apart from MT, are two Greek translations and their respective daughter versions (e.g., Ethiopic, Bohairic, Old Latin, Armenian, Syro Hexapla, etc.). 1 Esdras contains only chaps. 35–36 from the book of 2 Chronicles and was written in 2d-century Egypt. Though its elegant Greek style is paraphrastic, making reconstruction of the Hebrew *Vorlage* more difficult than elsewhere in the LXX, it bears witness to an older and often shorter form of the text, differing both from the MT and the other Greek translation (Klein 1966).

This second translation *(Par.)* is also now dated to 2d-century-B.C.E. Egypt, primarily because the translation seems to have been known by Eupolemus (ca. 150) and shows Ptolemaic Egyptian coloring (Allen 1974a: 12). This translation is best preserved in the G family of texts (Vaticanus [=B]; cf. Sinaiticus and miniscule c^2), of which the L, R, and O families are revisions (Allen 1974a: 65–108). G itself has been extensively revised (Allen 1974a: 142–74), so that its fairly close approximation to MT may result to a large extent from the recensional process. 1 Esdras may provide more direct access to the state of the Hebrew text in the 2d century. *Par.* does not seem to be a full part of the *kaige* recension since it does not share fully 10 of 19 translation characteristics, and its use of the other characteristics is sporadic and inconsistent (Allen 1974a: 137–41). C. C. Torrey's opinion that *Par.* was written by Theodotion depended almost exclusively on the use of transliterations and is now generally rejected.

In synoptic passages, *Par.* often agrees with Samuel-Kings (Hebrew and/or Greek) against the MT of Chronicles. Allen argues extensively (1974a: 175–218) that *Par.*'s *Vorlage* and, occasionally, *Par.* itself have been assimilated to the Samuel-Kings text, thus removing changes introduced by the Chronicler. He concedes that in some of these cases Chronicles' MT itself may be corrupt, and the proportion of such cases may be higher than he suggests. Allen considers *Par.*'s *Vorlage* to be a popular (vulgar) text (1974b: 167–68).

2. Text of Samuel-Kings Used by the Chronicler. Great text-critical interest has focused on the character of the text of Samuel and Kings that lay before the Chronicler himself (Cross 1961: 188–92; Lemke 1964; 1965; summary in Klein 1974: 42–50). Earlier scholars had assumed that the Chronicler used a text much like the MT of Samuel-Kings, though now it is clear that what he had was the Palestinian text of Samuel-Kings attested by Qumran mss (especially $4QSam^a$), the Old Greek and the proto-Lucianic recensions of LXX, and Josephus. In a number of cases, historical or theological changes ascribed to the Chronicler have been shown to be part of the textual history of Samuel-Kings (examples in Klein 1974: 42–46; Lemke 1965). McKenzie (1985: 119–58) distinguishes between Samuel and Kings, and claims that the Chronicler's *Vorlage* in Kings was a proto-rabbinic text type.

This is not to deny the extensive rewriting of the Deuteronomistic History which the Chronicler undertook. But it does mean that before a change can be credited to the Chronicler, one must be sure of the textual shape of his *Vorlage.* Micheel (1983: 25), for example, detected the theological hand of the Chronicler in the notice in 2 Chr 18:31 that Jehoshaphat's cry was answered by the Lord's saving him since the reference to salvation is not mentioned in 1 Kgs 22:32. This reference, however, is contained in the (proto-) Lucianic text and therefore in the text of Kings that lay before the Chronicler. Many other variations between Chronicles and Samuel-Kings, to which no historical or theological significance has been ascribed, are also now explainable in this fashion (Klein 1974: 47–50).

F. Sources

1. Canonical Sources. The author of 1 Chronicles 1 drew his genealogies from the book of Genesis. Other genealogical notices in 1 Chronicles 2–8 show strong ties to Genesis, Exodus, Numbers, Joshua,

Samuel, and Ruth. Psalms 96, 105, and 106 are cited in 1 Chronicles 16. There are also allusions to or evident knowledge of the books of Isaiah (2 Chr 28:16–21), Jeremiah (2 Chr 36:21), and Zechariah (2 Chr 36:9). But clearly the most frequently used canonical source is the Samuel-Kings corpus from the Deuteronomistic History. (For a convenient list of parallels see Myers [*2 Chronicles* AB, 227–31].) A recent attempt by Halpern (1981: 52) and Macy (1975) to show that both Kings and Chronicles were dependent on a common, Deuteronomistic source has not been successful in my judgment. McKenzie's proposal (1985: 189–206) that the Chronicler knew the Deuteronomistic History only in its preexilic redaction (Dtr 1) is also not persuasive. When Chronicles contains parallels to passages commonly assigned to the exilic edition of DH (Dtr 2), McKenzie either denies the exilic date of these pericopes from Kings or alleges that the passages in Chronicles (2 Chr 7:19–22 and 34:22–27) are themselves secondary. His argument, thus, appears to be circular.

The Chronicler's use of Samuel-Kings is, of course, selective. For his depiction of David he utilized those materials from the DH that would enhance David's qualifications as builder of the temple or highlight his position as a victorious and powerful king. Thus he omitted most of the narrative commonly known as the History of David's Rise (1 Samuel 16–2 Samuel 5), in which David gradually gained ascendancy over Saul and kingship over all Israel, and almost all of the Succession Narrative (2 Samuel 9–20; 1 Kings 1–2). The reader of Chronicles is not told about David's adultery with Bathsheba, his murder of Uriah, or the revolt of Absalom. These omissions are probably not the cover-up they are sometimes portrayed to be, since the Chronicler could have presupposed that his readers already knew these stories. Rather, the Chronicler selected only those passages for his account of David that fit his positive agenda. Similarly, passages about the northern kingdom were omitted unless interaction with the south required their inclusion (e.g., 2 Chr 18:2–34, the joint campaign of Ahab and Jehoshaphat).

At times his selective citations ignored the original context. For example, 1 Chr 14:3–7 begins, "And David took yet more wives at Jerusalem" (= 2 Sam 15:13–16), although 2 Sam 3:2–5, to which the "yet more" refers, is omitted by the Chronicler. He also picked up the story of the people of Jabesh-gilead caring for the body of Saul (1 Chr 10:11–12 = 1 Sam 31:11–13), but omitted 2 Sam 2:4b–7, the real goal of this narrative, where David congratulates the people of Jabesh-gilead on their actions and invites them to recognize his kingship (Noth *NCH*, 90, for other examples).

The Chronicler also sometimes rearranged the order of items from Dtr to serve his own interests. For example, the list of David's mighty men was taken from 2 Sam 23:8–39, where it forms part of an appendix to 2 Samuel identifying acts of heroism. In 1 Chr 11:10–47, however, this list is placed within a series of lists of those from all Israel who gave David unanimous support in the early days of his kingdom.

Finally, the Chronicler combined items from his sources in order to avoid the unfavorable implications of the tradition. According to 1 Kgs 3:4–15, God appeared to Solomon at the high place of Gibeon, but the Chronicler added in 1 Chr 16:39 and 2 Chr 1:3 that the Tent of Meeting from the wilderness period stood at that site until the completion of the temple. Hence the possible impression that God had appeared at an illegitimate sanctuary was avoided (Noth *NCH*, 94–95).

2. Noncanonical Sources. a. Explicit Source References. The Chronicler refers the reader to sources at the end of virtually every king's history. Typical references include: (1) 2 Chr 9:29 "The rest of the acts of Solomon, the first and the last, are they not written in the acts of Nathan the prophet, in the prophecy of Ahijah the Shilonite, [and] in the vision of Iddo the seer concerning Jeroboam the son of Nebat?" (cf. 1 Kgs 11:41). (2) 2 Chr 24:27 "Accounts of his sons, and of the many oracles against him, and of the rebuilding of the house of God are written in the Commentary [Heb *midraš*] on the Book of the Kings" (cf. 2 Kgs 12:20). (3) 2 Chr 27:7 "The rest of the acts of Jotham, and all his wars, and his ways, behold they are written in the Book of the kings of Israel and Judah" (cf. 2 Kgs 15:36).

While the names of the recorded sources may vary in Kings and Chronicles in these and other cases, we should probably not suppose that the Chronicler here referred to extant records which were available to him or his readers. Rather, these source references are paraphrases or interpretations of source references from DH. The following four observations may be made:

All of the references are found at the same place in Kings and Chronicles, even when the source reference does not come at the exact end of a king's reign (e.g., 2 Chr 16:11; 20:34; 25:26). This makes unlikely the proposal that these source notices themselves come from sources other than the book of Kings (McKenzie 1985: 174). The unique addition of a source reference for David at 1 Chr 29:29 attributes the materials drawn from the Dtr account of David to the three prophets associated with David (Samuel, Nathan, and Gad), even though Samuel died before David took office.

Other references to such sources as the acts, prophecies, or visions of a variety of prophets are merely new titles for the source references already contained in DH, indicating that in the Chronicler's judgment the earlier history (DH) was a prophetic history (Nathan, Ahijah, Iddo, 2 Chr 9:29; Shemaiah and Iddo, 2 Chr 12:15; Iddo, 2 Chr 13:22; Jehu ben Hanani, 2 Chr 20:34; Isaiah, 2 Chr 26:22; 32:32). The mention of prophets in the source references occurs only for those kings who play an important role within the dynasty or in fostering the cult, that is, for those kings who are evaluated positively, in whole or in part, by the Chronicler. The source reference at the end of Solomon's reign (2 Chr 9:29) refers to three "prophetic" records instead of "the book of the acts of Solomon" of 1 Kgs 11:41, even though all the materials in 2 Chronicles 1–9 are drawn from 1 Kings 1–11, with no evidence for information from additional sources.

The reference to "the book of the kings of Judah and Israel" (2 Chr 16:11; cf. 20:34; 25:26; 27:7; 28:26; 32:32; 33:18; 35:26; 36:8 with minor variations in the name of the source), instead of "the book of the chronicles of Judah" (1 Kgs 15:23, etc.), shows the Chronicler's interest in pointing out that Judah was part of that inclusive Israel which he maintained before his readers as an ideal (Williamson 1977b: 106–7, 128).

There is no need to think of "the *midraš* of the book of the kings" (2 Chr 24:27) as anything other than a rephrasing of the source reference in 2 Kgs 12:20—Eng 12:19.

b. Implicit Source References. The question of the availability of additional sources is related to, though not identical with, the question of the historical value of the Chronicler's additional information.

Most scholars agree that the genealogies in 1 Chronicles 1–9 came to the Chronicler from a variety of sources. Note the varieties of genealogical genres in these chapters (horizontal and vertical genealogies; some genealogies feature the word "begat," while others link the generations with "his son" or "the sons of," etc.), the varying amount of material for the various tribes, the mention of events (4:41; 5:10) not recorded elsewhere in the Bible, and the general obscurity of many of the names. (The same line of argumentation is probably applicable to many of the other lists of names in the book [e.g., 1 Chronicles 12, apart from redactional elements; chaps. 23–27].) 1 Chr 4:24–5:22 seems to have been drawn from a genealogy that included intertribal history and geography, while chap. 7 was once a military census list.

The reference to Hezekiah's tunnel in 2 Chr 32:30 and to Neco's goal in his battle against Josiah (2 Chr 35:20), though not attested in the parallel passages in Kings, are regarded as historically reliable additional information that could not arise from exegesis of Dtr (Noth *NCH*, 57–58). Again, the reference to the fortifications of Rehoboam in 2 Chr 11:5–10, which fits awkwardly in the context, must have been available in some kind of source. Williamson believes that the descriptions of armies in 2 Chr 14:8; 17:14–19, 25:5, and 26:11–15 are from a source (*Chronicles* NCB, 261–62; contra Welten 1973: 79–114). The interpreter of Chronicles in each case must decide whether the additional material in Chronicles comes from a source, and, if so, what the historical value of that additional information may be. The speeches and prayers of the kings and prophets are best understood as the Chronicler's own compositions (see I. 1 and 2 below).

G. Historical Value of Chronicles

Opinions on this question vary widely in the scholarly literature. Wellhausen remarked: "See what Chronicles has made out of David! The founder of the kingdom has become the founder of the temple and the public worship, the king and hero at the head of his companions in arms has become the singer and master of ceremonies at the head of a swarm of priests and Levites … It is only the tradition of the older source [Samuel-Kings] that possesses historical value" (*WPHI*, 182). Among critical scholars, a quite opposite position was held by W. F. Albright (1950: 66–69). He believed the Chronicler was correct in:

(1) attributing a 10th-century origin to the guilds of temple singers; (2) in listing towns fortified by Rehoboam in 2 Chr 11:5–10; (3) in the regnal years assigned to Asa; and (4) in his report of a judicial reform under Jehoshaphat. Albright admitted, of course, that the evidence was not one-sided and that it was "more difficult than ever to accept the stories of the wars of Abijah (II Chron. 13), Asa (II Chron. 14), and Jehoshaphat (II Chron. 15) *'au pied de la lettre'* since we know that the numbers are exaggerated out of all relation to the possible facts" (1950: 68–69). (For examples where the historical value of Chronicles is supported by archaeology and related studies, see Hasel *ISBE* 2: 668–69.)

In recent years, emphasis has focused more on the Chronicler's use of additional material, rather than upon that material's historical value. Although Welten's largely negative historical judgments about the building activities of various kings have not been unanimously accepted, he has found a wide following in his observation that the seven paragraphs dealing with building activities of a king in 2 Chronicles 10–36 are always included for kings whom the Chronicler judges positively (2 Chr 11:5–12 [Rehoboam]; 14:5–6 [Asa]; 17:12–13 [Jehoshaphat]; 27:3–4 [Jotham]; and 32:5–6a [Hezekiah]) or, if a king has both positive and negative periods, within the positive part of his reign (2 Chr 26:9–10 [Uzziah]; 33:14 [Manasseh]).

Welten also evaluated the five reports of successful wars in Chronicles that have no parallel in Kings (2 Chr 13:3–20 [Abijah]; 2 Chr 14:8–14—Eng 9–15 [Asa]; 2 Chr 20:1–30 [Jehoshaphat]; 2 Chr 26:6–8 [Uzziah]; and 27:5–6 [Jotham]). He pointed out that all the kings involved were positively evaluated by the Chronicler, at least for the portion of their reign when the alleged war took place. Welten's own historical judgment is negative, believing that the Chronicler is merely giving a graphic description of the animosities that beset his 3d-century community. The only historical source he allows in these accounts is in 2 Chr 26:6a.

In his recent commentary Williamson also deals with these five war accounts. He notes how these reports of successful wars and/or tribute illustrate a king's faithfulness and complete reliance on God, his self-humbling repentance, or the fact that a king was under God's blessing. He also concedes that the Chronicler has in almost every case expressed the account in his own language, complete with the ideology of Holy War. When it comes to historical judgments, Williamson opts more often than Welten for some kind of historical kernel. On Abijah he cites the authentic-sounding place names in 2 Chr 13:19 (though see now Klein 1983) and wonders whether the Chronicler would have arrived at a favorable evaluation of Abijah had he not had some previous account of his victory over the North. He sees Asa's reported battle against a million Ethiopians as an exaggeration of a local bedouin raid. Jehoshaphat's war is interpreted, following Noth and Rudolph, as the magnifying (for didactic purposes) of an incident that originally was fairly insignificant. He finds the account of Uzziah's war concise, specific, and historical, without the Chronicler's usual lengthy expansions, though he dismisses 2 Chr 26:6b for textual reasons. Finally, on Jotham's war he withholds historical judgment for lack of data.

This comparison of Welten and Williamson indicates that there is a tendency in current scholarship to recognize the extensive theological contribution of the Chronicler, whether the event is historical or not; that archaeological and form-critical judgments are reaching new levels of sophistication (documented more in the works of the two scholars than in the above summary); that in many cases a positive or negative historical judgment reflects in part a given scholar's overall evaluation of the historical value of Chronicles; and that in some cases there is no hard data that justifies a historical judgment one way or the other. Thus, Wellhausen's views on David in Chronicles seem misdirected by today's standards.

The Chronicler's magnification of an account for theological reasons can be seen in his use of large numbers. Abijah, accompanied by an army of 400,000, attacked the army of Jeroboam, which was 800,000 strong and inflicted some 500,000 casualties (2 Chronicles 13). Abijah's successor, Asa, supported by an army of 580,000, was able to stave off an invading horde of one million Ethiopians. These and similar numbers are totally out of line with what we know about ancient military forces, and they are in excess of what could have been mustered from the population of Israel or Judah. There has been a recent attempt to rationalize these numbers by understanding the word *ʾelep* as meaning not 1,000 but a tribal subsection and the military unit that went to war from this subsection (Mendenhall 1958; Myers *Chronicles* AB). In the usual reading of chap. 12 of 1 Chronicles, 340,822 men made their way to

Hebron to make David king, but Mendenhall reduced the number through his understanding of *ʾelep* to 15,290. However, this attempt to lend plausibility to the numbers in Chronicles has not been successful, however valid it may be for early Israel. When Chronicles and DH both have large numbers, slight differences between the texts allow us to conclude that the Chronicler understood these figures as true thousands and not as military units (e.g., 1 Chr 19:7 = 2 Sam 10:6; 1 Chr 21:15 = 2 Sam 24:9; 2 Chr 2:1, 16, 17—Eng 2:2, 17, 18 = 1 Kgs 5:29, 30—Eng 5:15, 16). The proposed new understanding of *ʾelep* does not seem appropriate in a monarchical setting, nor does it offer an adequate interpretation of the tribal numbers within Chronicles (e.g., the sons of Bela in 1 Chr 7:7 number 22,034, but it is meaningless to speak of 22 military units with an average number per unit of 1.5 men). Note also the impossibly large numbers for other objects in Chronicles where the tribal/military interpretation of *ʾelep* is irrelevant (1 Chr 22:14—100,000 talents of silver and 1,000,000 talents of gold).

H. Some Characteristic Features of Chronicles

1. Royal Speeches and Prayers. The speeches and prayers of kings and prophets in Chronicles are frequently referred to as Levitical sermons (von Rad *ROTT*). Recent studies, however, have raised doubts about whether the Levites were specialists in preaching and whether these speeches should be classified as sermons (Mathias 1984). Von Rad believed that the Chronicler was using a well-established genre and, apparently, actual sermons that were available. But the theological themes in these speeches are those of the Chronicler elsewhere, and von Rad disparaged unnecessarily the literary ability of the Chronicler (*ROTT*, 277). Perhaps the most significant part of von Rad's work was his observation of the way in which these speeches base their appeal on an authoritative scriptural text (for 2 Chr 15:2–7, cf. Jer 19:14; 31:15; for 2 Chr 16:7–9, cf. Zech 4:10; for 2 Chr 19:6–7, cf. Deut 10:17; Zeph 3:5, etc.).

Throntveit (1982b: 25–63), building on Braun, has distinguished the following genres in the royal speeches: (a) *Edicts.* A specific audience is addressed with an imperative that is to be immediately carried out (1 Chr 15:12–13; 22:5; 29:20; 2 Chr 29:31; 35:3–6). (b) *Rationales.* There is no specific audience, imperative, or reported action, but the speech provides some rationale for a cultic action (1 Chr 15:2; 22:1; 2 Chr 8:11; 23:25–32; 28:23). (c) *Orations.* Similar to edicts, but these speeches make frequent use of historical retrospects (1 Chr 13:2–3; 29:1–5; 2 Chr 2:2–9; 13:4–12; 14:6; 29:3–11; 30:4–9).

The royal speeches and prayers play a significant role in the structuring of Chronicles. The three speeches (22:7–16, 18–19; 28:2–8, 9–10, 20–21; 29:1–5) and the prayer of David (29:10–19) serve to link him with Solomon closely and place great emphasis on the temple as the joint project of the two kings and a united Israel. David's participation in the building of the temple is bracketed at the beginning (1 Chr 17:16–27) and at the end (1 Chr 29:10–19) by prayers. Similarly, the period of the Divided Kingdom is enclosed within speeches calling for repentance by Abijah (2 Chr 13:4–12) and by Hezekiah (2 Chr 30:6–9). Both speeches indicate the Chronicler's openness to Northern participation in the Jerusalem cult.

2. Prophets. The references to prophets, seers, and men of God in Chronicles can be divided into three groups (much of the following is drawn from Micheel 1983). The first group are those taken from parallel accounts in Samuel-Kings (Nathan [1 Chronicles 17]; Gad [1 Chronicles 21]; Shemaiah [2 Chronicles 11]; Micaiah [2 Chr 18:4–27]; and Huldah [2 Chr 34:22–28]).

A second group is part of Chronicles' additional material (Shemaiah in a second appearance [2 Chr 12:5–8]; Azariah [2 Chr 15:1–7]; Hanani [2 Chr 16:7–10]; Jehu ben Hanani [2 Chr 19:2]; Jehaziel [2 Chr 20:14]; Eliezer [2 Chr 20:37]; Elijah active in Judah [2 Chr 21:12–15]; Zechariah [2 Chr 24:20–22]; Oded [2 Chr 28:9–11]; an anonymous man of God and prophet [2 Chronicles 25]; Jeremiah [2 Chr 35:25; 36:22]). With the exception of Shemaiah, Hanani, Jehu ben Hanani, Elijah, and Jeremiah, these individuals are unknown from other contexts. According to the Chronicler, the attitude shown toward the prophets also reveals one's attitude toward Yahweh: "Believe in Yahweh your God, and you will be established; believe his prophets, and you will succeed" (2 Chr 20:20). These prophets often link the results in a king's domestic or foreign activities with his relationship to Yahweh, although in a few cases success or failure is linked to the whole people's behavior (e.g., Zechariah, Oded).

While some believe that all the words of these prophets were created by the Chronicler (e.g., Micheel), others hold that at least some of them were present in the traditions available to him (e.g., Westermann 1967: 163–68).

A third context is the source references which mention prophets or seers in connection with certain kings (see F.2.a above).

3. Levites. The Levitical genealogies can be described as follows:

a. 1 Chr 5:27–41—Eng 6:1–15. Two sets of Aaronic high priests, from Aaron to Ahimaaz, and from Azariah I (the priest in Solomon's temple) to Jehozadak (who was exiled).

b. 1 Chr 6:1–15—Eng 6:16–30. Each of the three sons of Levi (Gershom, Kohath, and Merari) is provided with a vertical genealogy of seven generations of ordinary Levites that connects to them through their oldest son. A seven-generation genealogy of Samuel and his sons has been inserted into the Kohath genealogy.

c. 1 Chr 6:16–32—Eng 6:31–47. Kohath, Gershom, and Merari are each provided with a vertical genealogy of 14 generations of Levitical singers, ending with Heman, Asaph, and Ethan, the chief singers at the time of David.

d. 1 Chr 6:39–66—Eng 6:54–81. No completely satisfying understanding of this list of Levitical cities or of its date is yet established. Mazar (1960) dated it to the time of the United Monarchy when there was an attempt to strengthen government control by stationing Levites in strategically significant administrative areas. Peterson (1977) proposed an 8th-century date and believed that the Levites in these cities taught the people the Mosaic covenant. According to Spencer (1980), this list is a fictitious composition designed to explain the appearance of the Levites and their secondary role in the postexilic period.

e. 1 Chronicles 23–26. *1 Chr 23:3–6a:* Four types of Levites, whose organization is credited to David; *23:6b–13a, 15–24:* a genealogically based list of those in charge of the work of the house of the Lord; *25:1–6:* a list of singers installed by David; *26:1–3, 9–11, 19:* a list of gatekeepers; *26:20–32:* a list of judges and officers. The Chronicler wanted to give Davidic authority to the role of the Levites in the temple of his day.

In five places (1 Chronicles 25; 2 Chr 20, 29, 34:30, and 35:15) the Chronicler identifies the singers as prophets or as performing prophetic activities. Petersen (1977) argues that the Chronicler hoped through these accounts to substantiate the Levitical singers' claim to cultic authority as prophets in postexilic society. This role is not (contra Mowinckel) a remnant of preexilic cult prophecy.

The standard terminology for cultic personnel in the Chronicler is "the priests and the Levites." The priests are sons of Aaron and descendants of Zadok. The term "sons of Aaron" seems to be used in place of "priests," especially when their rights over against the Levites are being stressed (2 Chr 26:18; 29:21).

The Levites consist of a wide variety of minor clergy, and any group that wanted to be a part of this minor clergy claimed to be a Levite, usually through the Kohathite Korah. Groups like the singers (1 Chr 6:16–24), the gatekeepers (1 Chr 9:17–26; 23:3–5; and 26:1, 19), and even the bakers (1 Chr 9:31–32), which in the sources used by the Chronicler were not identified as Levites, became Levites in the Chronicler's interpretation.

Among the many tasks of the Levites was teaching. The blessing of Moses (Deut 33:8–11) describes them as teaching legal ordinances to Israel. The Chronicler reports their teaching mission in Judah at the time of Jehoshaphat when they took with them the book of the law of Yahweh (2 Chr 17:7–9; cf. also 2 Chr 35:3; Neh 8:7). They also were in charge of various holy objects and prepared things such as the shewbread (1 Chr 9:28–32; 23:29–31; 2 Chr 29:34). Jehoshaphat appointed them to be judges in Jerusalem (2 Chr 19:8–11), and they also served as scribes (1 Chr 24:6; 2 Chr 34:13). In addition, they led in singing and praise (1 Chr 15:16–24; 16:4–42; 2 Chr 5:12–13; 8:14; 20:19–22; 23:13, 18; 29:25–30; 35:15).

I. Theology

1. Monarchy, Cult, and Temple. The Chronicler devotes an extraordinary amount of attention to David and Solomon, and in fact treats the two of them in equal or parallel fashion. David is approved by

all Israel right after the death of Saul, with no reference to his conflicts with Saul (cf. 1 Samuel 16–30) or the divided character of Israel early in his reign (2 Sam 1:1–5:3). His first act as king was to capture Jerusalem, the future site of the temple (1 Chr 11:4–9), to which he brought the ark (1 Chr 15:25–16:3). David arranged for the ordering of the priests and Levites, and assigned the latter a role as singers after their requirement to carry the ark had become obsolete (1 Chr 16:4–7, 37–42; 2 Chr 7:6; cf. 1 Chronicles 23–27). He designated the site for the temple (1 Chr 22:1) after Yahweh had indicated his own approval for it by sending fire from heaven (1 Chr 21:26–30). He also made massive preparations for the building of the temple before his death (1 Chr 22:2–5; 29:2–5; cf. 28:12–18, which may be secondary).

Solomon, too, receives unanimous approval, even from the other sons of David (1 Chr 29:23–25). He makes his own preparations for building (2 Chr 2:2–16) and erects the temple on David's site. He puts the ark in the temple (2 Chr 5:2–14) and installs the priests and Levites in their offices (2 Chr 8:14–15). While David had been prevented from building the temple because he had shed blood and waged wars, Solomon was a man of peace and rest (1 Chr 22:8–10). Designated by David, he was also the one chosen by Yahweh specifically for the building of the temple (1 Chr 28:10; 29:1). The Chronicler is the only writer in the OT to designate any king after David as chosen. Solomon's idolatry as reported in 1 Kings 11 is omitted in Chronicles. Braun (1971b; 1976) has made clear that the speeches in 1 Chronicles 22, 28, and 29 tie together the two most significant parts of the history, the reigns of David and Solomon.

The work of David and Solomon centered on the building of the temple, with its completion appropriately noted in 2 Chr 8:16. These two kings alone were recognized by all Israel just as they alone ruled all Israel. The two of them were concerned both with the ark and the temple. Their words and efforts gave legitimacy to the Jerusalem temple as the only appropriate worship site. The North's apostasy, according to the speech of Abijah, consisted primarily in its rejection of the temple (2 Chr 13:4–12). When Hezekiah appealed to Israel and Judah to repent, he called for a return to the sanctuary which God had sanctified forever (2 Chr 30:6–8). Hezekiah, in fact, is a kind of second Solomon. His passover is the first of its kind since Solomon (2 Chr 30:26), and its fourteen-day duration (2 Chr 30:23) echoes the duration of the temple dedication under Solomon (2 Chr 7:8–9). Apparently, the Chronicler was calling on all Israel of his day, including especially the North (see below), to join in recognizing the legitimacy of the Second Temple in Jerusalem, the heir of the temple erected by David and Solomon. The rebuilt temple could be seen as the major fulfillment of God's promise to David through Nathan (2 Chr 6:10–11; cf. 1 Chronicles 17).

Is the significance of the monarchy only to be found in its legitimation of the postexilic theocracy and/or the postexilic temple? Or does the Chronicler hope for a restoration of the monarchy? Note that kingship in Israel is equated with the kingdom of God (1 Chr 28:5; 29:23; 2 Chr 13:8) and that it is inalienably linked to the Davidic dynasty (1 Chr 17:13).

Otto Plöger believes that David and Solomon created for the temple those ordinances on which the acceptable worship of the present community depended, and that the work itself is antieschatological. Freedman, Cross, and Newsome, on the other hand, detect in the Chronicler hope for a restoration of the monarchy under Zerubbabel. For Freedman and Cross, this also entails including parts of Ezra in the original book of Chronicles, an interpretation we have decided not to follow.

Mosis (1973) proposes an alternate eschatological scenario, viewing Saul, David, and Solomon as symbolic representations of the exile, the restoration, and the ideal eschatological future respectively. His case falls, among other reasons, because of the unity between David and Solomon noted above, and also because it presupposes the unity of Chronicles-Nehemiah.

Williamson (1977a) detects a subtle, "royalist" eschatology in 2 Chr 6:41–42 (a modification of the *Vorlage* we know as Psalm 132:8–10). Verse 42 reads: "Remember thy steadfast love for David thy servant." This verse is a reapplication of Isa 55:3, which had broadened the promise to David to include all of Israel. Now this promise is again understood dynastically, suggesting that the prophecy of Nathan was only partially exhausted with the completion of the temple. In the Chronicler's view, the dynastic promise had become unconditional thanks to the promise of God and the carrying out of the conditions of this promise by Solomon, particularly in the building of the temple (cf. 1 Chr 28:7, 9; 2 Chr 6:16; 7:17–

18). The Chronicler believed that a brighter future lay in store for an obedient people, and a restoration of the monarchy may well have been part of his future hope. Immediately after Solomon's prayer for God to remember his promise to David, fire came down from heaven and consumed the sacrifices in the temple (2 Chr 7:1). This would seem to be an implicit yes to Solomon's prayer (cf. also 2 Chr 7:21–22; 13:5–8; 21:7).

2. Retribution. The Chronicler often interprets divine punishments or blessings as a retributive response to a king's behavior (Wellhausen *WPHI*, 203–8; cf. von Rad *ROTT*, 348–49). Rehoboam, for example, was attacked by Shishak I in his 5th year (1 Kgs 14:25–26) because he had forsaken the law of Yahweh the previous year (2 Chr 12:1). Asa became seriously ill in his old age (1 Kgs 15:23) because he had not relied on Yahweh in a war with Baasha and had imprisoned a prophet who rebuked him (2 Chr 16:7–10). Afflicted with leprosy, Azariah/Uzziah had to abdicate (2 Kgs 15:5), but it is only in Chronicles that we learn that his illness resulted from his pride and his assumption of the right to burn incense (2 Chr 26:16–21). In each of the above cases, the Chronicler has provided a theological rationale for an event reported in the books of Kings. Retribution is immediate, with the consequences befalling the evil or righteous king during his own lifetime. This threatens to break down the unity of history achieved by Dtr into a large number of single actions of Yahweh (von Rad *ROTT*, 350).

In his descriptions of positive behavior, the writer delights in words like "seek" (Heb *dāraš*) or "rely on" (*šāʿan;* Braun 1979: 53–54). David says to Solomon, "If you seek him, he will be found by you" (1 Chr 28:9). For negative behavior, the Chronicler charges that the person in question forsakes Yahweh, his law, or the temple; acts unfaithfully; engages in foreign alliances; and fails to give heed to Yahweh's prophets (Braun 1979: 54). Faithful royal behavior is accompanied by many children, building projects, a well-equipped army, victory in war, cultic reforms, or tribute from the nations (Welten 1973). A wicked king experienced God's wrath, war, defeat in battle, disease, or conspiracy. Note the Chronicler's summation of Saul's reign: "So Saul died for his unfaithfulness; he was unfaithful to the Lord in that he did not keep the command of the Lord … and did not seek guidance from the Lord. Therefore the Lord slew him" (1 Chr 10:13–14). The concept of retribution and the specific terms associated with it are almost entirely absent from Ezra-Nehemiah, an argument noted by those who favor separate authorship.

This retribution, however, is not mechanistic or inescapable. A king like Rehoboam who repents (2 Chr 12:13; cf. 2 Chr 7:14 and its references to humbling oneself, praying, seeking God's face, and turning) experiences some deliverance (2 Chr 12:7) and is not completely destroyed (2 Chr 12:12). Prophets are often sent to warn the king before a judgment falls, sometimes with success (cf. Rehoboam above) but often without (e.g., 2 Chr 16:10–12). Throntveit notes that the ten prophetic speeches between Abijah's sermon in 2 Chronicles 13 and Hezekiah's appeal to the North in 2 Chronicles 30 all enunciate the doctrine of retributive justice (1982b: 163–65). Retribution is more than a grid spread out over Israel's history; it is also a call for faith addressed to the Chronicler's audience. Just as repentance in the past led to divine favor, so faithfulness in the writer's present would have similar positive results. This aspect of his theology seems well summed up in 2 Chr 20:20: "Believe in the Lord your God, and you will be established; believe in his prophets and you will succeed."

3. Attitude toward the North. Earlier scholars (e.g., Torrey, Noth, and Rudolph) found one of the principal themes of the book to be its anti-Samaritan attitude. This has now been called into question because of the late date currently assigned to the Samaritan schism and the distinction between Chronicles and Ezra-Nehemiah. There is also a far more open attitude to the North in Chronicles than was previously recognized (Mosis 1973: 169–72, 200–1, 224, 232). Those willing to return to the Lord and come to his sanctuary are to be welcomed (2 Chr 30:7–8).

Shortly after the division of the kingdom, priests and Levites from the North, together with representatives from all the tribes of Israel, came to Jerusalem for sacrifice (2 Chr 11:13–17). From the very start, therefore, there were people who were willing to repent and acknowledge the Jerusalem sanctuary. While Abijah accuses the North of rebellion against the Davidic dynasty, idolatry, and a generally improper cult (2 Chr 13:4–12)—surely one of the most "anti-Northern" passages in the book—he also admonishes them as if repentance was possible (vv 4, 8, 12). In the reign of Asa, great numbers

from Ephraim, Manasseh, and Simeon deserted to the Southern king (2 Chr 15:9) and were part of those who entered into a covenant to seek Yahweh (2 Chr 15:9–15). Prophets were active in the North, including Oded, who persuaded Northerners during the reign of Ahaz to release their Southern prisoners (2 Chr 28:8–15). A number of Northern leaders openly confessed their sin on this occasion (v 13).

Hezekiah, according to the Chronicler, was the first king after the fall of the N kingdom and so was the first since Solomon to rule a united Israel. The king's invitation to the Passover was, to be sure, rejected in parts of the North, but individuals from Asher, Manasseh, and Zebulun did humble themselves and come to Jerusalem (2 Chr 30:11). Hezekiah's description of a merciful God—"For the Lord your God is gracious and merciful, and will not turn away his face from you, if you return to him" (2 Chr 30:9)—is nowhere withdrawn in Chronicles. His united Passover celebration was unique in its inclusion of the North for the first time since Solomon (2 Chr 30:26; cf. the similar celebration under Josiah in 2 Chr 35:17–18). His reform activities broke down cultic institutions not only in Judah and Benjamin but also in Ephraim and Manasseh (2 Chr 31:1). Josiah carried on reforming activities in Manasseh, Ephraim, and as far as Naphtali (2 Chr 34:6), making all Israel serve the Lord (2 Chr 34:33).

The Northerners, therefore, were not a people to be shunned, though they and all others who rejected the sole legitimacy of the Jerusalem temple are criticized by the Chronicler. Even at the division of the kingdom Shemaiah refers to the Northerners as brothers and to the division itself as God's will (2 Chr 11:1–4). From the Chronicler's point of view there were good reasons for Israel's refusal to endure the rule of the Judean king. The Chronicler seems to be inviting Northerners and, perhaps, other unidentifiable groups in Israel to acknowledge the claims of the temple in Jerusalem and participate in its cult.

Bibliography

The best full-length commentaries are those by Braun (WBC), Curtis and Madsen (ICC), Dillard (WBC), Galling 1954, Michaeli (CAT), Myers (AB), Rudolph (HAT), and Williamson (NCB). Also helpful are the shorter, less technical works by Ackroyd (JBC), Coggins (CBC), and McConville 1984.

In addition to the summaries in the commentaries, there are excellent reports on 19th-century research in Graham (1983), dealing especially with historical questions, and in Mathias (1977), dealing especially with the prophetic materials. A history of interpretation throughout the Common Era is found in Willi (1972: 12–47). Synoptic presentations of Chronicles and its counterpart in Samuel-Kings are found in Bendavid 1972 (Hebrew only) and Vannutelli 1931–34 (Hebrew and Greek). An English synopsis is found in Crockett 1951 and Newsome 1986. (Cf. also Ackroyd *Chronicles, Ezra, Nehemiah* TBC; Braun *Chronicles* WBC; Brown *HDB* 1: 389–97; Clines *Ezra, Nehemiah, Esther* NCB; Coggins *Chronicles* CBC; Dillard *2 Chronicles* WBC; Michaeli *Chroniques, d'Esdras et de Nehemie* CAT.)

CHRONOLOGY. Numerous problems often arise when one attempts to assign approximate (much less exact) dates to persons and events mentioned in the biblical corpus. This entry attempts to survey those problems. It consists of two articles, one focusing on the chronology of the Hebrew Bible/Old Testament, and the other focusing on the New Testament. For discussions of Mesopotamian and Egyptian chronology, see the articles EGYPT, HISTORY OF (CHRONOLOGY) and MESOPOTAMIA, HISTORY OF (CHRONOLOGY).

A. Introduction: Premodern Views

The generally chronological arrangement of the historical books of the Bible (Pentateuch-Kings) and the calendric superscriptions of most of the prophetic books show that the final redactors of the Hebrew Bible had a sense of chronology; yet, no all-encompassing chronological system is in use throughout the Bible. In some traditions, the Exodus from Egypt served as a pivotal point of reckoning (cf. Num 33:38; Judg 11:26; 1 Kgs 6:2). But it was not until the Hellenistic period, when the method of counting years by "eras" (Lat *265 aera,* "number")was introduced (Bickerman 1968: 70–77; *CHJ* 1: 60–69; Hallo 1984–85; 1988: 185–90) and the biblical canon was more or less set, that the first steps were taken to integrate the heterogenic chronological data.

In order to show the Bible to be reliable as history and so worthy of respect within Greek circles, its chronological picture was often found to need amplification or clarification. The earliest example is the extant fragments of Demetrius (early 3d cent. B.C.E., Alexandria) who dated events by reference to Adam and the Flood. Several centuries later, Josephus is found complementing the biblical record with information and nonbiblical dates gleaned from the works of other historians (mostly Menander and Berosus) and summarizing historical periods, e.g., the Temple of Jerusalem lay waste for 50 years (*AgAp* 1.154); in some of these matters, Josephus showed an acquaintance with chronological topics which are discussed in later rabbinic sources.

Chronological discussions in the Talmud often associate Rabbi Yose ben Halafta with the work *Seder Olam* ("Order of the World") (e.g., *b. Šabb.* 88a; *b. Nid.* 46b), and it seems that the tanna R. Yose both compiled and authored sections of this major midrashic chronography which treats events from Adam to the Bar Kokhba rebellion. Though often credited with being the first to use the "Era of Creation" (Heb *minyan layyĕṣîrâ;* Lat *anno mundi*), *Seder Olam* in actuality set dates by sabbatical and jubilee cycles (e.g., 11:50; 15:14; 23:83; 24:24; 25:54) and in so doing, adopted a practice already found in Josephus

and occasionally in the Talmud. The main concern of *Seder Olam* was "the establishment of a chronological continuum from the beginning of the biblical story until its end" (Milikowsky 1981: 4), achieved by calculating the intervals between events and harmonizing conflicting traditions; its eclectic methodology embodies the essence of rabbinic rationalization of the biblical data (cf. Heinemann 1978). (The "Era of Creation," together with the regulated 19-year cycle of intercalation, the basis for the current Jewish festival calendar, is traceable to the 9th century.)

The reworking of biblical chronology in the book of *Jubilees* is exceptional in the freedom displayed by assigning days, months, and years to recorded events. This sectarian work of the so-called "Enoch circle" (ca. 1st century B.C.E.), known to have influenced the Qumran order, was based upon an essentially solar calendar of 52 weeks with an even number of 364 days in each year (cf. Jaubert 1953); epochs were counted by sabbatical and jubilee cycles; thus, e.g., Jacob arrived in Egypt in the 45th jubilee cycle (since creation), in its 3d sabbatical cycle, in the 2d year of that cycle, on the 1st day of the 4th month (*Jub.* 45:1).

Early Christian writers were the first to synchronize biblical dates with secular calendars, e.g., Julius Africanus used the era of the Olympiads as a frequent reference point, later taken over by Eusebius in his *Chronicle.* Eusebius' opus, best preserved in Jerome's Latin translation, worked through the data from Adam to the rebuilding of the Temple in the second year of Darius, and then through the life of Jesus until the destruction of Jerusalem.

While viewing the biblical text as sacred scripture, some medieval Jewish exegetes took an approach independent of *Seder Olam* and reinvestigated critically several of the numerical calculations which by then had become traditional, cf., e.g., Abarbanel to 1 Sam 13:1 with reference to the length of Saul's reign. In the 12th-century history *Sefer Ha-Qabbalah* ("The Book of Tradition") by Abraham Ibn-Daud, chronology was made to conform to a preconceived notion of the symmetry of history, perceivable in recurring cycles set in time by divine providence. Now and then, the figures given in the biblical text were abandoned in order to save the pattern, e.g.: "Behold how trustworthy are the consolations of our God, blessed be His name, for the chronology of their exile corresponded to that of their redemption. Twenty-one years passed from the beginning of their exile until the destruction of the Temple and the cessation of the monarchy [—contrast the biblical calculation of 11 years—2 Kgs 24:12 and 25:8]. Similarly, twenty-one years passed from the time its rebuilding began until it was completed [—the exact figure is uncalculable from the biblical data]" (Cohen 1967: 10).

In the English-speaking world, the chronological calculations of Bishop James Ussher (published 1650–54) were for centuries the best known biblical dates, due to their publication in the margin of some editions of the KJV of the Bible. Ussher arrived at 4004 B.C.E. as the date of creation by following the Hebrew text and principles not unlike those which guided the author of *Seder Olam.*

A survey of the chronological issues regarding the major periods of biblical history as understood in critical circles follows.

B. Primeval History

Two ages of ten generations each, separated by the great Flood, open the biblical account of primeval history. The first age, the Age of Creation, is presented in two parallel traditions (Gen 4:17–26—"J" tradition; Gen 5:1–32—"P" tradition); the second one contains chronological data embedded within a genealogical table composed in a distinct literary form ("*a* lived *x* years and he begot *b; a* lived *y* years after begetting *b;* the total years of *a* were $x + y$"). The total number of years for this age is 1656, with most of the antediluvians living extraordinarily long lives, e.g., Jared, 962 years (Gen 5:50); Methuselah, 969 years (Gen 5:27). The second age, the Age of the Dispersion (Gen 9:28–29; 11:10–26—both "P"), numbers 290 years, with the lifespans of the postdiluvians gradually diminishing to near "normal" lengths as the age ends (Terah, 205 years; cf. Gen 11:32).

Table 1.
The Age of Creation (Gen 5:1–32)

Age at Birth of son Total Years Lived

Adam	130	930
Seth	105	912
Enosh	90	905
Kenan	70	910
Mehalalel	65	895
Jared	162	962
Enoch	65	365
Methuselah	187	969
Lamech	182	777
Noah	500	950
(age at Flood)	(600)	
Total	1656	

Table 2.
The Age of the Dispersion (Gen 11:10–26)

	Age at Birth of Son	*Total Years Lived*
Shem	100	600
Arpachshad	35	438
Shelah	30	433
Eber	34	464
Peleg	30	239
Reu	32	239
Serug	30	230
Nahor	29	148
Terah	70	205
Total	290	

The numerical variants found in the LXX and the Sam. Pent. cannot be taken as more reliable than those given by the MT, because they may be rational corrections of items in the received text considered illogical and/or sectarian doctrinal manipulations made during the postbiblical period (Larsson 1983). E.g., in the Sam. Pent., Jared, Methuselah, and Lamech all die in the year of the Flood; in LXX, the ages of most postdiluvians at the birth of their firstborn is higher by 100 years so that none of them outlive Abraham (as in MT).

Moreover, no systematic pattern has been discovered in these figures. A suggestion to derive the total 1657 years (1656 years + 1 year of the Flood—Gen 8:13) by means of calculations based on the sexagesimal system augmented by the number "seven". (600,000 days = 1643 years of 365 days each + 2 × 7 years = 1657 years), though tempting, remains speculative (Cassuto 1972: 253–62). At the same time, individual lifespans may signal special personages, e.g., the seventh worthy in the list of Genesis 5, Enoch, who "walked with God," lived 365 years (equivalent to the days in a solar year).

The biblical periodization of primeval times seems to derive ultimately from ANE tradition. For example, Sumerian sources record that the world's first rulers lived tens of thousands of years before the Flood destroyed all, e.g., "8 kings [variant: 10] reigned there 241,200 years. The Flood swept thereover." (Jacobsen 1939: 77). In the period following, the rulers still attained long lives, but not those of their ancestors. See also PRIMEVAL HISTORY. As to the dynastic and regnal years in the Sumerian king list, all of which are of extraordinary duration, some seem to be artificial constructions demonstrating the

expertise of the ancient mathematicians (Young 1988a); and ultimately may have influenced the figures in the biblical scheme (Young 1988b).

C. From the Patriarchs to the Exodus

The chronological data of this period consists, for the most part, of general statements and schematic numbers—multiples of 5 and 60, plus 7—and thus is of questionable value for historical purposes.

Table 3.
The Patriarchs

	Age at birth of son	*Total Years Lived*	*Sources*
Abraham	100	175	Gen 17:17; 25:7
Sarah	90	127 (2 × 60 + 7)	Gen 17:17; 23:1
Isaac	60	180 (3 × 60)	Gen 25:26; 35:28
Jacob		147 (2 × 70 +7)	Gen 47:28
Joseph		110	Gen 50:22

A total of 215 years elapsed from the migration of Abraham (aged 75) to Canaan until the move of Jacob and his family to Egypt (Gen 12:4; 21:5; 25:26; 47:9). The Israelite sojourn in Egypt lasted 430 years (Exod 12:40), a statement that does not accord with the promise to Abraham in Gen 15:13 that his progeny would be enslaved in a foreign land for 400 years, the fourth generation returning to the Promised Land (15:16). The tradition that the "fourth generation" was liberated from Egypt is supported by most of the genealogical lists in the Pentateuch, in which Moses appears as the great-great-grandson of Jacob (Exod 6:16–20; Num 26:57–59). In order to harmonize this with a 400- (or 430-) year enslavement, the entire period from the Covenant with Abraham in Genesis 15 until the Exodus has to be included in the tally. (Thus, and Sam. Pent. read in Exod 12:40: "The time that the Israelites *and their fathers stayed in the land of Canaan* and in Egypt," cf. too, the rabbinic sources, *Gen. Rab.* 63. 3; *Mek.* 1.14.7; *y. Meg.* 1.11.) Note, however, that the genealogies may not be trustworthy as they apparently telescope many generations in a three-member scheme, naming only a person's immediate family, clan, and tribe, so the true number of intervening generations in each stage is incalculable (cf. the ten-member line of Joshua in 1 Chr 7:20–27 for this same period).

No absolute dates for the patriarchal age are available since the events related in Genesis and Exodus cannot be synchronized with extrabiblical fixed chronology. Despite all that is known of the ANE, the E kings who joined battle in the Valley of Siddim/Dead Sea (Genesis 14) cannot be identified with certainty. See CHEDORLAOMER (PERSON). Nor does the tradition concerning the founding of Hebron "seven years before Tanis in Egypt" (Num 13:22), often associated with the 400th anniversary of the cult of the god Seth at Tanis (cf. Haremhab Stele, *ANET*, 252–53), provide a fixed reference point to any biblical event.

Many scholars would place the Patriarchs in the MB I period (2000–1800 B.C.E.), a conjecture based on the putative similarities between their seminomadic lifestyle as described in Genesis and the Amorite movements known from archaeology and the Mari documents. A few place them in the LB Age (1550–1200 B.C.E.), considering the affinities between the social customs in the patriarchal stories and the Nuzi texts (cf. Dever *IJH*, 92–102).

There is also no agreement as to the identity of the Pharaoh of the enslavement. The reference to the garrison cities Pithom and Raamses, built by the enslaved Israelites (Exod 1:11), indicates Rameses II, the resplendent ruler of the 19th Dynasty (1290–1224 B.C.E.). But this oft-proffered identification conflicts with the date in 1 Kgs 6:1: Solomon began to build the Temple "480 years after the Israelites left Egypt, in the fourth year" of his reign. Since Solomon's fourth regnal year is dated ca. 964 B.C.E. (see E.7 below), this would place the Exodus in the year 1444 B.C.E., almost two centuries earlier than the most plausible dating of the Exodus (i.e., the end of the 13th century B.C.E., the age of Rameses II–Merneptah. (On the literary nature of the "480 years," see further below.)

D. From the Conquest to the Monarchy

According to the biblical data, after a 40-year period of wandering (Num 32:13), the Israelites entered the land under the leadership of Joshua, who led them in battle for 5 years (Josh 14:10). This initial stage was followed by the dispersal of the tribes to their territorial allotments throughout Canaan, after which they suffered alternating periods of oppression and deliverance lasting, according to Judges, some 470 years.

Table 4.
The Judges

	Years of Oppression	*Years of Deliverance*	*Source*
Cushan-rishathaim	8		Judg 3:8
Othniel		40	Judg 3:11
Eglon	18		Judg 3:14
Ehud		80	Judg 3:30
Jabin	20		Judg 4:3
Deborah		40	Judg 5:31
Midianites	7		Judg 6:1
Gideon		40	Judg 8:28
Abimelech		3	Judg 9:22
Tolah		23	Judg 10:2
Jair		22	Judg 10:3
Ammonites	18		Judg 10:8
Jepthah		6	Judg 12:7
Ibzan		7	Judg 12:9
Elon		10	Judg 12:11
Abdon		8	Judg 12:14
Philistines	40		Judg 13:1
Samson		20	Judg 15:20
Eli		40	1 Sam 4:18
Samuel		20+	1 Sam 7:2

Innumerable attempts have been made at reconciling the total years recorded in Judges with other data concerning the premonarchic settlement period gleaned from Joshua and Samuel. The years of deliverance, during which the Israelite tribes were ruled by what scholars term the "major" judges, are expressed in typological numbers "20," "40," "80" and are likely to be from the hand of the Deuteronomistic editor of Judges; the uneven years of judgeship of the remaining "minor" tribal chieftains appear to have been drawn from a traditional listing of unknown origin. But while the final edition of Judges may be the work of Deuteronomistic historiographers, there is no explicit indication that the book's chronology was coordinated with any of the other calculations in the overall Deuteronomistic history Joshua through Kings. The round figure of Israel's 300-year settlement in Transjordan (Judg 11:26) is not helpful in this regard. And the 480 years of 1 Kgs 6:1 is too large to cover the years recorded for the period of the Exodus until the founding of the Temple; only by assuming overlapping figures for the Philistine oppression and certain late interpolations can one approach the total given in 1 Kgs 6:1 (so, e.g., *NDH*, 18–25). The figure 480 most likely comprises 12 generations of 40 years each, based on twelve leaders of Israel between the Exodus and the building of the Temple; e.g., Moses, Joshua, Othniel (Judg 3:11), Ehud (Judg 3:30), Deborah (Judg 5:31), Gideon (Judg 8:28), Samson (Judg 16:31), Eli (1 Sam 4:18; cf. LXX: "twenty"), Samuel (1 Sam 7:2, 15), Saul (1 Sam 13:1; cf. Acts 13:21; *Ant* 6.378),

David (2 Sam 5:4; 1 Kgs 2:11), Solomon (1 Kgs 11:42) (cf. Rowley 1950: 77–96). Priestly traditions preserved in the book of Chronicles similarly counted 12 generations from Aaron, brother of Moses and Israel's first High Priest, to Azariah, the priest who served in Solomon's Temple (1 Chr 5:29–36).

Because most of the events described for the period down to Samuel's judgeship were local, absolute dating has to reckon with the possibility that a number of judges were contemporaries, though the Deuteronomistic editors portrayed them as ruling "all Israel" in succession. David began his rule in Hebron ca. 1005 (see E.7 below); hence the events depicted in Joshua–Samuel fall during the approximately two centuries which separate the Exodus from David's rise to power.

E. The Monarchic Period

The chronological presentation in the book of Kings is the most systematic of any in the Bible. The editorial framework gives the following data for each king of Judah and Israel: his age at accession, the length of his reign, and a synchronic note concerning the regnal year of his royal contemporary in the neighboring kingdom.

It has often been pointed out that 430 regnal years are recorded for the Davidic kings from the beginning of the construction of the Temple under Solomon until its destruction during the reign of Zedekiah, and that this figure, together with a supposed 50-year exile, constitutes a second 480-year period (cf. 1 Kgs 6:1; and see D above) which marked the epoch from the First to the Second Temple (so, e.g., Koch 1978). But if such indeed was the intention of the ancient chronographer, it is nowhere stated nor is the sum of years ever given (cf. Begrich 1929: 14–16). (Note, though, that Ezekiel counted 430 sinful years for which Israel and Judah would have to do penance; Ezek 4:5–6.)

1. History of Research. Scholars of the late 19th century were skeptical regarding both the historical value of the synchronisms and the fidelity of the textual tradition of the regnal year totals (cf. Wellhausen 1875). A more just appreciation of the biblical data is now possible as ancient Israel's chronological reckoning is illuminated by the practices of its neighbors. Mesopotamian examples of synchronic chronologies have lent credibility to biblical synchronisms (Lewy 1927). Studies by Kugler (1922) and Begrich (1929) treat the Assyrian-Israelite synchronisms as pivotal points in their reconstructions. Though he leaned heavily upon extrabiblical data, Albright was less sanguine about the possibility that the numbers were "handed down through so many editors and copyists without often becoming corrupt," and so "corrected" items in several key reigns (Albright 1945: 17; cf. Mowinckel 1932: 163–64).

Contrariwise, the major work of E. R. Thiele (1983) proceeds from the assumption of the basic soundness of the Hebrew text. This entails an elaborate system of calendrical and regnal patterns which were operative at different times in the two kingdoms. H. Tadmor (*EncMiqr* 4: 245–310) bases his chronology upon considerations similar to those of Begrich and Thiele, but assumes far fewer systemic fluctuations; items which are inexplicable are regarded as late editorial calculations or errors.

Thiele's work has become a cornerstone of much recent chronological discussion (cf. De Vries *IDB* 1: 580–99; *IDBSup:* 161–66); but his harmonizing approach has not gone unchallenged, especially because of the many shifts in the basis of reckoning dates that it requires (e.g., Jepsen 1968: 34–35)—shifts which were unlikely in actual practice. The numerous extrabiblical synchronisms he invokes do not always reflect the latest refinements in Assyriological research (cf. E.2.f below). In many cases, he posits an undocumented event in order to save a biblical datum (e.g., the circumstances surrounding the appointment of Jeroboam II as coregent; Thiele 1983: 109). While also somewhat conservative in his approach to the figures in MT, Tadmor's pragmatic reconstruction delves into the process by which the redactor(s) of Kings compiled their chronological framework from heterogeneous materials, sometimes leaving traces in textual inconsistencies (Tadmor *EncMiqr* 4: 45).

2. Terminology. The key terms in the discussion of monarchic chronology are: (a) regnal year, (b) accession year, (c) accession year (or postdating) system, (d) nonaccession year (or antedating) system, (e) coregency, and (f) absolute dates.

a. Regnal Year. The official "royal year" was reckoned from the start of the New Year. The month of Nisan (March–April) is the first month of the *cultic* year (cf. Exod 12:2; Num 28:16); the month of Tishri (September–October) marks the start of the *agricultural* year with the onset of the rainy season (Exod

23:16; 34:22. Note that the terms used in these verses, *ṣē›t haššānâ,* "the end of the year" and *tĕqûpat haššānâ,* "the turn of the year," refer to the seasons of the year and are not calendrical terms, as is the synonymous expression *tĕšûbat haššānâ*, "the turn of the year," 2 Sam 11:1; 1 Kgs 20:22, 26; 2 Chr 36:10; cf. Clines 1974). The Mishnah records that the New Year "for kings and pilgrimage festivals" was counted from Nisan (*m. Roš. Haš.* 1:1), as was the practice in Mesopotamia, but this statement has often been taken to reflect postbiblical practice. Some scholars hold that the regnal year ran from Tishri to Tishri (Mowinckel; Thiele); others from Nisan to Nisan (Kugler; Lewy; Tadmor); while still others argue for different calendars in Judah and Israel, with shifts made at certain junctures (Begrich; Morgenstern).

Though the evidence is inconclusive, it appears that a Nisan calendar was in use in S Judah, while in N Israel, a Tishri calendar was used. The posited half-year difference between the two kingdoms can be seen in the notice of the 6-month reign of Zechariah of Israel (2 Kgs 15:8) which is synchronized with the 38th year of Azariah of Judah; while the 1-month reign of his successor Shallum is in the 39th year of Azariah (2 Kgs 15:13). In Judah, the regnal New Year had passed, while in Israel, the regnal year had not yet ended; if it had, Zechariah would have been credited with 2 years (by nonaccession reckoning, see d below).

The counting of N Israel's regnal years from Tishri rather than Nisan may have been prompted by a desire to be independent of Judah's practice. On the other hand, the shift of one month in the celebration of the autumn festival, from the 7th to the 8th month, proclaimed by Jeroboam I (1 Kgs 12:32), looks like an accommodation to local tradition (according to Talmon 1958, based upon climatic considerations), Deuteronomistic editorial criticism notwithstanding.

b. Accession Year. The "accession year" is the period from the king's taking the throne until the start of the New Year (Akk *rēš šarrūti*; Heb *šĕnat molk̃*; cf. 2 Kgs 25:27; not equivalent to the nonchronological Hebrew term *rē›šit mamleket*, "the beginning of the reign," Jer 28:1; cf. Tadmor *EncMiqr* 4: 49).

c. Accession-year (or Postdating) System. This system counts the years of a king's reign only from the first full "regnal year" after his accession year. Assyrian and Babylonian texts employ this system of postdating throughout.

d. Nonaccession-year (or Antedating) System. This system does not recognize an accession year, and so counts the first year of a king's reign from his actual taking the throne; thus, in the antedating system the last year of the deceased king and the first one of his successor, which are the same year, are counted twice. Antedating was employed in Egypt for most of its history.

In Judah and Israel, the chronological data can, for the most part, be understood on the assumption that the nonaccession system in counting regnal years was in use. However, toward the middle or end of the 7th century, under the strong assimilatory pressures of the Mesopotamian empires, Judah apparently adopted the accession-year system.

e. Coregency. This term refers to the designation of a royal heir during the lifetime of the reigning monarch. Coregency seems not to have been the regular practice in either Israel or Judah; generally, unusual historical circumstances led to such an appointment which sought to insure the continuity of the ruling family on the throne (contrast Na›aman 1986: 83–91). The number of cases of coregency explicitly recorded in Kings is not great; sometimes the synchronisms lead one to suspect a period of coregency—an overlap counted in the total regnal years of both kings. Thus, e.g., Jotham judged the "people of the land" as coregent following Azariah's leprosy (2 Kgs 15:5). Azariah himself was coregent with his father Amaziah (2 Kgs 14:21).

f. Absolute Dates. Absolute chronology can be achieved through correlation of biblical dates with extrabiblical ones that are fixed astronomically. Most reliable are the Assyro-Babylonian dates, preserved in eponym (Akk *līmu*—a high official after whom the year was named) and king lists, and chronicles. Thus, e.g., the three-month reign of Jehoiachin at the end of which Jerusalem was captured by Nebuchadnezzar (2 Kgs 24:8, 12) can be set in December 598–March 597 B.C.E. by reference to the precise dates recorded in the Babylonian Chronicle (see Table 5). (Several of Nebuchadnezzar's regnal years are noted in the concluding sections of Kings, no doubt under the bureaucratic influence of his hegemony over Judah's affairs [2 Kgs 24:12; 25:8, 27; cf. Jer 52:30].)

Egyptian dates, on the other hand, are still in question at certain crucial historical junctures. E.g., the invasion of Shishak in the fifth year of Rehoboam (1 Kgs 14:25), the only recorded Egyptian-Israelite synchronism, is primarily dated by reference to biblical coordinates (Kitchen 1973: 72–76).

A list of absolute dates, indicating their sources follows:

Table 5.
Absolute Dates for Events during the Monarchy

Event	*Date*	*Source*	*Biblical Citation*
Ahab participates in Battle of Qarqar against Shalmaneser III	853		
Jehu renders tribute to Shalmaneser III	841		
Joash renders tribute to Adad-nirari III	796	Monolith Inscription 6th year of Shlmaneser III (*ANET*, 278–9)	
Menahem renders tribute to Tiglath-pileser III	740	Annals: 18th year of Shalmaneser III (*ANET*, 280)	
	738	Annals: 8th year of Tiglath-pileser III (*ANET*, 283)	2 Kgs 15:19
Ahaz renders tribute to Tiglath-pileser III	734	Summary inscription Tiglath-pileser III (*ANET*, 282)	
Pekah removed; Hoshea ascends throne is Isreal	732	Summary inscription Tiglath-pileser III (*ANET*, 284)	2 Kgs 15:30; 17:1
Fall of Samaria	722	Babylonian Chronicle: 5th year of Shalmaneser V (Grayson 1975: 73: 27–31)	2 Kgs 17:6aα
Recapture of Samaria and exile of inhabitants	720	Annals: 2nd year of Sargon II (*ANET*, 285)	2 Kgs 17:6aβ-b
Assyrian Campaign to Judah	701	Annals: Sennacherib (*ANET*, 287–88)	2 Kgs 18:13–19:36
Mannasseh renders tribute and service to Assyria	ca. 674	Prism B: Esarhaddon (*ANET*, 291)	
	ca. 668	Annals Priam C: Ashurbanipal (*ANET*, 294)	
Battle of Carchemish	605	Babylonian Chronicle: 21st year of Nabopolassar (Grayson 1975: 99: 1–5)	Jer 46:2
Capture of Jerusalem	597	Babylonian Chronicle: 7th year of Nebuchadnezzar (*ANET*, 564)	2 Kgs 24:12
Release of Jehoiachin	561	Accession year of Amel-Marduk (Parker-Dubberstein 1956:12)	2 Kgs 25:27

Besides pinpointing individual events, these absolute dates determine the limits of scholarly conjecture. Menahem's reign could not have ended in 742, as Thiele supposes (1983: 139–62), if Menahem is listed among the kings who rendered tribute to Tiglath-pileser III four years later in 738. Similarly, a widely accepted interpretation of Assyrian inscriptional data from the days of Tiglath-pileser III which led to the identification of Azariah of Judah with a certain Azriyau has been refuted (cf. Na›aman 1974); as a result, an absolute date for Azariah's reign is no longer available.

3. The Sources and Their Editing. The précis of monarchic chronology which follows is based upon these premises:

(a) The lengths of reigns and the synchronisms recorded in Kings ultimately derive from king lists and a synchronic chronicle. We cannot say whether the Deuteronomistic editor had access to the original materials or whether the data was already incorporated in "the Annals of the Kings of Judah" and "the Annals of the Kings of Israel" —those composite works he so often refers to (Lewy 1927: 7; Begrich 1929: 173–74). Nothing is known about these "annals," their relation to archival data, or their comprehensiveness. The material concerning the N kingdom likely reached Jerusalem in compiled form soon after the fall of Samaria in 722 B.C.E. The Judean royal archives were accessible at the time the first edition of Kings was prepared, presumably during the reign of Josiah. The editorial attempt to integrate such diverse sources, and at the same time remain faithful to their differences, explains some of the conflicting chronological figures now in Kings.

(b) Some of the Judean synchronisms appear to be late calculations of the Deuteronomist who had no firsthand knowledge of the history of the N kingdom (cf. Aharoni 1950). This explains the synchronization of the reigns of the Judahite kings Jotham (2 Kgs 15:32) and Ahaz (2 Kgs 16:1) and the bloated figure of a 20-year reign for the Israelite Pekah (2 Kgs 15:27), who actually reigned just 2 years (see E.5 below). Similarly, the synchronization of Hezekiah's 6th year, the year that Samaria fell, with Hoshea's 9th year (2 Kgs 18:10) proves to be an erroneous assumption (as shown by the absolute dates for Israel's last decade).

4. From the Fall of Samaria to the Fall of Jerusalem. The number of years between these two landmark events is reckoned in the Bible with respect to the reigns of the kings of Judah (see Table 6).

Table 6.
From the Fall of Samaria to the Fall of Jerusalem

	Total reign	*Sources*
Hezekiah	29	2 Kgs 18:2
Manasseh	55	2 Kgs 21:1
Amon	2	2 Kgs 21:19
Josiah	31	2 Kgs 22:1
Jehoahaz	3 mths	2 Kgs 23:31
Jehoiakim	11	2 Kgs 23:36
Jehoiachin	3 mths	2 Kgs 24:8
Zedekiah	11	2 Kgs 24:18

Working from the absolute dates provided above, it appears that the accession-year system was in use during the final decades of Judah. Jehoiachin surrendered to Nebuchadnezzar in March 597 B.C.E. His father Jehoiakim had come to the throne in 609/8 (according to the Babylonian Chronicle and the date in Jer 46:2 for the battle of Carchemish in the king's 4th year = 605/4). In that same year, 609 B.C.E., Josiah met his death at Megiddo and Jehoahaz was deported to Egypt after a short 3-month reign. Accordingly, Josiah reigned from 639–609. Thus, keeping in mind that Samaria was captured in the 6th year of Hezekiah, 83 years had elapsed from the fall of Samaria to the accession of Josiah (722–639). The total for the three kings who reigned during this period, however, adds up to 81 years. The missing two years may be accounted for by assuming that the chronographer disregarded the partial years of these kings, though if the nonaccession-year system were then still in use, he should have included them in his counting.

The datum given in 2 Kgs 18:13 that Sennacherib attacked Judah in Hezekiah's 14th year has generated much controversy. Assyrian inscriptions indicate an attack in 701, thus Hezekiah's reign would have begun in nonaccession year 714 or accession year 715 (Mowinckel; Albright; Thiele). This calculation not only contradicts the synchronism in 18:10 in which the year of Samaria's fall (722) was Hezekiah's 6th year, but the 715/14 date requires extending the reign of Ahaz his father and shortening that of his son Manasseh (Albright 1945: 22) or positing a coregency for Manasseh (Thiele 1983: 174). Preferable is the

alternate solution which takes the "14th year" date as belonging to the prophetic story of Hezekiah's illness (2 Kings 20) which tells of the promise to the king of an additional 15 years of life (20:5), thus giving Hezekiah a 29-year reign (cf. 18:2). The present position of the date in 18:13, rather than its original one at the head of 2 Kings 20, is likely due to late editing of all the traditions concerning Hezekiah (cf. Cogan and Tadmor *2 Kings* AB). The mention of the Egyptian Taharqa in 2 Kgs 19:9 as having fought against Sennacherib was once thought to be decisive in restoring a second Assyrian campaign in the second decade of the 7th century (Albright; Thiele); for if Taharqa became king in 690 at age 20, he could not have fought the Assyrians in 701. But this interpretation of the Egyptian evidence is unwarranted (Kitchen 1973: 161–72) and leaves modern historians with a single campaign to Judah in 701 B.C.E.

The date of Jerusalem's fall and the destruction of the Solomonic Temple is also in dispute. According to the Babylonian Chronicle, Zedekiah was appointed king in March 597, Nebuchadnezzar's 7th year; thus Zedekiah's 11th year, the year Jerusalem was taken (2 Kgs 25:2), was the summer of 587 (cf. Freedman). But if Jehoiachin was deported only in Nebuchadnezzar's 8th year (as 24:12), then Zedekiah's accession year would have been 597/96. Whether Zedekiah's 1st regnal year is counted from Tishri 597 (Thiele, Malamat) or Nisan 596 (Tadmor), in both cases Jerusalem fell in 586.

5. From Jehu until the Fall of Samaria. The assassination of Jehoram of Israel and Ahaziah of Judah by the usurper Jehu (2 Kgs 9:21–28) provides a convenient point for calculating the chronology of both kingdoms since new rulers took their respective thrones simultaneously.

Table 7.
From Jehu until the Fall of Samaria

	Total Reign	*Source*
ISRAEL		
Jehu	28	2 Kgs 10:36
Jehoahaz	17	2 Kgs 13:1
Joash	16	2 Kgs 13:10
Jeroboam	41	2 Kgs 14:23
Zechariah	6 mths	2 Kgs 15:8
Shallum	1 mth	2 Kgs 15:13
Menahem	10	2 Kgs 15:17
Pekahiah	2	2 Kgs 15:23
Pekah	20	2 Kgs 15:27
Hoshea	9	2 Kgs 17:1
Total	143 yrs 7 mths	
JUDAH		
Athaliah	7	2 Kgs 11:4
Jehoash	40	2 Kgs 12:2
Amaziah	29	2 Kgs 14:2
Azariah	52	2 Kgs 15:2
Jotham	16	2 Kgs 15:33
Ahaz	16	2 Kgs 16:2
Hezekiah	[6]	2 Kgs 18:10
Total	166 yrs	

Jehu paid tribute to Shalmaneser III in 841 (see Table 5), which may have been a year or so after he seized the throne (cf. 2 Kings 9–10). Between 842 and 722, a period of 120 years had lapsed. But the total regnal years listed for both N Israel and S Judah are too high (for Israel: 143 yrs, 7 mths; for Judah: 166 yrs). By assuming a number of coregencies and overlapping reigns, as is explicitly stated of Jotham (cf. 2 Kgs 15:5), most of the figures can be accommodated.

a. Israel. The synchronisms in 2 Kgs 13:1 and 13:10 show that the 17-year reign of Jehoahaz includes a 3-year coregency with his father Jehu. Similarly, Jeroboam had a 4-year coregency with his father Jehoash which is included in the total 41 years of Jeroboam's reign (cf. 2 Kgs 14:17, 23; 15:8). The Judean synchronism in 2 Kgs 15:1 would give Jeroboam a reign longer than listed, 53 years instead of 41 and seems to be an error (cf. Josephus, *Ant* 9 §216, for a different synchronism). Pekah's 20 years (2 Kgs 15:27) are more difficult to explain. He was removed from the throne in a coup led by Hoshea in 732 (see Table 5), and if he took the throne in Azariah's 52d year (2 Kgs 15:27) (= 734/33), then Pekah actually ruled in Samaria for a little more than 2 years. The figure "20" has been thought to include the years he ruled "in Gilead as pretender to the crown of Israel" as well as those of his "official" rule in Samaria (Vogelstein; Thiele; Tadmor). Hoshea, who came to the throne in 732/31 with the approval of his overlord Tiglath-pileser III, ruled for 9 years until the winter of 724, after which Samaria continued without a monarch during the 3-year siege by Shalmaneser III.

b. Judah. Azariah served as coregent for 15 years with his father Amaziah (2 Kgs 14:17), after Amaziah had been defeated and taken captive by Jehoash of Israel (14:13). When Azariah was stricken with leprosy, his son Jotham "judged the people of the land" (15:5) in his stead. All of Jotham's rule (preserved in two conflicting traditions: a 20-year reign in 15:30; a 16-year reign in 15:33), as well as part of the years of his son Ahaz, overlapped with the 52 years credited to Azariah. In one instance, synchronisms show that Jehoash of Judah ruled just 39 years which were rounded off to the typological number "40" (2 Kgs 14:2, 23).

6. From the Division of the Monarchy to Jehu. Upon the death of Solomon, the kingdom split into two (1 Kings 12), and assuming that this event occurred close to the accession of Rehoboam son of Solomon, the period from the secession of N Israel down to the revolt of Jehu is of equal length in both Israel and Judah (since Jehu assassinated both Joram of Israel and Ahaziah of Judah; 2 Kgs 9:24, 27). Yet the total regnal years for the two kingdoms do not bear this out. While some synchronisms show that the totals can be reduced, other synchronisms are contradictory. Furthermore, an excessive number of years emerge from the biblical data for the 13-year period delimited by the absolute dates 853–841 B.C.E. (see E.2.f above).

Table 8.
From the Division of the Monarchy to Jehu

	Total Reign	*Source*
ISRAEL		
Jeroboam	22	1 Kgs 14:20
Nadab	2	1 Kgs 15:25
Baasha	24	1 Kgs 15:33
Elah	2	1 Kgs 16:8
Zimri	7days	1 Kgs 16:15
Omri	12	1 Kgs 16:23
Tibni		1 Kgs 16:23
Ahab	22	1 Kgs 16:29
Ahaziah	2	1 Kgs 22:52
Jahoram	12	2 Kgs 3:1

Total	98 yrs and 7 days	
JUDAH		
Rehoboam	17	1 Kgs 14:21
Abijam	3	1 Kgs 15:2
Asa	41	1 Kgs 15:10
Jehoshaphat	25	1 Kgs 22:42
Jehoram	8	2 Kgs 8:17
Ahaziah	1	2 Kgs 8:26
Total	95 years	

a. Israel. From the synchronisms (1 Kgs 16:15, 23), it can be determined that Omri's 12 years include the 4-year struggle with Tibni over the throne of Israel; the notice of his 6-year residence in the capital Tirzah (16:23) points in the same direction. Ahab's 22 years include a 2-year coregency.

The synchronism in 2 Kgs 1:17 of Jehoram son of Ahab with Jehoram son of Jehoshaphat of Judah belongs to the chronological system (see E.8 below); it contradicts 3:1 which fits the other data in the MT and so would seem to be a posteditorial addition.

The surplus of regnal years for 853–41 (from Qarqar to the death of Ahab at Ramoth-gilead = approx. one year; 2-year reign of Ahaziah; 12-year reign of Jehoram; Jehu's coup = approx. one year) necessitates shortening the reign of Jehoram to about 10 years (cf. Tadmor *EncMiqr* 4: 59; contrast Thiele 1983: 76–77).

b. Judah. The synchronisms for Jehoshaphat show that he served as coregent for 3 years (1 Kgs 22:52) and that Jehoram his son was likewise coregent for 4 years (2 Kgs 8:17).

7. The United Monarchy. The chronological traditions concerning Israel's first three monarchs are all problematic, so that only approximations of the length of their reigns can be offered.

The data on Saul's reign in the MT is corrupt: "Saul was […] years old when he took the throne and he reigned […+] two years" (1 Sam 13:1); the LXX versions are either defective or missing, while Josephus (*Ant* 6 §378; cf. 10 §143) and Acts 13:21 give the paradigmatic "40 years." For David, his 71/2 years in Hebron and 33 years in Jerusalem are rounded off to the paradigmatic "40 years" (2 Sam 5:4). Saul's son Ishbaal is said to have ruled for two years in Transjordan over the survivors of the Gilboa debacle (2 Sam 2:10), but this period ostensibly parallels David's early years in Hebron. The 40 years assigned to Solomon (1 Kgs 11:42) looks to be of similar typological origin and there is no way of knowing just how long the overlap between Solomon and his failing father lasted (cf. 1 Kings 1).

Moreover, there are no absolute dates for this period, save perhaps the date for start of the Temple construction in Solomon's 4th year (1 Kgs 6:1) which might be correlated with the 12th year of Hiram I of Tyre, who took the throne 155 years before the founding of Carthage (Josephus, *AgAp* 1.126). But discrepancy among the classical authors prevents exact dating of the founding of Carthage; most scholars date the event to 814 B.C.E.; others, who follow a minor tradition, set it in 825 B.C.E. (Liver 1953). Furthermore, doubts have even been raised about Josephus' reliability altogether (Katzenstein 1973: 80–83). Therefore, the dates offered in Table 9 have a margin of error wider than usual.

8. The Chronology of the Monarchy in the LXX. A major divergence from the chronology of the Divided Monarchy as presented by MT appears in Lucianic manuscripts of the LXX, especially for the period from Omri to Jehu. According to the MT synchronisms of Omri, his 12-year reign includes 4 years during which he contended with Tibni over the throne of Israel (cf. 1 Kgs 16:15, 23). An alternate construing of the text preserved in the Old Greek translation gives Omri all 12 years as sole ruler, and it not only reworks all the succeeding synchronisms with the kings of Judah but it also reorders the sequence of their reigns. It also identifies the king of Judah in 2 Kings 3 as Ahaziah (as opposed to MT's Jehoshaphat). It has been argued that the Old Greek chronology is original and that the MT is a secondary development adjusted to accommodate the prophetic narratives concerning Elijah and Elisha (Shenkel

1968; cf. Miller 1967: 281–84); but several of the Greek calculations (e.g., Zimri is assigned 7 years) and its repositioned textual units (e.g., 1 Kgs 16:28[a–h] [= 1 Kgs 22:41–51]) do not recommend themselves as original (cf. Gooding 1970). The Greek may represent the earliest preserved attempt at revising imagined difficulties in MT's chronology (Thiele 1983: 88–94).

9. The Chronology of the Monarchy in the Book of Chronicles. Chronicles adopts for the most part the regnal data of Kings concerning Judah's monarchs, while shunting that of the N kingdom of Israel. In but a single instance is there any serious discrepancy between the two works: in Asa's 36th year, he was attacked by Baasha of Israel (2 Chr 15:19), who according to Kings was long since dead (in 1 Kgs 15:33 Baasha began his 24-year reign in Asa's 3d year). Crediting the higher figure for Baasha's reign requires assuming that it was calculated on a system which reckoned dates from the rule of Jeroboam I, as well as altering the numbers assigned other monarchs (Albright 1945: 20; cf. Thiele 1983: 84–86).

A number of dates in Chronicles are used in a literary fashion and have no chronological significance. The notice that Hezekiah undertook a cult reform "in the first month of the first year of his reign" (2 Chr 29:1) means only that the king's very first act of state concerned the Temple (cf. Cogan 1985). Similarly, the dates assigned to the Great Reform of Josiah (2 Chronicles 34–35), spread over 10 years, depict the king attending to cultic matters immediately upon reaching his majority (contrast 2 Kings 22–23). Other nonchronological items in Chronicles include the formulaic date "in the third year" (2 Chr 11:7; 17:7).

All of the data pertaining to the monarchic period can thus be synthesized to yield a plausible chronology for the kings of S Judah and N Israel (see Table 9):

Table 9.
Kings of Judah and Israel

Judah		*Israel*	
	Saul	ca. 1025–1005	
	David	ca. 1005–965	
	Solomon	ca. 968–928	
Rehoboam	929–911	Jeroboam I	928–907
Abijam	911–908	Nadab	907–906
Asa	908–867	Baasha	906–883
Jehoshaphat	870–846*	Elah	883–882
Jehoram	851–843*	Zimri	882
Ahaziah	843–822	Tibni	882–878**
Athaliah	842–836	Omri	882–871
Joash	836–798	Ahab	837–852
Amaziah	798–769	Ahaziah	852–851
Azariah	785–733*	Joram	851–842
Jotham	759–743*	Jehu	842–814
Ahaz	743–727*	Jehoahaz	817–800*
Hezekiah	727–698	Jehoash	800–784
Manasseh	698–642	JeroboamII	788–747*
Amon	641–640	Zechariah	747
Josiah	639–609	Shallum	747
Jehoahaz	609	Menahem	747–737
Jehoiakim	608–598	Pekahiah	737–735
Jehoiachin	597	Pekah	735–732

Zedekiah	596–586	Hoshea	732–724

*Includes years as corregent **Rival rule

F. The Exile and the Restoration

The Judean expatriates in Babylon counted the years of their exile from the deportation of Jehoiachin by Nebuchadnezzar in the spring of 597 (Ezek 1:1, 2; 3:16; 8:1; 20:1; 24:1; 26:1; 29:1, 17; 30:20; 31:1; 32:1, 17; 33:21; 40:1; cf. Greenberg, *Ezekiel 1–20* 8–11). The appended note on the release of King Jehoiachin from prison in 2 Kgs 25:27–30 counts by the same era. According to the Chronicler, when the Persian king Cyrus, in his first year, permitted the rebuilding of the Jerusalem Temple (2 Chr 36:23), it was in fulfillment of Jeremiah's prophecy of a 70-year exile (Jer 25:11–12). But Achaemenid sources count the years of Cyrus' reign from his conquest of Babylon in 539, less than 50 years after the destruction of Jerusalem. Perhaps the end point of the Chronicler's 70-year epoch is the year of dedication of the rebuilt Temple, 515 (Ezra 6:15; cf. Zech 1:12).

In postexilic historic and prophetic literature events are dated by reference to the regnal years of the Persian kings, as was common throughout the empire. The assertion that the native Israelite sabbatical year cycle, known from late Second Temple texts, was in actual calendrical use in the 5th century (Demsky 1985: 43–44), cannot be supported by solid evidence.

Because a distinction is not made in the biblical record between Persian kings bearing the same name, and because the Greek translations and Josephus present a different order of events (especially Neh 7:73–8:12 relating to the activities of Ezra the scribe, which appears in Greek and in Josephus after Ezra 10 [cf. 1 Esdr 9:37–55; *Ant* 11 §154–58]), it is often suggested that, contrary to MT, Nehemiah preceded Ezra. Recent papyrus finds at Wadi Daliyeh, though not providing absolute dates, establish the succession of the contemporary Samaritan governors and confirm the MT sequence (Cross 1975). Perhaps the principle of composition of certain disordered units, e.g., Ezra 4:6–24, was thematic association, rather than chronology.

The identification of the Persian kings in Table 10 assumes that the biblical text is intact (contrast Albright 1963: 93); Ezra preceded Nehemiah (as in MT).

Table 10.
Persian Kings in Postexilic Literature

Cyrus (539–530):	Ezra 1:1; 4:3; 5:13; 6:3, 14
Darius I (521–486):	Ezra 4:5, 24; 5:6; 6:1, 13; Hag 1:1, 15; 2:10; Zech 1:1, 7; 7:1
Xerxes I (485–465):	Ezra 4:6
Artaxerxes I (464–424):	Ezra 4:7, 8, 11, 23; 6:14; 7:1; 8:1; Neh 2:1; 5:14; 13:6
Darius II (423–404):	Neh 12:22

NEW TESTAMENT

Any attempt to reconstruct the chronology of the NT must be tentative at best. The primary intention of the Gospels and other NT writings is not historical or biographical—they are documents of faith intended to proclaim, teach, and encourage the various early Christian communities. Thus, chronological information which may be found in these documents is incidental to their fundamental purpose. In addition to this, secular references to NT happenings are minimal and not without their own ambiguities and the patristic references to these events are often contradictory and based on data which is frequently

nonverifiable by the contemporary historian. As a result, what follows is more an introduction to the problematic of NT chronology than a solution to the manifold and complex issues raised.

6. Summary

———

A. Chronology of the Life of Jesus

1. The Birth of Jesus. a. The Death of Herod. Both Matt 2:1 and Luke 1:5 assert that the birth of Jesus took place during the reign of Herod the Great, king of Judea; according to Matt 2:15, 19–20, Herod died not long after Jesus' birth. Herod died in the 34th year after his assumption of power (Josephus *Ant* 17.8–9), which would be Nisan, 4 B.C. Further, Josephus states that an eclipse of the moon took place in the year of Herod's death, 12–13 March 750 (= 4 B.C.). Herod's death in 4 B.C. provides a relatively certain *terminus ante quem;* accordingly, most scholars place the birth of Jesus in the period 6–4 B.C. As a result of a mistake made by Dionysius Exiguus in the 6th century A.D., the calculation of the Christian era is in error by several years. One should also note that the common assumption that Jesus was born on December 25 stems from the interaction of 3d- and 4th-century Christianity with Roman paganism.

b. The Lukan Census. According to Luke Jesus was born during the time of a census when Quirinius was governor of Syria: "In those days a decree went out from Caesar Augustus that all the world should be enrolled. This was the first enrollment, when Quirinius was governor of Syria. And all went to be enrolled, each to his own city" (Luke 2:1–3). According to Josephus (*Ant* 17.13.5 and 18.1.1), Quirinius only became governor of Syria after A.D. 6. As a result, many scholars argue that Luke is guilty of an egregious error: he was perhaps correct about the census but wrong about the name of the governor, who was, in fact, not Quirinius but Sentius Saturninus (9–7/6 B.C.; Tertullian *Adv. Marc.* 4.19); his successor was P. Quinctilius Varus (7/6–4 B.C.). Further, it has been pointed out that Luke is involved in another significant chronological error when in Acts 5:36–37 he states that "Judas the Galilean arose in the days of the census" and places this event after the revolt of Theudas. According to Josephus (*Ant* 20.5.1) the Theudas revolt is dated to the procuratorship of Fadus (A.D. 44–46).

Some who would wish to defend the accuracy of the information about Quirinius presented in Luke 2:1–3 point to the existence of a damaged inscription from Tivoli, the *lapis* or *titulus tiburtinus,* now in the Vatican Museum, which refers to a nameless Roman who was twice governor of Syria. Mommsen, W. R. Ramsay, and others argue that the person in question is Quirinius and that his first reign was in the late years of Herod's reign. Ramsay has also pointed out that there are recorded occasions when two men with the rank of *legatus Caesaris* were appointed to one province and that it is possible that Quirinius was given some type of extraordinary command alongside the regular governor of Syria. Yet there are problems with this defense of Lukan accuracy: (1) there is no evidence that the *titulus tiburtinus* refers to Quirinius; (2) the Latin of the text is wrongly translated. As Fitzmyer and others have shown, *iterum* does not modify *optinuit* but the preceding phrase. Thus, the text reads: as "propraetorial legate of Divus Augustus for the second time, he received Syria and Phoenicia." Further, there is no evidence that a proconsul would become a legate of the emperor twice in the *same* province (Fitzmyer, *Luke* AB, 403).

Some of the factors frequently employed in the debate over these verses include the following: (1) In Acts 5:37, as referred to above, Luke states that "Judas the Galilean arose in the days of the census"; from Josephus (*Ant* 17.13.5, 18.1.1; *JW* 2.8.1) it is likely that the resistence of Judas was during the census of A.D. 6–7. This would suggest not only that Luke was aware of the census of A.D. 6–7, but also that he was attempting to distinguish the nativity census from this and others about which he may have known. The use of *prote* (first) in Luke 2:2 is cited in support of this view. However, the chronological problem between Theudas (Acts 5:36) and Judas has already been pointed out and it is perhaps the vagueness of this recollection that leads to Luke's false synchronization of the Quirinius census and "the days of Herod." (2) Some have attempted to translate *prote* in the comparative sense of "former, prior," which would govern the following genitive and render Luke 2:2 as "This registration was before Quirinius was governor of Syria." Since the genitive which follows *prote* is a genitive absolute, this interpretation cannot be maintained. (3) Those advocating Luke's chronological accuracy would argue that the sole censorship of Augustus in 8 B.C. coincides with the Egyptian 14-year census pattern as well as with Luke's testimony and that such a reconstruction would provide the years 8–7 B.C. as a *terminus a quo* for the birth of Jesus. This interpretation, however, has fused what must be kept separate. Augustus conducted two types of enrollments in the empire: one for Roman citizens (in Italy and in the provinces) and one for provincial inhabitants. The first type of census, the *census populi*, was conducted in 28 B.C., 8 B.C., and A.D. 14 (Suetonius *Aug.* 27.5). The second type of census, called by the same term Luke uses in 2:2, *apographē*, was administered in individual provinces and therefore could not involve "all the world" as Luke claims. It is known that in Roman Egypt such a census was carried out every 14 years from A.D. 34 to A.D. 258 (*POxy* 2.254, 255, and 256). Similarly, in Gaul such a census was administered in 27 B.C., 12 B.C., and A.D. 14–16; there are also extant references to such enrollments in Lusitania, Spain, and Judea. However, Syria was an imperial province and the emperor appointed the legates, prefects, or procurators to carry out the census of the *provincial* inhabitants, as opposed to the *census populi* in which Augustus was directly involved. The census of the *legatus* Quirinius was administered in A.D. 6–7, following the incorporation of Judea into the province of Syria. (4) It has been suggested that the discrepancies can be resolved by the concept of an *imperium maius* ("greater command"), the argument being that Quirinius would have been given a special imperial commission to carry out a census in Syria while someone else was actually legate there, especially S. Sentius Saturninus (9–6 B.C.). The plausibility of this solution founders on the very ambiguity and confusion found in the source it cites: Tertullian (compare *Adv. Marc.* 4.19,10, with *Adv. Iud.* 8 concerning the birth of Jesus).

A review of this material would suggest that all that can be said with confidence is that Jesus' birth took place in the days of Herod, a fact also mentioned in Matt 2:1. Further, following Matt 2:15–19, one can state that in all likelihood the birth took place shortly before the death of Herod in 4 B.C.

c. The Magi. According to Matt 2:1–12, certain Magi (astrologers) from the East came to Jerusalem searching for Jesus "for we have seen his star in the East, and have come to worship him" (v 2). Several ways of understanding this reference to the "star" have been proposed. (1) In 1606 the astronomer Johannes Kepler fixed the date of Jesus' birth in the year 7/6 B.C. on the basis of the triple conjunction of the planets Saturn and Jupiter in May/June, Sept/Oct and Dec of 7 B.C., with Mars passing shortly after the conjunction of Jupiter and Saturn. Kepler argued that such proximity of Jupiter, Saturn, and Mars occurs only every 805 years. What is intriguing about Kepler's hypothesis is that such a constellation was predicted by Babylonian astronomers and, further, that Jupiter was understood to be the star of kings and Saturn both as the star of the sabbath and sometimes even as the star of the Jews. (2) J. Finegan (1964) and others date the birth in the year 5/4 B.C., identifying Matthew's star with that of an unusual nova or supernova (a faint star which, as the result of an explosion, gives out much light for weeks or months). Although about a dozen novae are noted yearly, there is no record of such a nova or supernova before the birth of Jesus. (3) The comet named after E. Halley (d. 1742) occurs every 76 years and has been dated back to 240 B.C. in Europe, China, and Japan. Astronomical calculation has indicated that Halley's comet made an appearance in 12/11 B.C. Because this hypothesis requires an unusually early dating for the birth of Jesus it has not found many advocates.

Most biblical scholars today recognize the impossibility of reaching firm chronological conclusions on such hypothetical reconstructions, especially if Matthew's references to the star are primarily literary and theological. Even so, there is no compelling reason why one ought not to allow for the influence of such unusual astronomical occurrences in the development of the Matthean account of the visit of the Magi. Such occurrences, together with the popularity of astrology (the Aramaic fragments from Cave IV at Qumran contain fragments of an astrological treatise) and of magi as a professional class in the period (according to the Greek form of Daniel, *magoi* are active in every possible place in the Babylonian kingdom of Nebuchadnezzar) and the fact that many expected a star to attend the birth of a notable person, must be taken into account in understanding the setting of Matthew's assertions. Given the circulation of such prophetic oracles as that of Balaam (Num 24:17) with its promise of a "star coming from Jacob," many, as in the Qumran community, anticipated that a messiah's advent must be accompanied by such a stellar harbinger as Matthew describes.

2. The Beginning of the Ministry. a. John the Baptist and the Baptism of Jesus. Luke makes an extensive chronological statement about the beginning of John the Baptist's preaching activity: "In the 15th year of the reign of Tiberius Caesar, Pontius Pilate being governor of Judea, and Herod being tetrarch of Galilee, and his brother Philip tetrarch of the region of Ituraea and Trachonitis, and Lysanias tetrarch of Abilene, in the high-priesthood of Annas and Caiaphas, the word of God came to John the son of Zechariah in the wilderness" (Luke 3:1–2). Except for the first reference, the strokes are indeed broad: Pilate was governor of Judea from A.D. 26–36, Herod served as tetrarch of Galilee from 4 B.C. to A.D. 39, Philip was tetrarch of Ituraea and Trachonitis from 4 B.C. to A.D. 34, and Caiaphas was deposed from office at a Passover festival not later than A.D. 34. The 15th year of the reign of Tiberius, based on the year of Augustus' death (19 August A.D. 14) and the use of the Julian calendar, would be August A.D. 28 to August A.D. 29.

For those scholars who believe that this date (A.D. 28–29) is too late, one of the most common alternatives is to argue that Luke had in mind the date when Augustus allowed Tiberius to serve as coemperor. If on the basis of Velleius Paterculus (2.121) this date is assigned to A.D. 11 or on the basis of Suetonius (*Tib.* 21) to A.D. 12, the Baptist's activity would then be placed in the period A.D. 25–26. Other variables which affect dating include how Luke was reckoning Tiberius' regnal years (did he distinguish the accession year from the regnal years, or did he consider the partial accession year as the first regnal year?) and the calendar he was using (Julian, Jewish, Syrian–Macedonian or Egyptian).

All these and other factors suggest that since we are uncertain as to Luke's frame of reference one needs to be most cautious in using these materials for an exact dating of the appearance of John or for the beginning of Jesus' ministry. This caution is further underscored by those scholars who hold that many of Luke's chronological references serve more the historical perspective of Lukan theology than exact chronological reckoning. Thus, while Luke 3:21–22 suggests that some time elapsed between the beginning of John the Baptist's preaching activity and the baptism of Jesus, the exact length of that interval cannot be determined. What is clear, however, is that the baptism and ministry of Jesus could not have preceded that of the Baptist.

b. The Age of Jesus. How old was Jesus when he began his ministry? Once again it is Luke who supplies information: "Jesus, when he began his ministry, was about thirty years of age …" (Luke 3:23). What is the force of *osei* (about)? Given its use in 1:56; 9:14, 28; 22:41, 59; 23:44 it is evident that Luke is not intending to be precise in his determination of the age of Jesus (adding thirty to the tentative date established for Jesus' birth in Luke one would arrive at the years of A.D. 23–25, which, as will be discussed below, is impossible) and that he is consciously presenting the reader with a round number.

Some have suggested that Luke may be using the number thirty for theological reasons. In 2 Sam 5:3–4 it is stated that David was thirty at the beginning of his kingship; also Joseph (Gen 41:46) and Ezekiel (Ezk 4:1) were thirty when they were called by God. It is possible that Luke is using this number to refer to the age of maturity. There is evidence from the Qumran community (CD 17.5.6) that one had to be thirty in order to serve in a position of leadership.

On the basis of John 8:57, "You are not yet fifty years old …?" some (Irenaeus *Haer.* 2.22.5) have concluded that Jesus was in his forties during the ministry. Yet this, too, is intended as a round number and the phrase simply wishes to underscore the great time interval between Jesus and Abraham.

c. The Building of the Temple. In John 2:18 Jesus is in discussion with the Jews and they ask him, "What sign have you to show us for doing this?" Jesus replies: " 'Destroy this temple, and in three days I will raise it up.' The Jews then said, 'It has taken 46 years to build this temple, and will you raise it up in three days?' But he spoke of the temple of his body" (vv 19–20). Josephus (*Ant* 15.11.1) indicates that the reconstruction of the Temple began in the 18th year of Herod the Great (20–19 B.C.). This date is normally believed to be more reliable than the 15th year of Herod which Josephus records in *JW* 1.21.1. Perhaps this later reference refers to the initial planning for the Temple. Following the reference in *Ant*, 46 years would bring us to the Passover (John 2:13) of A.D. 28, a date which coheres with the date reached above on the basis of the information provided in Luke 3:1.

Some wish to find an exact reference to the age of Jesus in the number 46. However, the evidence for this is slim and even given the approximate references to Jesus' age in Luke 3:23, such a view would allow for a substantial contradiction between Luke and John.

3. The Duration of the Ministry. One looks in vain for a definitive answer to this question. The gospel of John is filled with chronological ambiguity and the synoptic gospels give no precise indication as to the length of Jesus' ministry. In the latter, there is only reference to one Passover (Matt 26:17; Mark 14:1; Luke 22:1). At the minimum one can speak of a one-year ministry or, at most, one that approached two years.

Strong advocacy for a one-year ministry was present during the ante-Nicene period, particularly among Valentinian gnostics (Irenaeus *Haer.* 2.22.1), Clement of Alexandria (*Str.* 1.21), and Origen (*Princ.* 4.5). Key to this interpretation was the chronological interpretation of Luke 4:19 ("the acceptable year of the Lord") as specifying a duration of one year. Most scholars today would doubt that Luke, in citing Lev 25:10 (LXX), has a literal interest in chronology in mind. The same would hold true of the parable of the barren fig tree, found only in Luke 13:6–9: the reference to "three years" is not a subtle indication of the length of Jesus' ministry. Many supporters of the one-year ministry also claim Mark in their support. Mark 2:23–28, the incident of plucking grain on the Sabbath, is said to take place in the early summer, the feeding of the five thousand in the spring (Mark 6:39, "the green grass"), and the death of Jesus during the Passover season. Such a view, however, involves another assumption which runs contrary to most contemporary understandings of Mark, viz., that Mark does not intend to present the reader with a consecutive ordering of the ministry of Jesus. Thus, all the texts cited from the synoptic gospels in support of a one-year ministry do not necessarily exclude other views of the length of Jesus' ministry.

Origen (*Jo.* 4.35) was of the opinion that even the gospel of John could be understood as describing a one-year ministry for Jesus, a ministry that begins (John 2:13) and ends (John 11:55) with a Passover. Presumably Origen had a text of the Fourth Gospel which lacked the reference to *to Pascha* in 6:4 (argued as the original text by Hort), thus allowing Origen to identify this feast with the Feast of Tabernacles referred to in the next chapter of the gospel. For many, however, the gospel of John points in the direction of a minimum length of at least three years. Such a position involves two assumptions: (1) that *to pascha* in 6:4 is the original reading, a reading which is today virtually unanimous; (2) that the Fourth Gospel is chronologically reliable and following a consecutive order, a position maintained by fewer and fewer interpreters today.

The earliest known supporters of a three-year ministry include Melito of Sardis (*ca.* A.D. 165) and Eusebius, who allows the ministry to last "not quite four full years" (*Hist. Eccl.* 1.10). Most who move in this direction place their emphasis on John's gospel. Yet the critical question is whether this gospel is able to carry such a burden of proof. Key to an adequate answer is the evaluation of the historical reliability and intention of John's gospel. Since it is impossible to review in detail all the historical and theological issues related to such an evaluation, one dominant, but not universal, perspective will be described: while the Fourth Gospel has access to reliable traditions, these are recast substantially to fit its theological portrayal of Jesus. One example of this procedure can be found in John's account of the cleansing of the

temple (2:13–22). It shares with the synoptic gospels the same account of the cleansing of the temple, but while the synoptics (Mark 11:15–18; Matt 21:12–17; Luke 19:45–46) place this incident at the end of Jesus' ministry in connection with the triumphal entry into Jerusalem, John places it at the outset of the ministry, expands the account, and makes the identification between temple and the body of Jesus (v 20). His reason for doing so is theological: already at the outset of this gospel Jesus is portrayed as the glorified and risen Christ (note, for example, the explicit confession of Andrew in John 1:41, unique to this gospel, "We have found the Messiah").

The supporters of a minimum three-year ministry use primarily those texts in John which make references to feasts. Yet many scholars view the frequent mention of at least some of these feasts as due not to genuine historical reminiscence but rather to literary device: the author of the Fourth Gospel often uses the occasion of a "feast" to bring Jesus to Jerusalem, as for example, in 5:1. In light of this it becomes impossible simply to strip away the theological interpretation of the tradition so that one can arrive at reliable chronological facts; to do so will lead to distortion. The genius of John lies not with the accurate, consecutive presentation of historical detail but rather in the ability to grasp the central meaning of the tradition and, from his perspective, to bring to expression its true meaning.

Other than the references related to the final Passover season of Jesus, the essential Johannine references used in chronological reconstruction of a three-year minimum ministry are found between John 2:13 and 6:4. Mention will also be made of John 7:2 and 10:22, but these are linked with the final Passover to form one liturgical year.

a. John 2:13. It has already been indicated that the Fourth Gospel has transposed a scene found elsewhere in the synoptic gospels. There is also a reference to the Passover in 2:23; however, most interpreters understand this reference as being identical to that referred to in 2:13 in the literary structure of John.

b. John 4:35; "Do you not say, 'There are yet four months, then comes the harvest'?" Sowing took place in Nov/Dec, following the autumn rains. According to the 10th-century-B.C. Gezer calendar, the harvest follows the sowing by four months. If this verse is part of an authentic tradition, it is possible that Jesus related this proverb at a time of sowing; the barley harvest would then follow in April and the wheat harvest in May.

c. John 5:1. Jesus had returned to Galilee in John 4:43; now he comes to Jerusalem again: "After this there was a feast [the majority of manuscripts omit the article] of the Jews, and Jesus went up to Jerusalem." The only specific identification of this feast is as a Sabbath (v 9); anything beyond that is a pure speculation since there is no substantial evidence that a chronological sequence has been preserved. Thus, the possible identification of this feast as Pentecost, since it follows the Passover referred to in 2:13, is without verifiable basis. It is best to take the reference to "*a* feast" as a literary device which enables John to account for Jesus in Jerusalem.

d. John 6:4, "Now the Passover, the feast of the Jews, was at hand." There is no manuscript evidence for the omission of the name of the festival; therefore this conjecture should be eliminated. Given the previous mention of a common Johannine literary technique, it is questionable to read this text as referring to the next Passover following that of 2:13. Once again, the Passover is mentioned not for chronological but for the theological reasons developed in chapter 6: the Eucharist, the Last Supper, can only be understood in a Passover context. That the feeding of the five thousand in John 6 takes place in the spring (near Passover) agrees with the evidence of the synoptics ("grass," "green grass"; Mark 6:39; Matt 14:19).

e. John 7:2, "Now the feast of Tabernacles was at hand." It has already been pointed out that this text and the next (10:22), form, from John's perspective, a common liturgical year with the final Passover mentioned in the Fourth Gospel. In this text the double ceremony of the water pouring and the illumination of the Court of the Women involved in this autumn feast undoubtedly serve as the background for the theological saying of Jesus in 7:37–38 and 8:12.

f. John 10:22. Here one finds another time reference: "It was the feast of the Dedication at Jerusalem." Already in the tradition this scene is bound to the feast of the Dedication for it is hard to believe that this

was invented. Yet this fact alone does not necessarily allow us to conclude that the chronological sequence of this feast—or any in the gospel of John—are accurate as presented.

g. John 11:55; 12:1; 13:1; 18:28; 18:39; 19:14. All these texts refer to the final Passover of Jesus, viz., the time of his death, a topic to be analyzed more fully below.

Based on this discussion, there is no unambiguous evidence in the gospel of John allowing the construction of a minimum three-year ministry of Jesus based on the reference to three sequential Passovers in that gospel. In all likelihood these festival references are of a theological rather than of a chronological nature. In light of this review of John and the synoptics and the tentative nature of any conclusion based on documents intended primarily for proclamation of the faith and not of biography or history, the evidence points in the direction of a ministry which may have lasted a minimum of one, or a maximum of two, years.

4. The Conclusion of the Ministry.—The Crucifixion. The basic problem in trying to determine the date of the crucifixion is that the synoptic gospels and the gospel of John disagree. According to John 18:28 and 19:14 the Passover meal was eaten on the Friday evening after the crucifixion. The Jewish day began at 6 P.M. and the Passover was eaten in the early evening of Nisan 15. Therefore, according to the gospel of John, and it is emphatic about this (19:14 and 16: "Now it was the day of Preparation of the Passover … Then he handed him over to them to be crucified"), Jesus was crucified on the day before Passover, i.e. Nisan 14. Mark 14:12 (see also Luke 22:11 and Matt 26:18–19), on the contrary, asserts that the Last Supper was the Passover meal. This means that the arrest, trial, death, and burial of Jesus all took place on Passover, Nisan 15.

The Passover account in Mark 14:12–16 is characterized by imprecision. The day of Unleavened Bread belongs to the Passover, viz., Nisan 15, yet Mark apparently understands it as having occurred on the previous day (Nisan 14), the day the Passover lambs are slaughtered. Such ambiguity is an indication that Mark was not well versed in Jewish law and the events of Passover. Further, because the difference in the calculation between Jewish and Greek days is not taken into account, Mark misinterprets Exod 12:18 ("In the first month, on the fourteenth day of the month at evening, you shall eat unleavened bread, and so until the twenty-first day of the month at evening"). Generally speaking, one not familiar with Jewish customs would not be able to reconstruct the flow of events characteristic of the Jewish Passover. Mark, not having an exact knowledge of these customs, confuses a meal Jesus had with his disciples during the Passover season with the Passover meal itself. Aside from these ambiguities in Mark's narrative, there is the further question whether all these events would have taken place on such a high holy day as Passover. In this case, the Johannine chronology of these final events in the ministry of Jesus is to be preferred.

Calendaric explanations have been offered to explain the contradiction between the Johannine and synoptic contradiction concerning the Last Supper. Some suggest that the Jewish priests were following the Sadducean calendar and Jesus the Pharisaic; others urge that the priests followed a Judean calendar and Jesus a Galilean. The most elaborate calendaric proposal is that of A. Jaubert (1965). According to this Jesus prepared for and ate the Passover meal following an Essene solar calendar; however, his death on the eve of Passover, as in the Johannine account, was according to the "official" calendar which was lunar or lunisolar. Her detailed proposal is illustrated in Table 1.

Table 1.
Proposal of Jaupert

Time of Day	*Solar Calendar*	*Lunisolar (Official) Calendar*
Tues—before sundown	13 Nisan: preparation for the Passover (Mark 14:12–16)	
About sundown	15 Nisan: Last Supper (Passover meal, Mark 14:17–25)	12 Nisan

Night	Arrest Interrogation before Annas (Mark 14:53a; John 18:13); Peter's denials; led to Caiaphas (John 18:24)	
Wed—before sundown	15 Nisan: first appearance before the Sanhedrin (Mark 14:55)	12 Nisan
At sundown	16 Nisan	13 Nisan
Thurs—before sundown	16 Nisan: second appearance before the Sanhedrin (Mark 15:1a); Jesus is led to Pilate (Mark 15:1b); Jesus is sent to Herod (Luke 23:6–12); people are stirred up to demand Barabbas' release (Mark 15:11)	
At sundown	17 Nisan: dream of Pilate's wife (Matt 27:19)	14 Nisan
Fri—before sundown	17 Nisan: Jesus is led to Pilate again (Luke 23:13); Barabbas released (Mark 15:15); Jesus delivered to be crucified; death on the cross (Mark 15:15–37)	14 Nisan: Preparation for the Passover (John 18:28)
At sundown	18 Nisan: Sabbath; Jesus in the tomb (Mark 15:42–46)	15 Nisan: Sabbath and Passover (John 19:31)
Sat—before sundown	18 Nisan: Sabbath; Jesus in the tomb	15 Nisan: Sabbath

This resolution of the problem has met with limited enthusiasm. It is pointed out that there is no NT evidence that Jesus followed a solar calendar in opposition to the lunisolar calendar, and, further, that Jaubert often resorts to a pre-form critical harmonization of the synoptic with the Johannine texts.

Working on the hypothesis that in this case the Johannine account is the more accurate and following the Jewish table of true moons, one is presented with two alternatives for the crucifixion of Jesus: 14 Nisan = 7 April A.D. 30 or 3 April A.D. 33 (Fotheringham 1934). Given the previously discussed probable dates and parameters, the first of these is to be preferred.

5. Summary. It is likely that Jesus was born between 8–6 B.C. and began his public ministry about A.D. 28 at the approximate age of 35, a ministry which lasted probably, at the most, not more than two years. Death would have come in the year A.D. 30.

B. The Apostolic and Pauline Period

1. Introductory Comments. The apostolic and Pauline period in early Christian history is presently being reviewed with renewed scrutiny and much vigor. As a result, the chronological options are several, although it is possible to reduce the major options for this period to two: (1) the traditional approach, heavily dependent on the accuracy of the information and chronological framework found in the Acts of the Apostles, which understands Paul's primary apostolic work to have begun in A.D. 47–48, and; (2) the approach pioneered by John Knox and now argued in greater detail by others (Lüdemann 1984), which is skeptical of the uncritical dependence on the chronological material provided by Acts, and suggests that Paul's apostolic work began as early as 37 or at the latest in A.D. 40. It is thus clear that the decisive issue between these two major approaches is the evaluation of the chronological reliability of Acts. But before these methodological considerations are discussed, it may be useful to provide a general overview of the traditional dating of the Pauline period, recognizing, of course, that individual scholars sharing this overall perspective may vary from this outline at some points.

Table 2.

Events	*Dates (A.D.)*
Conversion of Paul	33
First visit to Jerusalem	36
Famine visit	46

First missionary journey	47–48
Apostolic conference	49
Paul's arrival in Corinth	50
Paul leaves Corinth	autumn 51 or spring 52
Paul's arrival in Ephesus	autumn 53
Paul leaves Ephesus	summer 56
Paul's arrival in Corinth	late 56
Paul in Philippi	Passover 57
Paul's arrival in Jerusalem	Pentecost 57
Paul before Festus	summer 59
Paul's arrival in Rome	spring 60

2. Methodological Considerations. Given the remarks just made and the lack of consensus in evaluating the chronology of the apostolic and Pauline period, careful attention needs to be given to the issue of methodology in attempting to reconstruct the chronology of this period. To begin, it must be recognized that there are essentially only two sources for our knowledge of the Pauline period: the letters of the apostle himself and the events recorded by Luke in the Acts of the Apostles. Most NT scholars today give clear priority to the Pauline letters since Paul himself stands closest to the events he records. It is increasingly recognized that Luke in writing his second volume reshapes many traditions, just as he does in the Gospel, to cohere with his overall theological purpose. Thus, for those scholars who maintain such a view of Luke's purpose, Acts becomes a less useful source for exact chronological information since much of this information has been subjected to a larger theological program. While Acts can still be a valuable source of detailed and accurate information when separated from its programmatic framework, it should never be given priority over the documents stemming from Paul and should only be used when it does not contradict assertions made by the apostle.

Although implementing this critical methodology is, according to its adherents, a requisite of rigorous historical research, its adoption does not make the task of establishing a chronology of the Pauline period easier. If anything, it reveals how tentative and speculative previous attempts have been and how tenuous all reconstructions must be. For when all is said and done, Paul gives us not one specific date. Inevitably, if one is to establish a possible chronology of this period, there will have to be some dependence on Acts. Recognizing this, one should be cautious to use Acts in a way which is both critical and plausible. Yet it must be acknowledged that no matter from what perspective one views the data, *there can be no absolutely definite chronology of this period;* all attempts must be tentative and subject to correction and revision.

All scholars, no matter which chronological option they follow in their reconstruction of Paul's career, find it useful to distinguish carefully between the information found in the Pauline letters and that in the Acts of the Apostles. The first step will be to isolate certain information found in the Pauline correspondence which may have chronological implications.

3. The Pauline Correspondence. The information found in these letters might best be summarized in the following way: (a) the revelation of the Risen Jesus to Paul in Damascus (Gal 1:12–16); (b) the visit to Arabia and the return to Damascus (Gal 1:17); (c) "then [*epeita*] after three years" the first visit to Jerusalem for 15 days (Gal 1:18)—the so-called "acquaintance visit"; (d) then (*epeita*) activity in the regions of Syria and Cilicia (Gal 1:21); (e) then (*epeita*) after 14 years a second visit to Jerusalem (Gal 2:1)—the so-called "conference" visit; (f) activity in the churches of Galatia, Asia, Macedonia, and Achaia with special emphasis on the collection of the offering for Jerusalem (Gal 2:10; 1 Cor 16:1–4; 2 Cor 8–9; Rom 15:25–32); and (g) the final visit to Jerusalem (1 Cor 16:3; Rom 15:25–32)—the so-called "offering" visit. Let us examine these individual pieces of information provided by the Pauline letters more closely.

(a) The revelation of the Risen Jesus to Paul in Damascus (Gal 1:12–16). This is often referred to as Paul's "conversion," yet one should be most hesitant in using this term since it is not found anywhere in the text. In language reminiscent of prophetic imagery, the apostle declares that the God who had set him apart before he was born "revealed his Son to me, in order that I might preach him among the Gentiles." Most accurately we have here a "commissioning" event—the commissioning of Paul as one who is to preach Jesus Christ to the Gentiles.

In order to understand the context in which these remarks about commissioning, travel, and chronology are made, one must remember that Paul is attempting to document the thesis that "I did not receive it [the gospel] from man, nor was I taught it, but it came through a revelation of Jesus Christ" (Gal 1:12). One aspect of the argument that this Pauline gospel is not dependent on any human authority is for the apostle to insist on his independence from Jerusalem. That is exactly the point which follows upon this "commissioning" scene: "I did not confer with flesh and blood, nor did I go to Jerusalem to those who were apostles before me" (Gal 1:16–17). Not unimportant is to observe the word *eutheos* ("immediately, at once") in the text—"I did not confer *immediately* with flesh and blood." To understand very carefully this context is critical for an accurate perspective in interpreting the information which is to follow in the succeeding verses, viz., that Paul is primarily attempting to show his independence from Jerusalem and not to give detailed chronological information.

(b) The visit to Arabia and the return to Damascus (Gal 1:17). To underscore the independence of his gospel and to insist that it came to him through a revelation of Jesus Christ, Paul asserts that following this revelation, he did not go immediately to Jerusalem but rather to Arabia and "again I returned to Damascus" (Gal 1:17). This Pauline description allows one to conclude that the location of the original commissioning was in Damascus, a fact which coheres with the embellished description of this event in the book of Acts (9:3ff.; 22:5ff.; 26:12ff.). How long Paul was in Arabia or why he went there is unknown; how long he spent in Damascus is dependent on how one interprets the "then" of Gal 1:18. From the text before us it is likely to conclude that Paul spent his time in Damascus in the midst of a Christian community, a view that also coheres with the information provided in Acts 9:19–22.

(c) "Then *[epeita]* after three years" the first visit to Jerusalem for 15 days (Gal 1:18)—the so-called "acquaintance visit." To what does the "then" refer—to Paul's commissioning or to his return to Damascus? (Of course, if his stay in Arabia was a brief one, as it probably was, the commissioning event and his return to Damascus might be relatively close in time.) However, since this is not the only occurrence of the adverb "then" in the sequence of events to be described in Galatians, the interpretation of this word assumes great importance. Many interpreters see it consistently as referring back to the commissioning event; many others see it as consistently referring back to the immediately preceding event. The latter interpretation is strengthened by the parallel use in 1 Cor 15:6 and 7. Interpreted in this way, Paul remained with other Christians in Damascus for about three years (either two or three as a result of the ancient method of calculation) before making his first visit in Jerusalem since his call to preach Jesus Christ to the Gentiles. In keeping with his main thesis in this section, the apostle describes that he was only in Jerusalem with Cephas (Peter) for 15 days and saw no one else except James the Lord's brother.

(d) Then *(epeita)* activity in the regions of Syria and Cilicia (Gal 1:21). In light of what has just been discussed, *epeita* ("then") is likely to refer to the immediately preceding event: "I went to Jerusalem, then I went into the regions of Syria and Cilicia." That the *epeita* refers back to the commissioning event is hardly possible.

The critical question with regard to this verse in Galatians is not, then, the referent of *epeita* but rather what is meant by the reference to the activity in Syria and Cilicia. Syria includes Christian centers in Damascus, the place of Paul's commissioning, and Antioch, an area where, by Paul's own description, he had worked (Gal 2:11) and a city extensively referred to in Acts (11:19; 13:1, 14; 15:22; 18:22). In addition, Cilicia includes Tarsus, which according to Acts 22:3 is Paul's native city. Is the intention of this reference to suggest that Paul spent some 11 to 14 years (see (e) below) only in Syria and Cilicia? Or, given the overall context of Paul's desire to distance himself from Jerusalem, does he merely wish to say

that "then, after leaving from my 15-day stay in Jerusalem, I did not stay around that area but I began moving as far away as Syria and Cilicia" without in any way wishing to suggest that he worked only in this area? How one interprets this reference to Syria and Cilicia will be crucial for the reconstruction of a chronology of the Pauline period. For those scholars who understand the reference to Syria and Cilicia as not limiting Paul's activity to these regions, the apostle was involved in missionary work as far away as Philippi, Thessalonica, Athens, and Corinth very early in his career. They would urge that the reference in Phil 4:15 to "the beginning of the gospel" literally refers to the beginning of Paul's independent missionary work in Philippi and that 1 Thess 3:1 refers to Paul's continuing work during this period in Thessalonica, Athens, and Corinth. This interpretation, to date not the majority one, allows for an "uncrowding" of Paul's missionary work, for the maturing of his apostolic ministry and the development of his theology. Rather than an extended period of some 11 to 14 years in Syria and Cilicia, this perspective allows for the beginnings of the European mission at a much earlier point in his apostolic career and does not reduce the remainder of his activity to such a severely limited time frame. If one accepts this reading of the evidence then it is probable that 1 Thessalonians stems from this period prior to the conference visit in Jerusalem.

(e) Then *(epeita)*after 14 years a second visit to Jerusalem (Gal 2:1)—the so-called "conference" visit. In Gal 2:1 Paul indicates that he made this second visit to Jerusalem "by revelation" as opposed to being summoned by any human authorities. At the end of this meeting with James, Cephas, and John, Paul relates how they "gave to me and Barnabas the right hand of fellowship, that we should go to the Gentiles and they to the circumcised; only they would have us remember the poor, which very thing I was eager to do" (Gal 2:9–10).

Paul uses *epeita* here for the third time. To what does it refer—back to his commissioning or back to the initiation of his activities in Syria and Cilicia? In view of the remarks made above, the more likely is the latter. Since his work in Syria and Cilicia began so very soon after his brief visit in Jerusalem, the 14-year period can accurately be said to describe the time between the first ("acquaintance") and the second ("conference") visit to Jerusalem.

(f) Activity in the churches of Galatia, Asia, Macedonia, and Achaia with special emphasis on the collection of the offering for Jerusalem (Gal 2:10; 1 Cor 16:1–4; 2 Cor 8–9; Rom 15:25–32). A general review of the Pauline letters suggests that his activities in this postconference period were concentrated in Galatia, Asia, Macedonia, and Achaia and that one important focus of the apostle's work was in collecting the offering for the poor in Jerusalem, which was a request made at the end of the Jerusalem meeting with James, Cephas, and John.

The major center for Paul's activities during this period was Ephesus (1 Cor 16:10–11) and it is from here that Galatians, Philippians, Philemon, and 1 Corinthians were written. From here he traveled to Macedonia with Timothy, making a first stop in Philippi (1 Cor 16:5; 2 Cor 2:13) where they met Titus (2 Cor 7:5). If one sees 2 Corinthians as a composite document then it is possible that much, if not all of it, was written from Philippi. From Macedonia, which may have included a stop in Thessalonica, Paul heads on toward Corinth (2 Cor 9:3ff.; 12:4; 13:1). Finally, from Corinth, where the apostle writes Romans, he makes his final trip to Jerusalem.

(g) The final visit to Jerusalem (1 Cor 16:3; Rom 15:25–32)—the so-called "offering" visit. The last part of Paul's missionary activities that can be documented from his letters is this final trip to Jerusalem, although Acts continues on beyond Jerusalem until the apostle is placed in Rome. Paul's intention in making this last trip to Jerusalem is to "make some contribution for the poor among the saints at Jerusalem" (Rom 15:26). That Paul is anxious about this trip is evident from his request for the prayers of the Romans "that I may be delivered from the unbelievers in Judea, and that my service for Jerusalem may be acceptable to the saints …" (Rom 15:31). There is no precise indication from the letters concerning the length of the period between the "conference" visit and the "offering" visit to Jerusalem.

The result of this rapid survey of chronological information provided us by the Pauline letters is that only two (other than the reference to 15 days) references are given: three years between the return to Damascus and the first, acquaintance visit in Jerusalem, and 14 years between the first and second visits

to Jerusalem. This is where firsthand information from Paul ceases. From the letters there is no information whatsoever as to the year in which any of these visits or activities take place. The next task is to turn to Acts cautiously and critically to see whether reliable information can be found there which coheres with and does not contradict the primary evidence which has been derived from the Pauline letters.

4. The Acts of the Apostles. The relevant information in Acts having a possible bearing on Pauline chronology may be summarized as follows: (a) the revelation of the Lord to Saul and his subsequent commissioning in Damascus (Acts 9:1ff.—but notice the repetition of this event in 22:5 and 26:12); (b) first visit to Jerusalem to meet with the apostles (9:26); (c) preaching in Jerusalem followed by departure for Tarsus (Cilicia) and return to Antioch (9:28–30; 11:25–26); (d) second visit to Jerusalem to bring relief in time of famine (11:29–30; 12:25); (e) activity in Syria, Cyprus, and Galatia (Acts 13–14; the so-called "first missionary journey"); (f) third visit to Jerusalem for the apostolic council (15:1–29); (g) activity in Galatia, Macedonia, Greece, and Asia (15:36–18:21); the so-called "second missionary journey"); (h) fourth visit to Caesarea to greet the church, Jerusalem (?), Galatia, and Phrygia (18:22); (i) activity in Syria, Galatia, Asia, Macedonia, and Greece (18:23–21:14; the so-called "third missionary journey"); and (j) fifth (final) visit to Jerusalem (21:11ff.).

In order to compare this information with that found in the Pauline letters and to resolve the apparent contradiction concerning the number of visits to Jerusalem, it will be useful to examine this outline of Acts more closely.

(a) The revelation of the Lord to Saul and his subsequent commissioning in Damascus (Acts 9:1ff.; 22:5ff.; and 26:12ff.). Although Luke greatly embellishes the material found in Galatians 1, this event corresponds to item 3. (a) in the Pauline correspondence (see above).

(b) First visit to Jerusalem to meet with the apostles (9:26). This information coheres well with item 3. (c) above.

(c) Preaching in Jerusalem followed by departure for Tarsus (Cilicia) and return to Antioch (9:28–30; 11:25–26). This agrees only partially with item 3. (d) above in terms of the departure, and then differs substantially with the letters in terms of a return to Antioch followed by item (b), the second visit to Jerusalem.

(d) Second visit to Jerusalem to bring relief in time of famine (11:29–30; 12:25). There is no parallel for such a visit in the Pauline letters. This reference to a visit to Jerusalem is one of the two additional visits to Jerusalem which is described by Acts. When we discuss item (j) (below), we will observe that Luke gives no reason for this final visit to Jerusalem, a visit which in the letters is clearly described as the offering visit. One solution to the extra visits in Acts would be to suggest that the final offering visit is moved to this much earlier and likely incorrect position of Acts. Some (Knox, Lüdemann) would argue that although the tension between Jewish and Gentile Christians continued and perhaps intensified even into the last stages of Paul's apostolic ministry, Luke wished to suggest that these differences were essentially overcome at an early date. This is the real motivation for Luke's rearrangement and modification of Paul's visits to Jerusalem.

(e) Activity in Syria, Cyprus, and Galatia (Acts 13–14; the so-called "first missionary journey"). It is difficult to coordinate Acts (c), (d), and (g) with Paul's (d) above. Given our previous discussion that for Paul the reference to Syria and Cilicia was possibly only the starting point for activities that took him as far as Macedonia and Achaia, then it appears that Luke is fragmenting one longer visit into some smaller ones so that the Jerusalem visits can be rearranged according to his schema.

(f) Third visit to Jerusalem for the apostolic council (15:1–29). The majority of NT scholars today would hold that this visit to Jerusalem corresponds with item 3. (e) above, the so-called "conference" visit, although holding that Galatians describes a private meeting between Paul and the Jerusalem authorities, while Acts intends to describe a more public form of this meeting. If this correspondence is abandoned, then one is faced with a "jungle of problems" (Haenchen) as well as a jungle of solutions. These include: (1) Gal 2:1–10 does not describe the same Pauline visit to Jerusalem as Acts 15. Rather, the meeting referred to in Galatians is to be identified with the visit in Acts 11:27–30 (the famine visit) or

with 18:22 or with a visit not mentioned in Acts. (2) Gal 2:1–5 and 6–11 represent separate Pauline visits to Jerusalem, which are then identified with any of the three to five visits to Jerusalem by Paul described in Acts.

If one holds to the majority identification of Acts 15 with Galatians 2, then for Luke this is a third visit to Jerusalem while for Paul only a second. In view of the fact that in Acts 18:22 [(h)] that visit to Jerusalem is totally unmotivated and fits into its context very awkwardly, it has been suggested that the original location for this visit was at 18:22 and that Luke retrojected it back to chapter 15 [(f)] for theological reasons: for the sake of the unity of the church this controversy had to be settled early, before he went to Asia Minor, Macedonia, and Achaia. If this suggestion is correct, then after the elimination of (d) and (f), the activities described by Luke in (c), (e), and (g) all fall into place as part of one "missionary journey."

(g) Activity in Galatia, Macedonia, Greece, and Asia (15:36–18:21; the so-called "second missionary journey"). As we have noted, it is possible that (c), (e), and (g) are part of what took place during the 14-year activity described by Paul in item 3. (d) above.

(h) Fourth visit to Caesarea to greet the church, Jerusalem (?), Galatia, and Phrygia. Aside from the fact that no reason whatsoever is given why Paul "went up and greeted the church" (Acts 18:22) it is striking that in Acts 18:21 Paul is in Ephesus and then in v 24, after having traveled to Caesarea, probably Jerusalem (many commentators argue that it is unlikely that the original, pre-Lukan itinerary did not mention a visit to Jerusalem if Paul had already traveled as far as Caesarea), Antioch, and through the region of Galatia and Phrygia (all in three verses!), he is back in Ephesus. It is indeed possible that 18:22 was the original location for the conference visit which is now described in Acts 15:1–29 [(f.)]

(i) Activity in Syria, Galatia, Asia, Macedonia, and Greece (18:23–21:14; the so-called "third missionary journey"). This material coheres well with item (f) in the Pauline section (above), although it is noteworthy that Luke eliminates what was so prominent for Paul in this period of his apostolic ministry: the collection. At this point one notes the consistency of Luke: not only does he eliminate the real reason for the final visit to Jerusalem in 21:11ff., viz., to present the collection in Jerusalem, but he also omits the collection as a primary objective during Paul's final activity in the areas described here in (i).

(j) Fifth (final) visit to Jerusalem (21:11ff.) As we have already observed, this final visit is in agreement with Paul's final visit described in item 3. (g), although Luke omits the association with the offering and, as we suggested previously, retrojects this motivation to (d) (Acts 11:29–30; 12:25)—the "famine" visit.

However one resolves the differences between the Acts account of Paul's activities and Paul's own account—and we have suggested only one general possibility here—all scholars will have to acknowledge that these apparent contradictions require explanation. Although a comparison of those events in the Pauline literature and Acts which have possible chronological implications have allowed an overview of their similarities and dissimilarities, one is still not in possession of concrete and precise chronological data. Therefore, it will be necessary to examine Acts to see what other specific data it may provide and whether such evidence may be useful for determining the more exact limits of Pauline chronology, remembering the cautionary remarks already made concerning the transference of such information.

5. Chronological Information Provided by Luke. a. The Gallio Inscription and the Edict of Claudius. Reference is made in Acts 18:12 to Paul's visit to Corinth: "But when Gallio was proconsul of Achaia, the Jews made a united attack upon Paul and brought him before the tribunal …" Although the precise details, implications, and context of the events described are disputed, there is little doubt that Paul made one of his visits to Corinth at the time that Gallio was proconsul of the province of Achaia; most scholars place Gallio's term of office in the years A.D. 51–52 in light of the epigraphical evidence now in hand. While at first glance Acts 18:12 appears straightforward, caution must be exercised: was Paul's visit to Corinth in the vicinity of A.D. 51–52 his first visit or does it refer to a subsequent one? Acts 18 may well conflate two or more Pauline visits to that city into one. Among the several factors pointing in this direction is the fact that in Acts 18:8 Crispus is the ruler of the synagogue and in 18:17 the

reference is to Sosthenes as the ruler of the synagogue. It is fully possible that if Acts 18 is conflating at least two visits of Paul to Corinth that he may well have been in the city at a much earlier date.

Another piece of information relating to secular history mentioned in Acts and which may be useful in reconstructing Pauline chronology is the reference to the edict of Claudius in Acts 18:2. There it is stated: "After this he left Athens and went to Corinth. And he found a Jew named Aquila, a native of Pontus, lately come from Italy with his wife Priscilla, because Claudius had commanded all the Jews to leave Rome. And he went to see them …" It is likely that Suetonius (*Claud* 25) is referring to this edict: "*Iudaios impulsore Chresto adsidue tumultuantes Roma expulit.*" Since Suetonius does not date this edict, one cannot be certain whether it is referring to one issued by Claudius in A.D. 41 or whether it is referring to disturbances later in his reign. Those who would argue against the early dating cite Dio Cassius' reference (60.6.6) that the large number of Jews effectively ruled out their expulsion and point to Orosius' reference (7.6.15) that the edict occurred in Claudius' 9th year (= A.D. 49). Yet these references in themselves do not settle the issue. In the first place, there need not be any contradiction between Dio Cassius' assertions and Luke's characteristically exaggerated use of *pas* (the Lukan "all") in Acts 18:2 and elsewhere. Further, there is the critical issue about the reliability of the information provided by Orosius, a 5th-century church historian.

If the Claudius edict is dated in A.D. 41 then one would have strong evidence for the dating of Paul's first visit to the city at some point after the arrival of Aquila and Priscilla from Italy. If the more usual dating of this edict in the year A.D. 49 is to be accepted, this in and of itself would not speak against an earlier visit of Paul to Corinth, for it is difficult to know how thoroughgoing is the conflation in Acts 18. For example, a case could be made that Acts 18:1 had its original continuation in v 5 and that vv 2–4 are a retrojection made from a later period.

To place Paul's first arrival in Corinth as early as A.D. 41 is possible; yet some flexibility is in order since one does not know how long it took Aquila and Priscilla to travel to Corinth, nor if they went there directly. On this reckoning Paul's original visit to Corinth may have taken place sometime between the approximate period of A.D. 41–44. Additionally, it is most probable that he was also in Corinth during the years that Gallio was proconsul in A.D. 51–52. Some would place a visit by Paul to Corinth, usually his first, just before the Jerusalem Conference (Jewett 1979) and some just after (Lüdemann 1984—an intermediate visit). Thus, the Jerusalem Conference would be dated either in *ca.* A.D. 50–51 or A.D. 52. If his first visit to Jerusalem was 14 years before this conference visit, the date of that first visit would be between *ca.* A.D. 36–38, and his commissioning three years prior to the first visit would then be placed between *ca.* A.D. 33–35. Since in the view of this writer it is more likely that Paul was in Galatia, rather than Corinth, prior to the Jerusalem Conference, the first sequence of dates is preferred: *ca.* A.D. 33, commissioning of Paul; *ca.* A.D. 36, Paul's first visit to Jerusalem; *ca.* A.D. 50, the Jerusalem Conference; *ca.* A.D. 50–52, intermediate visit to Corinth.

b. Aretas. In 2 Cor 11:32–33 Paul states that at "Damascus, the governor [Greek: the ethnarch of] under King Aretas guarded the city of Damascus in order to seize me, but I was let down in a basket through a window in the wall, and escaped his hands." The king referred to is Aretas (Arabic *ḥarita*) IV, who reigned at Petra over the Nabataean Arabs from 9 B.C. to A.D. 40. Although his kingdom extended to the vicinity of Damascus and although this city had been subject to his predecessors until the Romans took control of the city in B.C. 64, there is no definitive way of knowing when Damascus became subject to Aretas. One recent proposal (Jewett) suggests that such control over Damascus was only given to Aretas in A.D. 37. If this is the case, then the *terminus a quo* for the references in 2 Cor 11:32–33 would be A.D. 37 and the *terminus ad quem* would be A.D. 40, the year of Aretas' death. Yet, the text in no way suggests that Aretas controlled Damascus nor is this in any way necessary. 2 Corinthians 11 asserts only that this leader was the representative (*513 ethnarches*—ethnarch) of King Aretas. In this case no *terminus a quo* can be reached. All that can be asserted is that this event took place before A.D. 40.

The "governor" (ethnarch) to whom Paul refers was, in all likelihood, the leader of the semiautonomous Nabataean community in Damascus, a community which had been organized as an *ethnos* within the city, much as the Jews of Damascus would have been organized following the pattern of the Jews in

Alexandria, viz., functioning as an *ethnos* within the city and under the leadership of an ethnarch (Strab. 17.798; Jos. *Ant* 14.117). In Gal 1:17 it is asserted that immediately following his call to proclaim the gospel to the Gentiles, Paul "went away into Arabia" (presumably to evangelize the Nabataeans) and thereafter "returned to Damascus." Presumably the Nabataean community in Damascus and their leader took this opportunity to express their displeasure at the apostle's activity in the territory of the Nabataean Arabs.

A similar account is found in Acts 9:23–25. There is, however, one substantial difference: in Acts it is the Jews, while in 2 Corinthians it is the ethnarch of the Nabataeans, who plots against Paul. Given the well-documented emphasis of Luke to portray the Jews as those hostile to the early Christian mission, the account of Paul is to be preferred.

c. The Great Famine under Claudius. In Acts 11:28 Luke writes that "one of them named Agabus stood up and foretold by the Spirit that there would be a great famine over all the world; and this took place in the days of Claudius." This event is cited as the background of the first collection for the relief of the Jerusalem church. Although both Suetonius (*Claud* 19) and Tacitus (*Ann* 12.43) refer to widespread scarcity under Claudius, there was no famine over "all the world" under Claudius; this phrase is undoubtedly an exaggeration. Either Acts is referring to a more local crisis or it has intentionally retrojected an event which took place after A.D. 51 to this early point in the narrative.

d. The Death of Herod Agrippa I. The death of Herod Agrippa I, which occurred in A.D. 44, is mentioned in Acts 12:23. The narrative continues in v 25 with the reference that "Barnabas and Saul returned from Jerusalem when they had fulfilled their mission …" This is certainly redactional and provides no firm chronological information.

e. Sergius Paulus. During the time that Paul and Barnabas were in Paphos on the island of Cyprus, they encountered a certain Bar-Jesus who "was with the proconsul, Sergius Paulus" (Acts 13:7). Unfortunately the extant sources are ambiguous and do not provide a precise date for this proconsul's term of office. It has been shown that the famous inscription from Soli (D. G. Hogarth, *Devia Cypria,* 114) on the north coast of Cyprus, which refers to a certain Proconsul Paulus, should probably be identified with Paullus Fabius Maximus, who was a consul in 11 B.C. Among the various inscriptions which may refer to a Sergius Paulus there is one from Pisidian Antioch with the name L. Sergius Paullus; however it is dated between A.D. 60–100. Another inscription (*CIL* VI 31 545) placed in Rome between A.D. 41–47 also refers to a certain L. Sergius Paullus who was the Curator of the Tiber; however, this reference does not specifically relate him to Cyprus. If he went to Cyprus after serving as one of the Curators of the Tiber, perhaps in the late thirties, this time frame would coincide with what we know elsewhere about Paul's travels.

f. The Trials under Felix and Festus. Acts 23:23–24:27 relate Paul's trial and imprisonment under M. Antonius Felix, procurator of Palestine. According to 24:27 the minimum period of time which elapsed was two years. The continuation of this situation is recounted in Acts 25:1–26:32. Here Porcius Festus has succeeded Felix; in addition, Paul has an opportunity to present his case to King Herod Agrippa II. If the testimony of Josephus (*JW* 2.12.8; *Ant* 20.7.1) is accepted, Felix arrived in Palestine during the summer of A.D. 53 and continued in office until the summer of A.D. 55 when he was succeeded by Festus. This would place the trial of Paul in the year A.D. 55. But once again the evidence is contradictory (cf. Tacitus *Ann.* 12.54) and it is possible that Festus succeeded Felix at a later date and a *terminus ad quem* of A.D. 60–61 has been argued (Jewett 1979). This later dating is supported by Plooij's reading of Eusebius' *Chronicle* where the transfer of the procuratorship is placed in the 10th year of Agrippa II (A.D. 59). If this later dating is accepted, it would cohere nicely with the view that Ananias, the high priest who censured Paul during his appearance before the Sanhedrin (Acts 23:1–5; 24:1), was probably replaced as high priest by Agrippa II in A.D. 59 (Josephus *Ant* 20§179).

6. Summary. Given the range of dates just discussed in Acts and the approach championed by J. Knox and most recently especially by G. Lüdemann, an alternative chronology to that given in Table 2 would be as follows, once again remembering that advocates of a similar approach may vary from another in some

details. Since this approach insists on the radical priority of the Pauline correspondence, it is important to follow the sequence of events found in the Pauline letters.

Table 3

Event	*Date (A.D.)*
1. The revelation of the Risen Jesus to Paul in Damascus (Gal 1:12–16)	*ca.* 33
2. The visit to Arabia and the return to Damascus (Gal 1:17)	*ca.* 33
3. "Then *[epeita]* after three years" the first visit to Jerusalem for 15 days (Gal 1:18)—the so-called "acquaintence visit"	*ca.* 36
4. Then *(epeita)* activity in the regions of Syria and Cilicia (and beyond) (Gal 1:21)	*ca.* 36–50
5. Then *(epeita)* after 14 years a second visit to Jerusalem (Gal 2:1)—the so-called "conference visit"	*ca.* 50
6. Activity in the churches of Galatia, Asia, Macedonia, and Achaia with special emphasis on the collection of the offering for Jerusalem (Gal 2:10; 1 Cor 16:1–4; 2 Cor 8–9; Rom 15:25–32)	*ca.* 50–56
7. The final visit to Jerusalem (1 Cor 16:3; Rom 15:25–32)—the so-called "offering visit"	*ca.* 56–57

If one were to assume that the general sequence of the subsequent events outlined in Acts is accurate—two-year Caesarean imprisonment, hearing before Festus, and arrival in Rome—then the dates *ca.* A.D. 57–59 for the first of these and a date of *ca.* A.D. 60 for Paul's arrival in Rome would agree with the parameters of possible dates reviewed above.

While the traditional dating exhibited in Table 2 is still held by many, the chronology itemized in Table 3 is a viable alternative. It has these advantages: it incorporates the recent redaction-critical studies of Luke-Acts in its analysis; it eliminates the long and problematic "silent period" early in Paul's career and intelligently explains the shape of Paul's apostolic activity in that period; it "uncrowds" the entire career of the apostle and provides the context for a ministry that actively spanned a much longer period, thus allowing for the possibility of growth and development both in the apostolic ministry and theology of Paul. Such an approach would allow one to more readily speak of an "early Paul" and a "late Paul," and it would permit placing the concrete, contingent letters of Paul against a broader and wider spectrum of time and activity resulting in a more coherent understanding of the theology of this often complex and paradoxical apostle.

CHURCHES, SEVEN. See SEVEN CHURCHES.

CHUSI (PLACE) [Gk *Chous* (Χους)]. A site mentioned in the book of Judith, whose exact location is unknown (Jdt 7:18). The name "Chusi" appears only here in the biblical literature. It may possibly be identified with the modern village of Quzeh (M.R. 174171), six miles south of Nablus, which, as Torrey points out, is on the direct road to Jerusalem. However, that location ignores the verse's specific reference to the Wadi Makhmur ("near Chusi beside the brook Mochmur"). Taking that into consideration, Aharoni and Avi-Yonah (*MBA*) identify Chusi with modern Kuzi on the Wadi Makhmur, one of the tributaries of the Jarkon river. See MOCHMUR (PLACE). Of course, given the genre of the book of JUDITH, it is entirely possible that the name is fictitious.

SIDNIE ANN WHITE

CHUZA (PERSON) [Gk *Chouzas* (Χουζας)]. A steward (*epitropos*) of Herod Antipas whose wife, Joanna, followed Jesus and supported him with her means (Luke 8:3). Most likely, Chuza was Herod's business manager, but he may have been some kind of political appointee since the Gk term for "steward" may refer to a political office. The fact that the name "Chuza" occurs in Nabatean and Syrian inscriptions (see Fitzmyer *Luke 1–11* AB, 698) may mean that Chuza was a Nabatean married to a Jewish woman. Chuza may have been the royal officer who, along with his entire household, believed after Jesus healed his son from a distance (John 4:46–53). If this were the case, it might help explain why Chuza permitted his wife to travel with Jesus and minister to his needs. The special knowledge of Herod and his court reflected in Luke may have come through Chuza. Luke's mention of Chuza and his wife offers evidence of Christianity within the aristocracy from the very beginning (Marshall *Luke* NIGTC, 317).

VIRGIL R. L. FRY

CILICIA (PLACE) [Gk *Kilikia* (Κιλικια)]. A province mentioned in Judith 1:12; 2:21–25 as an object of the ire of Nebuchadnezzar, who dispatched his general Holofernes with the army to punish the inhabitants for their insubordination. It is later mentioned in 1 Macc 11:14 as the location where Alexander Balas had gone to put down a rebellion and in his absence, Ptolemy usurped his throne. In the NT, the province is most noted as the homeland of the apostle Paul (Acts 21:39; 22:3; 23:34), and which was included in some of his evangelistic efforts (Gal 1:21–23; cf. Acts 15:23, 41).

Cilicia is on the SE coast of Anatolia and consists of two major divisions: Cilicia Tracheia (or Aspera) in the mountainous region W of the Lamus River as far as Syedra in Pamphylia, and Cilicia Campestris (or Pedias), the fertile plain S of the Taurus and W of the Amanus mountains. A limestone ridge, Cebilinur, running S from the Taurus to the coast at Karatas, divides the plain into an E section, where are located Misis and Anazarbus, and a larger W section, accommodating Adana, Tarsus, and Mersin.

———

A. Geography

Cilicia Campestris is a well watered alluvial plain formed by the deposits of the Ceyhan River (ancient Pyramus) in the E and the Seyhan and Tarsus Cay (Sarus and Cydnus Rivers) in the W. The Göksu (Calycadnus) flows through Cilicia Aspera reaching the Mediterranean at Selifke (ancient Seleucia on Calycadnus). These rivers made Cilicia a fertile region for producing grapes, cereals, grain, and flax in ancient times. In ancient times Cilicia had additional economic importance because of its access to rich metal producing areas in the Taurus and Anti-Taurus mountains. The plain also provides a comparatively

easy link between Syria-Mesopotamia to the E and Cappadocia-Phrygia on the Anatolian plateau to the N and W. The Bahce and Beilan Passes, the former being more frequently used in ancient times, provided access to Syria through the Amanus mountains. The Anatolian interior is usually reached from Cilicia through the Taurus mountains at the Cilicia Gates, but also from Selifke up the Göksu River, and passes in the watershed of the Seyhan River N into E Cappadocia in the Anti-Taurus mountains. These passes, the fertile plain, and the proximity of metal ores in the surrounding mountains gave Cilicia strategic importance in ancient times. The excavations at Mersin and Tarsus testify to the long and continuous habitation of the Cilician plain. Numerous ancient mounds extending along a trunk line from the Bahce pass westward to the Lamus River with northern branches from Misis along the Seyhan River and from Tarsus toward the Cilicia Gates indicate extensive village occupation as well as the use of Cilicia as a link between Cappadocia and Syria throughout the ancient period (Seton-Williams 1954).

B. Prehistory and Bronze Age

In the Neolithic period, cultural influences from the Konya plain in the N and from Syria in the E are both apparent in the archaeological strata at Mersin and Tarsus. Cilicia appears to have been a cultural and political crossroad for the Bronze Age as well. Sargon of Akkad, the founder of the first Mesopotamian empire (ca. 2370 B.C.) claimed to control the NW regions as far as Cedar Forest and Silver Mountain. The latter could be any one of several rich silver deposits in the mountain perimeter N of the Cilician plain, while Cedar Forest is likely the Amanus mountains. In the 17th century B.C., the Hittite king, Ḫattušilis I (ca. 1650–1620), marched through Cilicia, and may have been responsible for the artificial rock cut which resulted in the present passage through the Taurus mountains at the Cilician Gates. Hittite domination in this region declined following the reign of Muršili I (ca. 1620–1595), and Hurrians pushed into Cilicia.

In the LB Age Cilicia briefly was ruled by independent kings, at least three of whom were allied by parity treaties with Hittite kings who referred to the region of E Cilicia as Kizzuwatna. Finally in the reign of Šunaššrua of Kizzuwatna, Cilicia became a vassal kingdom in the Hittite empire then ruled by Šuppiluliuma (ca. 1375–1335). The Amarna letters from Egypt, as well as the letters from Ugarit, reflect an interest in Cilician. Analysis of ceramic evidence from Tarsus and elsewhere in Cilicia for this period suggests a Mycenaean presence with close contact with the Mycenaean mainland especially in the Late Helladic III C period (Mee 1978).

C. Iron Age

In the early Iron Age, Cilicia appears to have had a cultural and social pattern similar to other small, contemporary Neo-Hittite states which emerged throughout SE Anatolia, Syria, and N Mesopotamia, whose development was triggered by the collapse of the LB Age empires, population migrations, and invasions. The E plain of Cilicia appears to have been inhabited by a mixed population including Hurrian, Luwian, and Phoenician elements.

This condition is illustrated by the bilingual inscription found at Karatepe in the hills NE of the Cilician plain where the Taurus mountains meet the Amanus. The inscription is on stone steles and sculptures which line two gateways to a fortress citadel, and is written in hieroglyphic Hittite (a script used to write the Luwian language) and in Phoenician. Its Phoenician text is the longest Phoenician inscription found to date. The inscription and associated sculptures have been variously dated from the 9th to the 7th centuries B.C. While some of the material found at Karatepe may date to the 9th century, it is most likely that the inscription and its author, Azatiwatas, date to the late 8th or early 7th century B.C. (Winter 1979; Hawkins and Davies 1978).

The independent Neo-Hittite states of Cilicia, like other similar small states in the surrounding regions were eventually annexed into the Assyrian Empire in the 7th century B.C. The Assyrians called the Cilician plain *Que,* and part of the mountain perimeter to the N and W *Ḫilakku*. Shalmaneser III (858–824 B.C.) was the first Assyrian king to subjugate Cilicia after several annual campaigns against its border defenses. Cilicia continued to be a difficult region to control because of local resistance and the interest taken in the area by Phrygia, Urartu, Phoenician, and Greek traders and colonists who wanted to limit Assyria's power. Sargon II (721–705 B.C.) used Cilicia as the base for extensive military campaigns into the Anatolian interior which resulted in the submission of the Phrygian king to Assyria (Postgate 1973).

With the collapse of the Assyrian Empire, a period of political balance ensued between Lydia, Egypt, Neo-Babylonia, and Media. The treaty on the Halys River in 585 B.C. between Lydia and Media which was arbitrated by Labynetus, a Babylonian, and Syennesis of Cilicia illustrates the political balance of this period (Hdt. 1.74). Possibly at this time Cilicia or parts of it became politically independent. But Neo-Babylonian sources indicate that the Cilician plain (*Ḫume* in Neo-Babylonian) was under Babylonian control. From this territory Babylonia obtained high quality iron. Nebuchadnezzar conquered the Cilician plain ca. 592 B.C., and Neriglissar reasserted Babylonian control over the region in 557/556 B.C., not long before Cyrus the Great brought Cilicia into the Persian Empire.

D. Persian Empire and Hellenistic Period

In the 5th century B.C., the Persians controlled Cilicia through a series of semi-independent vassal kings called Syennesis, and this region served as a mobilization area for military expeditions against the Danube region, Ionia, and Greece. The seizure of Cilicia was an important phase of the expedition of Cyrus the Younger in his revolt against his brother, Artaxerxes, in 401. As a result of Syennessis's cooperation with Cyrus, Cilicia was annexed as a province (satrapy) to the Persian Empire. During the 4th century B.C., a series of satrap generals issued coins in Cilicia which were used to pay mercenary soldiers and other military expenses. The legends of these coins are written either in Greek or Aramaic.

The occupation of Cilicia was also a crucial phase of Alexander's conquest of the Persian Empire. In addition to the good fortune of taking the undefended Cilician Gates, Alexander also fought his first battle against Darius III at Issus on the E edge of the Cilician plain in 333 B.C. The Macedonian king established his first imperial mint outside of Macedonia at Tarsus, the site of Persian satrapal mints as well as the capital of this Persian province. During the struggles of the successors of Alexander (Diodochi), Cilicia often played a military or financial role because of its strategic location between Asia Minor and Syria, its coastal position, and proximity to silver deposits in the surrounding mountains.

In the Hellenistic period, the Seleucids acquired control of the Cilician plain but were challenged by the Ptolemies for possession of Cilicia Tracheia during the 3d century. Antiochus III's naval expedition in 197 eclipsed Ptolemic influence on the W coast of Cilicia. With the Treaty of Apamea, Antiochus retained control of both districts of Cilicia, but had restricted access to Cilicia Tracheia because his naval activity was limited to the coast E of the Calycadnus River. The Cilician plain remained under Seleucid control for the next hundred years. The Seleucid kings pursued a continuous policy of urbanization and hellenization in Cilicia, with many of its towns receiving names in honor of their Seleucid patrons. Antiochus IV Epiphanes (175–164) was especially active in this regard, adding to the already hellenized Tarsus (Antiocheia-on-Cydnus), Mopsuestia (Seleucia-on-Pyramus), and Silifke (Seleucia-on-Calycadnus) the towns of Adana (Antiocheia-on-Sarus), Mallus/Magarsus (Antiocheia-on-Pyramus), Oeniandus (Epiphaneia), and Castabala (Heiropolis). Seleucid control over Cilicia weakened after Antiochus IV, and Cilicia Tracheia came increasingly under the influence of local lords engaged in brigandage who were secure in their mountain fortresses. This region was geographically conducive to outlaws on land as well as by sea (Strabo 14.671). Pirates exploited the timber in the mountains and the numerous small protected coves along the coast with fertile valleys nearby. The region became so infested with pirates that "Cilician" became practically synonymous with "pirate" (Appian, *Mith.* 92).

E. Roman Period

Pompey annexed Cilicia Tracheia into the Roman empire during his campaign against the Mediterranean pirates in 67 B.C. He colonized defeated pirates in Cilicia Campestris at Soloi (refounded as Polpeiopolis), Mallus, Epiphaneia, and Adana, and annexed the Cilician plain at the conclusion of the war against Mithridates VI, king of Pontus. The two regions of Cilicia were joined to the already existing province of Cilicia which consisted of Pamphylia and Isauria. The region E of the Pyramus River remained under control of Rome's friend and ally, the local dynast Tarcondimotus, whose capital was at Castabala (Hieropolis-on-Pyramus).

Roman republican administration of Cilicia was generally corrupt despite the best efforts of the provincial governor, Marcus T. Cicero (51 B.C.), to rectify the maladministration of his predecessor. Conditions in the province worsened during the Roman civil wars which were largely fought in the E.

Cassius imposed severe economic penalties on Tarsus in 43 B.C., and political instability, severe requisitions, and taxes followed Mark Antony's gift of Cilicia Aspera to Cleopatra. By the early principate, Cilicia Aspera was joined to the province of Lycaonia while the Cilician plain was linked to Syria. Two client kings ruled portions of Cilicia: the temple state of Olba in the W, while the region E of the Pyramus came under the control of Archelaus, king of Cappadocia, following the death of Tarcondimotus.

The emperor Vespasian joined Cilicia Tracheia and Campestris to form the province of Cilicia. This emperor as well as Trajan improved roads in Cilicia connecting this region to its neighboring provinces. The Flavians and Antonines promoted urbanization and hellenization within the province, and Hadrian and Antoninus Pius enlarged Cilicia with the addition of Lycaonia and Isauria. These policies were probably designed to strengthen Cilicia's military functions within the empire's defensive system. Road improvements in the reign of Alexander Severus (ca. A.D. 230) further strengthened Cilicia as a conduit for troop movements and a source of military provisions. Many of the governors of the province are known from the Flavian through the Severan dynasties, and a study has been made of their previous and subsequent positions in the imperial administration (Pflaum 1966).

Following the capture of Valerian by the Persians, about A.D. 260, this new aggressive enemy of Rome overran the provinces of Syria and Cilicia. These provinces were recovered for Rome as a result of the counterattacks of Callistus (or Ballista) who was in charge of Roman military supply at Samosata. Due to his efforts, the Roman frontier was restored on the upper Euphrates—part of a broader policy of restoration accomplished by the barracks emperors of the late 3d century culminating in the imperial reunification and reforms of Constantine (A.D. 306–37). As part of these reforms, the administration of Cilicia was divided with Cilicia Tracheia becoming part of the province of Isauria, while the Cilician plain constituted the province of Cilicia. Both Isauria and Cilicia belonged to the diocese of Oriens which also included Arabia, Palestine, Syria, and NW Mesopotamia.

References in the NT to Cilicia consistently link it to Syria reflecting the administrative unity of these two areas during the early principate (Acts 15:23, 41; Gal 1:21; also Acts 27:5). The apostle Paul came from Tarsus, and probably belonged to a prominent Jewish family of that city, holding both local and Roman citizenship (Woloch 1973). The fact that he was a tent maker fits with other evidence which indicated that textile manufacturing was an important industry in Tarsus during the Roman period.

CIMMERIANS [Gk *Kimmerioi* (Κιμμεριοι)]. The Greek name of a group of Indo-European nomadic people possibly to be identified with the descendants of the biblical Gomer in the "Table of Nations" (Gen 10:2–3) and mentioned as providing part of the forces of Gog (Ezek 38:6). The Cimmerians, as they are called in Classical literature, lived on the steppes of Russia. Josephus wrongly equates the Gomerians with the Celtic Galatians (*Ant* 1.123). Homer indicates that the Cimmerians were from a foggy land possibly located along the northern shore of the Black Sea on the Crimean peninsula (*Od.* 11.13–19; cf. Strabo 7.4.3).

There is much debate over the history of the Cimmerians prior to the 8th century B.C. It is thought that they occupied the steppes north of the Caucasus Mountains from the 18th to the 13th century B.C. Then it is likely that they moved south to the area of the Caucasus mountain range and resided there from the 13th

to the 8th century B.C. The Cimmerians were pushed south from the Ukraine region of Russia by the Scythians who, in turn, were being pressed westward by other peoples from farther east.

Several cuneiform texts from the late 8th to the early 7th centuries B.C. record Cimmerian conflicts with Urartu and the Assyrians. The Cimmerians attacked the Urartians twice, once during the reign of Rusa I, king of Urartu (734–714 B.C.) and a second time in 707 B.C. These attacks weakened the Urartians and allowed the Cimmerians to move farther west into eastern Turkey. The threat of the Cimmerians worried the Assyrians and an elderly Sargon II (722–705 B.C.) led an attack against them during his campaign in Tabal. In 679 B.C. Esarhaddon managed to defeat them near Tabal.

The conflict with the Assyrians caused most of the Cimmerians to move further west to central Anatolia. There they attacked Sinope, a Greek colony located along the shore of the Black Sea. In ca. 676 B.C. they destroyed Gordion, the capital of the Phrygian kingdom and home of the legendary King Midas. Strabo records that Midas, distraught over the defeat, committed suicide by drinking bull's blood (Strabo 1.61).

The Cimmerians led three attacks against Gyges, king of the Lydians, the first being between 668 and 665 B.C. It was after this first attack that Gyges pleaded for military aid from the Assyrians. The second Cimmerian attack against Lydia came in 657 B.C. The death of Gyges and the fall of Sardis, the Lydian capital city, came as a result of the third and final Cimmerian attack. The Cimmerians pushed on into Ionia and attacked Smyrna, Magnesia, and Ephesus.

The Cimmerians, under the leadership of Lygdamis (Strabo 1.61; known as Tugdamme in cuneiform sources), then attacked Cilicia in southeastern Turkey. The Assyrian king Ashurbanipal (668–631 B.C.), reportedly killed Tugdamme in battle. Shandakshatru, the son of Tugdamme, then submitted to Assyrian authority and the Cimmerians were no longer an independent entity. The name *Gimmiraia*, however, survives in the Akkadian portion of the Behistun inscription. Cappadocia, later called Gomir by the Armenians, may have been the home of some Cimmerians after their submission to the Assyrians.

CIRCUMCISION. In the ancient Near East circumcision was widely practiced in two distinct forms: certain classes of Egyptian men, especially priests, slit the foreskin to let it hang free; many men from western Semitic groups in Syria and Palestine removed the foreskin altogether. The origins of the practice are irretrievable. Herodotus (5th century B.C.E.) speculated that circumcision had originated in Egypt and then moved E and N around the Mediterranean to Phoenicia. Although his view prevailed among modern scholars until recently, archaeological discoveries have required a reassessment of the evidence. Depictions of Syrian warriors circumcised in the W Semitic manner unearthed in Syria and Egypt date from early in the 3d millennium B.C.E. (Sasson 1966: 473–76). The Egyptian practice of circumcision first surfaces in the 23d century: a stele describes a group rite in which 120 men were circumcised (*ANET,* 326). On the basis of this evidence, Sasson argued that the practice began among NW Semites and moved S where Egyptians adapted it. His assessment accounts for the data currently available.

Hebrews adopted the W Semitic practice of circumcision as they moved into Palestine (Genesis 17; Josh 5:2–9). Because circumcision occupied a central place in the Hebrew sense of cultural and religious identity, each generation had to appropriate and interpret it. As a result, the Hebrew understanding of the rite's significance became extraordinarily rich. The subject divides neatly into three divisions: Hebrew writings, Jewish writings authored between Alexander's conquest (333 B.C.E.) and the Bar Kokhba Revolt (132–35 C.E.), and early Christian writings.

A. Hebrew Writings

1. Circumcision behind the Stories

2. The Bloody Bridegroom (Exod 4:24–26)
3. Circumcision of Abraham
4. Circumcisions at Gilgal (Josh 5:2–9)

B. Greek and Roman Periods to the Bar Kokhba Revolt
1. Consolidating Circumcision
2. Explaining Circumcision to the Greeks
3. Neglecting Circumcision

C. Early Christians and Circumcision
1. Circumcision Is Necessary
2. Circumcision Is Irrelevant
3. Jews Should Circumcise; Gentiles Should Not
4. Literal Circumcision Is Abolished
5. Circumcision Used Positively

———

A. Hebrew Writings

The stories concerning circumcision as told in the Hebrew scriptures already show the richness which results from long reflection. Differing conceptions intertwine below the surface of these stories. Although disentangling these conceptions will not suffice to interpret the stories from which they come, it can isolate ideas significant for the Hebrew understanding of circumcision.

1. Circumcision behind the Stories. Circumcision was a marriage or fertility rite. Israelites cannot marry Shechemites until Shechem circumcises himself and all his men (Genesis 34). Zipporah announces that circumcision has made someone a "bloody bridegroom" to her (Exod 4:25). Whatever her enigmatic phrase means, it implies connection between marriage and circumcision even if it loses that significance in the Exodus account. The story of Abraham presupposes a rationale for uniting a marriage with circumcision: Only after Abraham's circumcision can Sarah bear a child or can Abraham have the right child who will be blessed by God. Circumcision is a fertility rite to ensure a goodly number of offspring blessed by God.

Circumcision was also an apotropaic rite, that is, a ritual to ward off evil. In a Phoenician myth El escapes grave danger by sacrificing his only son, then circumcising himself and his confederates (Euseb. *Praep. Ev.* 1.10.33, 44; cf. Flusser and Safrai 1980: 46). Although this passage is late (from Philo of Byblos, ca. 100 C.E.) it probably preserves an ancient Phoenician belief that circumcision turns evil away. In Exod 4:24–26 an act of circumcision turns aside a threat of death. Conversely, uncircumcision delivers kings and armies to the fullest possible experience of death, relegating them to the deepest corner of Sheol (Ezek 28:10; 31:18; 32:19–32; Lods 1943: 271–83). When later Jews, by analogy with Passover blood, attribute to circumcision sacrificial value to thwart the destroying angel (Flusser and Safrai 1980; Vermes 1958), they elaborate ideas long implict in the Hebrew conception of circumcision.

E. Isaac (1965) argues that circumcision served as a knife rite to ratify a covenant. Parties to a covenant, after killing an animal, swore by imprecation: if I fail to keep this covenant may the knife turn on me. The Abraham story associates circumcision with a covenant (Genesis 17). Similarly circumcision is associated with an agreement between Israel and the Shechemites (Gen 34:14–17). Perhaps the circumcisions at Gilgal (Josh 5:2–9) occurred at a covenant renewal ceremony. Yet this motif lies below the surface and was not developed in later Hebrew literature.

Although many of the surrounding nations practiced it (Jer 9:25–26), circumcision gave Hebrews a sense of national identity. This usage peaked when the Hebrews confronted "uncircumcised" nations, the Philistines (Judg 14:3; 15:18; 1 Sam 14:6; 17:26, 36; 31:4 [cf. 1 Chr 10:4]; 2 Sam 1:20), the Babylonians and the Greeks.

The heart (Deut 10:16; 30:6; Lev 26:41; Jer 4:4; 9:25–26), the lips (Exod 6:12, 30), the ears (Jer 6:10, and even fruit trees (Lev 19:23–25) are called circumcised or uncircumcised. What are the connotations on which these metaphors rely?

Passages which use the metaphor of the circumcised heart cluster in the Exile and in the years immediately preceding it. The heart is the thinking, willing part of a human being; hence the passages hold up the ideal of a circumcised mind, one which delights in the obedient love of God (Deut 10:16; 30:6). An Israelite with an uncircumcised heart differs not at all from a Gentile whose nation practices circumcision (Jer 9:25–26). Only those with a circumcised heart can experience the blessings of the covenant of Abraham (Jer 4:4; cf. 4:2) or return from exile (Lev 26:41; Deut 30:6) or enter the rebuilt temple (Ezek 44:7, 9). A circumcised heart is a mind of the right kind, one able to participate in a covenant with God. Human beings ordinarily circumcise their own hearts, but God promises to do so after the exile (Deut 30:6).

Moses complains that he has uncircumcised lips: he delivered God's message to the people and they did not respond (Exod 6:12, 30). Again the metaphor concerns ability for participation in what God is doing; since the problem cannot be with God's word, it must be with Moses' lips. In the subsequent narrative God responds by giving Moses heightened ability for the task: God will make Moses like God to Pharaoh (7:1).

Jeremiah speaks of uncircumcised ears which cannot hear the warning God issues through him (Jer 6:10). These are ears unable to participate in what God is doing; they cannot hear God's message.

Israelites must not eat from newly planted trees for their fruit is uncircumcised (Lev 19:23–25). This injunction is a specific instance of the command, "You shall be holy for I the Lord your God am holy" (19:2). Uncircumcised fruit is unsuitable for a people participating in God's holiness.

In the Hebrew Scriptures the metaphorical use is consistent. Circumcision connotes suitability for participation in what God is doing. It follows that physical, literal circumcision also carried this meaning. Circumcision made Israel fit to participate in God's activity as God's people. This meaning for literal circumcision lies behind the requirement that only the circumcised may eat Passover (Exod 12:43–49).

Hence Hebrews could draw from a plethora of significances when interpreting stories about circumcision. They could emphasize connotations of marriage and fertility, of covenant making, of deliverance from evil, of suitability for participation within God's activity, and of national identity. Of course, few stories make use of all of these ideas. We now turn to several of the more important stories to see how these ideas intertwine.

2. The Bloody Bridegroom (Exod 4:24–26). The most vexing of all stories about circumcision is that of Zipporah, her son, and the "bloody bridegroom" (Exod 4:24–26). The many puzzles of this passage reduce to two: What does the phrase "bloody bridegroom" mean? Does God seek to kill Moses or Moses' son?

The first puzzle stems from the ordinary meaning of the Hebrew word translated "bridegroom" (*ḥātān*). Since Moses and Zipporah have at least one child, "bridegroom" describes Moses poorly. Applying "bloody bridegroom" to Zipporah's son fares even worse. In Arabic *ḥatan* can also denote one who is circumcised. Perhaps Zipporah declares, "You are a blood-circumcised one for me" (Kosmala 1962: 27). Whether or not the story presupposes the meaning "circumcised one," the last verse of the story shows how the final editor wants the reader to understand the phrase: "She said '*ḥătan dāmîm*' concerning circumcision" (Exod 4:26) as if to say "Don't worry about this puzzling phrase; Zipporah was talking about circumcision, nothing more."

The second puzzle concerns antecedents of the pronouns in the passage. Do the masculine pronouns refer to Moses or Zipporah's son? Although the story does not mention Moses by name (the RSV clarifies the text by introducing Moses' name in 4:25), ambiguous masculine pronouns most naturally refer to him. But God has just charged Moses with a message and sent him to deliver it to Pharaoh. Why would God immediately waylay his messenger? If God attacks Moses, the story hardly fits its context.

What if God seeks to kill Moses' son? This requires mental agility from the reader, but, once the reader makes the required leap the story not only fits the context but makes a positive contribution to the argument. The message with which Moses has been entrusted threatens Pharaoh's first born son with death (Exod 4:23). If uncircumcised, Moses' own son is a son of Egypt, unable to live once the prophetic word has gone forth against Egypt's first born. Zipporah wards off the threat of death by circumcising her

son and daubing him with the blood. The story not only foreshadows the later events of Passover but also confirms the commission God has just given Moses. The narrow escape of his son is a sign that Moses' message is true: not even Moses' own son is safe apart from the covenant of circumcision; how much less Pharaoh's!

Since the story fits its context better if the pronouns refer to Moses' son than if they refer to Moses, probably this is the intention of the final author. Perhaps the author has made some attempt to narrow the gap the reader must leap. After all the author has most recently been writing not about Moses but about firstborn sons. Perhaps he gave another clue that is now obscured. Changing one letter in the Hebrew phrase "in the way" *(bdrk)* yields "your first-born son" *(bkrk).* The text may originally have read "When his first-born son was at the lodging, God met him and sought to kill him" (Exod 4:23). Other interpretations of this difficult story have been well defended. See Childs (*Exodus* OTL, 90–107), Kosmala (1962), Kaplan (1981), and the literature they cite.

The Zipporah story draws upon a number of the themes discussed above. Circumcision incorporates Moses' son into Israel, God's first born. It wards off death from him as an apotropaic, sacrificial rite. It fits him to partake in what God is doing.

3. Circumcision of Abraham. The authors of Genesis 17 lived in a culture, probably during the Exile, which did not practice circumcision. They had to explain why Israelites should circumcise their children. They drew gladly upon traditions which claimed that circumcision ensured many offspring who would be blessed by God and who would experience what God was doing for his people. Before Abraham's circumcision Sarah is not fertile; afterward she is. Before his circumcision Abraham can only beget Ishmael; afterward he can beget Isaac, the child blessed by God. The chapter generalizes the principle: to experience the promise of many children blessed by God in the land, Abraham's children through Isaac must be circumcised on the eighth day (Gen 17:8, 14). But, since they were uncomfortable with the magical associations these claims had, the authors invented a new mode of operation: circumcision does not bring about these blessings; God has promised them. Circumcision is a mnemonic sign of the covenant with God. It reminds both God and Israelites that they are God's and he is theirs; that he has chosen them and that they are in the sphere of his working (Fox 1974). With circumcision Israelites commit themselves to living in this sphere; hence, to neglect it is to read oneself out of God's people. Since circumcision denotes the beginning of this new sphere of existence, both Abraham and Sarah change names. Although Abraham, like Phoenician El, both circumcises himself and seeks to offer his son as a sacrifice, Genesis no longer assumes that circumcision completes the sacrifice of an only son. However, the stories may be connected at another level (Flusser and Safrai 1980; Alexander 1983).

4. Circumcisions at Gilgal (Josh 5:2–9). Editors of the Joshua story wondered why the Israelites were not circumcised already and gave three answers: (1) Israelites were already circumcised but are circumcised a second time. Sasson (1966) suggests a plausible background for this explanation: They had been circumcised in the Egyptian manner; now they made the incision all the way around, "rolling off" (from the same root as Gilgal) the reproach of Egypt (Josh 5:2, 9). (2) The children of those who had disobeyed God and hence wandered in the wilderness had not been circumcised but were circumcised at Gilgal so they could eat Passover (cf. Exod 12:44–48). (3) The LXX preserves a different explanation: some of them had not been circumcised in Egypt.

The authors may have included the story because it connects circumcision with entering the land. Probably the backdrop is exilic. Why should we circumcise? Because only the circumcised can participate in what God is doing, only they can enter the land and take it. Their parents, who had neglected circumcision, could not.

B. Greek and Roman Periods to the Bar Kokhba Revolt

With the arrival of the Greeks came strong cultural pressure against circumcision. Greek sensibility accepted public nudity but strongly recoiled against removing the foreskin. Greeks considered a bare glans so repugnant, perhaps indecent, that those born with a defectively short foreskin frequently submitted to epispasm, surgery designed to restore the foreskin to its natural shape (Celsus *Med.* 7.25.1; Soranus *Gynecology* 2.34; Dioscorides 4.153; Hall 1988). Even those adequately endowed frequently

secured the foreskin in place with a string or a pin (fibula), a practice called *kunodesme* in Greek, *infibulation* in Latin (Kreuls 1985; Celsus *Med.* 7.25.2), lest the glans inadvertently be revealed. Since the Romans shared the Greek repugnance toward circumcision, circumcision became the target of horror, contempt, scorn, and ridicule (Martial *Epigrams* 7.35, 82) throughout the period.

Cultural pressure against circumcision manifested itself in several ways. Since Jews were widely known to be circumcised, they were frequently ridiculed and ostracized. The Greek gymnasium or the Roman bath, both favorite institutions of those who could afford them, presupposed public nudity. The severe social stigma against circumcision discouraged Jews from participating. Greek athletics offered lower class boys of ability one of the readiest avenues for social and economic advancement, but since athletes competed naked, those who were circumcised could not compete. In Alexandria and probably other cities organized on the Greek pattern, citizenship hinged on Greek descent and successful completion of training as an ephebe. Since ephebes regularly exercised in gymnasia, circumcised Jews had to dispense with the privileges of citizenship. After the Jewish War (66–72 C.E.), Rome levied a tax on all circumcised Jews to support the worship of Jupiter Capitolinus. The tax not only imposed a financial burden; it also made it impossible for Jewish men to avoid the stigma of being Jewish by ceasing to practice Judaism. Suetonius tells with sympathy how an elderly man, who for years had not lived as a practicing Jew, was stripped in court, found to be circumcised, and forced to pay (*Dom.* 12.2). Two rulers outlawed circumcision on pain of death: Antiochus IV Epiphanes, a Greek Seleucid ruler (ca. 160 B.C.E.), hurled mothers and their circumcised babies from the walls of Jerusalem (1 Macc 1:48, 60–61; 2 Macc 6:10; *4 Macc. 4:25*); Hadrian, a Roman emperor, considered circumcision the moral equivalent of castration and outlawed both, precipitating or responding to the Bar Kokhba revolt (Smallwood 1959).

This stiff resistance to circumcision produced several responses among Jews. Some consolidated the traditional emphasis on circumcision so that circumcision became even more important than before. Some, educated in the Greek mode, retained circumcision and sought to explain it in ways acceptable to Greek sensibility. Some Jews, abandoning circumcision but not Judaism, allegorized circumcision and practiced a Judaism consonant with the best ideals of Greek culture. Some abandoned Judaism with circumcision and faded entirely into their cultural surroundings. We will examine these groups in turn.

1. Consolidating Circumcision. As *Jubilees,* written shortly after the Hellenizing reforms of Jason the High Priest (175–172 B.C.E.), takes a rigid stance against Greek culture, so it staunchly supports the necessity of circumcision. Those who are circumcised live in the godly sphere of existence; the uncircumcised live in a sphere dominated by evil. After narrating the ancient institution of circumcision by divine command to Abraham, an angel reveals to Moses the necessity of circumcision. Evil spirits rule the nations to deceive and annihilate them, but God rules Israel. Circumcision removes Israelites from the dominion of evil, places them under God's reign, and sanctifies them to experience God's presence with the holy angels who were created circumcised (*Jub.* 15:25–34). Circumcision determines the sphere in which one lives: the uncircumcised are dominated by evil, the circumcised, being ruled by God, experience his blessing. A paraphrase of the Shechem story demands that Israelite daughters not be given to the uncircumcised (*Jubilees* 30). To do so would place them outside the sphere of God's activity. Since not everyone physically circumcised fits in God's sphere, circumcision of the heart is necessary as well. When people repent God will circumcise their hearts and include them in his sphere as his children (*Jub.* 1:23–25).

The community at Qumran, which owned several copies of *Jubilees,* elaborated the doctrine of circumcision found in *Jubilees* and added a thrust of its own. Circumcision removes one from the wicked sphere and places one in the sphere of God: entering the community resembles Abraham's circumcision in that it frees one from the Angel of Enmity (CD 16:4–6). Those ruled by the spirit of truth in the community circumcise the foreskin of inclination (1QS 5:5). From the Qumran writings, metaphorical circumcision signifies the ability to receive or impart revelation. Circumcised ears can hear God speak the truth (1QH 18:20); uncircumcised lips cannot speak God's message truly (1QH 2:7, 18). Because those at Qumran viewed the rest of Israel as apostate, they used circumcision metaphorically rather than literally to define the sphere where God works. Yet in doing so they follow a path blazed by *Jubilees.*

Flusser and Safrai argue that the traditional Jewish blessing for the rite of circumcision praises God for instituting circumcision to save Abraham and his kin from destruction. If so, this blessing draws upon the same circle of ideas: circumcision removes one from the sphere of evil. Levi presupposes the same conception of circumcision when he argues against circumcising the Shechemites since God's wrath burned against them (*T. Levi* 6:3).

The LXX and the Targums interpret Zipporah's circumcision of her son as a sacrifice. The blood of circumcision atones for the guilt of Moses, thus warding off the angel of destruction who seeks to kill him (Exod 4:24–26 in LXX, *Tg. Onq.; Frg. Tg., Tg. Neof., Tg. Ps.-J.;* Vermes 1958). Somewhat later than the period of interest here, the Mishnah and Talmud elaborate the sacrificial significance of circumcision and speak of the blood which ratifies the covenant (for references to circumcision in the later works see Betz's remarks: *TRE* 5: 717–19).

Other books emphasize the necessity of circumcision without offering a rationale. Judith and Esther pointedly mention circumcision of proselytes (Jdt 14:10; Esth 8:17 [LXX]). The Hasmoneans regularly permitted residents of conquered territory to remain only if they submitted to circumcision (1 Macc 2:46; Joseph. *Ant* 13.257, 318–19, 397). As in *Jubilees* Hebrew daughters should only marry circumcised men (Joseph. *Ant* 20.139, 145). In the LXX recension of the book of Esther, the heroine abhors the bed of the uncircumcised (Esth 14:15). Moses is blessed by what the Greeks abhorred; like the angels in *Jubilees,* Moses was born circumcised (*L. A. B.* 9:13).

All of these works counter the Greek threat against circumcision by reasserting its necessity or explaining its significance. Circumcision atones for guilt as a sacrifice, transfers one from the realm of the deceiving, destroying angels to the realm of blessing, and sanctifies one for participation in heavenly worship in God's presence. It is folly to neglect it, folly inspired by the demonic rulers of the uncircumcised.

2. Explaining Circumcision to the Greeks. Jews who wanted to participate in Greek culture as fully as possible had to deal with the Greek prejudice against circumcision. Josephus and Philo, from the 1st century, and Artapanos, who wrote somewhat earlier, probably fit in this category.

Although Josephus projected but did not complete a book on the customs of the Jews, his existing works offer some clues. God gave circumcision to keep Abraham's posterity from mixing with others (*Ant* 1.192). As Jews circumcise on the eighth day to follow Isaac's example, so Arabs follow Ishmael in circumcising in the thirteenth year (*Ant* 1.214). Apion, an Egyptian, abuses the Hebrews for practicing circumcision and teaching the practice to others. Josephus, by pointing out that Egyptians circumcised priests and, according to Herodotus (2.104), taught others to follow their example, turns the tables on him (*AgAp* 2.141–44).

Artapanos claims that Moses originated Egyptian and Ethiopian as well as Israelite customs. Moses established (pagan!) deities for the various nomes within Egypt. When he heads an army against the Ethiopians, his enemies emulate his circumcision (Eus. *Praep. Ev.* 27.10). Artapanos hopes to defend and honor the customs Moses established, especially circumcision. If Egyptians and Ethiopians still obey the customs Moses gave them, why should not the Hebrews obey him as well?

When specifically replying to ridicule against circumcision (*Spec Leg* 1–11), Philo divides his defense of circumcision into two parts. In the first of these, attributed to divinely gifted men of old, Philo lists four reasons justifying circumcision: (1) it renders one less susceptible to disease, (2) it promotes that cleanliness of the whole body is necessary for priestly sanctification, (3) it likens the circumcised member to the heart (since the heart begets thought, the highest excellence to issue from human beings, it is fitting for the member which alone begets sensible things to resemble the heart as much as possible), (4) circumcision, by clearing the way for the seed, enhances fertility (*Spec Leg* 2–7). To these Philo adds two allegorical reasons: since the mating of man and woman is the most imperious of pleasures, circumcision tokens the excision of those pleasures which bewitch the mind. Since human beings readily arrogate to themselves the power to produce children, circumcision shows in the begetting member that the prerogative belongs to God alone (*Spec Leg* 8–11; cf. 304–5; *Migr* 92). Philo further elaborates his ideas in his commentary on Genesis 17 (*Ques Gen* 3.46–62).

3. Neglecting Circumcision. Every religious or cultural tradition has its dropouts. In the face of the severe social pressure against circumcision in the Greco-Roman period, many Jews quietly bowed out and joined the dominant culture, ceasing to practice circumcision. So much cannot be disputed, but dispute does arise over whether some Jews created a Jewish theology capable of offering a rationale for neglecting the practice of circumcision. This dispute, when reduced to the least common denominator, concerns whether a Jew who does not practice circumcision is apostate. Recognizing that "apostate" applies differently within differing confessional groups, we will sidestep this question by applying the term "Jewish" to any theology held by those claiming to live as Jews.

Evidence for compromise with Greek sensibility is strong. Martial twice mentions Jews who have hidden their circumcision by infibulation (*Epigrams* 7.35, 82). Celsus describes an operation (epispasm) to restore the foreskin of those who were circumcised (*Med.* 7.25.1). References to Jews who had submitted to epispasm begin about 150 B.C.E. and last throughout the period of interest here (1 Macc 1:15; cf. Joseph. *Ant* 12.241; *T. Mos* 8.3; 1 Cor 7:18; *m.* ›*Abot* 3.16; Epiphanius *Mens.* 16; frequent in Babylonian Talmud; Hall 1988). *Jub* 15:33, written in the middle of the 2d century B.C.E., mentions two ways Israel transgresses circumcision: by cutting off too little of the foreskin, by leaving their sons just as they were born. Removing too little of the foreskin clearly concedes to Greek sensibility; not only would it facilitate infibulation and epispasm, but a sufficiently small cut would hardly show even without these expedients. Both forms of neglect were problems throughout the period. Mattathius forcibly circumcised uncircumcised Jewish boys (1 Macc 2:46) as, perhaps, did Bar Kokhba (*t. Šabb.* 15:9; *b. Yebam.* 72a). *2 Baruch* 66:5, in attributing a similar action to good King Josiah, presupposes that the problem of uncircumcised Jews was ever present. The Mishnah must stipulate removal of the entire foreskin for circumcision to be valid (*b. Šabb.* 137a–b).

Some references to neglect of circumcision presuppose a rationale. Those Jewish parents who cut off a minute portion of their son's foreskins show as much concern for Jewish tradition as they do for Greek sensibility. After all, their quarrel with other Jews concerns not whether circumcision should be done but what constitutes circumcision, a matter of interpreting traditions which were vague when the question first arose.

Some Jews required proselytes to be baptized but not circumcised. *Sibylline Oracle* 4.163–170 pleas for all mortals everywhere to repent and be baptized but does not mention circumcision. Ananius, a Jewish merchant (ca. 50 C.E.), after working hard to convert Izates, Prince of Adiabene, tried to dissuade him from offending his subjects by being circumcised. Ananius argued that, in his case, keeping the ordinances of God in a general way sufficed (Joseph. *Ant* 20.38–48). Although the rabbis staunchly supported circumcision of proselytes, a debate between Eleazer, who maintained that circumcision alone could make a proselyte, and Joshua, who maintained that baptism alone sufficed, may reflect issues raised first by those who thought circumcision of proselytes unnecessary. Philo, although he probably wished proselytes to submit to circumcision (*Migr* 92), says that the real proselyte circumcises not his uncircumcision but his passions (*Quaes Ex* 2.2). Such thinking, in other minds than Philo's, probably justified allowing proselytes to remain uncircumcised.

Philo criticizes Jews who so allegorized the law that they robbed it of its literal meaning. They repudiated sabbaths, feasts, the temple, and circumcision, among many other things (*Migr* 89–93). ›*Abot* denies a portion in the world to come to those with a similarly defective practice (›*Abot)* 3.16; cf. a similar list in *b. Yoma* 85b). Ignatius warns the Philadelphians against listening to Judaism taught by those who were uncircumcised (Ign. *Philad.*6.1). Such passages imply that some Jews dispensed with practices offensive to Greeks by interpreting them allegorically. Since they still valued the law and other Jewish traditions, they represent a Jewish theology which found circumcision unnecessary. (For further consideration of this topic see Collins 1985.)

C. Early Christians and Circumcision

Like Jews of the same period, early Christians differed in their stances toward circumcision. The issue certainly threatened and probably fractured the unity of the early church. One question dominated the dispute: how could Christians inherit the blessings regularly associated with circumcision? This question

broke down into several others: Was circumcision necessary for Christians? What does circumcision mean? How does what God is doing in Christ fit with what God did in the past through Abraham's covenant of circumcision? Answers to these questions took several forms: (1) what God has done in Christ is part of the wonderful thing God did in Abraham, hence circumcision is necessary for all (Paul's opponents); (2) what God is doing in Christ surpasses anything he did in the past, hence circumcision, valuable in itself, now is irrelevant (Paul); (3) in Christ the plan of God has widened to include the gentiles; Jews should circumcise, Gentiles should not (Luke-Acts); (4) a proper reading of Scripture shows that literal circumcision is abolished (Ephesians, *Barnabas, Diognetus, 4 Ezra* 1–2); (5) others sidestep the central questions to use the imagery of circumcision to illustrate a point (John, *Odes of Solomon, Gospel of Philip*).

1. Circumcision Is Necessary. Although no early Christian writing advocating circumcision for all Christians has survived, Luke describes a group of Judean Christian Pharisees who find circumcision and observance of the Law of Moses necessary for salvation (Acts 15:1, 5). Paul faces similar opponents in Galatians. Since Paul argues that the decisive move from the sphere of evil to God's sphere occurs in Christ, his opponents probably made a similar claim for circumcision. In analogy with the claims in *Jubilees* and other works, Paul's opponents probably claimed that without circumcision the Galatians belonged in the present evil age (Gal 1:4) enslaved to "elemental spirits" or "beings not gods" (Gal 4:1–11) and that they could not partake of the heavenly blessings belonging to the descendants of Abraham (Gal 4:21–5:1). The opponents in Colossians, whether they have elaborated the spirit world in Essene or Pythagorean directions, adapt similar ideas. In Phil 3:1–21 Paul does not counter a heavenly mythological thrust: those who advocate circumcision are concerned only with earthly things (3:19). Hence some early Christians saw what God was doing in Christ as part of what God had done in Abraham; therefore, they required circumcision. A subset of this group adapted older and current Jewish arguments to explain the necessity of circumcision. Since circumcision removed human beings from the dominion of evil and included them in the rule of God where Christ was, and since circumcision fit them for the heavenly Jerusalem where Christ was at God's right hand, circumcision was necessary for salvation.

2. Circumcision Is Irrelevant. Paul and his followers argue that advocates of universal circumcision have failed to grasp what God is doing. Contrary to the kind of thinking preserved in *Jubilees*, not circumcision but faith in Christ assures acceptance before God. Since the heavenly court reckoned Abraham righteous by faith before he received circumcision, and since God's promise made Abraham father of many nations, not of Jews alone, circumcision does not produce acceptance with God but only signifies it (Rom 4:9–12; cf. 15:8–9). Reliance upon circumcision obligates one to keep the rest of the law; failing that, circumcision becomes uncircumcision (Gal 5:3; Rom 2:25–29; cf. Jer 9:25–26). But the law, only a temporary restraining injunction handed down by the heavenly court, sentences everyone to death (Rom 3:9–19). Justification and acceptance before the heavenly court comes in Christ and is awarded to faith as with Abraham (Rom 3:21–5:5). Hence circumcision, far from assuring acceptance before God, actually condemns anyone who trusts it. Those who exalt circumcision seek salvation from a part of God's plan designed to give condemnation. Not circumcision but Christ makes one fit to stand before the heavenly court.

As Christ, not circumcision, assures acceptance with God, so Christ, not circumcision, assures deliverance from the reign of evil powers. Not those in the covenant of circumcision but those in Christ are children of Isaac through Sarah, born for freedom not slavery (Gal 4:21–5:1). Not those circumcised and keeping the law are free from the "elemental spirits" and "beings not gods" but those in Christ (Gal 4:1–11). It is Christ who delivers from the present evil age (Gal 1:3–4) and makes a new creation (Gal 6:15).

Concern for literal circumcision shows a mind set on the flesh, on the earth, on the old age, not on the Spirit or on heaven (Gal 6:1–13; Phil 3:2–21; Col 3:11). Real circumcision is of the heart; it is spiritual not literal and belongs, in Christ, to Christians (Rom 2:25–27; Phil 3:2–5; Col 2:11–13) who worship God in Spirit, who glory in Christ, and who put no confidence in the flesh (Phil 3:3).

Paul sums up his thinking in a series of allied statements: circumcision is irrelevant: "neither circumcision nor uncircumcision is anything, but a new creation" (Gal 6:15; cf. Gal 5:6; 1 Cor 7:19). A circumcised man should not seek epispasm; an uncircumcised man should not seek circumcision; each should remain as God called him (1 Cor 7:18–19). Circumcision has its place, even its value (Rom 3:1–2), but it neither removes one from the realm of evil nor fits one for God's presence. Only Christ delivers human beings from this present evil age and reconciles them to God.

3. Jews Should Circumcise; Gentiles Should Not. Luke-Acts chronicles the transition in God's plan. Jesus reveals the plan at the climax of the work: Christ must be rejected, suffer, and rise; repentance and forgiveness must be preached to all nations; you are witnesses of this plan (Acts 2:14–42; Luke 24:46–48). The transition in the plan begins squarely within the promise to Abraham: both John the Baptist and Jesus are circumcised, and, like Abraham, receive significant names at their circumcision (the giving of names at circumcision does not appear to be the usual Jewish custom). Stephen's speech makes a crucial transition: Abraham receives the promise along with circumcision (Acts 7:8) and recognizes God's fulfillment of it by circumcising Isaac. But the rest of the speech proves that Israel never recognizes the fulfillment of God's promises. Stephen concludes: despite its circumcision, Israel is uncircumcised in heart and ears; Israelites always resist the Holy Spirit. If resisting the Spirit implies that circumcision has become uncircumcision, receiving the Spirit implies that the uncircumcised have entered the plan of God (Acts 10:45, 11:2–3). This raises a question: Must Gentiles be circumcised to be saved (Acts 15:1, 5)? The council under the Holy Spirit (Acts 15:28) discerns that the plan of God includes Gentiles as the are and Jews as they are. Hence Jews must circumcise and keep the law of Moses; Gentiles must keep only the Noachic commands binding on all human beings (Acts 15:19–29). The principle is illustrated when Paul circumcises Timothy, who has Jewish blood, and when Jerusalem Jews are suspicious of Paul not because he teaches Gentiles not to circumcise but because they erroneously suppose he teaches Jews not to circumcise their sons (Acts 21:21). Luke thus endorses a mediating position: the newly revealed plan of God includes Jews as Jews and Gentiles as Gentiles. Brown (1983) probably does not have quite enough evidence to label this new view "Hellenist"; I would call it Lukan.

4. Literal Circumcision Is Abolished. Ephesians asserts the view of circumcision current among Jews of the 1st century but rigorously limits it to the past. Circumcision once effectively separated Jew from Gentile, uniting the former to Israel, to the covenants, and to God, but denying all hope to the latter (Eph 2:11–12). By abolishing circumcision among other such commands, Christ has included Gentiles and Jews in one new body with access to the Father (Eph 2:13–22). In part because circumcision is nullified, Ephesians readily announces that Gentiles are no longer sojourners (proselytes?) but full-fledged citizens (Eph 2:19).

The *Epistle of Barnabas* indulges in full-blown allegorical interpretation to assert a much less sympathetic view of circumcision. Circumcision of the flesh has been abolished. Not those who are uncircumcised but those who require circumcision are deceived by an evil angel (*Ep. Barn.* 9:4). Christians, however, have received true circumcision of heart and ears which reveals to them what scripture really says (*Ep. Barn.* 9:1–3, 9; 10:12). *Ep. Barn.* presents a mirror image of Qumran: although it equates circumcision of heart and ear with revelation as do the Qumran writings, it assumes that the angel of error inspires the literal practice of circumcision, instead of apostasy from the law.

In the *Gospel of Thomas,* Jesus denies the value of literal circumcision but upholds an unspecified spiritual value of true circumcision (*Gos. Thom.* 53). Later Christian writers view circumcision as silly (*Diognetus* 4.1, 4) or as ineffectual with God (*4 Ezra* 1:31).

5. Circumcision Used Positively. As it is right to circumcise on the Sabbath, so it is right to heal on the Sabbath (John 7:21–24). Though this argument is similar to a rabbinic one (*m. Ned.* 3.11), John invests it with special nuances. The argument presupposes that circumcision retains the connotations of blessing it commonly has in Jewish works and on this basis sets up a typical Johannine contrast between Moses and Jesus. You do not delay the blessings of circumcision, how much less the far greater blessings of what Jesus does. Circumcision from Moses cures in part; healing from Jesus cures completely.

In *Odes of Solomon* 11 circumcision is a metaphor for salvation which opens the odist to God and enables him or her to receive revelation and to experience a heavenly trip. Here common Hebrew notions of circumcision form a complex metaphor with many connotations. As at Qumran or in *Jubilees* circumcision fits the odist for the experience of God and enables the reception of revelation, but the odist speaks of something more than physical circumcision. He speaks of an act of the Holy Spirit which uncovers himself toward God.

A positive use of circumcision persists as late as the Gnostic Christian *Gospel of Philip* (*Gos. Phil.* 82.26–29). As Abraham circumcised himself when he received revelation it is proper for others likewise to destroy the flesh (Jewett 1971: 199, 212).

The use and significance of circumcision in ancient Hebrew and Christian writings is rich with diversity. As common with other religious practices, the meaning of circumcision resists reduction to a least common denominator. The foregoing review illustrates both the consistency and complexity of circumcision as a religious concept in the Judeo-Christian tradition.

CIRCUMLOCUTION. A rhetorical device (often employed in the Bible) involving deliberate evasiveness in speech or writing, talking around a delicate subject rather than using straightforward references. For example, defecation is sometimes referred to as "covering one's feet" (Judg 3:24; 1 Sam 24:3). See BIBLE, EUPHEMISM AND DYSPHEMISM IN THE.

CISTERN OF SIRAH (PLACE). See SIRAH, CISTERN OF (PLACE).

CISTERNS. See AGRICULTURE.

CITIES. There is no single definition of a city. As a cultural phenomenon, the nature of a city depends on the social and historical context within which it evolved (Eisenstadt and Shachar 1987). Generally speaking, however, a city is a permanent settlement which serves as a center for a large region and whose population is engaged in activities additional to agriculture. This entry consists of two articles that treat this subject. The first surveys cities in the Levant, particularly focusing on the emergence of the Israelite city in the Iron Age. The second surveys cities in the Greco-Roman world, focusing especially on the model of the Greek *polis.*

CITIES IN THE LEVANT

Urbanism in the Levant, as in other regions, is a cyclical process that reappeared roughly every millennium: in the Early Bronze Age (ca. 3000 B.C.E.), in the Middle Bronze (ca. 2000 B.C.E.), and in the Iron Age II (ca. 1000 B.C.E.). Each of these urban phases was preceded by a period of village life and pastoral nomadism. Emergence of cities is therefore an adaptive process rather than a result of diffusion of ideas or population.

A. Steps Toward Urban Life: The Chalcolithic Period

Before the Chalcolithic Period, evidence for urbanization is minimal and ambiguous. Pre-Pottery Neolithic Jericho is usually given the status of a city on account of its defensive wall. However, that position needs to be modified in light of Bar-Yosef's convincing demonstration (1986) that the wall was in fact a retaining wall against floods, built only at one side of the village. Therefore the first solid evidence for urbanization is found in the Chalcolithic Period, at which time large communities demonstrated the characteristics of a stratified society, such as the production of prestige goods and the establishment of ceremonial centers. The need for a centralized institution arose, possibly, from the unpredictability of agricultural yields and the deterioration of economic conditions at the end of the Chalcolithic period (Horowitz 1978). The cultic elite, which established itself around ceremonial centers, was the only entity that could control the storage and redistribution of cereals and cope with the difficult economic situation. One city in this period, Tuleilat-Ghassul, appears to be one continuous settlement of about 20 hectares with a temple surrounded by a ceremonial temenos. Other such centers arose, such as Gilat, a settlement of about 10 hectares in the northern Negeb, and En-Gedi in the Wilderness of Judah. A complete picture of the development of a ceremonial center into an urban one is offered so far only at Megiddo; this took place in the next stage, the Early Bronze Age I. A temenos with twin temples was erected above a village in Stratum XIX, followed by a fortified settlement in Stratum XVIII.

B. The First Cities: The Early Bronze Age

1. Early Bronze Age I. The first clear representation of a city in the Levant is Hububa Kabira on the Upper Euphrates dated to the late 4th millennium. See Fig. CIT.01. The city has a preplanned rectangular layout, a developed system of fortifications, a network of streets and, on a raised elevation, separated buildings constructed for the city's elite. The earliest urban center in Israel, roughly contemporary with Habuba Kabira, is found in the Early Bronze Age I at Tel 'Erani, in the Southern Coastal Plain (Kempinski and Gilead 1988). However, very little is known of this city so far. It covered about 15 hectares and contained public structures, a city wall and square towers. The complex process of urbanization seems to have gained momentum during the later part of the EB I, as indicated by the presence of fortifications at sites like Aphek, Tell Shalem, and Tell el-Far‘ah (north) and ‘Ai.

2. Early Bronze Age II. The general nature of an urban center in Israel may be studied from the detailed information on cities of the EB II, such as Arad and Megiddo.

The city of Arad, located at the southern edge of the Judean Hills and bordering the valley of Beer-sheba, is the best preserved and most widely exposed city in Early Bronze Age II. Like previous Chalcolithic and EB I villages at the site, the city occupied several elongated hills in a horseshoe shape around a central depression, in which runoff water was collected and stored. On the crest of the surrounding hills a modest city wall, 2.25 m wide, was constructed, from which semicircular towers projected; the wall was segmented by a main gate and several secondary gates. The excavator's interpretation of "a grid of streets, which includes streets running parallel to the wall and radial streets leading into the city centre" (Amiran 1980: 6) cannot be observed on the plan. The inner urban matrix of Arad is rather determined by the shape of its dwelling units. These are compounds created by the

arrangement of the dwellings, storage units and fences encircling a central open space (such compounds are called "Huerdenhaus" by Heinrich (*RLA* 4: 173–220). Each compound covers about 150–200 m^2 and includes at least one broadroom dwelling (the "Arad House") and several working and storage installations. Part of the central courtyard was probably used to pen the flocks. The "streets" are simply the open spaces between the compounds. See Fig. CIT.02. Besides the city wall, the only other public structure is a rectangular "fort" which dominates the central water reservoir. Two of the larger but otherwise unremarkable compounds are interpreted by the excavator as palace and temple units. If this identification is correct, it indicates that the concentration of power at Arad was not extensive.

The limited evidence on the early phase of the city (Stratum III) shows many open spaces and numerous clustered circular stone platforms, which served as bases for silos. It seems, therefore, that the city was erected not as a result of population growth and prosperity, but rather as an adaptation to the economic stress of a sparse population, with the aid of a system of redistribution organized by a central authority.

Cities built in the Early Bronze Age II were uncovered at several sites but, due to later overlying occupation layers, they could be exposed only in limited areas. Fortified cities were excavated at Beth-Yerah, Tell el-Far‘ah (north), Khirbet Makhruk, Megiddo, ‘Ai, Jericho, Tell Yarmut, and Bab edh-Dhra‘, to mention the main ones. They are characterized by very thick city walls (4.00–5.00 m), which, when attached to existing walls from the previous phase, could reach a total width of about 10 m or more. Semicircular or rectangular towers offered the defender the possibility of aiming flanking fire over the "dead area" at the foot of the wall. In some instances like at Tell Yarmut a large bastion and a stone covered glacis were added.

Two types of gates were used in an Early Bronze Age city: a main gate more than 2 m wide, which allowed the passage of fully laden beasts of burden, and several secondary narrow gates (0.80 to 1.00 m). An example of a main gate is the entrance to Tell el-Far‘ah (north) protected by two impressive towers. Secondary (or postern) gates are known from Arad, ‘Ai, Jericho and Tell el-Far‘ah (north). It is suggested that the multiple passages met the requirements of the farmers who inhabited the large cities of the period, allowing them direct access to their fields.

In addition to fortifications, an important communal concern was the water supply. The cities at Arad and ‘Ai took into consideration the topography in such a way that rainwater within the city was directed into large reservoirs. The water inside the walls was vital in both times of siege and periods of drought. The internal organization of the city shows little attempt at planning. Household units arranged in compounds were typical at Arad, Tell el-Far‘ah and Jericho, but no street networks can be observed.

The only remarkable structures inside EB II cities are ceremonial buildings usually called temples. The importance of temples in the period is clearly attested by the large scale construction, the thick walls, the orthogonal layout and the superb building materials used for these edifices. The temple at ‘Ai, located on the summit of the mound, was shaped as a broadroom with outer measurements of 22.00 by 9.50 m. In the center of the hall were four stone bases for wooden columns which supported the roof. An auxiliary room surrounded it on three sides, probably serving as the storeroom of the temple.

The first clear evidence of a process in which the temple establishment developed into a military-political power base is in the fortified citadel built in Stratum XVIIIB at Megiddo. The citadel was protected by a 4.00-m-wide wall and had a gate guarded by towers. The area inside the citadel, which was only partly exposed and poorly preserved, contained part of a broadroom temple. A broadroom temple was erected also at Bab edh-Dra‘ in EB II, while its later phase and the city's fortifications date to EB III. A large compound at Arad is interpreted by some scholars as a temenos with twin temples and by others as the dwelling of an affluent family.

3. Early Bronze Age III. During the EB III the process of urbanism reached its peak: fortifications were expanded, the internal layout of the city became more complex and many new cities such as Hazor and Lachish were erected for the first time, although several urban centers, such as Arad and Tell el-Far‘ah (north), were abandoned at the end of EB II. These developments are evident from architectural elements related to religious, economic, military and political institutions. The relative importance of

these elements in the city reflects the crystalisation of the role of the social elite in the urban centers and their struggle for power.

Megiddo is the best example for illustrating the important role of the temple. In Stratum XVI a new temenos was constructed, to the west of and higher up the mound than the previous one. The new temple is an impressive structure with an innovative plan: a combination of a local traditional broadroom and the northern megaron (Ben-Tor 1973); it consisted of a cult room (13.75 by 8.90 m) with two central bases and a porch with two pillars before it. Behind the back wall of the temple stood a circular stone platform 8.00 m in diameter and 1.40 m high, generally interpreted as an altar. Alternatively, it may be considered the base of a central granary (Herzog 1986a): it is not located, as other altars are, in front of the temple, its size is much larger than that of any known altar, and the fence around it prevented worshippers from participating in the ceremony. On a lower terrace than the temple stood a large building which served as a palace. Although it was not completely exposed, the palace is a neatly planned unit separated into two wings by a narrow corridor and by a street on the three exposed sides. Its inferior topographical position and thinner walls show the lower status of the palace in comparison to the temple, or in social terms, the superiority of the cultic role of the elite—apparently due to control of the central granary—over its political role. In the same phase, the city wall was doubled in thickness and extended over additional lower sections of the city, providing an early example of a separately fortified acropolis.

In Stratum XV at Megiddo, in the latest phase of the EB III period, the city saw an even more dramatic increase in the role of the religious establishment, when in addition to the previous temple, another two identical megaron-like temples were erected. The temenos with three large temples dominated the whole mound and the use of the palace was discontinued. The grandiose appearance of the center was further enhanced by a monumental gateway, built over the dismantled remains of the previous palace. The gateway contained two straight approaches with stairs, set between three rectangular structures. The 15-m-long parallel flights of stairs and the relatively thin walls of the flanking rooms point to a ceremonial rather than a military function.

Important information regarding economic organization on the community level comes from Beth-Yerah, on the southern shore of the Sea of Galilee. A well planned structure covering 1200 m^2 included nine circles, each 8 m in diameter, sunk into a wide stone base. The circles were arranged around a square area divided into a courtyard and a room measuring 11.00 by 4.50 m, the roof of which was supported by two columns. A corridor 3 m wide led into the courtyard. The building is generally interpreted as a public granary and its total capacity was about 2500 m^2, or 1750 tons of grain. Such a large quantity surely had to be gathered from a populous community of farmers, which indicates a complex redistributional economy. The broadroom plan of the central room and the column bases very much resemble the typical temples of the period. The ceremonial function of the central unit is further supported by the presence of several large ovens in the courtyard, in front of the suggested cult room. If this interpretation is correct, then Beth-Yerah is another example of the correlation between the religious and economic social institutions in the EB III city.

Another aspect of urban life, emphasized in some cities, are large bastions incorporated into the fortifications. Their location, size (about 10 by 20 m) and the thickness of their walls show us that the role of the city guard had developed into a powerful and independent institution. The bastions, like those at Jericho and Tell Hesi, were undoubtedly several stories high, and their rooms could accommodate soldiers, weapons, and food.

C. Gap in Urban Life: The Early Bronze Age IV

The decline of urban life was a long and complex process that started already at the end of the Early Bronze Age II with the abandonment of important cities such as Arad, Tell Erani and Tell el-Far‘ah (north). However, by the end of the Early Bronze Age III, most cities in Palestine had ceased to exist. It is as yet unclear what the forces were that caused such a drastic social upheaval, forcing large communities to abandon their homes in cities and move into small villages or to convert their way of life to pastoral nomadism. In cases such as Megiddo or Lachish, where some objects date to the Early Bronze Age IV, the poor architectural remains of a rural or nomadic nature demonstrate this great break. The only

exception known so far is Khirbet Iskander in trans-Jordan, where a 7.5 acre site surrounded by a 2.50 m wall is dated to this period. Rich urban centers, such as Hama and Ebla, flourished at this same time in northern Syria, indicating that the social change did not influence the entire Levant.

D. Second Urban Period: The Middle Bronze Age

Restoration of urban life in ancient Israel was not a revolutionary event. In most sites the first phase of occupation was represented by an unfortified settlement. This shows that urbanism was reestablished by groups of local farmers and pastoralists who found it worthwhile to live together in towns. Early in the Middle Bronze Age I, fully advanced urban centers emerged, first in the coastal and inner plains and then in the rest of the country.

Megiddo serves again as the key site to illustrate the developmental process. The only element in Stratum XIIIB is the old temple of Early Bronze Age III, reused in Early Bronze Age IV, now used again as a cult chamber with a few poor dwellings around it. In Stratum XIIIA the city is fortified with a buttressed wall, a projecting tower and a city gate with stairs leading into a bent-axis gate entrance. The houses near the cult area are slightly larger and better arranged, but the dramatic development in the acropolis happens in the next phase. In Stratum XII the old temple is finally abandoned and replaced by another small cult chamber with a thin fence, but to the west an impressive palace is now constructed, built with 2.00-m-thick walls over an area of about 1000 m^2. Blocks of houses fill the space between the palace and the city wall. The houses, which are of medium size, uniformly oriented with straight streets, were probably used as dwellings by the city's well-to-do families. The order in which the architectural elements appeared at Megiddo teaches us how the social institutions were consolidated: at first, when the military aspect was of prime importance, the city was fortified, later the political elite expressed its ascendancy with a monumental palace, but in both phases the religious aspect is hardly noticeable.

A similar picture, although less detailed, unfolds in other cities. The dominant structure in MB I fortified sites such as Tell Aphek is a courtyard palace, which in this case covers an area of 750 m^2. Not a single temple is known in the excavated urban centers of the period. This fact, which contrasts so strongly with the importance of the temple in the previous Early Bronze Age II–III, reflects the change of social organization in the cities of the Levant. Clearly the power in this period was no longer in the hands of the theocratic elite but had been taken over by the ascendant political-military class. Like other characteristics of this urban phase, the palaces, arranged around large courtyards, are obviously inspired by the formidable palace complexes in northern Syria, such as those at Mari and Tell Mardikh (Ebla). Large courtyard palaces were constructed also in many of the MB IIB cities such as Hazor, Shechem, Lachish, Aphek and Tel Sera‘.

City walls in the Middle Bronze Age were of modest width (about 2.00 m), but various improvements indicate that protection of cities was based more on the availability and mobility of professional soldiers than on the passive dependence on solid walls. First, towers or bastions were erected along the city walls, at intervals of 20.00 to 30.00 m. These could serve both as accommodations for the garrisons and as firing platforms. Such installations were excavated at Tell Beit Mirsim, Tel Zeror, Megiddo, Gezer, and Tel Poleg. A huge bastion at Tell Mardikh points again to the origin of this defensive feature. A second improvement of the MB I fortifications was the systematical maintenance and repair of the glacis covering the slopes outside the walls. Smooth, steep slopes made any attempt to climb up to the walls very difficult.

But the most important innovation regarding city planning was the erection of very large cities not on previous mounds (which were evidently too small), but on entirely new and flat areas, such as the lower cities found at Qatna (100 hectares) and Tell Mardikh (56 hectares) in Syria and Hazor (60 hectares) in Israel. These new settlements were surrounded by enormous earthen ramparts, which could reach a width of 60.00 m at their base and a height of 15.00 m, as in the western rampart of the lower city at Hazor. In front of this rampart was a moat, 15.00 m deep, from which most of the soil for the construction of the rampart was taken. Since no city walls were found incorporated into the ramparts, they apparently did not serve as fortifications against military attack. Instead, their erection seems to indicate peaceful times, when the large communities that settled the new urban centers were satisfied simply with the demarcation

of the city's limits. Unlike city walls which required professional masons and expensive construction materials, earthen ramparts could be piled up by the thousands of unskilled inhabitants within a short period. As such, the ramparts provided fast and cheap means for delimitation of the city's borders, and their steep slopes could prohibit access by thieves or other undesirable elements.

This interpretation of the earthen ramparts is supported also by the unique design of the city gates commonly associated with them. The gates are shaped like strong forts consisting of two large towers and a passageway between them, narrowed down by three pairs of piers. Absence of a city wall is seen here again: no wall was found attached to the gates but instead they were joined into the ramparts by short "anchor walls." Two sets of doors, one on the outer and one on the city side, converted this building from a simple fortified entry into an independent stronghold (Herzog 1986b). The absence of city walls clearly encouraged the introduction of this type of gate. The guards could control the daily traffic through the gate and could repel enemies on either side in times of emergency. Gates of this type, associated with earthen ramparts, were found at Tell Mardikh, Qatna, Carchemish and Alalakh in Syria, where both elements probably originated in the MB I—and at Yavneh-Yam and Hazor in Israel. This gate was eventually adopted in cities fortified by conventional walls in Israel, such as Megiddo, Shechem, Gezer, Beth-Shemesh and Tell el-Far‘ah (south). It had the advantage of providing the ruling class protection not only from foreign enemies but also against internal attempts at revolt.

A glimpse at the internal organization of a MB I city is provided at Tell el-‘Ajjul. See Fig. CIT.03. The city covers an area of 12 hectares and is demarcated by a 3 m high earthen rampart and a 6 m deep glacis, without a city wall. On a raised elevation of the city, close to the main approach way, stood the Courtyard Palace I covering about 1500 m^2, built contemporaneously with the first erected City III. The excavations of the residential quarter cleared mostly the later City II, which, however, followed the same plan as Stratum III. The area was filled with large blocks of houses, erected along straight streets 3–4 m wide, bisected by narrower lanes. The buildings in the city were not equal in size: it seems that each block included one house occupied by a more affluent family (200–400 m^2) and the rest were smaller dwellings. Towards the end of the Middle Bronze Age II dramatic developments in city planning are apparent, best illustrated by Stratum X at Megiddo. Here a new temple was erected above the remains of the previous cult place, starting a new tradition of shrines with a long room and thick walls. The temple, which stood inside a large temenos, was joined at its west by a large palace, with an entrance from the temple courtyard. At the same time, a second palatial center was established on the northern side of the mound, an area which gradually developed into the sole location of the city's palaces. Here a 6-pier city gate was built adjoining the new palaces on either side. These changes may be explained as the result of a final split in the structure of the ruling class; at first large palaces were erected near the traditional religious center and later they became completely independent. Another important change first observed at Stratum X at Megiddo is the absence of a city wall; the city was simply encompassed by a belt of houses, a feature that became common in the subsequent Late Bronze Age. Residential areas in all excavated parts of the city were well organized and had a common orientation. In the area east of the temple, a grid of perpendicular streets is observed.

E. The Decline of the Canaanite City: The Late Bronze Age

Cities in the Late Bronze Age show continuation and even elaboration of some aspects of the late Middle Bronze Age, but at the same time there is some deterioration in many other elements of the urban structure. New palaces, designed apparently as enclosed citadels, are constructed next to the city gate and are entirely separated from the temples. Fortification systems, on the other hand, are mostly neglected: often the old city wall or earthen ramparts are reused without any repair, but in other instances, such as Megiddo and Lachish, the city is surrounded solely by a belt of houses with no city wall at all. The religious institution seems to maintain some power, and temples continue the tradition from the MB II period; the reduction of their status within the social structure of the city is indicated by their removal from the area of the royal palace.

These developments are especially clear in Strata IX to VII at Megiddo. In area AA the former temple of Stratum X was rebuilt and reused throughout the whole period, but the large building on its western

side was diminished in size and gradually disappeared. Concurrently, the palaces near the gate constantly grew in size, in width of walls and in the complexity of their design. The excavated part of the palace in Area AA, west of the city gate, covers about 1500 m^2 and the one in Area DD 1200 m^2. In view of the lack of a city wall, it may be suggested that the gate and the two palaces were actually parts of an enclosed royal citadel occupying about 7000 m^2 and separated from the other cultic and residential quarters. This theory is supported by the large palatial citadels found immediately inside the main gates in major urban centers like Alalakh and Ugarit. The desire to erect such enclosed palaces stimulated their transfer into the gate area. In an unwalled city it was essential to provide the palace complex with a defensible entrance. The buttressed outer walls of the palace in Area AA at Megiddo in Stratum VIIB were shaped in the Egyptian style and were intended to serve as a symbolic expression of power and to camouflage the lack of real military strength.

If this interpretation is correct, a separate entry to the "civilian" part of the city might have been necessary; in fact, such a passage may be observed in the plans of Strata IX–VII, immediately west of the palace, where there is a clear gap between the palace and the outer walls of the adjacent structures. In area CC at the southern side of the city a residential quarter was extensively exposed in Stratum VII. The thin walls and small size of units in this area stand out in bold contrast to the luxurious palaces in the N citadel and demonstrate an extreme lack of socioeconomic equality in the social structure of the inhabitants. See Fig. CIT.04.

No site other than Megiddo is so far available for a comprehensive view of a Late Bronze Age city, but similar elements may be recognized even in partly excavated sites. Cities protected by a belt of houses instead of a city wall are known, in addition to Megiddo and Lachish, at Tel Batash, Tell Beit Mirsim and Jericho. Such conditions probably existed in many other sites of the Late Bronze Age where no city wall was found. Large buildings of the Late Bronze Age called forts, fortified palaces or public buildings by their excavators were exposed in otherwise unfortified sites, such as Tell el-ʿAjjul, Tell el-Farʿah (south), Tel Seraʿ, Ashdod, Taʿanach, and Beth-shean. It is very likely that these structures were also enclosed palaces, separated from the rest of the city occupied by the common people.

The archaeological data on the nature of cities in the Late Bronze Age exposes the degree of exaggeration of the Egyptian records which describe the conquered Canaanite fortified cities; obviously it was merely the enclosed palaces that they had to overcome. One of the exceptional cases of a fortification wall erected originally in the Late Bronze Age is at Tell Abu-Huwam, where a 2-m-wide city wall is attributed to Stratum V. In the 13th century a new type of building, called the "governor's residency," is found in several sites with clear Egyptian influence. These were compact forts of about 200–500 m^2 with a small center courtyard surrounded with rooms on three or four sides. Column bases in some of the courts probably indicate that half of the space was shaded. Governors' residencies were found at Beth-shean, Tel Hesi, Tel Seraʿ, Tell Jemmeh, Tell el-Farʿah (south) and Tel Masos and served the Egyptian administration that controlled the country. Stronger Egyptian fortresses were built along the main coastal road: at Haruvit, Deir el-Balah and Tel Mor (Oren 1984). Many of these centers functioned until the termination of Egyptian rule in Canaan, in the middle of the 12th century B.C.E. The intensified activity of the Egyptians was generated not by a sudden flourishing of Canaanite culture but by an attempt to maintain the economic viability of the land despite the collapse of the local system.

F. Emergence of the Israelite City: The Iron Age

1. Variety of Settlement Forms in Iron Age I. In spite of the general decline, urban culture did not totally disappear in the Iron Age I, but survived in several cities such as Megiddo Strata VIIA and VIA and Lachish Level VI, alongside the above-described Egyptian administrative and military centers. The character of the Philistine cities in their initial occupational phases in the late 12th and early 11th centuries is not yet clarified due to the limited extent of the excavations of sites such as Ashdod, Tel Miqne and Ashkelon. It is only from the late 11th century that the site of Tel Qasila is able to provide an indication of the nature of a Philistine town. See Fig. CIT.05. Although relatively small, it has an orthogonal layout with a network of perpendicular streets, parallels of which are known from Cyprus

(Negbi 1986). Functional division inside the town of Tel Qasila includes quarters for craftsmen and temple priests. No palace or fortifications were uncovered there.

New settlements founded in the hinterland in Iron Age I, generally attributed to the Israelites, demonstrate different phases of the sedentarization process of pastoral nomads. The sites range from a simple camp of huts with storage granaries (Beer-sheba Stratum IX), through groups of enclosures (Giloh), to densely occupied villages (Beth-shemesh). All these are unfortified sites without any attempt at planning. This concept is first seen in the "enclosed settlements," such as those at Beer-sheba Stratum VII (see Fig. BEE.01) and Izbet Sartah. These settlements are designed with an eliptical belt of dwellings arranged around an open courtyard, which apparently served to pen the flocks (Herzog 1983). The large site of Tel Masos, identified variously as Israelite, Amalekite, or Canaanite, also seems to incorporate one or more enclosed settlements in addition to administrative and commercial buildings.

2. Iron Age II: Criteria of Planning. In Iron Age II, cities developed into full urban systems, organized for the first time under a United Monarchy, which, however, was soon divided into the kingdoms of Judah and Israel. Cities were established in both of these states according to an overall administrative-hierarchical scheme. Several criteria may be applied for the analysis and interpretation of the degree of planning of the city and its role in the system (Herzog 1987; Shiloh 1987).

a. Size of City. Iron Age cities were of medium size, about 3 to 7 hectares, but the capitals at Jerusalem and Samaria grew to be 30 to 50 hectares, attracting a considerable population.

b. Administrative Buildings. The higher the rank of a city in the hierarchical order, the larger were its administrative buildings. They were also more closely grouped together on higher elevations, and had a more organized layout. Under this heading are included the palace of the king or the city's governor, the temple, storehouses, and open spaces for markets and army encampments.

c. Fortifications and Water Systems. Solid city walls were the most costly. Casemate walls were less effective but much more economic in regard to materials and space. The simplest defense was the outer belt of houses usually found in cities located at some distance from the border. Cities of higher rank were equipped with systems of water supply which enabled them to withstand long periods of siege.

d. Street Networks. In the better planned cities, streets were of constant width and ran in continuous lines, parallel or radial to the city wall. Channels under the streets allowed fast drainage of rainwater and reduced the danger of dampness undermining the foundations of the buildings.

e. Construction Materials. The strongest, most impressive and most expensive construction materials were the ashlar stones widely applied in the monumental architecture of this period (Shiloh 1979). More ordinary materials were the unhewn stones used for foundations and the mudbricks used extensively in the superstructures.

f. Domestic Architecture. In high-ranking cities, dwellings tended to share a common plan in strictly allocated plots of land. In unplanned cities, houses varied in shape and size, resulting in a high percentage of unbuilt and wasted space.

3. Hierarchical Order of Cities. a. Royal Capitals. Of the two capitals of the Iron Age, only the acropolis of Samaria, capital of the N kingdom of Israel, is widely exposed, but it provides a remarkable illustration of the royal quarter of the city. See Fig. CIT.06. The acropolis was a large rectangular area, which extended in its final stage over 2.6 hectares, and necessitated quarrying, leveling, and infilling operations on the summit of the hill. It was surrounded by wide casemate storerooms on most of its circumference and by a solid wall on the rest. On the S side stood the royal palace with an open courtyard in front of it. The N part had a well-planned street grid, occupied by dwellings of the noble families of the court (in one of which the Samaria ivories were found). West of the palace was an administrative office which contained an archive of ostraca. Although not completely preserved, enough remains of the acropolis at Samaria to show its monumental scale, strict planning, and superb ashlar masonry, all befitting the superior social status of its occupants.

Similar features were surely incorporated into the architecture of the acropolis at Jerusalem, which has not been archaeologically explored. In addition to the king's palace it also housed the royal cult center: Solomon's Temple. Part of a huge stepped retaining wall exposed in Area G of the recent excavations

probably served to support the wall of the acropolis. Around the raised acropolis, the civic parts of the capital were located. Royal acropolises of the same pattern are known from N Syrian capitals such as Zenjirli, Carchemish and Tell Taʿainat.

b. Major Administrative Centers. Cities of the second level in the state hierarchy, which apparently served to supervise a single district of the kingdom, were only about 5–7 hectares in size. The administrative functions were performed in different sectors of the city and occupied a considerable part of it.

At Megiddo the increasing entrenchment of the bureaucracy is evident when comparing Strata VA and IVB. In the first phase of the early 10th century B.C.E., it was still an unwalled city, protected by a belt of buildings and entered through a simple gate. Two large structures were dedicated to administrative functions. These were Palace 1723 with a large square courtyard and an adjacent building in the S and Palace 6000 near the gate on the N. The rest of the area (about 75 percent) was filled with common dwellings. In the second phase, in the late 10th century, the city was fortified by a solid wall of the offsets and insets type and a large six-room gatehouse. More than 80 percent of the city's area was allocated for administrative buildings. They included: the city wall and gate, Palace 338, 17 royal storehouses (assumed by some scholars to be stables), large open courtyards apparently used as camping grounds for merchant caravans or army units, and an elaborate water system. See Fig. CIT.07. The concentration of administrative functions is even greater at Lachish Level III of the 8th century B.C.E. Here at an elevated palace, two types of storehouses and an immense rectangular courtyard were exposed. The common population was crowded into a few small, miserable dwellings at the foot of the raised palace. As the result of the large section allocated for administrative functions in these Iron Age cities, only limited space was available for dwellings. For example, apparently only 500–700 people lived at Lachish at this time (about 100 per hectare).

These characteristics indicate that, unlike in the Bronze Age, the Israelite city did not have a large population of agriculturalists but rather a limited number of families belonging to the political, military, economic and religious elite of the monarchy.

c. Secondary Administrative Centers. For smaller, economically less important districts another type of city plan was followed. The best example is seen in Stratum II at Beer-sheba, a small fortified city (ca. 1.1 hectare) of the late 8th century B.C.E. See Fig. CIT.08. The administrative units, such as storehouses, water system and governor's residence, were not confined to a separate quarter but were organically integrated with the dwellings. This is evident most clearly in the association of the houses and the casemate city wall; the casemates served as the rear rooms of the adjoining dwellings. The complete city is neatly planned with two circular streets running parallel to the city wall. Apparently, the entire city was a royal administrative center.

d. Fortified Provincial Towns. In this category are fortified sites in which the city wall is the only clear public element. Dwellings inside the settlement are scattered haphazardly in an agglutinative pattern. Stratum A at Tell Beit Mirsim is typical of such towns, demonstrating a total lack of planning. Instead of streets of equal width as at Beer-sheba, here the spaces between the houses are of uneven size. In the initial phase of the stratum no administrative structures were exposed, not even a proper city gate. Evidence of light industry such as olive presses, looms, dying installations and pottery kilns, apparently related to royal estates, may provide partial explanation of the function of these towns. In addition, the fortifications of the town could have served as part of the regional defense framework of the monarchy.

e. Fortresses. Although these were not cities, they provide an interesting view of a "condensed" city. Fortresses such as that at Arad illustrate all the administrative functions: fortifications for military needs, stores and industrial quarters for economic functions, a royal temple serving the religious needs, and dwellings for the commander and his staff.

4. Assyrian Provincial Capitals. Stratum III at Megiddo offers a view of the layout of such a city. See Fig. CIT.09. It is characterized by an orderly street network, which was, however, more regular for the north-south streets than for the east-west ones. Each block was 65–75 feet deep, and the width of the street was about 8–10 feet. A full one-third of the city was occupied by several large courtyard palaces.

Lack of separation between the palaces and the other dwellings may indicate that the whole city was occupied by high functionairies of the Assyrian administration, however, no similarly planned Assyrian center has yet been found in the Levant.

GRECO-ROMAN CITIES

Greco-Roman cities throughout the ancient world were based on the model of the Greek *polis.* The Greek *polis* was a politically and economically independent community centered around one town, usually walled but also including the surrounding countryside (see Fig. CIT.10).

———

A. The Classical Greek Polis
B. The Hellenistic Greek City
C. The Roman City

———

A. The Classical Greek Polis

The tradition of the *polis,* the Greek city-state, goes back at least to the 7th century B.C., when local tensions between landed aristocrats, poor peasants, and upwardly mobile merchants produced a system of independent political units. On the mainland of Greece, on the west coast of Asia Minor, and in colonies sent out to the Black Sea and the western shores of the Mediterranean (especially Sicily and southern Italy), the geographical boundaries of these *poleis* varied from narrow mountain valleys of uncertain fertility to broad expanses of rich ground.

The citizen body of a *polis* was smaller or larger depending on whether the city had an oligarchic or democratic constitution, and membership in it was tightly controlled. The citizens met in an assembly to hear reports and to register their reactions to proposals which normally originated in a *boule,* a council usually composed of members of the old aristocratic families. A small group of magistrates administered the political system and the civic religious rites. They were normally elected or appointed for terms of a year.

Besides the aristocratic elite and the larger group of citizens, the population of most cities included a variable number of free resident foreigners and of slaves. In comparison with a modern city, the *polis* was small—the little island of Keos in the 5th and 4th centuries had four separate *poleis,* the smallest with

about 700–800 inhabitants, and represents the lower range of population; Athens, with perhaps 40,000 adult male citizens and a total population of about 200,000 in the 5th and 4th centuries, was the largest *polis* in Greece.

The financial affairs of the *polis* show common collaboration of the population in public work. Large projects were assigned to the wealthy, in the form of "liturgies" [*leitourgiai,* literally "people-work"]. These might include the requirement to outfit a warship, pay for a religious procession, or sponsor a dramatic performance. Public construction was sometimes undertaken by corvee labor. Other expenses of building and maintaining temples and other public structures were paid by income from *polis*-owned farms and mines, and from taxes and tolls (usually levied on foreigners and resident aliens).

The *polis* was the whole community of citizens, and the whole land area they possessed. When the Athenians for example referred to a political or military action of their city they called it, not "Athens," but "the *polis* of the Athenians." The surrounding hinterland was an indispensable part of the *polis.* Citizens regularly owned farms in the country, even if they lived in the town where they practiced their citizen rights, and the economy of the *polis* was inextricably tied up with the agricultural produce of its fields. The army and citizen assembly were both made up, in the classical era, of farmers. Both (*Plato Rep.* 2.369B–372A) and Aristotle (*Pol.* 1.1252a26–1253a3) mention self-sufficiency as a characteristic of the *polis*, though even they recognized that imports enrich city life. Grain was often imported from near or far during a shortage, and luxury items were traded in small quantities by traveling merchants.

The Greeks regularly regarded the *polis* as the natural form of human society. When Aristotle (*Pol.* 7.1328b2–23) in the 4th century B.C. names the essential characteristics of the *polis*, he lists: a supply of food, necessary skills and crafts, military supplies, commerce, religion, and a system of justice. Five hundred years later, in the second century A.D., Pausanias considers similar needs when he writes (10.4.1) that a *polis* is defined by a municipal office, gymnasium, theater, *agora,* and public water supply.

The normal Greek word for the urban sector within the city walls was *asty*. Certain types of buildings, invented to fit the particular needs of *polis* life, became characteristic of the classical Greek city. The *agora,* a market and gathering place, was the center of public life. It was either located physically at the center of town or demarcated by streets and monuments to claim a dominant position. In or near the *agora* stood the essential political buildings: steps or bleachers for the citizen assembly; a *bouleuterion,* an enclosed stepped building to house meetings of the council; and a *prytaneion,* a houselike structure with a symbolic civic hearth, and meeting and eating facilities for the magistrates. Roofed colonnades called "stoas" provided shelter, and allowed the talk, commerce, and legal proceedings of the *agora* to go on no matter how hot the sun or insistent the rain. In the *agora*, and in many other parts of the *polis*, both inside and outside the walls of the *asty*, were sanctuaries. Sanctuaries were usually defined precincts which might be furnished with springs, stoas, statues, commemorative inscriptions, cooking facilities, and temples. Normally the most architecturally elaborate of the city's buildings, temples provided shelter for dedications and cult statues. Another prominent architectural complex was the *gymnasion,* where young men were educated intellectually and physically, and where adults continued their education, exercising, listening to lectures and readings, and visiting with acquaintances. The gymnasium (of which the Academy, Lyceum and Cynosarges at Athens were examples) was frequently located outside the walls where there was more space for its sand-covered open-air exercise court (*palaistra*), its school rooms and changing rooms, its colonnades, its shrines, and sometimes its gardens. A *stadion* also provided place for exercise, and for the athletic contests which were an important part of civic festivals. A theater, arranged on a hillside to face a circular *orchestra* ("dancing floor") where at festivals chorus and actors performed at the bottom of the slope, also provided continuing education in the tradition and myths of the *polis.*

In the *asty*, richly appointed public spaces and two or three main streets often contrasted strongly with crooked, modest, even squalid alleys leading to houses which were, at least in the face they presented to the street, small and unpretentious. In older cities, which had grown organically during the early stages of *polis* development, streets tended to wind casually along the lines of early roads, sheep tracks, and property boundaries. In others, new foundations where surveyors were able to begin with a clear plot of ground, a grid imposed some regularity on the town plan and the surrounding farm land. Colonies in the

Greek west (Paestum in Italy, Agrigentum in Sicily, for instance) show a characteristic Greek grid plan: in one direction run three or four parallel, widely spaced avenues, intersected by many smaller, perpendicular, streets. The grid produced was composed of blocks, their narrow ends facing the main streets, their long sides facing the side streets. This rational grid plan was codified in the 5th century B.C. It leaves traces in literature at Thurii in Italy (Diod. 12.10.7), and on the ground at Olynthus in Greece and Miletus in Asia Minor. Later, during the 4th and 3d centuries, it became standard, as at Hellenistic Thessalonica, where the blocks measured 100 × 50 m. At places like Priene in Asia Minor we find it imposed on a steeply sloping, not particularly hospitable hillside site.

This grid plan became identified with the urban theories of Hippodamus of Miletus (Arist. *Pol.* 2.1267b–1268a), who in the 5th century B.C. wrote of a utopian *polis* of 10,000 citizens, composed of craftsmen, farmers, and soldiers. He also provided for a rational legal system, and for democratically elected magistrates, who were to take care of public property, resident aliens, and orphans.

The *asty* was normally bounded by some sort of defensive wall, although Sparta, relying on its soldiers, claimed to need no wall. (Plato *Leg.* 778, recommended Sparta's model, though Arist. *Pol.* 1330–1331, vigorously disagreed, maintaining that a wall was essential for a city's well-being.) From the 8th to the 5th centuries, city walls were usually irregular in ground plan, conforming to the local topography, even when the town inside was oriented to a strict Hippodamian grid. They were also rather casual in construction, since warfare tended toward pitched battles rather than extensive sieges. A change to more highly developed types of warcraft at the end of the 5th century B.C. and through the 4th century brought with it the necessity for more sophisticated city walls, and a writer on 4th-century strategy (Aeneas Tacticus 1–2) discusses arrangements for siege defense which will both protect the walls from direct attack and be alert to the constant danger posed by citizens who sympathize with the enemy.

B. The Hellenistic Greek City

The campaigns of Alexander the Great, who presented himself as a champion of Hellenic culture, marked a turning point in the history of the *polis*. His empire, and the large-scale kingdoms of his successors, helped limit the power of the old individual *polis* to act independently. On the other hand, the traditional *polis* provided the standard setting for Hellenic culture. As Alexander led his armies through Asia Minor, Syria, Palestine, Egypt, Mesopotamia, Persia and Bactria he founded many new cities (Plut. *Alex.* 1.5 gives a probably exaggerated total of seventy), and his successors used the *polis* as the model for new cities throughout the conquered East in the 3d and 2d centuries B.C. These cities attracted Greek settlers, veterans, and traders, as well as natives of the lands in which they were located. They were beacons of Greek civilization with their theaters, gymnasia, statues, and inscriptions. They were also a focus at which Greeks met their oriental neighbors and absorbed features from their cultures. Some served as royal capitals for the kings, others as market centers for an extensive hinterland, still others as military outposts.

Royal capitals, like Alexandria and Antioch, were governed by servants of the king, and from the Attalid capital of Pergamum in the 2d century B.C. we have a detailed inscription (*OGIS* 483—cf. Plato *Leg.* 759–66; Arist. *Ath. Pol.* 50.2) describing the duties of the *astynomoi*, officials in charge of day-to-day urban administration under the supervision of a board of "generals" (*strategoi*). They were in charge of buildings on public land, highways, common walls between properties, and had to keep streets open and accessible, enforce clean water regulations at public fountains and private cisterns, and maintain the public latrines. Older Greek cities tended to keep their traditional constitutions during the Hellenistic period, like the board of *politarchai* typical of Macedonian magistrates mentioned (Acts 17:6–8) as the "city authorities" at Thessalonica. Oligarchical governments flourished, a phenomenon which increased under the Roman empire, since the Romans were used to an aristocracy at home and found it easier to deal with aristocrats in provincial cities. Even at Athens, where the democratic assembly continued to meet and pass decrees throughout antiquity, the real government of the city was in the hands of the aristocratic council of the Areopagus. The text of the NT hints at the Roman presence hovering over the local administration: at Jerusalem for example the presence of Pilate and his soldiers pervades the Passion Narratives, and at Ephesus it is a local magistrate (*grammateus*, "town clerk") who deals with the riot in

the theater (Acts 19:38–40), but he reminds the unruly crowd that the Roman authorities feel free to intervene if things get out of hand, and that the courts of the proconsul administer Roman justice. The letters that Pliny the Younger, when governor of the province of Bithynia between A.D. 109 and 111, wrote to the emperor Trajan (*Ep.* 10) also show independent cities like Nicomedia submitting requests for permission to undertake public building and for financial help to the Roman authority represented by Pliny.

The population of Hellenistic cities represented a rich ethnic mix. At Alexandria, distinct quarters were occupied by the ruling Greeks, the Egyptian natives, and the large Jewish population (which was permitted a certain degree of self-government as an autonomous (*politeuma*, always of course subject to the central authority). In other cities too, both in the east and in the west, Greek cities were inhabited by descendants of Greek settlers, by highly mobile merchants and craftsmen (exemplified by Priscilla, Aquila, and Paul—Acts 18:1–3, 18–28; Rom 16:3–5; 1 Cor 16:19), and by members of the original population, attracted to the cities by proximity, business, or the varied opportunities available in an urban setting.

Royal cities were financed from the purse of the kings, who were concerned that their capitals reflect the glory of the king in a way that was evident and easy for all to understand. Auxiliary building projects might well be undertaken by friendly monarchs eager to make an impression: an example is the project which Herod the Great undertook for Antioch in honor of Augustus, paving with marble two Roman miles of one of the city's main streets. Smaller cities relied on traditional means of financing their building and maintenance projects: liturgies, taxes, and tolls. During the age of the Hellenistic kings and into the period of Roman dominance, many cities vied eagerly for the favor and patronage of kings and the Roman senate.

Prosperity came to some cities because of their location or local industries. A good harbor, as at Thessalonica, was important in bringing goods from the roads of the interior to the sea. Dura-Europus, at a junction of a major desert road and the Euphrates River, grew into an important caravan city, as did Gerasa at the junction of several desert routes. Thyatira, in the western part of Asia Minor, and Tarsus, on the south coast, were both known especially for their textile industries.

In physical appearance, Hellenistic cities resembled those of the classical age, except that buildings were often larger, more elaborately decorated, and deliberately sited for dramatic effect. New cities were laid out, usually according to a Hippodamian grid, in plains and on hillsides. The *agora* was often surrounded and enclosed by a formal arrangement of stoas, producing a more regular, symmetrical space. The traditional buildings—*bouleuterion, prytaneion*, theater, gymnasium, stadium—were still built, bearing witness to the continuity of political and cultural ideas. In royal capitals, palaces were placed in dominant positions (on the mountain top at Pergamum, for example, or the riverfront at Antioch, or the main harbor at Alexandria). New large theaters, as at Ephesus, where 24,000 could be accommodated, and temples proclaimed the prestige of important cities, and were imitated on a smaller scale at more modest towns.

The Hellenized cities of Palestine and the Decapolis were in many ways typical. Some were new foundations of the kings, but at most of them the structures and institutions of a Hellenistic *polis* were imposed on earlier non-Hellenic towns and villages. For example, at Samaria, the old capital of the northern kingdom of Israel, Herod the Great rebuilt the city on a grand scale (27 B.C.) and renamed it Sebaste in honor of Herod's patron, the emperor Caesar Augustus [Gk *Sebastos*]. Among its Hellenized features were a new city wall, a temple to Augustus and Rome, a gymnasium, a theater, and a mixed population of Jews and Greeks. Caesarea Maritima, built by Herod the Great between 22 and 9 B.C., was provided with a big harbor from the start, which made it a center of trade. It was also an administrative center, and was eventually a congenial residence for the Roman governors of Judaea (Acts 23:23, 25:6). The city's constitution was along Greek lines, and apparently the Jews who settled there did not enjoy the rights of citizenship (Joseph. *JW* 2.266; *Ant* 20.173). Herod's son Antipas, tetrarch of Galilee and Peraea, continued the policy of building and rebuilding cities. Sepphoris (an easy walk from Nazareth) with its walls, may have been founded as a *polis* under Antipas, even though its population seems to have been

predominantly Jewish; later it minted its own coins, a special sign of the status of a *polis*. Its wall, theater, and water supply may well have been built by Antipas. In A.D. 18, he also built a new city, Tiberias (named for the reigning emperor), on the shores of the Sea of Galilee. Its population included both Jews and Greeks, and its administration had such typical Greek features as an *archon* as chief magistrate, a board of ten magistrates (*dekaprotoi*), and a *boule* of 600 (Joseph. *Life* 278, 296; *JW* 2.641). It apparently lacked city walls, as well as authority over its hinterland, which was ruled by the king's ministers. Antipas' brother Philip, tetrarch of Auranitis, Trachonitis, and Batanaea, rebuilt the Hellenistic city Paneas, site of an important shrine to Pan and the Nymphs, as his capital; he renamed it Caesarea Philippi, organized it as a *polis*, and established a mint there.

In the Decapolis, some cities may have enjoyed some form of self-government even under the Roman domination. At Gerasa, for example, inscriptions record activities of local political units ("tribes") which show that an active civic life continued at least into the 2d century A.D. Most, however, like Damascus (2 Cor 11:32–33) were under the control of one or another of the kings and princes. In most of them, Jews lived together with the Hellenized gentiles, and were themselves highly Hellenized (Acts 9:20–22, 11:19–26). The physical remains of most of them show the typical features of a Hellenistic city: walls, fortresses, palaces, temples, theaters, and aqueducts. Jerusalem itself took on these features: the Hellenizing which preceded the Maccabean revolt was recognizable by the building of that most typical Greek structure, a gymnasium (1 Macc 1:14; 2 Macc 4:9–10), and in the time of Herod the Great, Jerusalem boasted such standard Hellenistic features as a grid plan, a careful arrangement of aqueducts, and aristocratic houses of Hellenistic type.

C. The Roman City

The Romans, as they spread their political and military influence throughout the Hellenistic East during the 2d and 1st centuries B.C., planted colonies of their own, which served as bastions of Roman power and civilization, just as the Greek colonies had proclaimed the political and cultural dominance of the Hellenistic kings.

The special characteristics of Roman cities developed during the 4th and 3d centuries B.C., when colonies were sent out to guard the expanding borders of Roman territory. These were of two main types. "Citizen" colonies were settled by Roman citizens, and they were considered extensions of Rome itself. Even political life was dictated by Rome, and citizens had to return there to vote. "Latin" colonies on the other hand were joint ventures of several of the Latin peoples; as Rome's prominence and dominance increased in Italy during the 4th and 3d centuries B.C., it exercised increasing control over such colonies, and dealt with them as it did with other Latin cities. They were politically autonomous, were entitled to the rights of trade and intermarriage with Roman citizens, and their citizens could under some circumstances come to Rome to vote.

The physical layout of newly established Roman or Latin colonies reflected the orthogonal planning learned from the Greeks, including a regular survey of the surrounding farm land into long rectangular plots, delimited by north-south *kardines* ("hinges") and east-west *decumani* ("tenths"). When a flat, unimpeded site permitted it, the junction of the main survey lines (*cardo maximus* and *decumanus maximus*) also served as the center of the walled town. Two main streets followed the line of the survey, and crossed at the central junction. Here, ideally, was the *forum*, which like the Greek *agora* offered space for political and commercial functions. A wall normally surrounded the built-up town site, where only a small portion of the settlers had their houses or shops. The majority of the population lived in farmhouses on their lots in the countryside. By the 1st century B.C., the planting of colonies spread overseas, as Roman generals used them to reward their soldiers with land—normally confiscated from defeated enemies—in a context of Roman civic institutions that would have been familiar to them. Such colonies inevitably displaced native populations, carving up their land into regular plots whose surveyed traces are still visible through aerial photography at, for example, Aurasio (Orange) in S Gaul. Towns which the Romans had destroyed were sometimes refounded as colonies, as was the case with Julius Caesar's new colonies at Carthage and at Corinth. As a special honor, older municipalities sometimes received the

status of a Roman colony: examples are Caesarea Maritima under Vespasian, and Antioch under Caracalla.

Colonies expressed their ties to Rome by imitating its civic institutions. A Roman colony was governed, like Rome itself, by a senate-like council of former magistrates (the *curia*, or *ordo decurionum*), and administered by committees of magistrates elected for single-year terms. Most commonly these magistrates were called *duumviri, aediles*, and *quaestores*. The whole citizen body voted for these magistrates, although as at Rome voting power was often weighted heavily in the favor of those with higher social status. The *duumviri* at the head of the colony's government were referred to in Greek as *strategoi,* "generals," as at Philippi (Acts 16:19–39), where they were assisted by the *lictores* (in Greek *rhabdouchoi,* "rod-bearers," Acts 16:35, 38) who normally attended Roman magistrates. In Corinth, the capital of the Roman province of Achaea, Paul is brought before the Roman governor, Gallio, who conducts hearings in the forum of the Roman colony (Acts 18:12–17).

Along with its political structure, a Roman colony took Rome as its model in topographical details. A prominently situated Capitolium housed images of Jupiter, Juno, and Minerva, and recalled the focal temple on the Capitoline hill in Rome. The forum of a colony with certain "Latin" rights was regularly adorned with a statue of the satyr Marsyas, in imitation of a similar statue in the Forum at Rome. Images of the emperor and his family appeared ubiquitously in public places, and certain specific buildings, like basilicas and arches, alluded to similar structures in the capital.

The financial arrangements of Roman colonies were similar to those of other ancient towns. The immediate agricultural hinterland produced food and revenues to finance ordinary expenditures, and rich patrons both inside and outside the colony were expected to pay for festivals, shows, and new construction. When feasible, the local council appealed to the governor of the province, or directly to the emperor. Corinth for example had several monuments dedicated by various members of the imperial family.

As the towns grew, they tended to expand in a fairly haphazard way outside the carefully planned grid of the original colony, as shops, houses, and cemeteries grew up along roads leading to the next town.

The physical features of a typical Roman town are similar to those of the Greek *polis,* but we can make a few generalizations about peculiarly Roman characteristics. Where topography permitted, the city wall tended to be more regularly rectangular than the walls of Greek towns. Inside, the space was divided by streets into residential blocks which generally were more square than their counterparts in Greek towns. Plazas and temple precincts also tended to show a sterner symmetry than Greek counterparts. Where a Greek town might feature two or three parallel main streets, a Roman town usually focused around one main street, and perhaps a single important cross street, the effect of which was to give a stronger axial focus to the whole design. The most important street tended to form a thoroughfare, what MacDonald (1986) calls an "armature," and along its sides the most important monuments were arranged, not necessarily concentrated in one spot but distributed throughout its length across the town. Such monuments as temples, theaters, porticoes, monumental staircases, and fountains were also typical of Greek cities, but during the Roman period they tended to become even more imaginative and elaborate. The decorative Corinthian order dominated, colonnades were added to main streets on one or both sides, and fountains were transformed into elaborate *nymphaea* through several stories of attached and projecting columns.

Among peculiarly Roman types of structures we may mention the commemorative arch, marking a passage with a large structure decorated with statues, inscriptions and reliefs; the *basilica*, a roomy columned hall adjacent to the forum which housed legal and other business; the amphitheater, a major structure near the edge of important towns, to which gladiatorial shows attracted huge crowds; and the public or private bath, to which most free urban residents paid regular visits to exercise, wash, visit, see and be seen, and hear lectures and readings.

Such amenities were particularly characteristic of Roman colonies, but during the Empire, as a more homogeneous Greco-Roman fabric was woven out of the many cultural strands within the empire, even proud, old Greek cities adopted the special features of Roman urbanism. Thus, during the 1st century A.D.,

the main thoroughfares in Antioch (which had been paved with marble by Herod the Great) received colonnades, and soon cities like Alexandria, Damascus, and Philadelphia also used rows of columns to emphasize their main streets. Technological improvements like aqueducts, roads, masonry drains, and building techniques using concrete were quickly adopted. The correspondence of the governor Pliny (*Ep.* 10) indicates that the cities of Bithynia must have been vying with each other to add Roman-style aqueducts, drainage ditches, theaters, and baths to their urban fabric.

CITIES, LEVITICAL. See LEVITICAL CITIES.

CITIZENSHIP. Before the Hellenistic period citizenship did not have the rather technical political significance in the biblical world that it thereafter acquired. In the ANE citizenship amounted to little more than birth or residence in a particular place; such privileges as it conferred were confined to freeborn males. Special prestige attached to citizenship of an outstanding city: thus in Psalm 87 to have been born in Jerusalem is something to be proud of. From the LXX of this psalm (especially v 5, Gk *mētēr Siōn,* "mother Zion") is derived in part from the NT concept of citizenship in the heavenly city, "Jerusalem above" (Gal 4:26; cf. Phil 3:20; Heb 12:22; Rev 3:12; 21:2, 9–27; 22:1–5).

The city (*polis*) was a political entity among the Greeks, and citizenship involved jealously guarded privileges. Thus in Athens in the 5th century B.C. only the children of two freeborn Athenians ranked as citizens: the child of an Athenian father and a non-Athenian mother was excluded from the register of Athenian citizens (Arist. *Ath. Pol.* 26).

Paul was obviously proud of his status as a citizen of Tarsus, "no mean city" (Acts 21:39). He was evidently born into a family which possessed the citizenship. For inclusion on the Tarsian citizen roll a property qualification of 500 drachmae had been fixed, perhaps ca. 30 B.C. by Athenodorus (Dio Chrys. *Or.* 34.23).

Paul's Tarsian citizenship, however, was not nearly so important in the world of his day as his Roman citizenship by birth, i.e., by inheritance from his father (Acts 22:28).

Roman citizenship, originally restricted to the city of Rome, was prudently extended to selected non-Romans as an honor for services rendered to Roman interests. The possession of Roman citizenship was a high social distinction in the Near East. Once conferred, it remained in the family. Paul's Roman citizenship, amply attested in Acts, has been questioned (cf. Stegemann 1987), but on no sufficient grounds.

Luke reports Paul as claiming the privileges of a Roman citizen on three occasions. In Philippi (a Roman colony) he does so in protest against having been beaten without receiving a fair trial (Acts 16:37). In Jerusalem he appeals successfully against being flogged by the Roman authorities in an attempt to discover the true reason for his being riotously assaulted in the temple precincts (Acts 22:25): a non-

Roman might be examined under torture but citizens were exempt (by a series of Valerian and Porcian laws). In Caesarea he exercises the right of a Roman citizen to appeal to Caesar—to have his case transferred from the inferior jurisdiction of the governor of Judaea to the supreme tribunal in Rome (Acts 25:11).

The question arises of the means by which the claim to be a Roman citizen was validated. The Lex Aelia Sentia of A.D. 4 and the Lex Papia Poppaea of A.D. 9 provided for the registration of Roman citizens at birth. The father or his agent would receive a certified copy of the entry in the register; if the child on coming of age gained personal possession of this copy (a diptych) it may have been carried around and produced when necessary (Schulz 1943: 63–64), but some hold that it was more probably kept in the family archives (Sherwin-White 1963: 149).

The picture of Roman citizenship given in Acts is true to the conditions of the mid-1st century A.D. By the beginning of the 2d century Roman citizens in the provinces, charged with offenses not covered by standard procedure, were sent to Rome almost automatically without formally appealing to Caesar. Thus in A.D. 112 Pliny the Younger, reporting to Trajan on his treatment of Christians in Bithynia and Pontus, mentions some "whom, because they were Roman citizens, I marked down to be sent to the capital" (*Ep.* 10.96.4).

There seems to have been a steady erosion of the citizen's privileges as the 2d century advanced. The Roman citizens arrested with other Christians of the Rhone Valley in A.D. 177 were kept in custody until a ruling could be obtained from the emperor; even after he had ruled that they should be beheaded and not put to death by torture, like the non-citizens, one of them, Attalus, was exposed to the beasts to please the mob (Eus. *Hist. Eccl.* 5.1.44, 50). The special privileges of citizenship lapsed in 212 when Caracalla extended it to all freeborn provincials throughout the Roman Empire.

CITY AUTHORITIES. Where Near Eastern cities formed part of a larger political grouping, their internal affairs were normally administered by the "elders" who "sat in the gate" (cf. Deut 21:2, 19; 25:7; Ruth 4:1–2; Amos 5:10, 15). This holds true into NT times, as with the "elders" (Gk *presbyteroi*) of Capernaum who acted as the centurion's messengers to Jesus (Luke 7:3). In a fortified city final authority would lie with the commander of the garrison.

The rulers of independent city-states (like the kings of cities in the Euphrates-Tigris valley) had greater authority. When one such city-state gained power over its neighbor its ruler became a "great king" or "king of kings" (cf. 2 Kgs 18:19; Dan 2:37).

The city as a distinct political institution (Gk *polis*) was a Greek development. Athens, for example, was governed by ten *archons,* democratically elected, and Sparta by two kings and five *ephors.* After the conquests of Alexander the Great (d. 323 B.C.) the *polis,* with its civic administration, became a familiar feature of the whole Near East.

Antiochus IV (168 B.C.) failed in his attempt to reconstitute Jerusalem as a Hellenistic *polis.* Since the return from exile, Jerusalem had enjoyed the status of a holy city, centered upon the temple; the temple staff, from the high priest downward, exercised authority over the city in general, although the judgment of the most influential citizens could not be ignored.

The titles of city authorities in Hellenistic and Roman times varied from place to place. The NT knows of the POLITARCHS (RSV "city authorities") of Thessalonica (Acts 17:6); this title is attested in inscriptions for the chief magistrates of several Macedonian cities. The chief magistrates of cities in Thessaly received the similar designation *poliarchs.* The chief magistrates, even in a free city, were

responsible to the Roman administration of the province, and ultimately to the emperor, for the maintenance of public order and the suppression of sedition.

Elsewhere the city authorities are referred to by more general terms, such as "the leading men (Gk *prōtoi*, "first") of the city" in Pisidian Antioch (Acts 13:50), or "the prominent men of the city" (*hoi kat› exochēn*) at Caesarea (Acts 25:23). At Ephesus Luke mentions the town clerk *(grammateus),* the chief executive of the citizen body (*dēmos*). He, in consultation with the chief magistrates (*stratēgoi*), drafted the decrees to be set before the civic assembly and was also principal liaison officer with the Roman government of proconsular Asia.

Roman colonies like Philippi and Corinth were settlements of Roman citizens, and their administrations were modeled on that of Rome. The chief magistrates of Rome from early Republican days were the two collegiate consuls; each Roman colony therefore was administered by two chief magistrates. These were usually called *duumvirs* ("two men"), but in some colonies, such as Philippi, they preferred the more grandiloquent title of *praetors* (Gk *stratēgoi*, RSV "magistrates," Acts 16:20–38). Like the Roman consuls, they were attended by *lictors* (Gk *rhabdouchoi*, "rod-bearers"; RSV "police," Acts 16:35, 38), with their bundles *(fasces)* of rods and axes as badges of office. The ethos of a Roman colony is well illustrated by Acts 16:20–21, where the Philippian citizens are so proud of being Romans, much superior to the neighboring Greeks, not to mention Jews. For further discussion see PWSup 13: 483–500.

CITY NAMES. One major division of city names in the Bible (and other areas of the ancient world as well) is the class of cities which have two or more alternate names. Of this group, there is an important distinction between those whose alternate names mean the same thing and those that have no more functional/semantic connection with each other than *New Amsterdam* which became *New York,* due to a change of rulers. The first of these two classes is further divided into names where the homosemic alternates are in one and the same language and names whose etymons are from different languages.

A. Names Involving the Roots *dbr/šwh*

In the modern period some of the earliest proposals were those of A. Wieder and of G. Mendenhall. Wieder (1965: 161–62) saw such an equation in the "gloss" in Gen 14:17 *(ʿēmeq šāwēh ȟ› ʿēmeq hammelek),* " 'The Valley of the Ruler' which is 'The Valley of the King,' " with *šāwēh* as the older and residual NW Semitic word for "ruler" (cognate with Ug *twy* "to rule, to govern," used in parallelism with *dbr* "to lead" in Ug (see UT 3: 641, 2662). Though Wieder's is a valid conceptualization, matters are further complicated by the fact that *šāwēh* itself is a Heb lexeme for " (level) plain" and is a component in the place name *Šāwēh Qiryātāyim,* probably "The Plain of the Two-Cities." De Moor (1973: 89–93) launched a severe attack on Wieder's procedures and, while some of his points are very well taken, it is always possible that Heb preserves in place names two different nouns *šāwēh*^{1} "ruler" and *šāwēh*^{2} "level plain," with the initial letter *šin* corresponding etymologically to Sem **t* and **š* respectively.

Mendenhall (1973: 76, 163, n. 60), with reference to the "gloss" in Josh 15:15 (= Judg 1:11), *(wĕšēm dĕbīr lĕpānîm qiryat sēpēr)* "And the name of Debir was formerly 'City-of-the-Scribe,' " read *sōpēr* "scribe" rather than MT *sēpēr* "book," and ascribed the meaning "marshall, ruler" to *sōpēr,* saying that *dĕbir* represented Hit *dabara* "lord, governor," and that the former was a translation of the latter (see Arbeitman 1988: 10–11, 43). Where Mendenhall appealed to NW Semitic for his analysis, some 1500 years earlier the Rabbis of the Bab. Talm. looked to the east for their interpretation. They explained

(‹*Abod. Zar* 2.4b.d) the biblical passage as being based on the semantic equivalency of Aram *spr*› ("scribe," traditionally vocalized as "book") with Pers *dbyr* "scribe." Arbeitman (1988) devotes the entirety of his study to an examination of these two proposals, which employ identical methodology, and of a third proposal: that the equation of the two cited names may involve NW Semitic *spr* and NW Semitic *dbr,* both meaning "to lead".

B. Names Involving the Root *ṣph*

Gen 31:44–53 describes the naming of the site where Laban and Jacob made their covenant. Three names were given to this place, names which all have the covenant as their referent: *Gal‹ēd, Yĕgar Sõāhădûtā*› and *Miṣpâ.* Arbeitman (1981: 999) suggests that the first two names are mutual translations in Heb and Aram respectively ("Cairn-of-Witness [of the covenant by the respective deities]") with the third name being Heb for "Look-Out[-Point]" /"Observation[-Place]" /"view" /"scope." This passage is the only explicit statement of (a) meaning identity and (b) such identity being in the respective languages of the parties, made in the Bible.

Astour (1975: 319–21), basing his position on (a) Eissfeldt's identification of Mt. *Ṣpn,* Baal *Ṣapun,* etc., with the Classical Mt. *Kasion* (present-day Jebel Aqra‹) and (b) Eissfeldt's etymological derivation of Mt. *Ṣpn* from the NW Semitic verb *ṣph* (Heb *ṣāpāh* "to look out"), concludes (p. 321): "Moreover, the same meaning is quite conceivable for its other name," i.e., Mt. *Ha-zi/Ha-az-zi* in cuneiform, *ḫz* in Ug alphabetic spelling. This alternate name is the source of what is represented in classical Mt. *Kasion.* Astour asserts that *Ḫaz (z)i* is from the Semitic root **ḫzy* (Heb *ḥāzāh* "to see").

Grave (1980: 221–26) provides an exhaustive survey of a number of proposals, each of which derives Mt. *Ṣpn* from a different Semitic root. At the same time she discusses other etymological proposals for the name *Ḫaz (z)i.* She then takes up Astour's proposal and suggests that *Ḫazzi* might have been taken as either a passive or a stative formation of *ḫzy* and understood as " (a mountain that is) seen/being sighted" and then this "oronym could have been 'glossed' by means of *Ṣpn* … because it was a beacon that was seen/sighted from the sea." In this theory, the "glossing" is based on a folk understanding of the old name *Ḫazzi* (probably of non-Semitic origin). She concludes, however, that the oronym *Ṣpn (Ṣapānu)* does derive from the root *ṣph,* but with a meaning "clearing/visibility" or, preferably, "the Clearer (of the sky and air)," and that the Modern Ar name *Jebel al-Aqra‹,* "the Bald Mountain," may refer to the same phenomenon, the mountain "as having been shorn/cleared together with the sky by the northwind …" (see also ZAPHON, MOUNT).

Josephus (*Ant* 11.329) remarks concerning Mt. Scopus: "At a certain place called *Saphein.* And this name, rendered into the Greek tongue, signifies *Skopos.*" As noted in the translation and notes by Marcus (Loeb ed.), Josephus' *Saphein* represents Aram *ṣāpîn,* which corresponds to Heb *ṣōpîm. Skopos* (Scopus) is the Gk word for "lookout," while the Heb/Aram words mean " (Mount-of) the Lookouts" or "Those Who Observe." Likewise, Philo of Byblos renders the Phoenician name *Zōphasēmin* by Gk *ouranoû katoptai* (see GesB for suggested meanings). Both the Phoen and Gk mean "those who contemplate the heavens" (as *LSJM,* 929 renders). Josephus wrote the Hebrew words, and Philo of Byblos Phoenician terms, in Greek letters. The current Hebrew form *(Har) haṣṣōfîm* first occurs in the Mishna (*EncJud* 16: 1191–92).

Returning to Gen 31:44–53, throughout this pericope both the pair of "witness" names given in Heb and Aram and the single Heb "lookout" name are repeatedly supplied with etiological explications in the text-intrinsic glosses. In the renderings in the LXX the explications of the "Witness" names work because both the names and the "cause" are rendered with a single Gk root. The "lookout" name fails to work because Gk has several suppletive roots for "see/observe"; and while the site is rendered *horasis* ("Seeing/sight"), the explanatory verbal phrase "May (God) look at us" is rendered in Gk with the root *id-* (in the compound *epidoi*). As opposed to the glosses embedded in the texts, which can be called "intrinsic glosses," the translations of place-names are best considered as "extrinsic glosses."

The rest of the occurrences of a set of nouns, *miṣpeh*[1]*, miṣpeh*[2]*,* and *miṣpâ* (all three spelled in Heb *mṣph*) are to be analyzed as follows. The noun *miṣpeh*[1] occurs as a common noun only twice in the Heb Bible, (2 Chr 20:24; Isa 21:8), translated "watchtower" (RSV). In both loci the LXX renders *skopia*

"lookout place" as it does in Isa 41:9 (no equivalent in the Heb) and in Sir 37:14. Of the occurrences of *miṣpeh*[2], the proper noun MIZPEH, a place name, the LXX renders one of them, Judg 11:29, as a common noun: Heb *miṣpeh gilʿād* is translated by *skopian Galaad,* "watchtower of Gilead." Among the numerous places called *Miṣpâ,* the LXX renders 1 Kgs (LXX 3 Kgdms) 15:22 *gebaʿ binyāmīn wĕʾet hammiṣpâ* (RSV: "Geba of Benjamin and Mizpah") by *bounon Beniamin kai tēn skopian* "mound of Benjamin and the watchtower." Similarly LXX renders Hos 5:1 *kî paḥ hĕyîtem lĕmiṣpâ* (RSV: "for you have been a snare at Mizpah") by *hoti pagis egenēthēte tę skopia* "because you were a snare to the watchtower."

The *Qal* masc. pl. act. part. of the verbal root *(ṣph)* of the three nouns of this subsection, *ṣōpîm,* occurs as part of a place name in Num 23:14: *śĕdê ṣōpîm (ʾel rōʾš happisgâ)* (RSV: "the field of Zophim, to the top of Pisgah") and is rendered by the LXX as *eis agru skopian epi koryphēn lelaxeumenu* ("to the watchtower of the field, hewn upon the peak"). Here the note given in the NJPSV displays how the choice of retaining the Heb name in transliteration offers the benefit of recognition of the place name but also the deficit of losing any etiological intention. In contrast to the RSV rendition of the place name Zophim in Num 23:14, the much more effective NJPSV offers in the text: "Sedeh-Zophim, on the summit of Pisgah." NJPSV's alternate rendering, "to the Field of (the) Lookout Point," approximates LXX (with reversal of "field" and "watchtower/Lookout Point").

Similarly, in Gen 31:47–48 the NJPSV gives the text (with marginal notes, here provided immediately following in parentheses) "Laban named it Yegar-Sahadutha (Aramaic for *'the mound [or, stone-heap] of witness'*), but Jacob named it Gal-ed (Heb for *'the mound [or, stone-heap] of witness,'* reflecting the name Gilead, v 23)." The translation continues (Gen 31:49): "Also Mizpah, because he said, "May the LORD watch (Heb *yiṣeph,* associated with Mizpah) between you and me." The comparable translation (and notes) in the RSV goes: "Laban called it Jegar Sahadutha (in Aramaic *The heap of witness*), but Jacob called it Galeed (in Heb *The heap of witness*)"; RSV continues, "And … Mizpah (that is, *Watchpost*), for he said, 'The LORD watch between you and me.' " The total translation is also, as we saw in the rendition of Num 23:14, a justified path for comprehension.

As noted above, the renders the word *miṣpeh* in this locus by *horasis;* it renders the two other names similarly: *kai ekalesen auton Laban Bounos tēs martyrias, Iakōb de ekalesen auton Bunos martys* ("And Laban called it 'Mound-of-Testimony/Witnessing' but Jacob called it 'Mound-Witness' "; cf. Speiser *Genesis* 243, 248–49). The use of *Bounos* in the for rendering both Heb *gal* and Aram *yĕgar* here is like the use of the same word to translate Heb *gebaʿ* in 3 Kgdms 15:22.

Another school considers the name-giving pericope in Genesis 31 to be entirely etiological, arising from the creation of stories to explain by folk etymology already existing names, ultimately from different and not always comprehensible sources. In this scenario, certainly the *mṣph* names are common enough. Speiser (*Genesis* 248–49) deems the name *Galʿēd* as such an etiological "event" explicating the toponym *Gilʿād,* the theater of the conflict and covenant with the mound or cairn *(gal)* of the Witness *(ʿēd)* and thus supplying the basis for the regional name Gilead. This part of the etiology is from the "J source," while the alternate Mizpah (Heb *miṣpâ*), a similar connection to the stele (Heb *maṣṣēbâ*) set up, derives from the "*E* source."

A modern lexicon (KB) states that *Galʿēd* is actually only such an etymologically etiological product, created for the tale by revocalization of *Gilʿād* to *Galʿēd* (same Heb consonantal text: *glʿd*) and that the "true" derivation of *Gilʿād* is a root **gʿd,* known from Arab *jaʿuda* "to be wrinkled/lined" (said of cheeks), with a phonetic development **giʿʿad* > *gilʿad* (an -*lʿ*- medial cluster replacing the original geminate *-ʿʿ-). (Similarly, they explain the toponym *Gilbōaʿ* as deriving from **gibbōaʿ* and thus being a "comparative form" to *Gebaʿ,* with a meaning something like "the Hillier Hill." W. Borée had already noted (1930: 34n. 1) the absence of any analogy for this presumed "dissimilation" of geminate -*b*- to -*lb*-.)

C. Names Involving the Root *ḥbr*

Arbeitman (1981), basing himself on (a) Mendenhall's methodology, (b) the covenantal relationship of the three name-giving events in Genesis 31, and (c) Borée's analysis, proposed interpreting the ancient triad of names, *Ḥebr̃n, (Qiryat) ʾarbaʿ,* and *Mamrēʾ* in a manner analogous to the interpretation of the

three names just noted. Each member of this triad of place names has reference to a covenant or treaty occurrence at that site. This treaty is noted in the Bible, though not in any way so explicitly as the treaty detailed in Genesis 31. It is rather with reference to the implicitly understood treaty between Abraham and Ephron in which the former obtains a burial cave from the Hittites. The name *Ḥebr̃-n* is to be explained as "the One-of [=Place-of-] the [Treaty-]-Ally" in Heb, and *›arba‹* as an exact Hittite translation (Hit *ara-* "friend, ally"); the third toponym, *mamrē›,* fits in as representing Hit *miu-mar* "friendship." The entire triad of names as applied to one and the same place is displayed ineluctably in Gen 35:27: "And Jacob came to Isaac, his father, at *Mamrē›, Qiryat ha-›arba‹,* which [is] *Ḥebr̃n* where Abraham sojourned and Isaac [too]." Yet some other scholars (e.g., Mazar [Maisler] 1949) have long believed *Mamrē›* to be a section of the *Ḥebr̃n* complex, nearby, but separate. This perspective seems to be inescapably tied in with their implicit acceptance of the midrashic (but nonbiblical) explication of *qiryat ›arba‹* as "City-of-the-Four-Quarters/Sections" (Arbeitman 1981: 895–900).

Finally, on the basis of Borée (1930: 58 n. 6), Arbeitman perceived the Arabic name of the city, *el-Khalîl* (traditionally considered as a reference to Abraham as "the Friend of the Merciful" [*ḫalîl* ar-raḥmān]) to fit with the Hit name triad when allowance is made for its original application to Abraham as the Friend (Heb *ḥābēr,* Hit *ara-* [and *miu-*]) of Ephron (Arbeitman 1981: 955–98).

D. Names Involving the Elements *tad-/pal-*

M. O'Connor (1988: 235–54) examines the alternate names of *Tadmōr,* the earlier attested name and the one used in Semitic language sources, together with the later attested name, used in Classical sources, *Palmyra.*

O'Connor notes that the traditional folk etymology, wherein "*Tadmōr* " is deemed to be a derivative from the Semitic word for "date," *tāmār,* while the later attested name, *Palmyra,* is simply a translation/calque on this in Latin, where *palma* "the stretched out 'palm' of the hand" has the secondary meaning "palm tree," runs up against several vitiating factors, both phonological and chronological (1988: 235). He then suggests that both *Tadmōr* and *Palmyra,* far from being respectively Semitic and "classical" (i.e., Latin) names, are both names left by the important Hurrian element of the population in Syria. Following the methodological framework established by Arbeitman (O'Connor 1988: 251 n. 25) and adding a wide survey of various other cities with multiple names, he concludes that the alternate Hurrian names offer a semantically unimpeachable sense when the second syllable of *Tadmōr* and *Palmyr (-a)* is separated as representing the well-documented Hurrian suffix *-mVr* (probably /mar/), the meaning of which is unknown, but not likely to be a suffix forming abstract nouns (O'Connor 1988: 249 n. 18). The bases that then remain, *tad-* and *pal-,* are of the semantic sphere of covenant terminology, "to love" and "to know" (O'Connor 1988: 238).

In this last regard they resemble the names in Genesis 31 as well as the triad of ancient names involving *ḥbr.*

E. Dān and Others: Arabic Translations

Rainey (1978: 9) notes: "Examples of pure translation from Heb to Arab are rare. One certain case is that of *Tell el-Qâḍī*: 'the mound of the judge,' representing Dān: 'He (who) judges.' Another may possibly be *Khirbet el-waṭn*: 'Ruin of the homeland,' if its identification with *Môlādāh* should be substantiated." Arabic *qâḍî* translates NW Semitic *dān* in either its "real" meaning or its folk etymological understanding by the Hebrews as "judge." Its actual origin lies with one of the Sea Peoples, the people of (A)daniya in Anatolia, as maintained by Arbeitman and Rendsburg (1981: 147–57). (With reference to the root *ṣph/ṣfw,* examined in Section B above, Rainey [1983: 10] provides a necessary word of caution against using vague semantic similarities for the purpose of site identification: "Many suggestions have been made for the identification of Libnah. One of the most frequent was Tell eṣ-Ṣâfī; but the name of that tell means 'bright, shining' and not 'white.' " For further discussion of place names, see also TOPONYMS AND TOPONYMY.

CITY OF DAVID. See DAVID, CITY OF (PLACE).

CITY OF DAVID, STAIRS OF. See STAIRS OF THE CITY OF DAVID.

CITY OF PALM TREES (PLACE) [Heb *ʿîr hattĕmārîm* (עִיר הַתְּמָרִים)]. An epithet for the city of JERICHO. From the top of Pisgah of Mount Nebo, Moses was shown the land to be possessed, "from the valley of Jericho, the city of palm trees, as far as Zoar" (Deut 34:3). From this text we can assume that Jericho was already called "the city of palm trees" before its destruction by Joshua. The name "City of Palm Trees" was probably given to this city because of the abundance of date-palm trees *(Phoenix dactylifera)* watered by the perennial spring *ʿain es-Sulṭan* located just east of the OT Jericho mound (Tell es-Sulṭan).

The name "City of Palm Trees" can be paraphrased as: "the city near which date-palm trees abound." S. Cohen (*IDB* 1: 638) thought that this term was used for a place which was a part of Jericho, and that after the destruction of the city by Joshua the term probably referred to the "groves of palm trees that flourished nearby." It is inconceivable, however, that the palm grove itself was called by this name because we do not have any reason to call a grove a "city." Rather, the destroyed city must have retained its names Jericho and "City of Palm Trees" which also included the surrounding area.

The Hebrew word for the date-palm is *tāmār* "erect," like a column or post *(tōmer).* This tree has no branches but its top is a large circle of palmate leaves. (RSV's use of the English word "branches" with respect to the palm tree [e.g., Lev 23:40; John 12:13] is imprecise.) So the Heb *tāmār* "palm tree" meant "erect tree" and symbolically represented a righteous man (Ps 92:12). The shape of the palm tree at a distance resembles a woman standing; therefore, in Cant 7:17, a nobleman's daughter is likened to the palm tree: "Your stature is [RSV marg.] like a palm tree, and your breasts are like its clusters."

Since this tree bears abundant sweet dates, the date-palm was a desirable fruit tree. The date-palm can reach a height of about 20 meters; its root is strong and fibrous so that the leaves are always full of sap and very green (Ps 92:14). The shape of the palm tree is graceful. Representations of date-palms ornamented Solomon's temple (1 Kgs 6:29). These excellent qualities may be the reasons why Tamar, "date-palm," was used as the name of some women in the Bible.

Many sorts of palm trees, different from each other in taste and name, were watered by the spring at Jericho. The better types yielded an excellent kind of honey when they were pressed, not much inferior in sweetness to the honey of bees. The Heb *nĕḥal,* generally translated "valley," may also have been the name of one of the excellent date-palms (Num 24:6; Cant 6:11). Also *ʾêl* "which you have desired" (Isa 1:29) may be a fruit tree like the date-palm. A place south of Judah near the Dead Sea had the name Tamar,

"Date-palm" (Ezek 47:19; 48:28) which may be another name for En-gedi, where many date-palm trees now grow, though it must be differentiated from the "City of Date-palms."

YOSHITAKA KOBAYASHI

CITY OF SALT (PLACE) [Heb *ʿîr hammelaḥ* (עִיר הַמֶּלַח)]. A Judean city near the Dead Sea mentioned once in the OT (Josh 15:62). Identification of the site is problematic, and the problems are reflected in the variant readings of LXX mss. LXX^A agrees with MT in reading *poleis halōn* "City of Salt," whereas LXX^B reads *poleis Sadōm* "city of Sodom." Sodom has commonly been thought to lie E of the Dead Sea. Conder identified the City of Salt with Tell el-Milḥ (M.R. 152069). The situation of the tell at the upper end of the Valley of Salt (Wâdī el-Milḥ; 2 Sam 8:13; 2 Kgs 14:7) E-SE of Beer-sheba makes this identification attractive, but Tell el-Milḥ has more recently been identified as Moladah (Gk *Malatha*).

There are six cities listed in Josh 15:61–62 as lying "in the wilderness" later known as the wilderness of Judah: (v 61) Beth-arabah, Middin, Secacah, (v 62) Nibshan, the City of Salt, and En-gedi. Of these, the only firmly identified site is En-gedi (the Hazazon-tamar of 2 Chr 20:2) on the W side of the Dead Sea 28 miles S of Jericho. The sites of Middin (Khirbet Abu Tabaq), Secacah (Khirbet es-Samrah) and Nibshan (Khirbet el-Maqari) have suggested locations in the Valley of Achor (although Bar-Adon [1977: 22–23] is among those who disagree with these identifications).

The City of Salt is now commonly identified with Khirbet Qumran (M.R. 193127; Noth *Joshua* HAT^2, 100), although Kallai (*HGB,* 396 n. 143) prefers to identify Qumran with Secacah. Others suggest Ain el-Ghuweir further S as the City of Salt. Qumran is just E of the Valley of Achor, about 14 miles from Jerusalem (on the site, see QUMRAN, KHIRBET).

CLAUDIA (PERSON) [Gk *Klaudia* (Κλαυδια)]. A Christian woman who was in contact with Paul during the imprisonment referred to in the Pastorals, probably in Rome, although Caesarea has also been defended (2 Tim 4:21). Claudia, along with Pudens and Linus after whom she is mentioned, sent greetings to Timothy. Her name suggests that she belonged to the imperial household, perhaps as a slave, or possibly as a member of the *gens Claudia.* The *Apos. Con.* 7.46 note that a certain Linus, the son or husband of Claudia (Gk *Linos ho Klaudias*), was the first bishop of Rome after the death of the apostles. Whether this Claudia and Linus are to be identified with those mentioned in 2 Timothy is not certain, although not impossible.

The supposition that the Claudia and Linus of 2 Timothy were mother and son has led some to assume that she was therefore the wife of Pudens. But this leads to the problem of explaining why in the text of 2 Tim 4:21 Linus is named between them. Redlich (1913: 222) has argued that if Claudia was the wife (or sister) of Pudens, she would have been mentioned before Linus and along with Pudens. He concludes that "if the order of names suggests anything, it points to a closer relationship between Linus and Claudia than between Pudens and Claudia." Nevertheless, those who suppose Claudia to have been married to Pudens draw the further inference that the two were identical to a couple with the same names mentioned by the Roman poet Martial (*Epigrams* 4.13) and to Roman couples named in British (*CIL* VII.17) and Roman (*CIL* VI.15.066) inscriptions. But since these names were common, there is no persuasive support for the linking. See a fuller discussion under PUDENS (PERSON).

FLORENCE MORGAN GILLMAN

CLAUDIUS (EMPEROR). Claudius (Tiberius Claudius Nero Germanicus), younger son of the elder Drusus and Antonia was born at Lyons on 1 August 10 B.C. and became emperor after the assassination of his nephew, Gaius, on 24 January A.D. 41. Although not a member of the Julian family by birth or by adoption (unlike his three predecessors), he was, on his father's side, the grandson of Livia (who married Augustus after the divorce of her first husband, Claudius' grandfather) and, on his mother's side, grandson of Mark Antony and also of Augustus' sister. He suffered throughout his life from some physical disability (possibly a form of paralysis) and was an object of scorn to many members of his family. "His grandmother Augusta [i.e. Livia] always treated him with the utmost contempt" (Suetonius *Divus Claudius* 3.2); to his mother, he was a "monster" (ibid.). Under the emperors Augustus and Tiberius, he held no public office, even though he was in his mid-forties at the time of Tiberius' death. Augustus had been wary of the public's reaction to his seemingly eccentric behavior—"they might ridicule both him and us" (Suet. *Claud.* 4.2). His first significant office was the "suffect" consulship of July 37: even this was a lesser award since members of the imperial family always received the "ordinary" consulship, i.e., they were the first consuls of the year, serving in January and replaced some months later by "suffect" consuls.

His accession was far from normal. Found hiding in the palace behind a curtain, he was dragged off by the praetorians and proclaimed emperor, while the senators debated whether the imperial "system" should be abolished and the Republic restored. He soon established his ascendancy, however, though his relationship with the senate was never good. Conspiracies against him were many, starting in 42 with that of L. Arruntius Camillus Scribonianus. The full extent of the opposition that existed (or that he believed existed) against him may be assessed by Suetonius' claim (*Claud.* 29.2) that in his reign thirty-five senators and more than 300 knights were executed.

Despite the hostile literary tradition belittling him and accusing him of succumbing to the power and influence of his wives and freedmen, at least some of the substantial administrative achievements of his reign were due to his personal intervention. His speech urging the admission to senatorial status of a number of Gallic leaders has survived: the irrelevancies and awkward expressions must be his. His intentions, though, were sound and consistent with his general belief in the importance of Romanizing the empire—note the new cities he created and the colonies established from Britain to Syria. Of some importance, too, were his efforts to improve Rome's grain supply by building a new harbor (*Dio Cass.* 60.11.1–5) and by establishing greater control over the process of distribution. As well, he was responsible for substantial improvements in roads and aqueducts in both Italy and the provinces. He was extremely interested in legal matters, from the introduction of measures aimed at greater humanity towards slaves to attempts at speeding up the judicial process. However, his preference for trials before the emperor and his advisors (*intra cubiculum*), rather than before the senate, did nothing to lessen his unpopularity with that body. His most powerful ministers included the former slaves Narcissus (responsible for the official correspondence), Pallas (financial minister), and Callistus (in charge of petitions). But the extent of their influence is impossible to assess, especially in view of the sources' hostility not only to Claudius himself but also to former slaves in general. There is no reason to doubt their efficiency; on the other hand, the argument that, through them, Claudius extended and centralized the bureaucracy ought to be regarded with extreme caution, because the evidence for it is slight.

Claudius was a scholar. In his youth, he was encouraged by the historian Livy: later he composed an autobiography, a defense of Cicero, accounts of the Carthaginians and the Etruscans, a history of Augustus' principate from the end of the Civil wars and, as well, tried to have three letters added to the alphabet. His foreign policy was markedly more aggressive than that of his predecessors. A revolt in Mauretania was settled and two new provinces were created there. Thrace became a province in 46. Most expansion, however, occurred in Britain, where Roman influence had been confined to the south-eastern

quarter. Claudius' massive invasion force of four legions moved rapidly and before long, the Fosse Way from Exeter to Lincoln marked the limit of their progress. Britain was now a province.

His attitude to the Jews was more enlightened than Gaius'. He posted an edict guaranteeing Jews throughout the empire the right to practice their religion "without let or hindrance" (Josephus, *Ant* 19.290). In Alexandria, where Gaius' policy had led to serious unrest, an edict of A.D. 41 (*British Museum Papyrus* 1912) reprimanded both the Greek and Jewish rioters, urging the former to "act kindly towards the Jews." The reaction of the Greeks in that city is presumably represented in a collection of papyrus documents now known as "The Acts of the Pagan Martyrs" which purport to give, *inter alia,* details of the trials in Rome of Greek nationalist leaders: In tone, they are violently anti-Roman and, at the same time, hostile to the Jews. Later, though, he expelled the Jews from Rome "for constant rioting at the instigation of Chrestus" (Suet. *Claud.* 25.4), where at least the reference to Christianity is unambiguous; the emperor's action is confirmed by an incident recorded in Acts 18:2, where two Jews, Aquila and Priscilla, expelled from Rome, came to Corinth and later met Paul. Finally an inscription said to come from Nazareth records a decree (possibly of Claudius) on the violation of tombs: scholars since 1930 have debated the possibility of an allusion to the burial and resurrection of Christ.

Of his four wives, the last two are the best known. At the time of his accession, he was married to Valeria Messalina: their children were Octavia (whom Nero later married) and Britannicus (whom Nero later poisoned). After Messalina was put to death in 48 following her public "marriage" to Silius, Claudius married his niece Agrippina who already had a son, Domitius Ahenobarbus, some four years older than Britannicus: shortly after the marriage, Domitius was adopted by Claudius and named Nero Claudius Drusus Germanicus Caesar, though his young step-brother persisted, much to Nero's annoyance, in calling him "Ahenobarbus" (Suet. *Nero* 7). Greater honors came to Nero and greater power to Agrippina, but, fearing that Claudius might regret his promotion of Nero, Agrippina had him poisoned on 13 October 54, thereby ensuring her son's accession. Scholars have attempted to rehabilitate Claudius or at least to moderate the uniformly hostile picture painted by the ancient sources. Yet he remains a paternalistic autocrat and a pedantic administrator. The influence exerted over him by his wives and former slaves has been exaggerated: only in his last years did Agrippina's power become excessive.

BRIAN W. JONES

CLAUDIUS LYSIAS (PERSON) [Gk *Klaudios Lysias* (Κλαυδιος Λυσιας)]. A chiliarch and tribune of a cohort of Roman troops in Jerusalem. He was not a Latin, as his Greek cognomen Lysias indicates. Perhaps he took on the nomen Claudius when he purchased his emancipation from slavery and became a Roman citizen while Claudius was Emperor (Acts 22:28). Claudius and his cohort were quartered in the tower of Antonia, northwest of the Temple and connected to the Court of the Gentiles.

Claudius arrested Paul during his struggle with the Jews in Jerusalem (Acts 21:30–23:35). When Paul's life was threatened by the Jews in the Temple, Claudius had Paul bound and carried to the tower of Antonia, thinking initially that Paul was the Egyptian sicarii who had led a recent rebellion against Jerusalem (21:38; cf. Jos. *JW* 2.261–63). See EGYPTIAN, THE (PERSON). When he commanded that Paul be examined by scourging to find out why the Jews made such an outcry against him, he was deterred by Paul's claim to Roman citizenship (22:24–29). Claudius later had Paul examined before the Sanhedrin (22:30–23:10). Informed by Paul's nephew of a conspiracy against Paul's life (23:12–22), Claudius dispatched a full military escort at night to take Paul from Jerusalem to Caesarea, where Felix, the procurator of Judea, was stationed (23:23–35). He sent along a letter to Felix outlining his dealings with Paul (23:26–30). The only reference to his name occurs in the heading of this letter (23:26).

CLEMENT (PERSON) [Gk *Klementos* (Κλεμεντος)]. A Philippian Christian and one of Paul's fellow workers whose names are recorded in the "book of life" (Phil 4:3). The Latin name, Clement, may indicate that his family was among the original, prospering colonists in the Roman colony of Philippi. Clement is named by Paul, along with Euodia, Syntyche and "true yokefellow," as having struggled side by side with him to preach the gospel. "To struggle side by side" (Gk *sunathleō*) is an image taken from the games and suggests that Clement was a "fellow athlete" striving together with Paul in the united effort of preaching the gospel and sharing the suffering involved in that endeavor. Clement is also described as being among those whose names are in the book of life. Just as in the OT reference is made to a "book of life," as a kind of registry of God's chosen people (Exod 32:32–33; Ps 69:28; 139:16; cf. this expression in apocalyptic literature: Dan 12:1; Rev 3:5,20; *1 En* 47:3; and in Qumran: 1QM 12:2), and just as in cities like Philippi there must have been a civic registry that included all the names of citizens, so also, as Paul sees it, the heavenly commonwealth (cf. Phil 3:20) has inscribed in God's book of life the names of believers. Although the phrase "names in the book of life" can indicate in apocalyptic literature that those people so designated have already died, such an assumption regarding Clement is improbable.

Tradition from the ancient church, specifically Origen (*Jo.* 6.36), has identified this Clement from Philippi with Clement of Rome, the author of *1 Clem.* (ca. 96), a view then transmitted by Eusebius (*Hist. Eccl.* 3.4.9) and taken up by later writers. Irenaeus, writing before Origen, had said that Clement of Rome, whom he lists as the third in the list of Peter's successors, was a disciple of the Apostles (*Haer.* 3.3.3), but he did not link him explicitly with the Philippian Clement. Nor did Tertullian, who wrote that Clement of Rome was consecrated by Peter (*De praescr. haeret.* 32), mention any connection between Clement and Paul. It is generally judged, in spite of Origen's statement, that an identification of the Philippian Clement with the Clement of Rome is unlikely because of the geographical and chronological distance that separates these two (Lightfoot 1888: 168–71). Also, Clement was a common name in the 1st century.

A. Tradition and Influence

The so-called *First Epistle of Clement* was an authority in the early church. For a time, it was part of the canon of the churches of Egypt and Syria. Three of the manuscripts in which it is found contain portions of the Christian Scriptures: Codex Alexandrinus (5th century), a Coptic papyrus codex (5th century), and a Syriac NT (12th century). It appears alongside the Didache in Codex Hierosolymitanus. The Latin translation is to be assigned, on linguistic grounds, to the 2d century (Mohrmann 1949). In ca. 150 A.D., Dionysius, bishop of Corinth, wrote to his Roman counterpart, Soter, that the epistle sent by Clement was still being read from time to time in the Christian assembly (Eusebius *Hist. Eccl.* 4.23). Eusebius attests that the letter was read in the worship services of many churches, in the days of old and in his own time

(*Hist. Eccl.* 3.16). Indeed, the letter seems to have been one of the best known writings in the early church. Polycarp makes full, if tacit, use of the work (Lightfoot 1890:1.149–52). Irenaeus praises the letter and summarizes its first chapters (*Haer.* 3.3.3). The epistle is frequently utilized by Clement of Alexandria, who knew the work when he wrote his *Paedagogus* (1.91.2), and filled the *Stromata* with explicit quotations (Grant 1965:5–6). The high esteem in which the letter was held contributed, no doubt, to the legend of its reputed author, to whom anonymous works were subsequently attributed (*2 Clement*, two epistles *De virginitate*, the *Apostolic Constitutions*), making it possible for him to become the hero of a 3d-century romance, the Pseudo-Clementine *Homilies* and *Recognitions*, and glorifying him with a posthumous martyrdom (*Martyrium Clementis*, 4th century). The reading of the work in the worship assembly, the frequent citations in the writings of the fathers, the early translation of the work into three languages, the canonical status which the work sometimes enjoyed—these are so many testimonies to the authority of *1 Clement* in the early church. It is a surprising authority, given the fact that the work made no claim to apostolic authorship. How, then, is one to account for the remarkable authority of this text?

An answer to this question might be sought in the usefulness of the work to the orthodox leaders of the church. *1 Clement* was a weapon in the struggle against the gnostics; it was understood and utilized as an antiheretical writing by Hegesippus and Irenaeus (Bauer 1970: 103–4). Moreover, its teaching on the divine origin of church order and the apostolic succession of ecclesial office (40:1–44:6) seemed to lay the foundation for the concept of the monarchical episcopate and the claim of the Roman church to primacy (Ziegler 1958:102–22). But the usefulness of the work was limited in both respects. For, in fact, Clement's orthodoxy left something to be desired, as Photius quickly pointed out (*PG* 103.408A). It is interesting to note, in this connection, that Clement of Alexandria already omits reference to the mythical phoenix of chap. 25 and the virtuous pagans of 54:1–55:2. Those who wished to assert Roman primacy came, in time, to prefer to cite the Pseudo-Clementine *Homilies* and *Recognitions*, or the *Apostolic Constitutions*, since, in fact, *1 Clement* says nothing about the primacy of Rome or the monarchical episcopate (Peterson 1950: 129–30). The Latin version had to alter the wording of 60:4–61:1 to make it clear that it is to the Roman church that God has given authority. As a result, by the late Byzantine era, *1 Clement* had virtually disappeared from sight, until the first edition was published by Patrick Young in 1633.

If one seeks to comprehend the authority of the text, one must go beyond its function in the struggle for orthodoxy, beyond its influence upon the fathers of the church. In fact, one cannot stop short of the text itself. For the letter makes its own claim to authority, which is altogether surprising at this early period. One is immediately struck by the naturalness with which the Roman church intervenes, all unbidden, in the affairs of another congregation, and not in order to urge both parties to seek peace and reconciliation, but to take sides with the deposed presbyters. The author insists upon strong disciplinary measures: the exile of the younger persons who had raised the rebellion (54:1–4; 1:1; 3:3), and the restoration of the old presbyters to office, apparently against the will of the majority (44:1–6). Astonishing instructions, when one remembers that at this time the Roman church possessed neither the means nor the position to effect such an intervention. That the author did not possess the authority he claims is evident from the rhetorical character of the letter: He must persuade by argument and induce by example; that is, it is not yet his to command.

B. Principal Sources

What is the source of the authority which the letter asserts? Where is the presumption of its author grounded? It is clear that the OT is a warrant for Clement (Wrede 1891: 58–107); it is the book of revelations through which God speaks (22:1). It provides instructions for conduct and examples of nurture (1:3; 3:4; 40:4–5; 50:5; 58:2). More importantly, it prophesies, typologically, the order of the church, the offices of bishop and deacon (42:5, citing Isa 60:17). Like Moses before them (43:1–6), the apostles knew that there would be strife over the title of bishop; thus they decreed that, at the death of the bishops, other approved men should succeed to their ministry, with the consent of the whole church (44:1–3). The presbyters are viewed as cultic officers, on the analogy of the OT priests, and thus are fundamentally

distinguished from the laity (40–41). Their task consists, in accordance with the priestly example, in the offering of sacrifices and in service to the community (44:3–4).

Christian tradition is a second source of authority. The lives of Peter and Paul are paradigmatic (5). 1 Corinthians is cited repeatedly (24:1; 35:5–6; 37:5–38:2; 47; 49:5–6). The author calls upon the liturgy to give force to his counsel: doxologies (20:12; 43:6; 45:7–8; 58:2; 61:3; 64), trinitarian formulae (46:6; 58:2), and, above all, the solemn liturgical prayer, with which the work concludes (59:1–61:3), situate the advice in the worshipping community and invite its sanction. Moreover, the letter has a homiletical character; the first long section (4–39), especially, makes the impression of a sermon. It has even been suggested that *1 Clement* is composed of old homiletical pieces. One has no difficulty locating the accustomed elements of Christian paraenesis: household codes (1:3; 21:6; 21:8), catalogues of virtues (62:2; 64), and of vices (30:1; 35:5–6). In keeping with its homiletical character, the epistle makes use of rhetoric to a far greater degree than other early Christian writings. The author is more familiar with the figures of ancient prose, more sure in his use of diatribal style, than Paul, or than the author of the Epistle to the Hebrews. One repeatedly encounters rhetorical questions and imperatives, antitheses, anaphora, alliteration, etc. The panegyric on love in chap. 49 draws upon rhetorical models in its attempt to rival 1 Corinthians 13. Like the synagogue preacher and the political orator, Clement makes frequent use of examples to illustrate his admonitions on jealousy and envy (4–8), faith and hospitality (9–12), humility (16–18), repentance (51–53), and voluntary exile (55). The agon motif (in chaps. 5–7) is taken over from the diatribe (Dibelius 1942: 192–99; Ziegler 1958: 24–37). All in all, the work makes the impression of a sermon, permeated with scripture citations and concluded by a solemn liturgical prayer. There can be little doubt that the work was intended, from the very beginning, for reading in the assembly, and perhaps in churches beyond Corinth (Stuiber *RAC* 19: 192).

These are strong warrants—the OT and Christian tradition. But it is not here that the claim of the text is grounded. For it is not the content of the tradition which is normative for Clement, but a value which he imports from without. For example, the author of the epistle asserts that God saved through Noah the living creatures which entered in concord *(homonoia)* into the ark (9:4). What is peculiar about this formulation is that the emphasis falls not on the salvation of Noah and his family, as in 1 Pet 3:20, but on that of the animals who entered the ark in concord. There is no tradition, Jewish or Christian, in which the animals are said to have entered "in concord." The notion was doubtlessly suggested to Clement by the "two by two" of Gen 6:10. Behind the curious statement lies the desire to tell the Corinthians, as Knopf rightly observed, "the animals were peaceable, the humans were not" (1920: 59). But precisely this purpose is foreign to the text. The same motive is apparent in chap. 11, where the sin of Lot's wife is said to consist in a difference of opinion with her husband, in her failure to remain in concord *(homonoia)* with him (11:2); thus she was changed into a pillar of salt to make it clear to all that "those who are double-minded fall under condemnation" (11:2). But nowhere is it said in the biblical text that Lot's wife held different opinions from her husband, that she was not in concord with him. Precisely what Clement views as essential has been imported into the text from without. So it is everywhere that the OT is cited: the specific regulations are not considered normative, but the principle of order as such. And whence this principle?

Nor is Christian tradition the basis for the obedience which Clement demands; it furnishes the occasion, or, at most, the content for instructions which are grounded elsewhere. Clement's account of the trials of Peter and Paul (chap. 5) reflects no knowledge of the actual events of their lives, no acquaintance with the autobiographical portions of Paul's letters; rather, the description is shaped by the image of the philosophic athlete, who enters the moral arena to fight for virtue, whose mythological prototype is Hercules, the Cynic-Stoic hero (Sanders 1943: 30–31).

Similarly, Clement adds to Paul's hymn on love, from which he quotes in 49:5, precisely what he wishes to say: "Love creates no strife, love does all things in concord *(homonoia).*" When Clement takes up Paul's image of the body (from 1 Cor 12:12–27), he gives it a very different significance: Paul meant to illustrate the relationship between members, despite their differences; but by stressing the contrast of hand and foot, and the collaboration of great and small (37:1–5), Clement preaches subordination, in

contrast to Paul. Nor does the tradition of Christian worship provide sufficient warrant for the text. Contrast the solution which Clement recommends to the crisis in the Corinthian church, voluntary exile (chap. 54), with the procedure which Paul directs against the sinner of 1 Corinthians 5. Paul insists upon the removal of the man from the community; judgement is to be pronounced in the name of the Lord, and the sinner is to be delivered to Satan. Paul's advice is modelled upon the process for excommunication from the synagogue. Neither the vocabulary nor the process has anything in common with what Clement suggests. Clement's measures are not based upon Jewish or Christian precedents; the norm must be sought elsewhere.

C. Greco-Roman Context

These observations lead one to search for an external warrant for the text. The influence of popular philosophical conceptions, like the moral athlete, with their Cynic-Stoic character, has long been noted (Sanders 1943: 13). One finds, for example, in Clement's discussion of the resurrection, alongside much that is dependent upon Paul (24:1–5, citing 1 Cor 15:20, 36–37), an argument drawn from natural history, the story of the phoenix (chap. 25), in a version which is closely akin to that of Pliny (*HN* 10.2) and Pomponius Mela (*Chorogr.* 3.8). Military obedience as an example of social order (37:1–3) was a favorite topos of the Stoics, as well (Sanders 1943: 82–83). The collaboration of great and small was admired by Plato and Euripides, among others (Sanders 1943: 84). Clement's use of the metaphor of the body (chap. 37) has more in common with Menennius Agrippa (in Livy) than with the purposes of the apostle Paul (Sanders 1943: 85–91). In recommending voluntary exile (chap. 54), Clement follows the precedent of Roman politics, in keeping with Stoic teaching (Sanders 1943: 41–50). Clement's conceptions, illustrations, and figures of speech reflect his dependence upon Greco-Roman models.

But it is not merely a matter of diffuse cultural influence. For the order which Clement seeks to create within the church is that recommended by Roman political philosophy; it is the ideal of "peace and concord," visibly established in the Imperium Romanum and vigorously defended by contemporary orators. At the close of the epistle (63:2), Clement describes his work as "an appeal for peace and concord" (Gk *enteuksis peri eirēnēs kai homonoias*), and expresses the desire that the ambassadors who have accompanied the work will be sent back to Rome quickly, in order that they may report the sooner "the peace and concord which we pray for and desire" (65:1). One notices what a large role is played by "peace and concord" in Clement's account of cosmic order in chap. 20: The heavens are subject to God "in peace" (20:1); sun, moon, and stars roll on in their appointed courses, "in concord, without swerving at all" (20:3); seasons change, giving place to one another "in peace" (20:9); the smallest animals conjoin "in concord and peace" (20:10). So Clement concludes: "All these things did the great creator and master of the universe ordain to be in peace and concord" (20:11). If human beings wish to find their place in the cosmos, as citizens worthy of God, they must accomplish "virtuous deeds before him in concord" (21:1). The great liturgical prayer culminates in an appeal for the peace and concord of the earthly rulers (61:1).

By the end of the 1st century of the Roman empire, "peace and concord" had become a formulaic description of the well-being of the state. One encounters the slogan everywhere, in speeches, in histories, in government documents, on inscriptions and coins. So, for example, in Dio Chrysostom's thirty-ninth oration, *On Concord in Nicaea, Upon the Cessation of Civil Strife:* "But it is fitting that those whose city was founded by the gods should maintain peace and concord toward one another" (39.2; cf. *Or.* 40.26). Plutarch concludes that the plan of Alexander's campaigns demonstrated that he was a true philosopher, because he did not seek to obtain luxury for himself, but to bring "peace and concord to all men" (*De Alex. Fort.* 1.9; cf. Plutarch *De Garr.* 17; Lucian *Hermot.* 22; Dio Cassius *Hist. Rom.* 44.23; 44.25; Dionysius of Halicarnassus *Ant. Rom.* 7.60.2). Diodorus Siculus relates how the inhabitants of Euboea fell into strife, and how their island was devastated; but "at long last the parties came into concord and made peace with one another, having been admonished by their misfortunes" (*Hist.* 16.7.2). The terms "peace and concord" are found together from the 1st century B.C. on, mutually defining a conception of the well-being of the state, in reaction to the bloody civil war (P. Jal 210–31). It is not possible to say whether the combination is typically Roman, and has been taken over into Greek literature (P. Jal 221), or whether *concordia* has been influenced by the Greek concept *homonoia* (Skard 1932). But the origin of the slogan

does not lie in Stoic circles exclusively (contra Sanders 1943: 129). For the ideal is found on inscriptions which record the arbitration of disputes (e.g., *SIG* 816) and on coinage celebrating the end of strife between cities. In urging peace and concord, Clement may be seen to follow the advice which Plutarch gave to a young friend who had inquired about the mode of political life appropriate to a citizen of the empire, in which "the affairs of the cities no longer include leadership in wars, or the overthrow of tyrannies, or the conclusion of alliances … There remains, then, for the statesman, of those activities which fall within his province, only this—and it is the equal of the other blessings—always to instill concord and friendship in those who dwell together with him and to remove strifes, discords, and all enmity" (*Praec. ger. rep.* 805A,824C–D).

D. Literary Form

The importance of political context is confirmed by consideration of literary form. The most explicit description of the work is found in 58:2, in the appeal to the readers to "receive our counsel" *(symboulē).* The letter is conceived, therefore, as a *(symboulē),* or deliberative discourse, regularly discussed by writers on rhetoric after Aristotle (Arist. *Rh.* 1.3–4.8; *Rh. ad Her.* 1.2.2; Quintilian 3.4.15; 3.8.6; [Aristides] *Ars rh.* in Spengel 1894: 2.503–504; see the studies of the literary category *symboulē* by Klek 1919 and Beck 1970). Epistolary theorists provide definitions of the symbouleutic letter (Ps.-Demetrius *Typoi Epistolikoi* 11 and Ps.-Libanius *Epistolimaioi Xaraktēres* 5 in Weichert 1910). The purpose of such a work is to exhort or dissuade, with reference to some future act; thus, it advocates what is beneficial, as opposed to what is harmful (on the goals of deliberative rhetoric, see Aristotle *Rh.* 1.3.5–4.7; Quint. 3.8.1–3; 3.8.22; 3.8.33; Alexander in Spengel 1894, 3: 1–2 and the more detailed analysis by [Aristides] *Ars rh.* in Spengel 1894, 2: 503–504). Narrative is kept to a minimum, since the deliberative work is concerned with the future and seeks to advise about things to come (Arist. *Rh.* 1.3.4; Quint. 3.8.6). The deliberative orator assigns blame where it is due (Arist. *Rh.* 1.9.28–37; Quint. 3.7.28) and makes use of examples (*Rh.* 1.4.8–9.39; Quint. 3.8.36). A sub-category of the deliberative discourse is the appeal for concord (Isocrates *Paneg.* 3; *Ad Phil.* 16; *Ep.* 3.2; Cicero *De Or.* 1.56; Dio Chrys. *Or.* 38.1–2; Dio Cass. 44.23.3; Aelius Aristides *Or.* 24.825D,826D,827D; Philostr. *VS* 1.9.4; Iamb. *VP* 9.45). A number of examples of this genre have fortunately survived, several in the form of epistles (e.g. Thrasymachus *Peri Politeias* Antiphon *Peri Homonoias;* Isocr. *Or.* 4; *Ep.* 3,8,9; Ps.-Plato *Ep.* 7; Ps.-Demosthenes *Ep.* 1; Socratic Epp. 30–32; Ps.-Sallust *Ep.* 2; Dio Chrys. *Or.* 38–41; Aelius Aristides *Or.* 23–24; [Herodes Atticus] *Peri Politeias;* Ps.-Julian *Or.* 35). Their authors, generally philosophers or rhetoricians, seek to calm the outbreak of faction, within cities or between cities, by dissuading from strife *(stasis)* and exhorting to concord *(homonoia).*

The *First Epistle of Clement* fully conforms to the definition of a deliberative work (van Unnik 1970: 33–46). The author successfully combines exhortation *(protropē)* with warning *(apotropē),* e.g., in 30:3; 35:5; 58:1. He uses the recommended topics and arguments, appealing to what is beneficial (19:2–21:2; 35:1–2; 38:6), to what is right and holy, and warning against what causes harm and danger (14:1–2), where the terminology of the *(symboulē)* is especially prominent; on danger as an argument, see also 41:4; 47:7, and the parallel in Dio Chrys. *Or.* 48.14). As Quintilian suggests (3.8.36; 3.8.66), Clement argues for what is right and lawful (63:1–2). Like other works in this genre, *1 Clement* is filled with examples (5; 6; 46; 55; 63:1). The relative absence of narrative, confined to chaps. 1 and 44, is also explained by reference to the genre (Dion. Hal. *Rhet.* 10.14). Even the theme of cosmic harmony in chap. 20 belongs to the topoi of a discourse on concord (cf. Dio Chrys. *Or.* 48.14–16).

In existing speeches and letters on concord, one meets with the same complex of ideas and motifs, adapted by each author to a particular situation. Is it nevertheless possible to discern a structure? When one compares several works from Clement's time, e.g. Dio Chrys. *Or.* 38, [Herodes Atticus] *Peri Politeias,* Ps.-Julian *Or.* 35, Aelius Aristides *Or.* 24.28–37, a schema begins to emerge, in which introduction is followed by proposition, a general appeal for concord, arguments against strife, specific advice, an answer to possible objections, and an epilogue.

E. Occasion and Purpose

1 Clement finds its warrant in the ideology of the empire, and utilizes the popular counsel of concord, ubiquitous in the 2d century (Bowersock 1969: 68). This discovery allows for several conclusions on the occasion and purpose of the work as a whole. First, the fact that Clement draws upon rhetoric and ideology does not mean that the situation is fictitious, or that the letter is a crypto-apology for the faith (Eggenberger 1951). There is no reason to doubt that, as Clement says, "a few rash and self-willed persons have caused strife to blaze up" (1:1), and that several presbyters have been removed from office (44:3–6; 46:9; 47:6), replaced, it seems, by younger men (3:3). That the letter deals sparingly with affairs in Corinth is dictated by the rules of the genre. In the orations of Dio Chrysostom and Aelius Aristides "on concord," the causes of strife are seldom reported. In no case is this a reflection of ignorance; it is simply in keeping with the aims of the genre (Dion. Hal. *Rhet.* 10.14; Quint. 3.8.6–10). In light of these formal and social constraints, one might even say that Clement has told us too much in chap. 44. Thus it is hardly surprising that the background of the conflict is never described, and that the author mentions, as the sources of strife, nothing more concrete than jealousy and envy (4–5). One may conclude that it is impossible to reconstruct the conflict, or the views of those whom Clement combats. It may well be that Lütgert is right in seeing here a conflict between "Spirit and Office" (1911: 50–111), or that W. Bauer was correct in describing the conflict as a special case of the struggle between orthodoxy and heresy (1970: 99–109). But the rules of the genre make it difficult to advance beyond hypotheses.

Whatever the causes of the conflict in Corinth, money seems to have been involved. Contrasting the former humility of the Corinthians with the ambition which has now given rise to strife, the author states that the Corinthians had once been "satisfied with the provision *(ephodios)* of Christ" (2:1). Dionysius of Corinth, in his letter to Soter, observed that it had been the custom of the Roman church from the beginning "to send contributions *(ephodia)* to many churches in every city" (Euseb. *Hist. Eccl.* 4.23.10). From the Roman point of view of Clement, the younger generation of leaders at Corinth are dissatisfied with the provision for their church. What role did this play in the revolt against the presbyters? Were the established presbyters accused of embezzlement? Did the new leaders seek another contribution, to replace the funds their predecessors stole? Polycarp reports that the presbyter Valens was deposed from office for "avarice" (*Ad Phil.* 11). The unrest of the 1st and 2d centuries almost always had economic causes; and the agreements which brought strife to an end usually included concrete provisions which served the interests of all parties.

If one knows less about the situation in Corinth as a result of these insights, one learns more about the purposes of the Roman church. The intervention of Rome into the affairs of Corinth is modelled on the relations of the capital to the provinces. It is thus an expression of the will to power, and not a fraternal correction (Stuiber *RAC* 19: 192) or a kindly (Lietzmann 1832: 202). There is nothing to suggest that Rome's intervention was invited by the Corinthian church, or initiated by the deposed presbyters. The inexact reference to a "report" *(akoē)* in 47:7 seems rather to exclude the possibility of an official communication from Corinth. The Roman church has acted on its own initiative; the division in Corinth only furnished the occasion.

The intervention of the Roman church is modelled on the actions of the Roman senate and the emperor. First, the church decided to dispatch a *symboulē,* in much the same manner that philosophers and orators, with the approval, or on the instruction, of the Roman emperor were sent to troubled cities to counsel concord. Along with its appeal, the church sent three "witnesses" (63:3–4; 65:1) to observe and report on the restoration of peace. The Roman state proceeded in similar fashion in its efforts to quiet faction in the cities. When a class struggle erupted at Rhodes, Aelius Aristides sent a speech on concord in which he described himself as a "witness" (*Or.* 24.833D). In a symbouleutic discourse ascribed to Julian, but dated by Keil (1913) to the 1st century A.D., the author states that a legation *(presbeia)* will be sent to Corinth consisting of two philosopher orators (Ps.-Julian *Or.* 35; Keil 1913: 39). The senate frequently adjudicated disputes between provincial cities, often employing local agents as arbiters (texts and commentary in Sherk [1969]; cf. Tod [1913]; Piccirilli [1973]). Finally, the Roman church recommended exile. *Exsilium* was a Roman practice for escaping trial (frequently mentioned in Cicero, e.g., *Pro Caec.* 100; cf. Suetonius 5.25.4). Clement's solution brings to mind the voluntary exile of Dio under Domitian.

Thus the Roman church sought a relation with its sister congregation in Corinth like that which Rome had with the cities of the empire (Cauwelaert 1935), a relationship like that between mother-city and colony (Seibert 1963). In this sense, *1 Clement* belongs in the history of the primacy of Rome (Ziegler 1958: 122).

In adopting the ideology and strategy of the government, Clement endorsed the Roman imperium. The epistle is characterized throughout by a positive attitude toward the Roman state (Wengst 1987). In 37:2–4 the author praises the Roman military, "the soldiers in service of our leader," as a model of obedience, in language which recalls Aelius Aristides' *Eulogy of Rome* (88). In the solemn liturgical prayer with which the work concludes, the author asks that Christians "may be obedient … to our rulers and governors on earth," to whom God has given the sovereignty (60:4–61:1). This prayer for princes is more than a show of loyalty; it expresses the conviction that the empire and its rulers have been established by God as the earthly counterpart of the heavenly kingdom.

F. Authorship

1 Clement represents itself as a writing of the Roman church, and gives no hint of the name or person of the author. Yet, it must have been written by a single individual, as the unity of style and content suggest. That his name was Clement, as the manuscripts indicate, was the unanimous opinion of the ancient church. The earliest witnesses are in the letter of Dionysius to Soter (Euseb. *Hist. Eccl.* 4.23.11) and in Hegesippus (Euseb. *Hist. Eccl.* 4.22.1). Irenaeus knows that the Roman community, "during his time in office," sent a letter to Corinth (*Haer.* 3.3.3). Without referring to the epistle, Hermas mentions a Clement who had responsibility for correspondence with the churches without (*Vis.* 2.4.3). One may see in this person the author of *1 Clement.* He must have been a leading personality in the church at Rome, the official correspondent with other churches. More than this, one cannot know.

G. Date

The epistle is customarily dated to the end of the reign of Domitian (95 or 96 C.E.). In the first sentence of the letter, the author explains that the Roman church has been delayed in turning its attention to the dispute at Corinth by "sudden and repeated misfortunes and hindrances which have befallen us" (1:1). This statement is usually interpreted as an allusion to a persecution through which the church at Rome has just been passing. Since chap. 5 speaks of the Neronian persecution as something long past, the sporadic assaults of Domitian must be meant. But the language of 1:1 is so vague that one may doubt whether it refers to persecution at all (Merrill 1924: 160); and the evidence for a persecution under Domitian is tenuous (Merrill 1924: 148–73). In letters and speeches on concord, one often finds an apologetic formula like that which introduces *1 Clement*; it was customary for one who gave advice on concord to excuse his delay by reference to personal or domestic hindrances (e.g. Dio Chrys. *Or.* 40.2; Aelius Aristides *Or.* 24.1; Socratic Ep. 31). The language which Clement uses to describe the causes of the delay, *symphorai* and *periptōseis,* with the adjectives *aiphnidioi* and *epallēloi,* is frequently found in discussions of the circumstances which give rise to discord in literary and epigraphic texts (Diodorus Siculus 16.7.2; *4 Macc.* 3:21; Josephus *JW* 5.32; Euseb. *Hist. Eccl.* 4.2.1; *OGIS* 335.15; 339.17; *SIG* 685.137; 708.7; 730.20; 731.6). The appearance of terms so closely associated with strife in the preface to *1 Clement* suggests that the author has cast the conventional apology in the form of a *captatio benevolentiae*; he wished to include himself and the Roman church in the *nouthetēsis* (admonition), so that they should not appear to be lording it over their brethren. The "misfortunes and hindrances" of which the epistle makes mention may have been internal dissensions like those which troubled the community in Corinth. But it is not necessary to believe that these quarrels had any real existence at all, only that the author found allusion to them, by means of conventional expressions, a convenient way of establishing a sympathetic relationship between himself and his readers. He wished to say: We are faced with the same problems and have need of the same admonition.

Thus one must rely upon more general statements in the epistle and in tradition. The account of the deaths of Peter and Paul in chap. 5 is not that of an eye-witness. The presbyters installed by the apostles have died (44:2), and a second ecclesiastical generation has passed (44:3). The church at Rome is called "ancient" (47:6); and the emissaries from Rome are said to have lived "blamelessly" as Christians "from

youth to old age" (63:3). Thus the epistle cannot have been written before the last decades of the 1st century. There are references to the letter by the middle of the next century in the works of Hegesippus and Dionysius of Corinth (*apud* Euseb. *Hist. Eccl.* 3.16; 4.22; 4.23). Thus one may place the composition of *1 Clement* between A.D. 80 and 140.

CLEMENT, SECOND EPISTLE OF. An early Christian epistle transmitted along with *1 Clement* in the biblical Codex Alexandrinus (late 4th century) and the later Jerusalem Codex (1056) which includes the *Didache,* as well as in the Syriac version. It was not written by the author(s) of *1 Clement* and, indeed, is not a letter but a sermon on self-control, repentance, and judgment. The sermon begins abruptly: "Brothers, we must think about Jesus Christ as about God, as about the judge of living and dead; and we must not think little of our salvation." The preacher tells his "brothers and sisters" that he is reading them a "petition" or "plea" (Gk *enteuxis*) to "pay attention to what is written," i.e. to the scriptures which he frequently cites (along with quotations from "the prophetic word," otherwise unknown, and something like the apocryphal Gospel of the Egyptians). He himself refers to "the books (i.e., the OT) and the apostles" as authorities (14.2).

Scholars have noted the "synoptic-type" Jewish piety of the sermon, perhaps surprising around A.D. 140–160 (the epistle's approximate date). The work appears to rely on the Gospel of John as well, however, notably in 9:5–6: "If Christ the Lord who saved us was spirit at first but became flesh [John 1:14] and so called us, so we shall receive the reward in the flesh. Let us then love one another [John 13:34] so that we may all come to the kingdom of God." The kingdom will come when truth and good works are accompanied by ascetic practise (chap. 12). Until then, Christians must preserve the "seal of baptism" (7:6, 8:6) and belong to "the first, spiritual Church, created [like Israel, according to some rabbis] before sun and moon," for Gen 1:27 refers to the male Christ and the female Church, both spiritual; Christ is also the Spirit (chap. 14). The theology is not altogether clear, and the author soon turns to state that he has "given no trivial counsel about self-control," leading into his practical appeal for repentance and going so far as to say that "fasting is better than prayer, but almsgiving is better than both" (16:4).

He urges his hearers "not just to seem to believe and pay attention while being exhorted by the elders" but to remember at home and meet more frequently (17:3). Sinners will be punished in unending fire (17:7, cf. 5:4, 7:6).

Why was it supposed to be from Clement? Three places of origin have been assigned to it because of its connection with *1 Clement:* Corinth, Rome, and (later) Alexandria; but none is fully convincing. It is simply one example of a "garden-variety" 2d century sermon, rhetorically inferior to the work of Melito of Sardis and Hippolytus.

ROBERT M. GRANT

CLEMENTINES, PSEUDO-. "Pseudo-Clementines" is not primarily a generic designation used in all inauthentic writings attached to the name of Clement of Rome. It refers rather to a specific group of pseudonymous compositions that relate a fictitious tale of Clement's conversion to Christianity, of his travels with Peter, and of his recovery of the long-lost and dispersed members of his family. The genre of these writings is the ancient romance of recognitions; the *Pseudo-Clementines* are the first known example of Christian adoption *en bloc* of this literary *Gattung.* The author has thereby used established literary conventions to illustrate his belief that Christian faith leads to the resolution of intellectual difficulties as well as hardships in life.

The main constituents of the *Pseudo-Clementines* are the *Homilies* and the *Recognitions.* The original Greek of the *Hom. Clem.* has survived in two manuscripts from the 11th or 12th and 14th centuries. The Greek of the *Clem. recogn.,* in contrast, has been lost except for small fragments preserved in the church fathers (listed in Rehm 1965: c–cii). Two ancient versions of this work must be employed in lieu of the Greek. A Latin rendering was undertaken by Rufinus of Aquileia in ca. 406 C.E. A Syriac version, containing at least books 1 to 4.1.4, was made somewhat earlier. The surviving Greek and Armenian fragments reveal that these two translations are of approximately equal text-critical value, though the Syriac deserves slight preference. The *Hom. Clem.* and the *Clem. recogn.* originated probably in 4th century Syria, as traces of the Arian debate indicate.

These two main recensions of the *Pseudo-Clementines* have so much material in common that some sort of literary relationship must exist between them. Though simple dependency of the one upon the other was advocated in the 19th century, the view that both are based on an earlier third writing (the basic writing) has gained predominance. It is controversial whether this basic writing was employed independently (Waitz, Strecker) or under the influence of the other recension (Rehm).

There are no undisputed fragments of the basic writing. The most likely candidates are the citations in the *Chron. Pasch.,* Origen *comm. ser. 1–145 in Mt.* at Matt 26:6–13 (series 77, p. 185.18–24), the *Opus imperfectum in Matthaeum* cols. 770–71, and Origen *philoc.,* though Strecker (1981: 260–64, 269) denies that any of these derive from the basic writing. Of decisive importance in this regard is whether Origen

himself knew the basic writing. Beyond the passages already mentioned, one should compare also Origen *Cels.* 1.57, 6.11 with *Hom. Clem.* 2.23–24 par. The debate on the genuineness of the citation in Origen *philoc.* (see now Stuiber 1973) has been continued by Junod (1976: 25–33), on the one side, and Rius-Camps (1976: 153–54), on the other; while it is not true that one of the compilers, Basil the Great, did not know the *Pseudo-Clementines* (see Riedinger 1969: 258–59), this citation probably derives from Origen. In contrast, the suggestion by Tetz (1968) regarding a new fragment of the basic writing must be flatly rejected. Other authors who are likely to have used the basic writing are Epiphanius, the *Const. App.* (contra Wehnert 1983: 289–90), and possibly Lactantius. In sum, these witnesses would indicate that the basic writing was composed ca. 220 C.E., and Syria is its probable home.

Great effort has been exerted in attempts to recover the sources of the basic writing. The most important and controversial of these are the so-called *Kerygmata Petrou (Preachings of Peter).* This hypothetical writing, postulated by modern investigators to explain the genesis of the *Pseudo-Clementines,* quite possibly never existed and thus is perhaps only a fiction that has riddled recent scholarship. In any event, the emendations of the text in *Hom. Clem.* 1.20.2 that are used as a main buttress for the theory of this source are not legitimate. Another common source-critical theory assumes that much of the material in *Clem. recogn.* 1 derives from (a recension of) the *Anabathmoi Jakobou (Ascents of James),* a Jewish Christian writing described by Epiphanius *haer.* 30.16.7–9 as containing a vicious lampoon against Paul. While a source does seem to be reflected in this section of the *Pseudo-Clementines,* the similarities with the *Ascents of James* do not extend beyond widespread Jewish Christian notions, while the differences (e.g., no elements of the lampoon against Paul as reported by Epiphanius) preclude the identification of the *Ascents of James* as the source.

The *Pseudo-Clementines* are significant for biblical studies in a number of ways, but mainly because the author of the basic writing was affected by Syrian Jewish Christianity. He has preserved traditions that evidently extend back to apostolic times and that have survived elsewhere only fragmentarily. Elements of anti-Paulinism in the *Pseudo-Clementines* led F. C. Baur to employ these writings as a cardinal witness to the Jewish Christian wing of earliest Christianity. Early tradition is also reflected in some of the unusual sayings of Jesus that find parallels in a variety of sources, especially Justin Martyr. The thesis that the *Pseudo-Clementines* are directly dependent on a harmony of the Gospels (in particular, one supposedly used by Justin, as assumed by Kline 1975), however, finds insufficient support in the parallels. The history of each saying must be examined independently.

F. STANLEY JONES

CLEODEMUS MALCHUS. A Jewish historian who lived prior to the mid-1st century B.C.E. A brief excerpt of his work is first quoted by the pagan author Alexander Polyhistor, possibly in his now lost book *On Libya.* The fragment is preserved in Josephus *Ant* 1.15.1 §§ 239–41, from which it is later quoted in slightly altered form in Eusebius *Praep. Evang.* 9.20.2–4.

The exact title of his work is not known. Josephus only says that Cleodemus "reported concerning (perhaps, narrated the history of) the Jews." The one surviving fragment expands on Gen 25:1–4, which lists Abraham's descendants through his second wife Keturah. Conflating the biblical account, Cleodemus lists 3 sons of Abraham by Keturah: Iapheras, Sures, and Iaphras (or, as reported by Eusebius, Apher, Assouri, and Aphran), after whom he says the city of Ephra (Afra; otherwise unknown), Assyria, and Africa were named.

Cleodemus displays special interest in traditions relating to Libya (the continent Africa) and Africa (the region around Carthage), in particular the exploits of the Greek hero Heracles in Libya, which were variously reported by ancient authors (cf. *Diod. Sic.* 1.17.3; 21.4; 24.1–8; 4.17.4–5; Plutarch *Sert.* 9.3–5). Especially remarkable is Cleodemus' claim that Abraham's sons joined Heracles in fighting the Libyan giant Antaeus, and that subsequently Heracles married Abraham's granddaughter and fathered a son from whom descended the "barbarian Sophakes" (perhaps a reference to Numidian tribes in N Africa). This willingness to link the biblical account of Abraham's descendants with popular legends current in the Hellenistic-Roman world, thereby providing a distinctly Judaized version of the settling and civilizing of Libya and Africa, is a specific instance of syncretism that typifies certain Gk-speaking Jewish authors of the Hellenistic period, e.g. Artapanus and Pseudo-Eupolemus.

As to the identity of Cleodemus, virtually nothing is known except that Polyhistor gives his surname as Malchus and calls him "the prophet." Depending on how one interprets each of these biographical data, as well as how one assesses his syncretistic tendencies, scholars have variously identified him as Samaritan (Freudenthal 1875: 131–36), Jewish (Walter 1976: 116), and pagan (Wacholder 1974: 54, 55), either Syrian or Phoenician. The likely Semitic origin of the name Malchus and his demonstrable interest in Abraham argue for his Jewish identity. Generally a Palestinian or Samaritan provenance has been suggested, although the prominence he gives to N African traditions suggests that he was perhaps a member of the Jewish community at Carthage (Walter 1976: 116).

The only firm indicator of his date is that he is quoted by Alexander Polyhistor (ca. 105–30 B.C.E.). How much earlier he flourished is difficult to say. He may have used a Gk translation of Genesis, which would suggest that he lived after the mid-3d century B.C.E. Scholars generally date him between 200–50 B.C.E.

CARL R. HOLLADAY

CLEOPAS (PERSON) [Gk *Kleopas* (Κλεοπας)]. One of the 2 disciples whom Jesus joins on their way to Emmaus (Luke 24:18). The name Cleopas has been found on a Gk ostracon from Egypt: it is a shortened form of *Kleopatros* ("illustrious father"), the masculine form of Cleopatra. It is sometimes identified with Clopas (John 19:25), but the latter is of Semitic origin. The evidence for identifying the 2 names is not strong. Probably, Luke is working with a tradition (cf. Mark 16:12–13); otherwise, he would have also named Cleopas' companion (Fitzmyer *Luke x–xxiv* AB, 1554–55, 1563–64). Cleopas was very likely known to Luke's readers. Naturally, there has been some speculation about his unnamed companion; Cleopas' wife or son have been suggested. The former is more reasonable, since if the son was later bishop of Jerusalem, he would have been named (Marshall *Luke* NIGTC, 894). Other suggestions for the identity of Cleopas' companion include: Peter (unlikely in view of vv 33–34), Nathaniel, the deacon Philip, Nicodemus, Simon, Amaon and even Emmaous (Metzger 1980:40–1).

More important is how Cleopas and his companion function in the narrative. They stand for any Christian who was (or is) confused about what happened to Jesus and about where they might now find him (Wanke 1973: 67,122,126). Of course, Jesus' appearance to Cleopas and his companion and the majestic passives express divine initiative and grace (Betz 1969: 34–39,44–46). Cleopas and his companion walk on "the way" (vv 32,35), a name for Christianity (cf. Acts 8:26,36,39;9:2;16:17;19:9,23;22:4;24:14,22). Their failure to see represents weakness of faith; thus, Jesus describes them as "foolish … and slow of heart to believe all that the prophets have spoken!" (Luke 24:25). To be sure, they knew that Jesus of Nazareth was a prophet mighty in work and word and that he had been delivered up, condemned and crucified by the chief priests and rulers. But they failed to realize how well founded was their hope that Jesus was the one to redeem Israel. Now, 3 days had passed, and everything was gloomy, except for the confirmed report of the women that the tomb was empty and their amazing news that they had seen a vision of angels who said that Jesus was alive. Then, before their blind eyes, Jesus opens all the Scriptures. Beginning with Moses and the prophets, he explains everything about himself—that the Christ had to suffer all these things and so enter his glory (cf. Luke 16:31). Some authors (Betz 1969: 37–41; Perry 1986: 59–68) derive from the story a message about the presence of the risen Jesus in every Christian interpretation of scriptures. Koet (1985: 59–73) contends that "discuss" *(synētēo),* "open" *(dianoigō)* and "explain" *(diermēneuō)* are certainly technical terms for scriptural interpretation, and to a lesser extent, "converse" *(homileō).* "Heart" can be associated with such interpretation.

Cleopas and his companion also exemplify hospitality and the recognition of the risen Jesus in the Eucharist. When they reached Emmaus, Jesus appeared to be going further. However, Cleopas and his companion constrained him to remain with them because it was late. At table, Jesus took the bread and blessed it, broke it, and gave it to them. Only then were their eyes opened, and they recognized him (v 31; cf. vv 16, 35; Plevnik 1987:94–98), but he vanished. A theme of hospitality (Karris 1987: 58–59; Robinson 1984: 485–94) does not explain the similarity of Jesus' words to those of the Last Supper (Luke 22:19; cf. 9:11–17) nor the parallel with "Philip and the Ethiopian Eunuch" (Acts 8:25–40; Dupont 1953: 361–64). Furthermore, the information that their eyes are opened and their journey ended only at the breaking of bread emphasizes that event even more than the correct understanding of scripture. On the other hand, Luke does associate the breaking of bread with instruction about himself and the mission (Dillon 1978: 105–8).

Cleopas and his companion recalled how on the way their hearts had burned within them when Jesus opened the scriptures. Immediately, they returned to Jerusalem and told the eleven and those with them what happened on the way and how they recognized Jesus in the breaking of bread. Yet their news is subordinated to Jesus' appearance to Peter (Wanke 1974: 186–88), and the return to Jerusalem and the eleven marks the formation of the community (Dillon 1978: 93–103).

Like all Christians, Cleopas and his companion are on the Way. Their inability to see, their lack of faith and hope, calls for a correct understanding of scriptures—that Jesus is the redeemer and, as Christ, had to suffer and thus enter his glory—and of his presence in the Eucharist. Such an understanding brings

amazement and joy. Cleopas and his companion also demonstrate the need for grace, hospitality, enthusiasm to share the good news and joining one's proclamation to that of the Church (Borse 1987: 62–66; Wanke 1973:49–53,114–16).

ROBERT F. O'TOOLE

CLEOPATRA (PERSON). Although borne by several minor mythological figures, the name Cleopatra ("born of a famous father") came into prominence during the Hellenistic period mainly as a result of its close association with the royal house of Macedon. The first Cleopatra of historical note was the wife of Perdiccas II of Macedon (ca. 452/35–413 B.C.) and Cleopatra was also the name of the daughter of Philip II at whose wedding celebrations Philip was assassinated in 336 B.C.

It was presumably because of these royal associations that the name later became popular with the Seleucid and Ptolemaic dynasts. Several Ptolemies had wives and daughters called Cleopatra and the best-known bearer of the name—the mistress of Julius Caesar and Mark Antony and last ruler of an independent Egypt before her suicide by asp bite in 30 B.C. and the country's annexation as a Roman province—was actually Cleopatra VII of that line. There are three previous Cleopatras of this dynasty who are of particular biblical interest.

1. *Cleopatra I,* born ca. 215 B.C., was the daughter of Antiochus the Great and Laodice. Married to Ptolemy V in 194/3 B.C. as part of the peace settlement between the two kings in 195 B.C., she brought as her dowry the revenues of Coele-Syria and Palestine (Josephus *Ant* 12.4.1 § 154). Nicknamed Syra ("the Syrian"), she ruled as regent for her young son Ptolemy VI after her husband's death in 180 B.C. She died in 176 B.C., leaving 2 sons, Ptolemy VI and VIII, and a daughter Cleopatra II.

2. *Cleopatra II,* daughter of the foregoing, was married in 175/4 B.C. to her brother Ptolemy VI. Add Esth 11:1 is thought to refer to them. It was to them that Onias IV fled after the installation of the hellenizer Alcimus as high priest (Joseph. *Ant* 12.9.7 §§387–88). In response to his petition citing the prophecy in Isa 29:19, they permitted him to construct at Leontopolis a temple similar to the Temple at Jerusalem (*Ant* 13.3.1–3 §§62–73), as well as favouring the Jews in other ways. In 170–164/3 B.C. Cleopatra was co-regent with Ptolemy VI and her younger brother Ptolemy VIII, with whom she joined in a dynastic marriage with the latter after her husband's death in 145 B.C. Matters deteriorated in 142 B.C. when Ptolemy VIII also married her younger daughter Cleopatra III, adding her to the co-regency. A confused power struggle resulted, with both Cleopatra II and Ptolemy VIII fleeing into exile on occasion. Reconciled in 124 B.C., the three again ruled together until Ptolemy's death in 116 B.C. Cleopatra II herself died soon afterwards, probably in 115 B.C.

3. *Cleopatra Thea,* oldest daughter of the foregoing and Ptolemy VI, was joined in a diplomatic marriage in 150 B.C. to Alexander Balas, who had gained the Seleucid throne with the support of Ptolemy and of Jonathan Maccabaeus (1 Macc 10:57–58; Josephus *Ant* 13.4.1–2 §§80–85). He proved unsatisfactory as king and in 146 B.C. Ptolemy switched his support and Cleopatra's hand to a rival claimant, Demetrius II Nicator (1 Macc 11:9–12; Josephus *Ant* 13.4.7 §§109–110). Demetrius was captured while invading Parthia (139/8 B.C.) but Cleopatra continued as queen by marrying his brother

Antiochus VII Sidetas (138–129 B.C.). Later she ruled in her own right for a short period (126 B.C.) and then as regent with her son Antiochus VIII Grypus (125–121 B.C.). Exposed in an attempt to poison him, she was forced to commit suicide by drinking the poison herself (Justin 39.2.7–8).

4. Unrelated is the Cleopatra from Jerusalem, a wife of Herod the Great (Josephus *Ant* 17.1.3 §21) and mother of the tetrarchs Herod and Philip (Luke 3:1). See further in PW 11/1: 738–44, 785–87.

CLERGY. See MINISTRY IN THE EARLY CHURCH.

CLIENT KINGS. Rome's ability to establish friendly contacts and alliances with the powers around her was fundamental to the success of Roman imperial expansion and administration. "Client kings" is a convenient general term employed by modern scholars to denote monarchical rulers who enjoyed such relations with Rome, whether those relations were based upon a formal treaty or not.

A. Terminology and History

The Roman state termed these rulers its *amici* ("friends") and/or *socii* ("allies", a term also applied to provincials). Their kingship was often recognized formally by Roman proclamation *(appellatio),* sometimes, especially under the Republic, with grand ceremony at Rome, as was the case with Herod in 40 B.C. At the same time, individual Romans developed special personal and family relationships with these rulers and might actually describe them as their "clients" *(clientes),* though here, too, the terminology of friendship was the norm. Therefore, the term 'client king' is not a formal title or a common designation so much as a metaphor used to express the *de facto* patronage exercised by Rome and Romans over these rulers. Of course, in practice, the actual nature of that patronage varied greatly from case to case, especially according to the relative strengths of the contracting parties. Thus, for example, the powerful king of Parthia often had a relationship with Rome which, in purely formal terms, was indistinguishable from that of a petty client king (such as Herod), but the vastly greater power of the Parthian king made the realities of his relationship with Rome entirely distinct.

The first client kings were insignificant tribal chieftains of Italy whose names have mostly been lost to history. As Rome expanded into the Hellenistic world, it gained grander "friends and allies." For that reason Hiero II, king of Syracuse (ca. 263 B.C.), is often though erroneously regarded as the first client king of Rome. Client kings remained vital to the Roman empire until the fall of the empire in the West in A.D. 476 (when a client king of sorts, the Germanic Odoacer, seized power). In the East they continued to be vital to the Byzantine state, which could even count kings of Italy among its clients. Yet it is often supposed that Rome conceived of client kingdoms as temporary entities eventually to be replaced by provinces administered directly by Roman governors. The fact is, however, that although kingdoms tended to be annexed over the centuries, there is no evidence that Romans ever thought of such kingdoms as temporary; indeed, such long-term thinking was simply not characteristic of Roman government.

B. Relations with Rome

The frontier of the Roman empire was in practice a broad, ill-defined area, even where fortified lines existed. Within that undefined area, client kings played a crucial role, since most were therefore situated on the margins of the territories directly administered by Rome. Due to their marginality, the Romans themselves disagreed as to whether, strictly speaking, client kings were "inside" or "outside" the *imperium Romanum.* On the frontier, client kings joined Roman military campaigns of attack and defense, providing large forces, necessary resources, information, and strategic positions. Rome seems to have preferred not to tax such kingdoms directly, but rather to leave them as reservoirs upon which she could

draw whenever required. Moreover, client kings could use their marginal positions to act as intermediaries for Rome, though they risked accusations of treachery by so doing (see HEROD ANTIPAS).

It must be stressed that client kings enjoyed a great measure of independence and real power by virtue of their powerful friends in Rome and, more generally, because Rome was simply not interested in matters of day-to-day local administration. Rome became genuinely interested in the kings' activities primarily when those activities threatened Roman interests directly or indirectly (e.g., when a king consorted with an enemy of Rome, or if he created or failed to quell unrest within his kingdom). In particular, Rome expected client kings to suppress banditry and piracy within their territories. Should a king fail to satisfy Roman expectations he might be deposed, detained, or even executed. On the other hand, client kings could call upon Roman support and protection against internal and external threats to their kingdoms. Though Rome might refuse to help, usually it was in the interests of its prestige and of future deterrence to be seen rallying to the aid of her friends. In the same way, when a king died he sometimes left a will that called upon Rome to ensure the succession of his chosen heir. Where no such heir existed, kings might bequeath their entire kingdoms to Roman protection and administration.

The relationships between Rome and client kings were structured (and on occasion undermined) by personal and family relationships between kings and leading Romans. These relationships brought great military forces into the hands of the most influential Romans, such as Pompey. In the civil wars which marked the passage from republic to principate at Rome, client kings played important roles. Juba of Numidia and Cleopatra VII of Egypt are the two best-known examples.

After the Battle of Actium in 31 B.C. and the establishment of the principate under Augustus, the patronage exercised over client kings by the Roman state and by individual Romans tended to coalesce, becoming simply the patronage of the emperor and the imperial family. Although other Romans (especially governors in adjoining provinces) continued to form relationships with kings, the emperor took some care to ensure that these did not undermine or contradict his political wishes. Augustus, following precedents set by Caesar and Antony in particular, made client kings a more integral part of the Roman empire than they had been. Most client kings were now granted Roman citizenship and regularly sent their sons to stay with the imperial family at Rome. In their kingdoms, kings founded or refounded cities which they named Caesarea, cities which often contained edifices named after members of the imperial family. These cities also became centers of the imperial cult, and a few kings, notably in the Crimean Bosporus, actually appointed themselves priests of the imperial cult. Coins were minted depicting the image of the ruling emperor.

Emperors used kings to boost their prestige not only in the empire at large but also within Rome itself, where great ceremonies could be held to celebrate the conclusion of treaties and formal arrangements. The Romans were ambivalent toward these kings, but they nevertheless recognized the exalted status of royalty. It was easy therefore for the emperor to claim honor not only as the "conqueror" of kings but also as their great patron and protector.

In the course of the principate, client kings and leading Romans became increasingly indistinguishable. In the Roman Senate, provincial elites more and more replaced the members of the old aristocracy, which had largely died out. Scions of royal dynasties were very much in the vanguard of this movement into the Senate.

DAVID C. BRAUND

CLOISONNE. See JEWELRY.

CLOPAS (PERSON) [Gk *Klōpas* (Κλωπας)]. Husband (or son or father) of a woman who stood near the cross of Jesus during his execution according to John 19:25. The exact relationship cannot be

determined from the Gk text, because she is identified only as "the Mary of Clopas." He sometimes has been identified with Cleopas [Gk *Kleopas*], one of the 2 travelers to Emmaus with whom Jesus conversed after the resurrection according to Luke 24:18. While it is possible that the Semitic name Clopas has been transformed into the Gk name Cleopas (abbreviated for *Kleopatros*), or vice versa, there is no reason to assume the identity of the 2 men. No evidence in the Gk texts of Luke and John suggests that the 2 names were interchanged during the course of their transmission. But a tradition found in Origen (*Cels.* 2.62, 68 and elsewhere) suggests that Cleopas and Clopas may have been equated by Christians as early as the 3d century.

Efforts to identify Clopas as a relative of Jesus based on biblical texts are not convincing. John 19:25 appears to depict 4 women near the cross: Jesus' mother "and the sister of his mother, the Mary of Clopas, and Mary Magdalene." Although the phrases "the sister of his mother" and "the Mary of Clopas," seem to refer to separate individuals, the ambiguity of the Gk makes it quite possible that only 3 women are present. Thus if one takes "Mary of Clopas" to stand in apposition to "the sister of his mother," then Clopas could be Jesus' cousin or grandfather or uncle on his mother's side. The last possibility is intriguing because Eusebius knows a tradition from Hegesippus that Clopas was Joseph's brother, hence Jesus' uncle on his father's side (*Hist. Eccl.* 3.11). According to Hegesippus, Clopas was the father of Symeon (Simon) who succeeded Jesus' brother James as bishop of the Jerusalem church (3.32; cf. 3.11; 4.22).

Reading John 19:25 to refer only to 3 women witnesses (as in Mark 15:40 = Matt 27:56; diff. Luke 23:49) has led to further speculation that Mary the wife of Clopas was also Mary the mother of James and Joses named in Mark 15:40. Based on this identification and the conjecture that the James of Mark 15:40 was the son of Alphaeus (Mark 3:18 = Matt 10:3 = Luke 6:15; Acts 1:13), Alphaeus and Clopas would be one and the same person. But the identification of Alphaeus and Clopas depends upon 3 weak presuppositions: (1) the assumption that Mary is Clopas' wife; (2) the inference that Mary of Clopas was the sister of Jesus' mother, which leads to the unlikely result that both sisters had the same name; (3) the arbitrary identification of the James in Mark 15:40 with the James of Mark 3:18. Moreover, there is reason to think that 'Mary the mother of James and Joses' in Mark 15:40 refers not to Clopas' wife but to Jesus' mother, as does a similar description in Mark 6:3. If this is the case, then both Mark and John would agree in portraying the mother of Jesus as present at the crucifixion, but the Mary of Clopas does not readily correspond to any woman in Mark 15:40. (See Platz *IDB* 1:650; *NTApocr* 1: 418–32.)

CNIDUS (PLACE) [Gk *Knidos* (Κνιδος)]. A Greek port on the SW coast of Asia Minor which Paul sailed past on his voyage to Rome (Acts 27:7). Cnidus (pronounced with a silent "c") was situated at the very W tip of a 40-mile peninsula which juts out into the Mediterranean between the islands of Cos and Rhodes, near the modern town of Tekir. This region was called Caria, and in Paul's time was part of the Roman province of Asia. Acts relates that Paul's ship sailed slowly W from Myra to Cnidus, and then was forced by unfavorable autumn winds to turn S and sail to Crete (reference to "the fast" in 27:9 indicates the autumn season). Haenchen detects an error here, claiming that the course was not changed by unfavorable winds but rather was the normal route to Rome (1971: 699). Actually, the text does not say where the normal course for fall sailing was, but simply that "the wind did not allow us to go on." This is not inconsistent with Haenchen's claim that autumn winds typically forced westbound ships to detour S from Cnidus to Crete.

Writing less than a century before Paul's journey, Strabo described Cnidus as a city:

> with two harbours, one of which can be closed, can receive triremes (warships), and is a naval station for twenty ships. Off it lies an island which is approximately seven stadia in circuit, rises high, is

> theatre-like, is connected by moles with the mainland, and in a way makes Cnidus a double city, for a large part of its people live on the island, which shelters both harbours. (14.2.15)

The military harbor faces NW while the larger, commercial harbor which Paul's ship approached faces SE. The mountainous island rises W of the city and is connected by a narrow man-made isthmus to the mainland E of the city. Modern excavations have revealed that the city itself may have originally been built on the island and then spread across the isthmus to the mainland. It boasted 2 theaters, the smaller of which seated approximately 4,500 and faced the S commercial harbor. The city also featured numerous temples and a necropolis that is one of the largest ever discovered. A circular temple with 18 Doric columns crowned the westernmost terrace above the city, overlooking both harbors. This almost certainly displayed the famous marble statue of Aphrodite Euploia (the Aphrodite of Fair Sailing) created in the 3d century B.C.E. by Praxiteles. Writing during the 1st century C.E., Pliny the Elder described it as the finest sculpture in the world, a work of art which had made Cnidus a famous city (*HN* 36.20–22).

It was previously hypothesized that ancient Cnidus was founded near modern Burgaz-Datça, about 26 miles E, and was only moved to the present site during the 4th century B.C.E. (*IDB* 1:655). Excavations have disproved this theory by unearthing pottery fragments at the present site dating from the 6th century B.C.E. (Mellink 1978: 324). Anti-Hasmonean Jewish refugees may have fled to Cnidus ca. 142 B.C.E. In that year, at Hasmonean request, the Roman consul Lucius wrote to Cnidus requesting that the city extradite any Jewish refugees to the high priest Simon (1 Macc 15:21–23). Roughly a century later the Romans exempted the city from tribute (Love 1972b: 401). Although Paul sailed past Cnidus, Christian missionaries later came to the area, several churches were constructed, and eventually the city became the seat of a bishop. During the 5th century C.E., a basilica was constructed on the site of the temple of Dionysus (*IDB Sup,* 169).

CODE. See LAW, BIBLICAL AND ANE.

CODEX. The codex (pl. codices), or leaf book, of which the modern book with pages is a direct descendant, came into use as a medium of literature only in the early centuries of the Christian era. Although it was not a Christian invention, the codex was early favored in the Christian circles for the transcription of Christian literature, and its wide use by Christians popularized it and eventually led to its use for the transcription of Greek and Roman literature as well. The replacement of the traditional scroll or roll book (Lat *uolumen,* whence our "volume") by the codex was a development of major importance in the history of book production in general. Within Christianity the codex played an important role in the transmission and collection of Christian writings and contributed to the formation of the Christian Bible.

This entry consists of 10 articles. The first provides a discussion of what exactly a codex is, followed by separate articles on the major codices: Alexandrinus, the Berlin Gnostic codex, Bezae, Brucianus, Claramontanus, Ephraemi Rescriptus, Sinaiticus, Vaticanus, Washingtonianus. A discussion of Codex Askewianus can be found under PISTIS SOPHIA. See also CANON (NT); CHESTER BEATTY PAPYRI; NAG HAMMADI; PAPYRI, EARLY CHRISTIAN.

THE CODEX

The codex made of papyrus or parchment apparently evolved from sets of thin wooden boards, either whitened to receive writing with ink or slightly hollowed and filled with wax to receive writing with a stylus, and then hinged along one edge. Such sets of writing tablets *(tabellae, pugillares)* had long been used as notebooks for jotting memoranda, keeping accounts, doing school exercises, or making rough drafts. The term codex derives from them: *caudex* or *codex* meant originally "a piece of wood." When sheets of papyrus or parchment were substituted for wooden tablets the codex became lighter, easier to

handle, and far more capacious. Yet it retained its purely functional status as a notebook and was not immediately regarded as a proper book, that is, a medium of literature.

The papyrus codex was constructed either on a single-quire or a multiple-quire method. A single-quire codex was produced by cutting sheets from a manufactured papyrus roll, stacking them, folding them across at the center, and then fastening them along the crease. Such a codex might contain as many as 50 sheets (yielding 100 leaves or 200 pages). A multiple-quire codex was formed by folding single sheets or small groups of sheets, thus creating a series of gatherings (or quires) which were then stacked and stitched together at their folded edges. On either method, the sheets were usually so arranged that facing pages always exhibited the same side of the papyrus, whether horizontal or vertical fibers. Most early papyrus codices were made as single quires, but the multiple-quire method later prevailed because it permitted the construction of larger codices which did not bulge at the outer edge and tend to spring open. Extant papyrus codices vary in size, but normally are 6–8“ wide and 10–12“ high. Papyrus codices were almost always higher than wide, and thus typically differ from parchment codices, which closely approximate a square shape. Parchment codices could be constructed on the single-quire or the multiple-quire method, but multiple quires are characteristic. Here too the sheets were arranged so that the facing pages showed the same side of the material, in this case either “flesh” or “hair of the skin.” Although parchment codices were much outnumbered in the early evidence by papyrus examples, the evidence does not allow a clear determination of what material was originally used for making codices. In the first 3 centuries papyrus seems to have been preferred, for it was plentiful and inexpensive, but by the 4th century parchment predominated, less because of any intrinsic advantage over papyrus than, as some have suggested, because of economic decline in Egypt. Once constructed, the codex was often furnished with a cover of wood or leather which could be fastened with thongs. Few early covers have survived, but the Nag Hammadi codices preserve some fine examples.

The inscribing of a codex posed problems not encountered in a roll. Whereas in a roll all writing was done on the side where the papyrus fibers ran horizontally, in a codex the scribe had to write on both sides of each sheet, and thus also where the papyrus fibers ran vertically. A comparable task was posed by the parchment codex, where the scribe had to write on the hair side as well as on the flesh side. Also, when inscribing a codex it was necessary to calculate carefully in advance how much space would be needed, for the codex, if it was constructed before being inscribed, could not be so easily enlarged as a roll. If, however, the pages were inscribed before the codex was gathered and bound, the sheets had to be carefully maintained in the proper order. Further, whereas rolls were normally inscribed in narrow columns, the relatively narrow pages of codices encouraged the inscription of a rather broader single column per page, and this is the general rule for extant codices. Some, however, have 2 or more columns, but this is more typical of parchment codices with their relatively wider pages.

The first mention of the codex as a medium of literature, and thus as a book proper rather than a notebook, is found in epigrams of the Roman poet Martial in the late 1st century C.E. He refers to the availability of his own poems in a form “which the parchment confines in small pages” (1.2: *quos artat brevibus membrana tabellis*), and mentions the bookseller from whom these could be obtained, so that these were commercial products. He refers also to works of other writers (Homer, Virgil, Cicero) which are *in membranis* or *in pugillaribus membraneis* (14.184–92); at least the latter, but probably all these, were parchment codices. Such inexpensive pocket-editions, which are represented as novelty gifts, must have been produced by a publishing entrepreneur. But the innovation apparently made no headway against the time-honored roll, which continued as the medium of Greek and Latin literature for centuries to come.

It was first of all in Christian circles that the codex gained popularity as a format for literature. The remains of Christian manuscripts from the 2d and 3d centuries are predominately in codex form, and items of Christian “scriptural” literature are almost exclusively in codex form, while the remains of non-Christian manuscripts from this period are by large majority in traditional roll form. The marked departure of Christianity from the established standard in book production cannot be plausibly explained simply by reference to the practical advantages of the codex over the roll, for though there were advantages

(economy, portability, ease of reference, comprehensiveness), they would not have been recognized exclusively by Christians. Consequently it has been supposed that the codex was promoted into general Christian usage by the authority of some particular document originally published in a codex, such that the authoritative content of the work carried over to the type of book in which it was known. It has been argued that this document was the gospel of Mark (Roberts 1954), or some early gospel-type document, such as a collection of sayings of Jesus (Roberts and Skeat 1983). A good case might also be made that it was an early collection of Pauline letters. Although such a nonutilitarian stimulus to the Christian adoption of the codex is plausible and probable, the practical advantages of the codex for travelling missionaries (portability, ease of reference, comprehensiveness) ought not be left wholly out of account (McCormick 1985). In any event, the codex early became the standard form of the Christian book, and it was undoubtedly under Christian influence that by the late 3d and early 4th centuries the codex gained parity with the roll as the medium of non-Christian literature, and thereafter almost entirely replaced the roll.

The use of the codex within early Christianity, and most especially for its "scriptural" literature, may be said to imply a functional approach to scripture: this format did not depict its content as cultured literature, but as documentary material for regular uses, such as preaching, teaching, and liturgical reading. Correspondingly, these codices were inscribed in workaday hands rather than calligraphic scripts. And in some ways the codex probably assisted in the conception and formation of a canon of Christian scripture. This type of book provided the technical possibility of compassing a series of documents far more extensive than any single roll could contain, and by the end of the 2d century certain documents were being collectively transcribed on a single codex. Certainly the four Gospels were made available in this way, and so also were the epistles of Paul (cf. the CHESTER BEATTY PAPYRI P^{45} [ca. 250], a codex containing the four Gospels and Acts, and P^{46} [ca. 200], a codex comprising the epistles of Paul). The idea of the exclusive authority of four Gospels, or indeed of a "fourfold Gospel," could find tangible expression only in a codex that contained these and no others, just as the idea that Paul had written to seven churches and no others (and so addressed the church at large) gained concretion by transcribing the letters together in one codex. The form in turn probably helped to promote and to standardize such collections as well as the rationales behind them. Ultimately, when, in the 4th century, all the writings that the Church had come to value as scripture could be transcribed in a single large codex like Codex Sinaiticus or Codex Vaticanus, the codex gave forceful physical representation to the concept of a canon of scripture, connoting its unity, completeness and exclusivity.

HARRY Y. GAMBLE

CODEX ALEXANDRINUS

Codex Alexandrinus is a 5th century Gk codex containing both testaments. Because of the early arrival of Alexandrinus to England (only 16 years after the release of the Authorized [King James] Version), this codex was the first early ms of the Gk Bible to be well-known and consulted by scholars. The interest that

resulted prompted a search for mss of the Bible, especially of the NT, which has lasted for over 3 centuries.

Codex Alexandrinus was sent as a gift to James I of England by the Greek Patriarch of Constantinople, Cyril Lucar, although the ms did not actually arrive until after the succession of Charles I in 1627. The British Museum became the repository of the codex in 1757 and designated it Royal I.D. V–VIII (Gregory-Aland A). Cyril Lucar had been Patriarch of Alexandria before coming to Constantinople, and it is believed that he brought the ms with him from Egypt (Finegan 1974: 150). A 13th or 14th century note (in Arabic) on the first page of Genesis maintains that the ms belonged to the Patriarchal library in Cairo.

The plain, large, square uncial script on vellum suggests an early date. No original accent or breathing marks occur, but punctuation is provided by the first hand. Ornamentation at the beginning of the books and punctuation or end colophons suggest a date later than Codex Vaticanus and Codex Sinaiticus. Material from Eusebius and Athanasius included before the Psalms requires a later date. It is generally agreed, therefore, that an early 5th century date is correct (see Milne and Skeat 1938:31).

The present codex is bound in 4 volumes with a few missing pages and lucunae defects. Three volumes (629 pages) contain the entire OT with few exceptions. The final volume (144 leaves) contains the NT with the Letters of Clement. Each page measures about 12.6 by 10.4 inches and contains 2 columns with 49–51 lines/column. The codex is composed of quires, usually 8 leaves, with each page numbered with Gk letters in the top center margin.

The OT includes all the books commonly associated with the LXX; in addition are Psalm 151, *3* and *4 Maccabees*, and (after the Psalms) the 14 Odes or liturgical canticles. Therefore, the ms is an important witness to the text of the LXX.

Appended to the entire text of the NT are the two *Epistles of Clement.* According to the table of contents, the *Psalms of Solomon* were originally a part of the codex, but they have been lost.

The type of text of Alexandrinus varies as to section in both testaments. Though opinions vary in the OT, primary text types are pre-Hexaplaric Alexandrian, Hexaplaric, and Lucian (Jellicoe 1968:186 ff.). The NT gospels contain a Byzantine text; Acts and the epistles are Alexandrian with some Western readings. Its greatest textual contributions are in Revelation and some OT books.

BERLIN GNOSTIC CODEX

The Berlin Gnostic Codex (abbreviation: BG) is also known by the title given it at the Berlin Museum, where it is conserved: Papyrus Berolinensis 8502. It is written in Coptic (Sahidic dialect) and originally contained 142 pages of text, all but the last of which were numbered. Numbered pages 1–6, 11–14 and 133–34 are now missing. It is appropriately called "Gnostic" because 3 of the 4 tractates included in the codex are gnostic: *The Gospel of Mary* ([1.1]–19.5), *The Apocryphon of John* (19.6–77.7), and *The Sophia of Jesus Christ* (77.8–127.12). The 4th tractate, *The Act of Peter* (128.1–141.7), probably comes from Encratite sources (Parrott 1979: 475). The codex is dated, on the basis of paleography, early in the 5th century A.D., which places it in the century after the sequestering of the Nag Hammadi Codices (Till and Schenke 1972: 7). It was discovered in Egypt sometime in the latter part of the 19th century (the date is unknown), and purchased in or near the city of Achmim in 1896 for the Berlin Museum (Schmidt 1896: 839–47). Carl Schmidt proposed to edit it and, in fact, published *Acts Pet.* (Schmidt 1903: 1–25). But the remainder of the codex was unpublished at his death. Walter Till published the 1st edition of the remaining text (1955). Subsequently Hans-Martin Schenke produced a 2d edition of the whole codex (1972).

The cover of BG (presumably leather) is no longer extant. Codicological analysis indicates that the sheets used in the production of the volume were about 13.5 cm. high and 21.6 cm. broad (open position). Three roles of papyrus were used in its manufacture, which resulted in a volume of 146 pages (J. M. Robinson, in Parrott 1979: 36–44). The BG script is bold and square, and is marked by the inconsistent use of superlinear strokes—important elements in Coptic writing that, among other things, help the reader to correctly identify word grouping and the presence of subvocables.

It has recently been proposed that the reason the tractates in BG were collected together is that they all in some way deal with the question of fate or providence. Further, it has been suggested that their arrangement in the codex is determined by that theme, with *Ap. John* serving as the linchpin (Tardieu 1984: 19). This view seems doubtful because (1) the theme of fate or providence is found so generally in gnostic tractates, (2) it is not clear from the extant remains that *Gos. Mary* focused on that theme, and (3) similar codices (i.e., the Nag Hammadi Codices) appear to lack such a theme organization. Therefore, it is likely that the reason for the BG collection could only be discovered if we were to know the special needs and interests of the person or persons for whom the codex was copied.

DOUGLAS M. PARROTT

CODEX BEZAE CANTABRIGIENSIS

Codex Bezae, allocated the letter D^{ea} and the number 05, originally contained the 4 Gospels (in the order Matthew-John-Luke-Mark), the Catholic Epistles, and Acts. There are a considerable number of lacunae, including all but a leaf of the Epistles, and Acts 22:20 onwards. Out of an original total of 534 leaves, 406 survive. The manuscript has 1 column of 33 lines on each page. The left-hand side of each opening is the Greek text; the right-hand side is an Old Latin version. The lines are of irregular length, with the same content in each column.

The manuscript was written shortly before A.D. 400. The place of writing has long been debated. All the evidence points to an E origin—the style of script has important links with the Roman law school at Berytus (Beirut), the most important Latin center in the E, and an early corrector of the manuscript (B) shows affiliation with a text located in Caesarea. This evidence leads the present writer to favor Berytus as the place where it was written. The character of the manuscript makes it plain that it was written for a church where the Bible was read in Greek and Latin.

The relationship between the 2 columns is complex. It seems that the Latin is derived from a Greek text closely related to D, but not identical with it. It was later revised to bring it into agreement with the Greek column, but with diminishing thoroughness.

A succession of 9 or more hands made corrections, mainly to the Greek, down to about A.D. 700. The manuscript reached Lyons by the 9th century. It stayed there until it passed into the hands of the reformer Theodore Beza, who in 1581 presented it to the University of Cambridge, in whose possession it remains.

In thousands of places the reading of D is unique. A number of factors contribute to its peculiarities.

Firstly, the basic form of the text is much older than the manuscript. It dates from the 2d century, when there was a considerable variety of NT texts.

In the Gospels, there are over 1,500 examples of harmonization (for instance, of the Lord's Prayer in Luke to that of Matthew).

The manuscript is also remarkable for its expansions. One of the more noteworthy is the pericope of the man working on the Sabbath (after Luke 6:4), which is found nowhere else. In particular, the text of Acts contains many significant additions. It has been suggested that theological motives were instrumental in their formation, but there is disagreement as to how distinctive these alleged motives are.

There are readings in the manuscripts that appear to be Semitisms, as well as some Atticisms, and a number of readings that appear actually to introduce Koine idioms into the NT.

The characteristics of the scribe himself are also significant. Many of his errors are due to the influence of the context, where a combination of letters has caught his eye and led him into error. The Gk contains many nonsense readings, and frequently interchanges vowels. But in many ways he carefully reproduced the spellings and practices of his exemplar.

While the distinctive readings of this manuscript have only occasionally laid claim to originality, an understanding of the character of its text is essential to our knowledge of the way in which the early Church handed down the text of the Gospels and Acts.

CODEX BRUCIANUS

Codex Brucianus is the designation for Coptic papyri included among manuscripts purchased in about 1769 in Upper Egypt (perhaps in Medinet Habu) by the Scottish traveler, James Bruce, and eventually acquired by the Bodleian Library in Oxford. The papyri contain the only known manuscripts of 2 ancient Gnostic works: the so-called *First and Second Books of Jeu* and an *Untitled Text.*

The original total of 78 leaves were unbound when acquired, and already in poor physical condition when an early transcription was made, and there has been significant further deterioration. Seven entire leaves and large portions of many others have been lost and are accessible now only in the early copy. Due to the circumstances of their acquisition, the papyri came to be termed collectively the "Bruce Codex," but in reality they seem to be the remains of at least 2 independent codices: 31 leaves containing the *Untitled Text,* inscribed in what is probably a single uncial hand; and the remaining 47 leaves containing the *Books of Jeu.* In this latter group, several scribal hands have been identified, and a more cursive style predominates. The latter fact could indicate that the *Untitled Text* is an older manuscript than the rest of the Bruce Codex, although the dating of these manuscripts is still very uncertain and in need of fresh analysis. Dates ranging from the 3d to the 10th century C.E. have been suggested (Schmidt 1954: xxviii). The Coptic text is probably a translation of works that were composed originally in Gk; the dialect is Sahidic. In the beginning pages of the *Books of Jeu* there are slight dialectical divergences from standard Sahidic. Walter Till (apud Schmidt 1954: xxix) once ascribed these to Subachmimic influence,

but they may simply reflect variations deriving from a period before the greater standardization of Sahidic.

Determining the genre of the *Untitled Text* is complicated by the fact that both the beginning and ending have been lost, and there are 5 leaves whose relation to the rest is disputed. The work seems to be a Christian gnostic treatise that describes in systematic fashion the unfolding of the transcendent world and the ordering of material creation. Here and there the author introduces quotations from, or allusions to, both NT and OT writings. The treatise's mythological patterns (e.g., a divine Father-Mother-Son triad), names (e.g., the luminaries Eleleth, Daveide, Oroiael, and [Harmozel]), and terminology are closely related at many points to such texts as the *Apocryphon of John* (NHC II,1; III,1; IV,1; Pap. Berol. 8502,1), *Trimorphic Protennoia* (NHC XIII,1), *Zostrianus* (NHC VIII,1), *Three Steles of Seth* (NHC VII,5), *Allogenes* (NHC XI,3), *Marsanes* (NHC X,1), and a few other "Sethian" gnostic works, as these are often labeled due to the divine Seth who figures prominently in many of them. In the *Untitled Text* a divine entity called "Setheus" does play a central demiurgic role. The precise nature of the relationship among "Sethian" gnostic writings, their respective positions within the history of "Sethian" gnostic doctrines and practices, and the question of how coherent "Sethianism" ever was as a sectarian movement, are issues still in dispute (Layton 1981). The *Untitled Text* is one of several writings important to this discussion.

At one point, the *Untitled Text* appears to allude to works by two Gnostic visionaries, Nicotheus and Marsanes (chap. 7; Schmidt and MacDermot 1978: 235). Epiphanius asserts that a gnostic group whom he labels Archontics spoke of two prophets, Martiades and Marsianos, who were raptured into heaven and returned after 3 days (*Pan.* 40.7.6). This Marsianos could be the same gnostic prophet mentioned by the *Untitled Text* (Schmidt 1892: 602; Puech 1960: 90), and the author of the latter could be alluding to the tractate *Marsanes,* a Platonizing gnostic work of which we now have a fragmentary copy in the Nag Hammadi Library (Pearson 1978: 377; 1981: 229–50). The Neoplatonist Porphyry (*Plot.* 16) mentions an Apocalypse of Nicotheus and an Apocalypse of Zostrianus among other writings already used in Rome in the mid-3d century C.E., by gnostic acquaintances of Plotinus. The Zostrianus apocalypse may be the same as the Nag Hammadi tractate *Zost.,* which in turn shares with the *Untitled Text* certain technical terminology that Plotinus himself mentions as used by his gnostic opponents.

The *Untitled Text* is therefore related to the texts known to this circle of 3d century C.E. Platonist Gnostics in Rome. Schmidt (1892: 664) believed that the treatise dated from around 170–200 C.E., but comparison of its contents with the related writings available since the Nag Hammadi discovery has suggested to some scholars that the *Untitled Text* may represent a later stage of development, in the 3d or 4th century (Sevrin 1986: 208; Turner 1986: 85).

The manuscript containing the *Books of Jeu* consists of 2 principal parts, at the end of the first of which is found the title, "The Book of the Great Mystery-Message" (cf. the reference a few lines earlier in the text to "this great mystery-message of Jeu" [chap. 41]). Though a divine "Jeu" figures prominently in the text, the title *1st and 2d Books of Jeu* does not actually appear in the manuscript. This title was applied to the text by Schmidt, who argued that the contents are to be identified with "the two books of Jeu" mentioned in the closely related *Pistis Sophia* (chaps. 99 and 134) in Codex Askewianus. There Jesus refers his disciples to mysteries that can be found in the 2 books of Jeu that Enoch wrote, when, in an earlier epiphany, Jesus had spoken to Enoch from the trees of Paradise. Early critics of Schmidt's hypothesis noted the absence of any reference to Enoch in Codex Brucianus, and questioned how closely the contents of the manuscript match the description of the teaching that Jesus in *Pistis Sophia* ascribes to the books written by Enoch (Preuschen 1894; Liechtenhan 1901). Most scholars have nevertheless inclined toward Schmidt's identification.

The manuscript of the *Books of Jeu* has the look of a compilation, the history of which is by no means certain. The surviving leaves seem to preserve only portions of what were originally 2 somewhat longer works, and there are a few extra leaves of uncertain placement, containing fragments of related material in different scribal hands and with some dialectical variations.

The *Books of Jeu* are significant for the history of gnostic ritual. The first book is framed as a revelation dialogue between Jesus and his disciples after his resurrection. Jesus tells them how his Pather brought

forth "Jeu, the true God," and then moved Jeu to produce further emanations, themselves called "Jeus" or "fathers of the treasuries." Jesus describes each Jeu in detail, revealing the secret names, numbers, and diagrams corresponding to each one (chaps. 5–32), and then gives instructions about secret numbers, seals, and passwords which will allow the disciples access to each of 60 treasuries of the transcendent world (chaps. 33–40). He takes the disciples into the treasuries and leads them in ritual prayers (chap. 41). In the second book Jesus initiates the disciples into the mysteries of water baptism, baptism of fire, and baptism of the Spirit, each accompanied by elaborate description of the requisite ritual materials and procedures (chaps. 45–48). He then describes the future ascent of their souls through the levels of the transcendent realm, and for each level there is again instruction about cryptic seals, numbers, and passwords to be used in the ascent (chaps. 49–52). Among the most striking features of this manuscript are the numerous cryptograms and seals actually sketched in the text and margins, virtually the only examples of such pictorial elements in a gnostic manuscript (Phinney 1980: 436–37). This fact renders the absence of any facsimile edition of this part of the Bruce Codex all the more regrettable.

Schmidt (1892: 552–98) argued that the *Books of Jeu* and at least the last two books of the *Pistis Sophia* were composed in the 3d century C.E. by members of the same ascetic Severian sect (Epiphanius, *Pan.* 45), and that this sect had come into conflict with libertine Phibionite gnostics who were near relatives as far as sectarian ancestry. Both writings include passages which condemn the ritual consumption of semen and menstrual blood (*Jeu* chap. 43; *Pistis Sophia* chap. 147), and Epiphanius (*Pan.* 26) accuses certain "Phibionites" of a similar practice. A literary connection between *Pistis Sophia* and the *Books of Jeu* remains likely, but a specific link with the Severian gnostics mentioned by Epiphanius is far more tenuous. The shared characteristics upon which Schmidt based his identification (e.g., use of the demiurgic names Ialdabaoth or Sabaoth; ascetic tendencies, etc.) are now found in several texts from Nag Hammadi, and may be too general to allow any narrow identification of the *Books of Jeu* with a gnostic sect that is otherwise so sparsely documented as is the Severian sect.

MICHAEL A. WILLIAMS

CODEX CLAROMONTANUS

Codex Claromontanus is a 5th- or more likely 6th-century codex containing only the Pauline letters (including Hebrews). It is a bi-lingual Gk and Lat manuscript, consisting of 533 vellum leaves ($9^{5/8}$" by $7^{5/8}$"), with the Gk text of the letters on the left-hand page, the Lat on the right. Each page bears 1 column of text with 21 lines of irregular length (corresponding to the pauses in the sense).

It is impossible to determine the codex's place of origin. The work of at least 9 different correctors has been identified (the 4th of these added accent and breathing marks in the 9th century). Theodore Beza, the celebrated French scholar who became the successor of Calvin as leader of the Genevan Church, acquired the manuscript between 1565 and 1582. He claimed that it was discovered in a convent at Clermont-en-Beauvais. An edition of the manuscript was published by Tischendorf in 1852.

Codex Claromontanus is an important early witness in the history of the NT text. Like Codex Bezae, which is roughly contemporaneous with this manuscript and contains most of the text of the four Gospels and Acts (with a small fragment of 3 John), the type of text in Codex Claromontanus is distinctly Western. As Metzger (1968) has noted, however, Western readings in the Epistles are not so striking as those in the Gospels and Acts.

Codex Claromontanus is also important for the history of the Christian canon of scripture. After the text of Philemon in this manuscript, and just before the text of Hebrews, there is a stichometric list, in Latin only, of OT and NT books. Whereas the OT books are listed without division, the NT books are subdivided into 2 categories: "The Four Gospels" and "The Epistles of Paul." What is striking is that Paul's letters are not distinguished from the Catholic Epistles and other writings which are also indexed. There is an obvious omission after the listing of Ephesians: Philippians, 1 and 2 Thessalonians are missing. Hebrews is also lacking. The scribe obelizes 4 works at the end of the list: *Barnabas,* the *Shepherd of Hermas,* the *Acts of Paul,* and the *Apocalypse of Peter.* Souter (1954) suggested that these horizontal lines indicate that they are not to be regarded as on the same plane as the others. If that is the case, the canon list included in Codex Claromontanus, granted its careless omissions, would apparently intend to set forth a NT canon of 27 texts.

The presence of such a list in this codex is curious. Jülicher (1931) thought this catalogue belonged to the 4th century and was of W origin. Zahn (1890), however, put forth a compelling argument for a 4th-century date and an E provenance, perhaps Syria-Palestine. As with the MURATORIAN FRAGMENT, how such a list could have come to occupy a place in this codex remains a mystery. Nevertheless, with the exception of Hennecke (*NTApocr* 1) most have followed Zahn in assigning a 4th-century date and an E provenance to the canon list, although the codex in which it appears is W and later.

GREGORY ALLEN ROBBINS

CODEX EPHRAIMI RESCRIPTUS

This manuscript (Paris, Bibliothéque Nationale Gr. 9; designated C throughout, and given the number 04 for the NT in the Gregory-Aland catalogue) originally contained the entire Bible. It is a palimpsest, having been broken up and used by a 12th century monk to copy a Gk translation of discourses by Ephraim Syrus. There are 63 OT leaves extant (containing parts of Proverbs, Ecclesiastes, Canticles, Job, Wisdom, and Sirach) and 145 of the NT (in which every canonical book is represented). It may have been written in the 5th century, though Cavallo dates it almost certainly to the 6th. The leaves are 25.6–26.4 × 31.4–32.5 cm; there is a single column, of between 40 and 46 lines on each page. The NT originally contained about 232 (Lyon) or 238 leaves (Kenyon). The OT and NT portions are by separate hands. Arguments that allot the NT to several scribes (Traube, Lyon) are based on differences in forms of the *nomina sacra* and orthography between different books, and have no foundation in the character of the handwriting. The differences are more likely to be due to the use of several separate exemplars in the

compilation of the manuscript. This is the appropriate point to note that Oliver has demonstrated that a dislocation of a portion of the text in Revelation is due to the leaves of the exemplar having been bound out of order.

Tischendorf suggested that the manuscript was written in Egypt. This is confirmed by Cavallo, who argues for the Nitrian Desert, associating the script (he is thinking, it appears, of the NT particularly) with those of the Freer manuscript of Deuteronomy and Joshua, the NT uncials 016 (its closest associate) and 027, and two Homer codices (Papyrus Berolinensis 6794 and the Cureton Homer). It belongs to the period of decadence of the biblical uncial script, and was written "without particular care to be calligraphic." The copying, it is alleged, was also careless. These 2 points have led to speculation that the manuscript may have been written for private use.

The text has been reworked by 2 correctors who, it is suggested, are to be placed in 6th-century Caesarea and 9th-century Constantinople. In the early 16th century the codex was brought to Italy, and passed into the possession of Catherine de Medici, with whom it went to Paris, where it has remained ever since.

The great difficulty of deciphering the manuscript has led to its neglect, so that it has been the subject of only a very few studies, and only one edition. The text of the NT is placed by K. and B. Aland in their Category II (of special quality, but contaminated by alien influences). Their analysis of test passages shows that the text of Paul is particularly good. The figures given below show, in order, (a) agreements with the Byzantine text, (b) agreements with the same where it has what the Alands consider to be the original text, (c) agreements with their original text, (d) and readings where it is unique.

	(a)	*(b)*	*(c)*	*(d)*
Gospels	87,	66,	66,	50

CODEX SINAITICUS

This codex comes from the Sinai, where it was preserved until the last century in St. Catherine's monastery, which is situated at the foot of Jebel Musa (Mount of Moses) on which, according to ancient traditions, the Ten Commandments were given by God to Israel. This Gk copy of the Bible is now housed in 4 very different places. Most of it, 347 leaves, are proudly displayed on the 1st floor of the British Library (the British Museum). Forty-three leaves are in the University Library at Leipzig. Fragments of 3 leaves are in Leningrad. These collections were removed from St. Catherine's by Constantine Tischendorf: the smaller collection in 1844, the fragments and the major part of the codex in 1859. A fire in St. Catherine's monastery in 1975 revealed around 4,000 manuscripts, including more than a dozen leaves of this precious codex; some of the leaves look as though they came off the table of the copying scribe. These are being prepared for publication by his emminence Archbishop Damianos.

This 4th-century Gk ms, one of the most precious and ancient manuscripts of the Bible, contains most of the OT, the NT, the *Epistle of Barnabas,* and the *Shepherd of Hermas* (up to *Man.* 4.3.6). Scholars estimate that the original manuscript contained at least 730 leaves and would have required approximately 360 goats or sheep to provide the skins. The work was copied by 3 different scribes whose calligraphy is so similar that it is probable that they were trained in the same scriptorium. The manuscript could have been produced in Rome, Caesarea, or Alexandria.

JAMES H. CHARLESWORTH

CODEX VATICANUS

Codex Vaticanus (Vatican Library, Cod. Gr. 1209, given the letter B and, for the NT, the numeral 03) is one of a small number of extant ancient Greek Bibles containing both the OT and NT (though it never contained any of the books of Maccabees). It has been in the Vatican Library since at least 1475, when it was listed in a catalogue (Ropes 1926: xxxi; cf. Kenyon 1912: 77n.). During the 15th century, it had certain lacunae filled: Gen 1:1–46:26 (copied from the Vatican Codex Chisianus R VI 38, which is numbered 19 in the catalogue of LXX manuscripts); Ps 105:27–137:6; Heb 9:14 to the end, the Pastoral Epistles, and Revelation (this addition is listed separately amongst NT manuscripts as minuscule 1957). Certain embellishments were added at the same period. In addition to these gaps in the ancient manuscript, part of a leaf (containing 2 Kgdms 2:5–7, 10–13) has been torn away. It has been suggested by Skeat (1984: 463) that B was brought to Rome from Constantinople as a gift by the Greek delegation to the Council of Ferrara-Florence in 1438–39, after a hasty restoration. Attempts to link the manuscript with Cardinal Bessarion and with S Italy are rightly rejected by Skeat (1984: 454–55), following Šagi.

In the 10th or 11th century, the original text was overwritten letter by letter, accents and breathings were newly supplied, and some corrections were made. This activity, apart from destroying the great beauty of the codex, has greatly impeded precise paleographical analysis, so that dating and placing the manuscript's origin is very difficult.

Cavallo suggests the date ca. 350 (after 328 but before 360). It is most likely to have been written in Egypt (Martini 1966: 6; Cavallo 1967: 56). Hatch (1953: xix) suggests Upper Egypt. The attribution to Egypt rests on textual grounds and the order of the books, rather than on a paleographical decision. The theory that the so-called Coptic form of the letter *Mu* indicates an Egyptian origin is not tenable.

It was once a fashionable suggestion that B (with Codex Sinaiticus) was one of 50 copies prepared by Eusebius of Caesarea for the Emperor Constantine in the early 330s. This idea must be abandoned, as must the idea that it was commissioned from Athanasius in Rome by the Emperor Constantine 10 years later.

The ms was written by 2 scribes, "A" and "B," of whom B wrote the NT. The codex is of fine appearance, square (27 × 27 cm), composed of 5-sheet quires (quinions), with 3 columns to a page, and 40–44 lines to a column. The text was corrected by a hand contemporary with the scribes, generally identified with the *diorthotes* (official corrector of the scriptorium).

This manuscript is, given its extent, textually the best of any. In the OT it forms the basis of the smaller and larger Cambridge editions. In the NT it was the foundation of Westcott and Hort's text. For the most part, the OT shows a form of LXX text similar to that used by Origen in the 5th column of his Hexapla. It was therefore affected far less than most other manuscripts by the deleterious influence of the Hexapla on the LXX. It is least valuable in Isaiah, Jeremiah, the Minor Prophets, and Job. Its text of Judges is very distinctive, and generally associated with the Hesychian recension.

In the NT, its text is of a high quality throughout (the view that in Paul it shows the influence of the so-called Western text should be treated cautiously). C. M. Martini has demonstrated that the text of B in Luke is substantially that found in the beginning of the 3d century in P. Bodmer XIV–XV. Porter has shown the same to be true for John. In Paul, according to Zuntz, it represents, along with P. Chester Beatty, P. Ann Arbor, and miniscule 1739, the Proto-Alexandrian text of ca. A.D. 200, and preserves the ancient tradition stemming from the creation of the Pauline corpus in ca. 100.

For the story of the early collations, and the first, notoriously inaccurate, full transcription by Mai, see Kenyon (1912: 77–79). A photographic reprint of the whole manuscript was made in 1889–90. A reprint of the NT alone was made in 1968, for presentation to the more distinguished of those attending the Second Vatican Council.

CODEX WASHINGTONIANUS

Sometimes referred to as the Freer Manuscript of the Gospels, this ms is designated "W" in the Gregory-Aland list of ms sigla. Housed in the Freer Gallery of Art (Smithsonian, Washington, D.C.), it is an Egyptian-provenance parchment ms of the 4th/5th centuries containing the four Gospels in the "Western" order (Matt, John, Luke, Mark), with 2 lacunae (Mark 15:13–38; John 14:25–16:7, owing to missing pages). Except for the 1st quire of John (1:1–5:11), it is the work of one scribe. There are various indications of formal formatting of the ms for public reading and for study (e.g., punctuation, blank spaces between phrases, paragraph divisions, diacritical marks), and several correctors' hands are evidenced. The pages (averaging $8^{1/8} \times 5^{5/8}$") contain a single column of 30 lines in a clear, sloping hand (ruled lines between 27–35 letters (approx. $3^{7/8}$" long). A major feature of codex W is the mixed nature of its text. Matt and Luke 8:13–24:53 reflect the Byzantine text-type. Luke 1:1–8:12 and John 5:12–21:25 are Alexandrian. Mark 1:1–5:30 (or slightly earlier) is "Western," resembling especially the Old Latin. Mark 5:31–16:20 was long thought a witness to an early stage of the Caesarean text, but has been shown to be insufficiently related to any main text-type, agreeing with P45 most often and showing numerous harmonizations with the other Synoptics as well as deliberate scribal changes, mainly in Markan style. It has been suggested that the varying textual complexion of W derives from an ancestor patchwork manuscript made up after Diocletian's attempt in 303 C.E. to destroy all Christian sacred books.

Probably the most noteworthy reading in W follows Mark 16:14, a reading witnessed to also by Jerome. The undoubtedly apocryphal reading is as follows:

> And they excused themselves, saying, "This age of lawlessness and unbelief is under Satan, who does not allow the truth and power of God to prevail over the unclean things of the spirits. Therefore reveal your righteousness now" —so they spoke to Christ. And Christ replied to them, "The term of years for Satan's authority has been fulfilled, but other terrible things draw near. And for those who have sinned I was delivered over to death, that they may return to the truth and sin no more; that they may inherit the spiritual and incorruptible glory of righteousness which is in heaven."

L. W. HURTADO

COELE-SYRIA (PLACE) [Gk *Koilē Syria* (Κοιλη Συρια)]. Coele-Syria is a geographical term variously used to describe portions of Syro-Palestine, depending on the historical time period and the author. The term which has been widely interpreted as "hollow Syria" is first attested in its Hellenistic form in the 4th century B.C. While often used by modern writers to describe the N extent of the Great Rift Valley between the Lebanon and Anti-Lebanon Mountains, the name was used by the Hellenistic writers to include a large portion of the E Mediterranean seaboard extending E toward to the Euphrates. Phoenicia however was held to be separate from Coele-Syria. Under Alexander the Great, Coele-Syria was a large administrative unit that included Samaria, which revolted against Andromachus the governor of Coele-Syria whom Alexander had appointed (Curtius Rufus 4.8.9). Under the Ptolemies and Seleucids, the term continued to be used for an administrative region. Under Antiochus III, the Levant was divided into strategia of Coele-Syria and Phoenicia. Coele-Syria in turn was divided into 4 eparchies: Samaria, Idumea, Paralia, and Galaaditis (Diodorus 19.95.2). The names of 6 Seleucid governors of Coele-Syria have been preserved. One of them, Apollonius of Tarsus, the "governor of Coele-Syria and Phoenicia" (2 Macc 3:5–8), fought the Maccabees and was defeated at Jamnia ca. 147 B.C. (1 Macc 10:69ff.). "Coele-Syria" is used to describe S Syria with the exclusion of Phoenicia throughout the Apochrypha (1 Esdr 2:17, 24, 27; 4:48; 1 Macc 10:69; 2 Macc 4:4; etc.). Diodorus of Sicily in describing the Levant prior to the Romans, defined Coele-Syria as being adjacent to Upper Syria, enclosing Phoenicia, and extending as far as Egypt (18.6.3).

The toponym "Coele-Syria" continued to be used after Rome expanded her power into the Levant under Pompey. After Herod gained the enmity of the Jews for his harsh rule over Galilee in 47 B.C., he was made a general over Coele-Syria (Josephus *Ant* 14.9.5 §180). In that position Herod apparently had authority in Damascus, Samaria, and the Transjordan (Josephus *JW* 1.10.8 §213); Josephus, however, uses the term in a variety of ways. At times it is defined as extending from the Euphrates to Egypt (*Ant* 14.4.5 §79).

Among other classical authors, Strabo in his geographical study included all of the arable land E of the Rift Valley in Coele-Syria, with Damascus as its chief city (*Geog* 16.2.2–22), and Ptolemy included the cities of Coele-Syria with those of the Decapolis (*Geog* 5.14).

In the 2d century A.D. the cities of the Decapolis such as Abila, Gadara, Philadelphia, and Scythopolis retained their ancient territorial description by having an abbreviation for Coele-Syria on their coins. The recognition of this region as Coele-Syria was later affirmed by the Roman Emperor Septimius Severus.

The etymology of the word "Coele" is debated. The widely accepted interpretation "hollow Syria" is challenged by E. Schwarz who has postulated that Coele is the hellenized form of the Heb word *kol.* His position is affirmed by A. Shalit, who maintains that Coele-Syria is identical to the usual expression in Gk for "all Syria." B. Mazar buttresses this position by arguing that the Greeks developed the toponym

Coele-Syria on the basis of the ancient term "all Aram," which was used by the Aramaic-speaking population, and the word Syria was substituted for Aram (see Mazar 1962: 120 for this discussion).

COINAGE. Money is a medium of exchange used to acquire goods or services, and therefore serves as a measure of wealth or value. It may also be symbolic of sovereignty or a unit of accounting. Coins are minted metal authorized to function as money; they are culturally accepted media for exchange and designations of value.

A. Money in the Hebrew Bible

When money is mentioned throughout the Hebrew Bible, the text does not refer to coins. The references designate measures of value in goods or in precious metals. The metals are not coined, however, in specific weights. Nor are they generally verified by an official stamp of governmental or religious authorities to meet certain weight standards. The NT, however, has as its background the coined money of the Hellenistic and Roman periods. Coins expressed monetary value more specifically and more easily than bullion, but were still used in tandem with "in kind" transactions, where "money" still existed in the form of sheep, goats, birds, grain, oil, or wine. Indeed, some form of money has existed from earlier times when people bartered with one another or traded commodities. By the time of Jesus and the Apostles of the early Church, coinage was widely accepted and used throughout all lands associated with the Bible. Coinage facilitated exchange of objects, measured value, stored wealth, and provided support and taxation for governments.

In the history of the people of the covenant, the first reference to the use of money is the restitution paid to Abraham by Abimelech for the wrong done to Sarah, Abraham's wife, in Gen 20:14–16. Abimelech pays Abraham "sheep and oxen, and male and female slaves" together with "a thousand pieces of silver" serving as "vindication" for what he had done. In Genesis 23, Abraham purchases a burial place from Ephron the Hittite for 400 shekels of silver. A shekel, on the Babylonian standard, was the equivalent of approx. 8.5 grams of metal. "Abraham weighed out for Ephron the silver which he had named in the hearing of the Hittites, four hundred shekels of silver, according to the weights current among the merchants" (Gen 23:16). The merchants used the Babylonian standard of weights and measures. To "weigh out" this amount was to hand over to Ephron the weight in silver of approx. 8 minas, the equivalent of 261/2 gold shekels. The silver would have been in the form of small ingots, pieces of silver

foil, rings or silver wire. This was a substantial amount to be sure, although we cannot accurately estimate its value in modern currencies. Ancient measures in grams can be converted to equivalents on the current market value of silver or gold, given market fluctuations. If we can assume that precious metals have always remained fairly stable in their relative value to other goods and services, then we can estimate in late 20th century equivalents what these amounts of money would equal. Clearly, however, this is a haphazard procedure and is best avoided.

The Joseph cycle contains several references to "money," translating the Heb *kesep,* which is also the word for "silver." This "money" included "bundles" which were placed in the traveling bags of Joseph's brothers when they were about to leave Egypt and return to Canaan; the text also mentions the money collected to pay for grain from the Egyptian royal granaries. In Genesis 43, Joseph received money which must have included gold, silver, bronze, and iron, in rings, bars, ingots, or dust (gold only). These were recognized forms of "money," which were weighed in specific amounts and functioned as bullion on the open market. The metals were weighed in specific ratios to one another for terms of standard commerce or taxation. So it is also in Genesis 47, when "Joseph gathered up all the money that was found in the land of Egypt and in the land of Canaan, for the grain which they bought; and Joseph brought the money into Pharaoh's house." When this metallic money was depleted, it was freely interchanged with cattle. "So they brought their cattle to Joseph; and Joseph gave them food in exchange for the horses, the flocks, the herds, and the asses; and he supplied them with food in exchange for all their cattle that year" (Gen 47:17). Specific numbers of animals were considered equally as valuable as their equivalents in metal. Obviously they were harder to handle, but were just as usable in making payments. In Genesis 47, seed and its produce function as money when the Pharoah decreed that harvests will go 80% to him and 20% to the tenant on the land. So it was according to the tradition, while Israel lived in the land of Goshen.

Abraham and the other patriarchs counted their wealth in numbers of sheep, goats, and cattle. The same was true for Job (1:3). Throughout the period of the patriarchs and into the time of the kings of Israel and Judah, the primary means of commerce and trade was barter. Money could be metallic and weighed according to accepted local or international standards, or it could be in kind. When Hiram of Tyre completed construction of Solomon's Temple in Jerusalem, he paid with grain and olive oil, according to 1 Kgs 5:11. Some taxes or forms of tribute were paid in like manner, with grains, oils, wine, sheep/goats, or cattle. On Israelite taxes, see specifically 1 Sam 8:15 and Ezek 45:13–16.

Clearly, transporting herds to administrative or tribal centers to pay tribute or taxes was difficult and most inconvenient for the taxpayer and the taxgatherer. This is probably why equivalent values in metals came to be weighed out and standardized for such transactions. Values could be more easily computed using weights in precious metals as well. For example, if a tax was 10 shekels, or its equivalent of 2 sheep, and the tax was raised by 20% to 12 shekels, the taxation would then equal 22/5 sheep. Metals became the preferred method of payment when available.

The earliest standards of weights and measures remain unknown. The Bible is mute on the subject, simply referring to numbers of "pieces" or "shekels" of silver (Heb *kesep*). We are not certain what standard this metal was weighed on. The Hebrew renders these expressions only as "silver," implying that an accepted standard or measure was used. The lack of exchange of gold within the Hebrew Bible is strong evidence to suggest that this metal was available in insufficient quantity for use in commerce. For many years, as well, copper was needed for tools, jewelry, or weapons. The copper was mixed with tin and made into bronze. With the coming of the Philistines in the period following 1200 B.C.E., iron began to replace bronze as the metal most used in implements and other hardware. Iron had been smelted in Egypt for many years but had been retained in Egypt; by 1200, its use began to spread.

An early use for precious metals was jewelry, which provided a safe, mobile means for their movement around the country. It is still common for Bedouin women in Palestine to carry all their wealth on their persons in the form of gold, silver, and bronze jewelry. They wear metals in bracelets, anklets, rings, chains, pins, beads, earrings, or settings for precious or semiprecious stones (see Ezekiel 28). Today one is more likely to find strings of coins, pierced and geometrically arranged on necklaces, or coins as earrings or pendants. Some of these forms into which metals were made were probably standardized and

accepted on the open market. Even so, as nearly pure forms of the metals, they could be weighed on scales and their value quickly established in commerce if needed, so that they could function as bullion. The Hebrew Bible mentions payment using bars of silver or gold, as well as bracelets, which could have had specific values assigned to them. Abraham's servant gave Rebekah a ring of gold which weighed 1/2 shekel and 2 bracelets weighing 10 gold shekels (Gen 24:22). In Joshua 7:21, Achan returns from Jericho with 200 shekels of silver and a gold bar (lit. "tongue") weighing 51 shekels. Certainly by the Iron I period, Babylonian weight standards were accepted and current through the lands of the Bible. At Ugarit, in the "Tale of Aqhat," the hero is said to have shed tears like quarter-shekels and fifth-shekels. This is Ugaritic hyperbole to affirm that Aqhat wept bitterly; the glittering metal likened to tears implies a recognizable size and shape, much like money.

Examples of references to weights of silver or money are numerous. In Judges 16:4, Philistine leaders entice Delilah to find the source of Samson's strength by offering her 1,100 pieces of silver (lit. "1000 and 100 *kesep*"). In 1 Sam 9:4, 1/4 shekel of silver is the payment to a seer for a prediction on the future success of a journey. When the king of Aramaean Damascus sent a messenger to Israel to seek assistance in healing Naaman of leprosy, the price was considerably higher: 10 talents (lit. "circles" from Heb *kikkār*) of silver and 6,000 shekels of gold. A talent was the equivalent of 60 minas, each of which equalled 50 shekels of silver. One gold shekel was the equivalent of 15 silver shekels. Later during the reign of Azariah in Judah, Menahem reigned for a short time in Samaria doing "what was evil in the sight of the Lord." To confirm his succession as king, he offered the sovereign of Assyria 1,000 talents of silver, exacting it in Israel from wealthy men, asking 50 shekels from each (2 Kgs 15:19–20).

B. Money in the Ancient Near East

1. The shekel. One silver shekel equalled approximately 8.26 g. Fractional shekels were also regularly employed in Palestine and throughout the ANE. A cuneiform text written in Akkadian from the Smith College collection, for example, details an exchange of goods from 2 brothers to their creditors from the time of Samsuiluna of Babylon (18th cent. B.C.E.), in which 1/6 shekel of silver equalled 240 *qa* of barley. Texts show that oxen were normally valued at 1 gold shekel (equal to 15 silver shekels or approx. 2 tons of grain). A ram was worth about 2 shekels according to Lev 5:15. A measure of grain, equal to about 11/2 pecks, was valued at a shekel if it was "fine" grain; "common" grain yielded silver double that amount for a shekel. Hoards of precious metals (silver, gold, and electrum) from Shechem, Megiddo, Beth Zur, and Gaza dating from the Late Bronze II through the Iron II periods (*ca.* 1400 B.C.E. to 600 B.C.E.) include pieces of many different weights, including fractions of the standard shekel weight.

2. Egypt. With its military interests encompassing far-off lands, Egypt amassed huge quantities of precious metals during her foreign conquests. Goods were bought and paid for with weights of gold, silver, and copper. Undoubtedly, the treasures of the Pharaoh took up much of the metal in the treasury at any given time in the form of vessels, decorated furniture, jewelry, and other tomb goods. The scenes depicted at Medinet Habu show gold stored in ingots, rings, vases, and dust. The gold was not native to Egypt. Gold usually came into Egyptian hands as booty from wars or as tribute from conquered or vassal countries in Asia and Africa. The Egyptian treasuries processed the gold and cast it into ingots and rings for ease in transportation. Gold dust, however, was apparently left as it was. The Nile Valley, like Mesopotamia and the lower Indus River Valley, was not well endowed in precious metals. In the 18th Dynasty, gold was obtained from Punt at the S end of the Red Sea (probably modern Somalia). The mines of the Sinai were worked from the 12th Dynasty onwards, as were the Red Sea mines. Under Queen Hatshepsut and Seti I, and again under Rameses II, the Sinai mines failed. Mining operations were dependent upon adequate supplies of water, and since there is no evidence that rainfall fluctuated so greatly in these periods, storage systems and cistern networks must have broken down.

The Egyptians, however, appear to have seen the Asiatic provinces under their influence as unlimited sources of gold. Dushratti of Mitanni wrote to his son-in-law, Pharoah Amenhotep IV (Akhenaton) "for was not gold as the dust of the country?" This bit of correspondence from Tell el-Amarna provides some insight into the Egyptian attitude toward gold and its availability. This was a time (the LB Age) when gold was in short supply in Babylon, where metal work prized in Egypt originated. A Babylonian official

named Burnaburias wrote to a pharaoh, who hinted that gold would be welcomed in his court. The Babylonian indicated he would be glad to comply if ingots were shipped to Babylon to be worked and returned to Egypt as finished products. The Egyptian demand for gold periodically caused shortages which must have increased the value of silver. Egyptian money was usually gold. Silver was rare, even in tomb treasures, until the 1st millennium when it was more plentiful and popular; but gold in ingots, rings, bags of dust, or lumps remained the most common form of currency. We know from tomb wall reliefs that taxes could be paid in metals or in commodities. Reliefs at Saqqarah also show farmers bringing their payments in kind, with animals, grain, oil, and wine.

3. Mesopotamia. In Babylonia and Assyria weight standards, both "heavy" and "light," were in use by the end of the 3d millennium B.C.E. These systems standardized commercial transactions until the Hellenistic period and the new administrative system initiated by Alexander the Great. Silver was plentiful in Asia Minor and Persia, and earliest smelting of the metal probably occurred in these regions. Mediterranean silver mines were still active when Ezekiel sang the glories of Tyre and Tarshish, "who was her merchant" (Ezekiel 28). Economic texts and receipts for daily commerce are among the most-common clay tablets found at sites in Mesopotamia and Syria. Silver standards were commonly used in local and international trade in the 2d and 1st millennia B.C.E. The Tell el-Amarna letters show evidence for this standard in Syria and Palestine in the 15th century B.C.E. By the 6th century B.C.E., silver was still the metal of account in everyday life; and Babylon was dependent upon Phoenician merchants for its importation. By 550 B.C.E., copper was imported in large quantities from Cyprus and sold at a rate of 33/4 minas to the shekel of silver (by bulk weight). Dealing in bits and pieces of silver or copper in daily commerce became the accepted norm. Bar silver was simply "cut" to furnish fractional amounts.

4. Biblical and Archaeological Evidence. Very little metal money is found at Palestinian sites from *ca.* 1300 to 587 B.C.E. A few hoards from major sites such as Gaza, Shechem, Megiddo, and Beth Shan are the exceptions. Many examples of other types of metal objects are known, including jewelry and weapons. Some of the jewelry undoubtedly functioned as money, since its forms were convenient for transport and commerce.

In the Bible, references to "money" generally fall into 3 categories: (1) prices paid for land; (2) prophetic injunctions against corruption in the market place; and (3) obligations to the temple. Some examples of the first category have already been cited. Temple taxes were usually paid in kind or with money (in metallic form). For example, when a purification rite was required following the birth of a child, an offering was made of a "lamb a year old … and a young pigeon or turtledove … and the priest [made] atonement for [the woman]" (Lev 12:6–8). Such rites involved charges to worshipers by religious authorities and were common throughout the Near East. The requisite animals could be purchased with grain, oil, wine, or the equivalent in silver. Tariff inscriptions from a number of Canaanite and Punic sources outline elaborate systems of payment for services rendered by cultic officiants (i.e. the Marseille Tariff inscription, Donner and Röllig 1968: 83–87). Analogous Hebrew customs provided monies for maintenance of the priests and the upkeep of the Temple.

Jehoash, king of Israel in the late 9th century B.C.E., formalized support for the Temple using monies assessed to individuals which were brought to the Temple of the people's own free will for "the house of the Lord." The priests then used his money to repair the Temple (2 Kgs 12:4–5). The uncoined metals were collected in a box, weighed, and then melted down and cast into bars or ingots according to royal standards. The pure metal bars functioned as currency to pay the workmen.

Prophetic injunctions resulted when metals were weighed or examined for purity, because occasional cheating occurred. For example, weights used by merchants were lumps of bronze or iron, or simply stones, supposedly conforming to accepted royal standards. In Deuteronomy 23:13–15, the Israelites were cautioned not to have different sets of stones, i.e., different weights, in their possession. Amos (8:5) preaches against this cheating in the marketplace. Eventually kings verified weight standards with royal seals of legitimacy. Royal identification also occurred on officially sanctioned crops of wine and olive oil. A series of jar handles stamped in paleo-Hebrew script with the phrase *lmlk*, "belonging to the king," dates first from the late 8th century B.C.E. Whether these jar handles simply identified "royal" wine or

certified the quality of a crop for international commerce is unclear. See STAMPS, ROYAL JAR HANDLE.

In 1967, excavations at Nush-i Jan, Iran, unearthed a hoard of silver objects in a bronze bowl buried below the floor of a building identified as a "fort." A. D. H. Bivar described these objects as "ingot currency," dating from ca. 600 B.C.E. Hoards like this one are common throughout the Near East in the Persian period, often also containing silver coins from mints in Greece, Anatolia, and Phoenicia. This hoard, for example, included coins, entire or subdivided with chisel cuts; fragments of ancient jewelry; lengths of silver wire; chunks of "cut silver" taken off larger slabs or ingots (usually called by German writers *Hacksilber*); rectangular ingots; and flat, circular ingots of different sizes formed by molten metals solidifying in the bottoms of jars. This particular hoard is important, because it lacks Greek coins and is pre-Achaemenid in date. Any person possessing wealth might have kept a hoard such as this.

Evidence from Nush-i Jan includes ingots in 2 forms, the flat, circular ingot which appears most often in hoards in Egypt, Palestine, and Syria, and the bar ingot, the rectangular form which is more common in Mesopotamia and Persia. The contents of this extensive hoard suggest that standards may have been variable from locality to locality and from time to time. Although there are many pieces in the hoard which closely approximate either the Babylonian standard or the heavier Persic (Achaemenid) standard, there are other bits which fall between the two.

At the same time, there is evidence that Greeks on the Peloponnese were using a currency of iron spits. It is unknown if the spits of iron—which must have originated no earlier than the late 8th or early 7th century B.C.E.—were a new or reformed currency. They may have provided an official standard if made in identical molds. Herodotus (1.68) suggests that iron was not readily available until Greece's colonial expansion in the 8th century B.C.E. (see Koester 1982: 76–77). The iron spits were used into the 6th century, when some Greek and E Greek city states were already striking coins in precious metals. The spits, though still in use, were soon to be obsolete. Coinage may have spread more rapidly among the Greeks since a form of iron-spit currency was already in use and was accepted throughout much of the region. Indeed a "drachma" was literally a "handful" of spits (coming from a root meaning "to grasp"; Grierson 1975: 9–10). The Nush-i Jan hoard, like similar hoards from sites in Palestine, is evidence of a medial development between the use of bullion and coined metals. Small chunks of metal show that pieces of standard weights were in use by the 8th and 7th centuries B.C.E., previewing the denominational systems of true coinage.

C. The Origins of Coinage

Literary evidence contemporaneous with the kings of Judah suggests that coinage began in Anatolia. Passages from cuneiform tablets imply that payments in Mesopotamia were made with coins or coin-like objects called "heads of Ishtar," "heads of Shamash," or "heads of Ashur," all titles suggesting the existence of early stamped currency. Of course, these may be funds belonging to the temples of those deities. Barley, gold, and lead are mentioned in texts as media of exchange; but by far, silver was the most common. Some silver ingots are known from Zingirli inscribed with the name of Bir-Rekeb, son of Panamua, dating to *ca.* 714–710 B.C.E. and weighing one mina.

The places where coinage developed are more certain than the dates of the circumstances, however. In all probability, the first coins were struck in western Asia Minor as small globular pieces of electrum, a natural alloy of silver and gold. The pieces bore a design on one face and a punch mark on the other. These coins, produced either in the late-7th or early-6th centuries B.C.E. were correlated to a weight standard, recognizing the stamp impressed upon the chunks of metal as official recognition that they were legal tender. These early coins bore no inscriptions and did not circulate widely. Their use, however, quickly spread to the Persian empire and the East because of the Persian domination of Asia Minor beginning in the mid-6th century B.C.E. Croesus, according to Greek tradition (Herodotus 1.94), later struck silver and gold coins in the mid-6th century, which probably supplemented and/or expanded the earlier use of electrum.

Some scholars have suggested that the earliest coins were struck by merchants, because the types are diverse and one early inscribed coin reads, "I am the mark of Phanes," presumably a businessman

(Grierson 1975: 10; Kraay 1976: 23). However, coinage not only facilitated commerce, it greatly simplified payment and receipt of taxes, temple maintenance, payment of mercenaries and soldiers, and government expenditures on public works. C. M. Kraay has convincingly argued that conversion from bullion to coinage was, therefore, a conscious effort by local communities to simplify monetary transactions. In Kraay's view, coined metals at first remained near the place of origin and were used for governmental purposes. Later, they were traded like any other valuable objects. Neighbors of the Greeks were slow to accept coinage until the Persian government decided that a unified monetary system might weld the empire together. *Sigloi* were the standard silver coins struck by Darius the Great and subsequent Persian kings. They copied coins of E Greek manufacture and were used throughout the E Mediterranean. Persian gold *darics* (probably named after Darius I) were struck by the central government and were the standard gold coinage of the realm. The silver *sigloi* were struck by local authorities in the satrapies. By weight, one gold *daric* was equal to 20 silver *sigloi.* Coins with the Great King's likeness were also powerful political tools.

Most classical numismatists argue that coinage was introduced sometime after 650 B.C.E. At first the use of coins spread westward from Lydia. Persian satraps and rulers struck silver and gold coins depicting the Persian king of kings in the guise of a running archer or an archer in the hunt. See Fig. COI.01 (a). The scenes are reminiscent of numerous examples of Babylonian, Assyrian, and Persian glyptic art from the 1st millennium B.C.E. Old systems of barter and the use of older forms of money persisted in the E for at least another century; but the use of coinage spread quickly to Greek communities in the Aegean, on mainland Greece, and in the Greek colonial west (Sicily and Italy). Coinage was used in Italy before the end of the 6th century B.C.E. and probably reached Marseilles (a Punic colony) by *ca.* 450 B.C.E. By the second half of the 5th century, coinage was in use and being struck in N Africa and at mints throughout the E Mediterranean, including the important trading centers of the Phoenician league of city states.

The coinage of Sidon, Tyre, Aradus, and Byblos began in the 5th century and became normative for trade in the Near East in the 4th century, supplemented by coins from Greek and E Greek cities (notably Athens whose standard and coinage gained great commercial prominence). Egypt was slow to adopt the use of coinage, using globs of weighed gold with the hieroglyphs *nefer nub,* "fine gold," incised upon them as payment to Greek mercenaries (Grierson 1975: 11). The Greeks probably insisted on being paid in coin, a new concept for the Egyptians.

Sidon was the leading Phoenician city during the Persian period (*ca.* 540–332 B.C.E.). Tyre had been destroyed by Babylonian armies and Sidon, its N neighbor, picked up the commercial slack. Phoenicia provided the navy for the Persian kings and was the critical link in the Persian trading network which connected the spice and silk routes of the E with the Greek and Punic west. By the 5th century, more and more foreign coins appeared in Gaza, the Phoenician cities, and in Jerusalem, so that local authorities sought permission to strike their own coins to make trade simpler and governmental activity more efficient. Merchants no longer weighed out a "shekel" of silver when officially stamped coins were available. The Phoenicians struck coins depicting important symbols of each city-state beginning in *ca.* 450 B.C.E. Sidon, for example, depicted a galley on the obverse types, symbolic of the city's leadership in maritime trade. See Fig. COI.01 (b). The reverse types showed the Persian king riding in a chariot followed by the Sidonian king dressed as high priest in the Great King's cult at Sidon. Inscriptions first appeared near the end of the 5th century in the form of abbreviations of the names of the Sidonian kings. Similar inscriptions were tried in Tyre, Aradus, and Byblos. Indeed from Byblos, much fuller inscriptions are known, listing the ruler's name and title—*milk gubl,* "king of Byblos." At Sidon it was common practice to use the 1st initial of the king's name as an abbreviation: i.e. ʿ*b* for ʿAbdʿaštart, or *bš* for Baʿlšallim. From an inscription published in the 1960's, the Sidonian king list was greatly expanded so that an accurate, more precise chronology for the Sidonian coinage of the Persian period was made possible. See Fig. COI.01 (c–e).

These coins were struck on the Phoenician standard, which was directly convertible into the Persic standard of the imperial gold darics. It also exchanged easily with coinage of the Attic standard on which the Athenian and Greek economies were built. By the early 4th century B.C.E., however, Sidon, Tyre,

Cyprus, and Egypt revolted against Persia. New coin types developed which depicted the local ruler's likeness, rather than the traditional scenes with the Persian King of Kings. These coins were short-lived because Persia reasserted its control and transferred minting privileges to the Cilician satrap, Mazday, whose name appears on the Sidonian coins in Aram script. One result of this revolt, however, is the adoption of the Attic standard in the Sidonian and Tyrian mints, probably to facilitate trade with Greece.

At the same time, coins were also being struck further S along the Levantine coast in either Gaza or Ashkelon. Most scholars presume that Gaza was the principal regional mint in this period, imitating Attic coins of the 5th century (which depicted Athena on the obverse and the Athenian owl and the Gk letters *alpha-theta-epsilon* ["Athenai" for Athens] on the reverse; see Fig. COI.01 (f)). The Athenian tetradrachmas, copied in the mint at Gaza, are among the most beautiful coins of this early period. Athenian coins were imitated because they were considered the international monetary standard of their time (late 6th through the early 4th centuries B.C.E.); the owl and head of Athena were symbolic of Athens and conveyed a confidence built up throughout the E Mediterranean in Athenian commerce and statecraft. The Athenians, after all, had been able to withstand the Persian juggernaut at Marathon and Salamis, and they maintained a strong navy. The so-called "Philisto-Arabian" or "Egypto-Arabian" copies are not so well done. See Fig. COI.01 (g). They were struck in silver, as were most of the Phoenician coins. Only a few bronze issues are known from Sidon; they supplemented the silver issues which were subdivisions of the more valuable gold darics—the mainstay of the Persian central mint.

The mint at Gaza or Ashkelon struck many different kinds of coins. Besides the Attic imitations, there was a large group which depicted a janiform head—that is, a head of the god Janus which gazes both ways. None of these coins exhibits the quality of craftsmanship known from Greece or Phoenicia. The owls do not measure up to Tyre's owl or that of Athens, and none has the quality of engraving common to the Byblian scenes of a lion attacking a bull.

Suffice it to say, that during the period 450–430 B.C.E., coins were struck along the Levantine coast for the first time. These issues were produced with the permission of the Persian government and under the authority of local rulers loyal to the Great King. Major silver denominations and their fractions facilitated trade and the payment of tribute and taxes to Persepolis and Susa. Each of the coin series depicted local scenes and bore ethnics which had some political or religious significance—a common practice at the time. All of the Phoenician mints used identifiable types peculiar to their own city mints. For the first time, abbreviations of cities' or rulers' names appear on coin flans. The letters, *mʾ,* for example, were an abbreviation for *mamlakt ʾArvad,* "the government of Aradus." These coins and numerous examples from Greek and East Greek mints circulated throughout the lands of the Bible as early as the end of the 6th century and beginning of the 5th century B.C.E. This was the period of the great reforms of Ezra and Nehemiah in Jerusalem, when the Temple was rebuilt and the city wall of Jerusalem was restored. Most coins of this time which are known from archaeological contexts, have come from hoards found at sites along major trade routes in the Levant and Mesopotamia. Such hoards have come from excavations or tombs at sites like Abu Shusheh (near Gezer), Acco, Khirbet el-Kerak, Tel Sippor (near modern Qiryat Gat), and Shechem. It was also during this time that coins were first struck under Jewish authority in or near Jerusalem.

D. The Yehud Coins

Investigation and analysis by L. Mildenberg and the author have produced a new chronological picture for the "Yehud" coins. These coins come from the late Persian period, which remains relatively unknown to biblical scholars (the 5th and 4th centuries B.C.E.). Coins bearing the inscription *yhd* have surfaced for many years on antiquities markets and in collections around the world. At first it was thought that they were part of the so-called Philisto-Arabian series already mentioned. The Yehud coins have now been recognized to be a separate series, emanating from a mint in or near Jerusalem. None of the coins bears a mint mark except for the name of the province in paleo-Aramaic or paleo-Hebrew script. When these coins are studied within the context of the larger series from Phoenicia, a clearer picture of the 5th and 4th centuries in Judah emerges.

In the markets of Jerusalem, coined money was first used in the 5th century B.C.E. Evidence of coins in this early period indicates that they were often cut to test the purity of the metal. Indeed at one time in the 4th century in Tyre, inflation was so rapidly devaluing the Tyrian stater, that one enterprising ruler introduced "sandwich" coins, which was a copper core encased in silver. The coins were obviously lighter in weight than pure silver; and following the subsequent public outcry they were withdrawn from circulation (Betlyon 1980: 44–46). Many of the so-called Philisto-Arabian and Egypto-Arabian coins in the collections of the British Museum and the Bibliothèque nationale display punch marks or cuts verifying their purity or weight. Use of officially coined metals, however, made it possible for merchants to transact business without weighing a "shekel" of silver to be certain that the weight in metal matched the accepted weight in stone. While no coins predating the late 6th century have thus far been found in Palestine, the use of metal rings and bars persisted even though the use of coins became more popular. Spreading first from coastal cities along established trade routes, coins were quickly utilized for collection of taxes, both governmental and religious. According to Ezra 2:68–69, the Israelites not only rebuilt Jerusalem, but families made freewill offerings for the rebuilding of the Temple, donating to the treasury "61,000 gold darics *(darkĕmnîm),* 5,000 minas of silver, and other priestly accoutrements."

From comparative analysis, the first coins bearing the ethnic "Yehud," were probably struck soon after 400 B.C.E. They depicted the head of Pallas Athena in typically Attic manner, facing to the right on the obverse. On the reverse was an owl with an olive branch and the legend, in paleo-Aramaic, *Yehud (yhd),* i.e., Judah. The craftsmanship is poor. The die engravers copied Athenian types similar to those presumably copied in Gaza. The legend appears both as it should and on some examples, in retrograde. All of the coins are fractional silver denominations which functioned as small change to complement the larger silver coins of Gaza, Tyre, and Sidon.

By 370 B.C.E., Judah introduced new types including the lily and the falcon with spread wings, again with the legend *Yehud.* Within this group is a coin with the likeness of a local leader, perhaps the high priest, to whom minting authority had devolved. The coin, featuring his bust "in kidaris" (the Persian costume) is very similar to issues from Sidon struck during the first revolt of the 4th century against Persian hegemony. These Sidonian coins from ca. 365/364–362 B.C.E. featured the local king wearing a crown like that of his Persian overlord, identical in style to this example from Judah. The coin stems from the revolt, reflecting Judean participation in the rebellion instigated by the Egyptian leader, Tachos. The Sidonian ʿAbdʿaštart I led the insurrection in the Levant, along with a number of kings from Cyprus. The Judeans, always envious of their own freedom from foreign rulers, participated as well, striking coinage with their own ruler's likeness. It is unusual for a Jew to have agreed to have his face shown on a coin; the use of this type, however, was short-lived, probably due to the public's lack of acceptance. E. Stern has summarized the archaeological evidence for disturbances in the first half of the 4th century at a number of sites in the Shephelah and the Negeb. These destructions were probably due to armed intervention by armies of Artaxerxes II Mnemon, who was doubly anxious when Yohanan, a high priest, killed Yeshua within the Temple. As a result of this act, according to Josephus (*Ant* 11§297–301), a Persian general, Bagoses, entered the Temple, defiled it, and imposed a fee upon each Jewish sacrifice, causing the Jews to suffer for 7 years. This fee may well have been collected in this silver minutiae.

A coin from the British Museum, the so-called Yehud drachma, is probably from this period (ca. 360 B.C.E.) as well. See Fig. COI.01 (h). This unique coin depicts a bearded head in Corinthian helmet on the obverse and a bearded figure seated on a winged wheel on the reverse, with a head of the Egyptian god Bes (in incuse) to the side. The legend "Yehud" appears on the reverse. First published by G. F. Hill and E. L. Sukenik many years ago, the coin was thought by some scholars to illustrate a scene from the prophecies of Ezekiel, showing God on the spinning, winged wheel, interpreting Ezekiel 1 and Ezekiel 10 in which God's throne room has whirling wheels, one for each of the cherubim, wheels within wheels. Although the reverse may indeed depict this scene, it is doubtful that it would have been struck by Jewish authorities, given their aversion to depicting God or anything so holy as the cherubim in this early period. This would have been a significant affront to religious authorities in this time of neoorthodoxy following Ezra's reforms. The coin was more likely struck by a satrap like Mazday, on behalf of the Persian

government, to maintain commercial activity in Judaea following the Tachos revolt. The coin is not Jewish in character, and represents a foreign, intrusive element. Since only one example is known, this issue must have been intended for limited use.

The next coins struck by Jewish authorities were issued by Yeḥizqiyyah the governor, with a facing head on the obverse and a poorly executed Athenian owl on the reverse. Instead of *Yehud,* the reverse inscription reads *yḥzqh hpḥh, Yeḥizqiyyah happeḥah* ("governor"). The title indicates the rank of the official granted minting privileges by the Persian government. By 346 B.C.E. parts of Judah once again joined in revolt with the Phoenicians and Egyptians against Persia. Yeḥizqiyyah apparently followed the Sidonian lead and put his own head on the coins during this revolt. This time Artaxerxes III Ochus put down the revolt quickly and harshly. Evidence of destruction is found at Hazor, Megiddo, Athlit, Lachish, and Jericho. Diodorus Siculus wrote about this rebellion led by Tennes of Sidon (16.40–46). Scholars have argued that Judah also participated in this revolt. There is some archaeological evidence to indicate that parts of the province revolted, causing more suffering and a deportation of some Jews to the area of the Caspian Sea.

Following the Tennes rebellion there was probably a period when no coinage was struck in Jerusalem; Persian retribution for an indiscretion such as rebellion was swift and sure. Archaeological evidence from the period is scanty, and two destructions cannot be easily reckoned anywhere, especially two destructions only 10 years apart. It is clear, however, that Judah participated at least half-heartedly in these two revolts, so that much of the province had been destroyed at least once by the time that Alexander the Great marched his armies into the E Mediterranean in 332/331 B.C.E.

Following the second revolt (ca. 340 B.C.E.) coins were struck on the same types, but without the inscription Yehud or the name of the fallen Yeḥizqiyyah. A small group of poorly made coins from this period has been recognized by D. Barag to bear the ethnic inscription *yḥnn hkhn, Yoḥanan hakkōhēn,* "Yoḥanan the priest." The listing of high priests in the Chronicler's history does not include the name of a Yoḥanan in the late 4th century. F. M. Cross has argued that the listing in 1–2 Chronicles, Ezra-Nehemiah lacks the names of at least 4 high priests, presumably having been dropped off the list because of scribal errors when the scroll was recopied (specifically by reason of supposed haplography). It may be, however, that the Chronicler's final history of this period was edited by Persian authorities deleting the names of rebellious priests, such as Yoḥanan who took authority on himself to strike coins without an official Persian imprimatur. Nehemiah and Ezra were both highly praised for their loyalty to Persia, and are given special laud for their magnanimity toward the Jews, as Persian officials. The Ezra lists may have been used for propaganda purposes, and only after the histories had passed censorship were they acceptable within the loyalist Jewish community. After all, the Persian period was a time when talk of freedom and revolt was regarded as open rebellion. Zerubbabel, mentioned as a leader in Zechariah 1–8, mysteriously disappeared, probably because he advocated a free, strong Jerusalem once too often.

If this reconstruction of late Persian period history is correct, the high priests apparently had assumed great authority, including the minting of coinage. Some measure, therefore, of civil authority was vested in the high priest as well as his religious function. This scenario corresponds to a time of Persian weakness, ca. 335–332 B.C.E.

These small coins were followed by a series in which old dies were initially reused under Ptolemaic sponsorship following Alexander the Great, with the Aramaic inscription *Yehud* replaced by the Hebrew *Yehudah.* Likenesses of Ptolemy I and his queen eventually appeared upon the types, indicating that secular governmental authorities had taken control of the mint from the high priest. This probably occurred immediately after Alexander's conquest of Judah in 331 B.C.E. Regional mints in Tyre and Alexandria struck the major denominations of silver coinage in this period portraying Alexander's own likeness. Small local mints continued to strike fractional issues such as the Yehud coins found near Jerusalem, Bethlehem, and Hebron.

The Yehud coins are important because they are the first coins struck within the land of Israel and Judah by local authorities. The coins have been found as far S as Beth Zur and Tell Jemmeh, nearly to the border

of Egypt. Judah was a province within the Persian satrapy of Abernahara, i.e., the satrapy "across the river," which included Syria, Phoenicia, Palestine, and Cyprus.

E. Coinage in the Apocrypha

After 332/331 B.C.E. no coins were struck in Palestine except in officially sanctioned mints such as the one at Jerusalem where only small minutiae were produced. The major coinage of the period came from Acco and Tyre, where Alexander established large Hellenistic mints. No major monetary changes occurred; the Athenian standard and coins on Greek types predominated until 168 B.C.E. Coinage and the right to produce it were the perquisites of political and military supremacy. As the Ptolemaic and Seleucid Hellenistic kingdoms weakened in the century following Alexander's death, rulers had more and more difficulty dealing with outlying provinces of the kingdoms. Judaea found itself between spheres of Hellenistic influence, which resulted in repressive policies from Syrian Greek rulers early in the 2d century B.C.E. The immediate result was rebellion led by Judas Maccabaeus. The end result was that Jewish authorities were again in control of Jerusalem by 168 B.C.E. Alexander Jannai (ruling from 103–76 B.C.E.) was the first of the Hasmoneans to strike coins in Jerusalem late in the 2d century B.C.E. with a flower (lily?) on the obverse and the ethnic inscription *yḥntn hmlk*, "Jonathan the king," referring to himself. These coins were struck mostly in bronze and functioned as supplemental currency with the larger coins circulating from the major mints. Silver and gold were in short supply, so Jonathan later overstruck his own coins altering the title "king" to "high priest and friend of the Jews." The Maccabees were slowly equated not with orthodoxy and revolt against Hellenism, but with Hellenism itself. Their use of an ethnic inference in Greek may have angered more militant Jews in the 2d century, but it was probably a necessary element to insure acceptance of the coins in the marketplaces of the land at the time.

The first Maccabaean coins struck by Alexander Jannai were in bronze. They were fractions of a shekel in weight, including half-, quarter-, and third-shekels. All were minted with similar types and ethnics. These coins probably served as Temple taxes as well as for commerce. The sanguinary family quarreling which marked the early years of Maccabaean/Hasmonean rule, meant that coins were not minted with someone securely in power. In 1 Maccabees 15, Antiochus VII granted to Simon the high priest a letter of privileges. It said among other things, "I give you leave also to coin money for your country with your own stamp." On this basis most scholars have argued that Simon (*Šimʿon,* d. 134 B.C.E.) struck the first Hasmonean coins. However on a closer reading of 1 Maccabees, it is clear that Antiochus VII went back on his word and revoked Simon's privileges. So who did strike the Hasmonean coins?

The series bears 4 names: Yehoḥanan, Yehudah, Yonatan, and Mittityah. Since the high priestly families commonly practiced papponomy, naming the son after the grandfather, each name could represent more than one person or generation, when the same names recur again and again within a family. The Hasmoneans further complicated this situation, however, because in the 4th generation they stopped using their Hebrew names in favor of Greek ones. The work of B. Kanael, A. Kindler, and Y. Meshorer leads us to the aforementioned conclusion that Alexander Jannai struck the first Hasmonean coins. Seleucid and Ptolemaic coins were circulating at this time throughout Judaea, but by *ca.* 110 B.C.E., the Seleucids had become so weak that subject states and cities often were able to demonstrate autonomy by striking their own types. Tyre was minting autonomous shekels by the mid-2d century B.C.E.; but it was a large, commercial city-state. Smaller states and cities only later began their mints, including renewed coinage from Gaza and Ashkelon, and new coins from Judaea and the Nabataean kingdom. Nabataean coins were struck from *ca.* 80 B.C.E. until about 80 C.E., and regularly circulated in Palestine.

Approximately 20 lead "coins" are known from Alexander Jannai (ruled from 103–76 B.C.E.). The lead flans are usually struck on only one side and appear to be experimental efforts at coin production using soft metal, according to Meshorer (1967: 56–57). Struck between 103 and 76 B.C.E., Alexander Jannai's coins usually depicted a flower on the obverse and an anchor on the reverse. The anchor symbolized his conquest of several maritime cities on the Mediterranean coast. However, it is very similar to other anchors used on the coins of Antiochus VII Sidetes. Some believe that his restriking of coins to delete the royal title "king" and replace it with "high priest and friend of the Jews," was a concession to the

Pharisees because the Hasmoneans were not of the house of David and had no legitimate right to the throne.

Alexander Jannai struck other types as well, including reverses depicting double cornucopiae and stars with 8 rays. John Hyrcanus II (high priest from 63–40 B.C.E.) followed Alexander Jannai striking coins on similar types, and repeating the lengthy ethnic—"high priest and friend of the Jews." A crested helmet was used on some smaller bronze issues as a reverse type. Judas Aristobulus II (ruled from 66–63 B.C.E.) and Mattathias Antigonus (ruled from 40–37 B.C.E.) completed the Hasmonean coin series with strikings in 37 B.C.E. No Hasmonean silver is known. Scholars in the last century confused silver from the First Jewish Revolt, *ca.* 67–70 C.E., with Hasmonean coins because of the similar types.

Hasmonean issues weighed a maximum of 14 g. and a minimum of 0.2 g. They were struck on flans which had been cast in open molds. This open mold production method resulted in heavier coins, which were the equivalent of 2 coins pressed together. The only coin struck on the closed mold technique was that of Antigonus depicting a 7-branched menorah. Meshorer argues that this coin was a special issue struck at half the weight of the other issues in 37 B.C.E. when the armies of Herod were laying siege to Jerusalem. Mattathias Antigonus saw his little kingdom slipping into the hands of "strangers" —Rome and Herod. He used this coin with the menorah to proclaim that it was forbidden for the Temple menorah to fall into enemy hands. Meshorer believes that the coin had no economic use, but was intended for "propaganda value only" (1967: 61–62). Mattathias placed his name in Hebrew on the obverse and his Gk name in the genitive, *basileos antigonou*, "belonging to king Antigonus," on the reverse.

F. Coinage of Herod and His Dynasty

In the 1st century B.C.E., coins of Republican Rome began to circulate in the E, especially after the conquests of Pompeii the Great, which established the Roman presence in Egypt and Palestine. With the overthrow of the Hasmoneans, Herod brought some changes to minting operations in Jerusalem: inscriptions (ethnics) would only be in Greek, no Jewish symbols would appear on coins, and a dating system would be attempted for the first time. All of his coins have either a full or abbreviated form of the ethnic, "Herod the King."

Herod's first coins are dated; thereafter they go undated. The symbolism is predominantly pagan, including a tripod, palm branches, crested helmets, shields, winged caduceus, pomegranate, aphlaston (a royal signet), a cross enclosed in a diadem, an anchor, an eagle, and a double cornucopiae. All the coins are in bronze and are meant to support silver from regional mints. See Fig. COI.01 (j).

Herod's lands were divided among his 3 sons, Archaelaus, Antipas, and Phillip, after his death in 4 B.C.E. Archaelaus's coins were struck from 4 B.C.E. until 6 C.E. and are maritime in type, perhaps because the principal ports were in his jurisdiction, including Joppa and Caesarea. These coins were struck at Herod's old mint of Jerusalem and continued the same craftsmanship. Herod Antipas, ruling in the Galilee and Peraea (Transjordan) until 39 C.E., began to strike coins in his 24th year, 19/20 C.E. His coins were distinctly Jewish in character, since all the lands he ruled were inhabited primarily by Jews. The designs include the palm tree, palm branches, bunches of dates, and reeds. His coins were struck in a new mint at Tiberias (founded on the W shore of the Sea of Galilee between 17 and 22 C.E.), and were limited to small bronzes which have been found only in N Israel.

Herod Phillip II ruled areas which were predominantly inhabited by pagans, and his coins show foreign influence, including the Roman emperor's bust on the obverse and a Roman temple on the reverse. These coins are extremely rare and were probably struck at Caesarea Philippi (modern Baniyas in the Golan Heights). He even included the name of the Roman emperor, in Greek, on his coins. These examples had a limited, local circulation; only one has surfaced in excavations as far away as Curium, Cyprus.

Agrippa I ruled in the N from 37–44 C.E., and struck coins beginning in his 2d year at Caesarea Philippi. He was a close friend of Claudius who became emperor in 41 C.E. Through his patronage, Agrippa I ruled over almost all the lands which once had been ruled by Herod, uniting the land of the Jews and the first Christians under a single ruler who was the grandson of Herod the Great and his Hasmonean wife Mariamne. Like his contemporaries and his predecessors, his most common issues were *peruṭ*—small bronze coins—which he struck in Jerusalem or Caesarea. Some of his coins bear types which were

intended to circulate in Jewish areas (with types like the canopy); other types, depicting the emperor, Agrippa, a quadriga, and a temple, were intended for areas untouched by Judaism. Agrippa I was the first Jewish ruler since the Persian period to put his own likeness on a coin flan.

The final Herodian ruler was Agrippa II, who sat on the throne until 95 C.E., strongly supporting Roman rule at all times. His coins have been problematic because they were sometimes dated twice, on differing systems; or they bear the names of 2 different emperors. Moreover, the date given by Josephus for his accession is incompatible with the dates on the coins. Josephus argued that Agrippa II came to the throne *ca.* 49/50 C.E.; from inscriptions and his coins, H. Seyrig has more correctly argued that he came to the throne in 56 C.E. (1964: 55–65). Agrippa struck coins on several new types, depicting 4 emperors, including Nero (54–68 C.E.), Vespasian (69–79 C.E.), Titus (79–81 C.E.), and Domitian (81–96 C.E.). He also used divine types such as Pan, Nike, and Tyche with cornucopiae.

During this same period, Roman procurators in Judaea issued coins sporadically between 6 C.E. and 66 C.E. Of the 13 procurators assigned to Judaea, only 5 struck any coins. Under Caesar Augustus (27 B.C.E.–14 C.E.), Coponius struck bronzes in 6 C.E. depicting barley and a palm tree. Ambibulus issued coins on the same types between 9 and 11 C.E. Under Tiberius Caesar (14–37 C.E.), Valerius Gratus issued a series of bronze coins with inscriptions inside a wreath on the obverse and double cornucopiae or lilies on the reverse. He struck them between 15 and 19 C.E. and again in 25 C.E. Pontius Pilate, who replaced him in 26 C.E., struck coins for 3 years, beginning in Caesarea and Jerusalem in 29/30 C.E. New obverse types included the simpulum and the lituus, Roman cult objects which were a source of irritation within the Jewish community of Judaea. Other symbols used by the procurators were not necessarily Jewish, but were less offensive than those chosen by Pilate. The palm tree and a palm branch were most compatible with the Jewish community; but coins depicting spears and shields, symbols of Roman military superiority, appear on some coins of Antonius Felix, issued in 54 and 58 C.E., in the last years of procuratorial minting in Judaea. See Fig. COI.01 (k). Felix presided on the Apostle Paul's arrest (Acts 23:26–35). The procuratorial coinage was secondary to imperial and Herodian issues, and was used to fill out the denominational system. Dating mechanisms were used on these coins indicating the year of the procurator's term. Some early scholarly studies described some silver issued of the procurators; these have proven to be forgeries of the modern era.

G. Coins of the New Testament

The coins of the Herodians circulated throughout Palestine during the time when Jesus and the apostles travelled those ancient highways. These coins, with those of the procurators, were the pocket change supplementing silver coins from imperial mints in Rome, Alexandria, and Antiochia. Among these larger silver coins was the *denarius* which was the accepted salary for a day's work by a common laborer. The *denarius* was also the annual Temple tax when Jesus was an adult and is probably the coin mentioned in Matt 22:21. Jesus was questioned concerning the payment of taxes; his response was "render unto Caesar that which is Caesar's," because like so many of the other coins, the emperor's likeness appeared on the obverse. After the revolt of 66–70 C.E., the Temple tax doubled to a half-shekel (two *denarii*).

The coins paid to Judas Iscariot (Matt 26:15) were probably silver shekels of Tyre or Antiochia. Thirty pieces would equal approximately 120 *denarii,* a laborer's salary for up to 4 months. According to Exodus 21:32, however, this sum was considered appropriate "blood money," paid in compensation when someone was killed accidentally. In Mark 12:42 the widow's mite was probably a Greek *lepton,* the smallest coin then in circulation. It was half a Roman *quadrans* or Jewish *peruṭa,* and in diameter would have been smaller than any modern U.S. coin. In 30 C.E., any of these coins may have been seen on the streets of Jerusalem, which was a cosmopolitan city. The coins varied greatly in weight and size from 8 mm or 40 mm in diameter. Because of the variations, simple commercial exchanges often required the services of a moneychanger.

The moneychanger functioned as both a banker and a financier. He sat in the gate of the city or the gate of the Temple and made his services available for a fee. For example, when Antiochian tetradrachmas were exchanged for local shekels, a premium of 4%–8% was exacted. Since coins of different origins were used, the moneychanger's services were often required. The Temple tax of a half-shekel to be paid

by adult males was specified in rabbinic instruction to be paid in silver didrachmas (= 1/2 shekel) of Tyre. According to the Mishna (*Šeqal.* 1:3), the tax was collected in the month preceding Passover and for 20 days immediately before the feast within the Temple precincts. When Jesus "cleansed the Temple" (Matt 21:12–3, Mark 11:15, Luke 19:45–6), moneychangers may have been collecting this tax for the public welfare. Sometimes they cheated when assisting in transactions, especially when converting money or selling animals for Temple sacrifices. Rabbi Simeon reduced the number of obligatory sacrifices (*m. Ker.* 1:7) to eliminate this fraud in the mid-1st century C.E. These same moneychangers also fulfilled the banker's function, paying interest on money held by them, even though there were laws against usury (*m. Šeqal.* 1:6).

H. Coins of the First Jewish Revolt

Mints in Palestine and Phoenicia struck coins for Augustus and his successors, Tiberius, Gaius, Claudius, and Nero. Mints in Judah, Samaria, and neighboring areas included Jerusalem, Caesarea Maritima, Caesarea Samariae (Samaria), Tiberias, Sepphoris, Scythopolis, and Ashkelon. All these mints struck bronze coins which supplemented the silver struck at Tyre.

The monetary situation in the early 1st century C.E. was typical for the Greco-Roman East. Large transactions were conducted in terms of talents; that is, in large masses of coined and uncoined silver by weight, or by barter in commodities, or by gold (Matt 2:11). C. H. V. Sutherland has argued that although there were many mints striking only bronzes, silver remained the principal medium for day-to-day transactions (1974: 129–37). Silver was the metal which fed the Temple treasury, settled moderate debts, furnished the medium for wage-payment, bought lodging and care at an inn for a wounded and exhausted man, covered a mass-purchase of bread for thousands of people, and tempted the traitor. Money was, in short, an essential part of life in Palestine in the 1st century. For a person to hold a purse with coins inside it was not a mark of wealth, but normal behavior for the day.

So there was an established monetary system in place when the Jews revolted against Rome in 66 C.E. Tyrian shekels had been used as payment for the Temple taxes; and for some reason the Romans shut down the Tyrian mint, depriving Jerusalem of this important source of funding for a significant part of its Jewish religious life. When Jewish rebels struck coins in Jerusalem, it was natural for them to be linked to Tyrian coins by weight and other elements—a symbiosis which C. Roth has called "a religious as well as a patriotic necessity." This relationship is clearly seen in a hoard found in Silwan, the modern village of Siloam near Jerusalem, dated from 67–68 C.E. It contained Jewish pieces of "year 2" mixed with Tyrian shekels of the period 13/12 B.C.E. through 64/65 C.E. Another hoard found on Mt. Carmel contained over 4,500 coins, including 3,400 Tyrian shekels, 1,000 Tyrian half-shekels, and 160 Augustan *denarii*—some have suggested that this hoard was Temple tax which had been intercepted by the Romans *en route* to Jerusalem.

The coins struck during the First Jewish Revolt against Rome are among the most studied examples in the world. Struck in silver and bronze, and dated to years 1–5 of the revolt, they emanated from Jerusalem and bore Jewish types. They depicted a chalice, a stem with three fruit (pomegranates?), an amphora with 2 handles, a vine leaf with tendril, the etrog and lulav, two lulavim, a palm tree, and ethnic inscriptions which included "shekel Israel" and denominational designations. See Fig. COI.01 (l). Coins were struck in the shekel, half-shekel, and quarter-shekel denominations. Besides the label *šql* and *yšr'l,* "shekel Israel" or a fraction thereof, several also bear the inscription, "Jerusalem the holy" *(yrwšlym hqdwšh)*.

Coins of the revolt have been found all over Judaea, even on Masada. They replaced the Roman coinage of the Herodians which had adapted non-Jewish types. Some Roman coins of the half-peruṭah and peruṭah denominations were struck in Caesarea during the revolt under one of the procurators. These coins were not part of the mass of Jewish coinage coming from Jerusalem. They were an attempt to supply coins to the monetary system of Palestine in this time when more currency was needed since 3 extra legions of soldiers were in the country. The monetary supply must have reached an apex in 67 or 68 C.E. This was especially true in Caesarea, the political capital.

After the revolt was put down in 70 C.E., silver continued to be struck in Antiochia and Tyre, although the old shekel was discontinued in favor of tetradrachmas like those already minted in Antiochia. Bronzes

appeared under Vespasian (69–79 C.E.) in Ashkelon, and also under Titus (79–81 C.E.) and Domitian (81–96 C.E.), some coming from Neapolis and Sebaste (Samaria) as well. In the period 71–79 C.E., Vespasian and Titus struck several coins commemorating their victory over the Jews. Probably struck first in Caesarea by Vespasian in 71, these coins depicted the conqueror on the obverse with Nike (Victory) on the reverse with an inscription in Greek, *ioudias ealokuias,* the equivalent of *Judaea capta* in Latin. See Fig. COI.01 (n). This latter ethnic was used to continue this massive coin series under Domitian in 92–93 C.E. Titus also struck these coins, which sometimes have on the reverse a trophy with Judaea seated and mourning, her hands tied behind her at its foot.

The coins struck with Gk ethnic inscriptions were intended for the Jewish population of Palestine. The Romans of the Flavian dynasty were very proud of their victory, as the continuing issuance of these coins has shown. Most of the coins, however, are from Titus and Vespasian. The few coins known from the reign of Domitian apparently celebrated the 20th anniversary of the fall of Masada, and probably should not be confused with or grouped together with the issues which immediately followed the war. The Domitian issues came from Rome. Note also that this was an economically and commercially active time: L. Ginzberg has shown that trade from Egypt and Judaea and from Judaea to Rome was extensive, because Palestinian wheat was half the price of wheat in Rome, but double the price of Egyptian wheat (Sperber 1974: 126–7). Ashkelon, Joppa, and Caesarea were points of transshipment (Smallwood 1981: 344–351). Some rabbis, to protect the Palestinian markets, went so far as to declare non-Palestinian goods ritually impure. Rabbi Simeon ben Shetaḥ (in the 1st century B.C.E.) declared imported metalware impure to protect local products (*b. Šabb.* 14b; *j. Pesaḥ* 1,6).

By the end of the revolt, Caesarea had officially become a Roman colony (in 69 C.E.). Roman coins for the province of Arabia were struck at mints in Ashkelon, Caesarea, Gadar, Gaza, Neapolis, and Philadelphia (Amman). Vespasian introduced a new bronze denomination, the *semis* which augmented the *dupondius* already widely in circulation. The *dupondius* was 24–25 mm in diameter and weighed 12.5–16 grams. The *semis* was smaller, ca. 20.5–21 mm, weighing about half as much as the *dupondius.*

I. Coins of the Second Jewish Revolt

By 130 C.E. Jerusalem had also become an official Roman colony: Hadrian (117–138 C.E.) built a new temple to Jupiter and issued coins on the city's new name, Aelia Capitolina. Hadrian officially visited Israel as emperor in 130 C.E., whereupon Simon Bar Kokhba and his followers began their revolt against Rome. This revolt was in reaction to Hadrian's decision to change Jerusalem's character. The Jewish Temple, after all, had been destroyed in 70 C.E. Meshorer argues that the Romanizing of Jerusalem preceded outright rebellion, since a hoard was found on the N edge of the Judaean desert containing 35 *denarii* of Bar Kokhba and a bronze issue of Aelia Capitolina. They were probably salted away together during the war for safekeeping. The contents of the hoard indicate that Jerusalem had been Romanized before Bar Kokhba made his move, not afterward as some have claimed.

The coins of the Second Jewish Revolt were struck under the aegis of Bar Kokhba in an effort to restore the Temple and reinstitute Temple services. See Fig. COI.01 (m). Coins dated to year 1 of the revolt (132/133 C.E.) depict the facade of the Temple, with a feature (probably the ark of the covenant) in the center and the inscription, "Jerusalem." The reverse depicts the lulav and etrog and the inscription "year one of the redemption of Israel." The coin is a silver tetradrachma weighing over 14 g. and is 27 mm in diameter. A silver *denarius,* 18 mm in diameter and weighing 3.2 g., was also struck, with a jug and palm branch on the obverse and the ethnic, *ʾl ʿzr hkḥn,* "El ʿazar the priest." The reverse depicts a bunch of grapes with the same inscription as the tetradrachma's reverse. Other issues in bronze altered the reverse ethnic to Shim ʿon,[w] "Jerusalem," or "Shim ʿon, prince of Israel" *(šm ʿn ns yšr l).* Palm trees, vines, leaves, and lyres were also shown on the types. Some coins were struck in the 2d year, reusing year 1 dies. New types emerged, including trumpets, and a new ethnic inscription, "year 2 for the freedom of Israel." In year 3, the ethnic was simply "for the freedom of Israel." Bar Kokhba's troops probably occupied Jerusalem in 133–135 C.E. When they finally had to withdraw, their slogan became "for the freedom of Jerusalem," hoping to reverse their fortunes and reestablish the Temple. While most of these coins were

undoubtedly struck in Jerusalem, late in the war some coins may have been struck elsewhere (Kindler 1986–87: 46–8).

Some scholars have argued that the "Shimon" mentioned on the coins is not to be connected with any real person. However, the papyri from the Naḥal Ḥever prove that this was really Bar Kokhba himself and no other. For a short-lived revolt, many different coin types were struck. This was in part possible because Bar Kokhba reused coins already circulating throughout Palestine. All of his issues are overstrikes, the silver on Roman *denarii* and Syrian provincial tetradrachmas, and the bronzes on flans from Gaza. At least one bronze was found with the countermark of the Roman 10th Legion on the reverse (from the M. Rosenberger collection in Jerusalem). So Rome freely reused the rebel coins. Bar Kokhba's types include musical instruments used in the Temple (trumpet and lyre) because the Temple was very important to him. It was depicted on the coins, along with many articles of cultic importance, i.e., lulav, etrog, amphora, etc.

With these coins, issues of the Jews from the biblical period came to an end. As M. Avi-Yonah has written, the Roman government in 135 C.E. attempted a radical solution to the "Jewish Question," expelling those Jews who still survived in and around Jerusalem. Religious practices such as circumcision, teaching of the Law, and ordination of rabbis were punishable by death (Avi-Yonah 1976: 13). These historical developments are well documented in the demise of Jewish coinage.

JOHN W. BETLYON

COL-HOZEH (PERSON) [Heb *kol-ḥōzeh* (כָּל־חֹזֶה)]. A name mentioned in 2 genealogy lists (Neh 3:15 and 11:5). The name means "all seeing" or "everyone's a seer." It is likely that this name was used in the list of names to designate the family profession. There is no apparent relationship between the 2 lists. GARY C. AUGUSTIN

COLONIES, ROMAN. See ROMAN COLONIES.

COLOSSAE (PLACE) [Gk *Kolossai* (Κολοσσαι)]. Best known as the destination of the epistle to the Colossians, this place name occurs in the NT only in the superscription of the letter and in the epistolary greeting (Col 1:2). Colossae was located in the territory of Phrygia in the Roman province of Asia Minor about 120 miles E of Ephesus. Situated near the Lycus river at the foot of Mt. Cadmus (Honaz Dagi; elevation, 8,435 feet), Colossae was only 11 miles SE of Laodicea and 15 miles SSE of Hierapolis. The ancient site was discovered in 1835 by explorer W. J. Hamilton. Surveys of the unexcavated site give evidence of an acropolis and a theater on the S bank of the Lycus river and a necropolis and the remains of other ancient buildings on the N bank.

The city apparently thrived in the 5 centuries before the Christian era as the principal city of the Lycus valley. Herodotus (7.30) refers to Colossae as "a great city of Phrygia" in 480 B.C., and Xenophon (*An.* 1.2.6) describes it as large and prosperous in 400 B.C. (see also Diod. Sic. 14.80.8). In a historical retrospect, Pliny (*HN* 5.145) includes Colossae in a list of famous cities *(oppida celeberrima).*

Colossae was still an important city during the Roman imperial period, as evidenced by inscriptional data and some extant coins showing the usual public officials (Magie 1950: 2.985–86). Based on Strabo's inclusion of Colossae in a list of small towns (*polismata; Geog.* 12.8.13), some scholars have contended that by the 1st-century A.D. Colossae had greatly diminished in size and importance. D. Magie has correctly observed, however, that there is a gap (lacuna) in Strabo's text after *polismata* and it should therefore not be inferred that this description applies to Colossae. Nevertheless, Colossae was increasingly overshadowed by its neighbors, particularly LAODICEA, which became the most prominent city of this valley by the Roman imperial period.

The economic success of the cities of this valley was derived primarily from their textile industries. Colossae was famous for the distinctive purple color of its wool, which was commonly called *colossinus* (Pliny *HN* 21.51; Strab., 12.18.16). The prosperity of these cities was also enhanced by their position on the major trade route leading from the Aegean coast to the hinterland of Asia and on to the E. There was probably a fairly large Jewish population in the cities of the Lycus. Some have estimated that as many as 7,500 Jewish freemen were in the district based upon the amount of Temple tax confiscated by the proconsul Flacus in Laodicea in 62 B.C. (see Cic. *Flac.* 28.68).

The paucity of inscriptions from the unexcavated site make it difficult to reconstruct any detailed history of the city. A number of Colossian coins, however, help to create some impressions about the city, especially concerning the gods worshipped at Colossae. Numismatic evidence points most frequently to the worship of the Ephesian Artemis and the Laodicean Zeus, but also to Artemis (the huntress), Men, Selene, Demeter, Hygieia, Helios, Athena, Tyche, Boule, as well as the Egyptian deities Isis and Sarapis (Head 1906: 154–57).

The fledgling Christian community at Colossae was perceived by Paul (perhaps through the report of Epaphras) as facing the threat of dangerous false teaching resembling aspects both of pagan religion as well as Judaism (see esp. Col 2:6–23). Making an eloquent case for the sole-sufficiency of Christ in his letter, Paul admonishes these believers not to give credence to the claims of the false teachers but to hold firmly to the Lord Jesus Christ alone (see COLOSSIANS).

It is unlikely that Paul had visited the city before he wrote (Col 2:1), although it is not impossible that he did stop off there either on his way to Ephesus (Acts 18:23) or during his lengthy stay at Ephesus. The Colossian church was probably the fruit of the labor of Epaphras, who also ministered in Laodicea and Hierapolis (Col 4:12–13). Paul's expressed desire to visit the city may have been met after his release

from prison (Phlm 22; 2 Tim 3:20). Both Philemon and his runaway slave Onesimus were inhabitants of Colossae (Col 4:9; Phlm 10) as were also Archippus and Apphia.

A severe earthquake rocked this region either in A.D. 60 (Tac. *Ann.* 14.27) or in A.D. 64 (Eusebius; see Magie 1950: 2.1421). Laodicea suffered extensive damage and it is probable that Colossae experienced the same devastation. Likely due to the city's susceptibility to damage from recurring earthquakes, the population eventually relocated to the neighboring town of Chonae (Honaz). The comments of Buckler and Calder from a generation ago concerning the unexcavated site of Colossae still apply: "To archaeological research Kolossai offers attractions similar to those of Sardis: historical renown plus an accessible site completely unoccupied" (Buckler and Calder 1939: xi).

CLINTON E. ARNOLD

COLOSSIANS, EPISTLE TO THE. Colossians traditionally has been classified as one of the Pauline "imprisonment epistles" since, like Ephesians, Philippians, and Philemon, it appears to have been written while the apostle was in jail (Col 4:3, 10, 18; cf. 1:24). The city of Colossae, in SW Asia Minor, was evidently destroyed by the same earthquake that devastated the neighboring cities of Hierapolis and Laodicea in the 7th year of Nero's reign (60–61 C.E.; see COLOSSAE (PLACE)). It is mentioned nowhere else in the NT, and Paul seems never to have visited the congregation there (see 2:1).

A. Structure, Character, and Contents

The overall structure of Colossians conforms to that of the typical Pauline letter: After the address there is a thanksgiving paragraph; in the body of the letter, affirmations and exhortations are closely related; and the letter is concluded with various personal data, greetings, and a benediction.

Colossians is often described as a polemical writing, since in 2:8–23 false teachings and practices are vigorously opposed. However, this letter does not exhibit the kind of argumentation that one finds in

Galatians where Paul seems to be in constant dialogue with his opponents. Colossians is much more admonitory than argumentative, and it is most accurately characterized as a letter of exhortation and encouragement (Bujard 1973: 129, 229). The representation in 1:28 of what Paul does could also be a description of what the letter itself does; it preaches, it admonishes, and it instructs. In the process, various materials from the hymnic (1:15–20), liturgical (2:13–15), and ethical (3:18–4:1) traditions of the church are drawn in. It is striking, however, that no scriptural texts are quoted or discussed, and that even allusions to Scripture are infrequent.

The contents of the letter may be outlined as follows:

I. Letter opening, 1:1–8
  A. Address, 1:1–2
  B. Thanksgiving, 1:3–8
II. Letter body, 1:9–4:6
  A. Affirmations of the apostolic gospel, 1:9–2:7
    1. Introductory prayer for the knowledge of God, 1:9–12
    2. Affirmation of Christ's role in salvation, 1:13–23
      a. Introductory affirmation, 1:13–14
      b. Hymn in praise of Christ, 1:15–20
      c. Appeal to remain faithful to Paul's gospel, 1:21–23
    3. Affirmation of Paul's role, 1:24–2:5
    4. Summary exhortation, 2:6–7
  B. Warnings about false teachers, 2:8–23
    1. General warning about "human tradition," 2:8
    2. Affirmations in support of the warning, 2:9–15
    3. Specific warnings about worthless regulations, 2:16–23
  C. Exhortations to lead a Christian life, 3:1–4:6
    1. Fundamental appeals, 3:1–17
      a. Seek the things that are above, 3:1–4
      b. Put off the old nature, 3:5–11
      c. Put on the new nature, 3:12–17
    2. Counsels about everyday life, 3:18–4:6
      a. The household, 3:18–4:1
      b. Prayer, 4:2–4
      c. Outsiders, 4:5–6
III. Letter closing, 4:7–18
  A. News and greetings of Paul's associates, 4:7–14
  B. Concerning the church in Laodicea, 4:15–16
  C. Concerning Archippus, 4:17
  D. Autograph conclusion and benediction, 4:18

B. Principal Affirmations and Appeals

Although warnings about certain false teachers and their teachings occupy a prominent place in Colossians (2:8–23) the bulk of the letter consists of other kinds of appeals and of the affirmations on which they are based.

1. Affirmations. The principal affirmations of the letter, which are closely related to one another, concerning the truth of the gospel, the supremacy of Christ, and the present reality of the believer's new life.

(a) The gospel is variously described as "the word" (4:3), "the word of the truth" (1:5), "the word of God" (1:25), and "the word of Christ" (3:16). It is said to disclose "the hope laid up for you in heaven" (1:5, 23), and therefore "the grace of God" (1:6). It is identified with "the mystery hidden for ages and generations but now made manifest to his saints," and the content of the mystery is said to be "Christ" (2:2; 4:3), or more specifically, the presence of Christ among the Gentiles (1:27). The awesome scope and

generative power of the gospel receive particular emphasis: "In the whole world it is growing and bearing fruit" (1:6) for "it has been preached to every creature under heaven" (1:23). This universal spread of the gospel is to be attributed to Paul himself whose office is to proclaim Christ—"warning every man and teaching every man in all wisdom" (1:28)—and who has been strengthened with a divine power for this purpose (1:29).

(b) The supremacy of Christ is affirmed throughout Colossians, most prominently in a hymn (1:15–20) which portrays Christ as preexistent with God. Echoing descriptions of Wisdom in the literature of Hellenistic Judaism, the hymn praises Christ as "the image of the invisible God" (v 15; 3:10) and "the first-born," both of creation and of those who shall rise from the dead (vv 15, 18b). He is, moreover, the one through whom "all things were created" (vv 15–16), in whom the whole of creation holds together (v 17), in whom "all the fulness [*plērōma*] of God was pleased to dwell" (v 19), and by whom the primal unity of creation is reconstituted (v 20)—"that in everything he might be preeminent" (v 18). He is thus the "head" of the whole cosmic "body" which an interpretive addition to the hymn identifies as "the church" (v 18a; 1:24). The cosmic dimensions of Christ's sovereignty are particularly clear from v 16, where it is declared that "all things," not only earthly but heavenly, including all of the supermundane powers ("thrones," "dominions," "principalities," "authorities"), have been created through him.

This cosmic christology is not confined to the hymn, however. In 2:9 Christ is again identified as the one in whom God's "fulness" dwells and the affirmation in 3:11 that "Christ is all, and in all" harks back to the praise of his role in the creation of all things. The portrayal of him as "head" recurs in 2:10 where he is described as "the head of all rule and authority," and "Head" is actually employed as a christological title in 2:19. The use of a creedal statement in 1:13 further enhances this emphasis on Christ's cosmic supremacy, for it sets the "kingdom" of God's beloved Son over against "the dominion of darkness" from which believers, since their baptism, have been delivered. Thus, in contrast to 1 Cor 15:23–28 where Christ's rule is described as still future and of limited duration, the conception here is of a reign which is already established and enduring. This idea is continued in the reference to Christ's enthronement at God's right hand (3:1) which echoes a creedal formulation based on Ps 110:1 (cf. Heb 1:3–4). In 3:15 Christ's reign is characterized very concretely as the rule of "peace" in the church ("the one body").

(c) Affirmations about the present reality of the believer's new life are also prominent in Colossians. Like those about Christ, these affirmations make frequent use of traditional concepts and terms and tend to be formulated in more or less traditional ways. Believers have not only been "delivered" from the power of darkness, but "transferred" even now into Christ's kingdom (1:13–14); they have not only "died" to the cosmic powers by which they were formerly tyrannized (2:20; 3:3), but "have come to fulness of life" in Christ (2:10); they have not only been "buried" with Christ, but have also been "raised with him" (2:12, 13; 3:1); they have not only "put off the old nature," but have already "put on the new nature" (3:9–10). Their entrance into this new life has been by way of baptism, which is described as "a circumcision made without hands" (2:11–13).

It is through the agency of Christ that believers are able to come into this new life, and his work is designated both as "redemption" (1:14) and as "reconciliation" (1:20, 22). "Redemption" is specifically identified as "the forgiveness of sins" (1:14; 2:13–14; 3:13). "Reconciliation" is also closely associated with forgiveness; through Christ's death believers have been freed from doing the "evil deeds" which had once alienated them from God and are now presented "holy and blameless and irreproachable before him" (1:21–22; 1:28). Although this new life is already fully present, it will not be fully disclosed until Christ's return when believers "will appear with him in glory" (3:3–4; 1:12, 27).

2. Appeals. There are 3 types of appeals in Colossians. Some are of a very fundamental sort, others are best described as instructional, and still others are situational.

(a) Most of the fundamental appeals are quite general: the readers are urged to be "rooted and built up in [Christ] and established in the faith …, abounding in thanksgiving (2:6–7), to "seek the things that are above, where Christ is …" (3:1–2), and to "do everything in the name of the Lord Jesus, giving thanks to God the Father through him" (3:17). The appeals to let "the peace of Christ" and "the word of Christ" rule their lives, to "admonish one another in all wisdom," and to sing to God with thankfulness in their hearts

(3:15–16) are only a little more specific. At several points in the letter there are implicit appeals, some of which are also of this fundamental sort: the readers should "lead a life worthy of the Lord …" (1:9–12), "continue in the faith, stable and steadfast …" (1:23, 2:5), and be "knit together in love" (2:2). Such appeals have their origin in the view which is implicit in the affirmation of 1:6, that the gospel's worldwide spread is abetted when it bears fruit in the lives of believers (Gnilka *Kolosserbrief* HTKNT, 35).

(b) The appeals in 3:18–4:1 all convey specific instructions about conduct. Ever since Martin Luther's German translation of the Bible (first completed ed., 1534), in which this section and its parallel in Eph 5:22–6:9 appeared under the caption, "Die christliche Haustafel," these and similar passages (1 Pet 2:18–3:7) have been identified as Christian household codes. Whether or not they are only christianized versions of pre-Christian codes, a point on which interpreters are not agreed, it is clear that they belong to the church's fund of catechetical materials. Other appeals involve the listing of practices or attitudes to be avoided (3:5, 8–9) or embraced (3:12–14) and thus provide believers with more general instructions about an appropriate way of life. The admonitions to devote oneself to regular prayer (4:2–4) and to "conduct oneself wisely toward outsiders" (4:5–6) may also be classified as instructional.

(c) The specific requests made of the readers in 4:15–17 (to extend Paul's greetings to the Laodiceans, to exchange letters with the Laodiceans, and to urge Archippus to fulfil his ministry) may be described as situational appeals. The only other such appeals are several warnings about the dangerous beliefs and foolish practices of certain false teachers (2:8, 16, 18).

C. The Errant Teaching

The appeals and warnings in chap. 2 are issued in response to the threat of errant teachings which seem to be getting a hearing in the Christian community to which this letter is addressed. Whether the propagandists are members of that congregation, and how widely their "philosophy" (2:8) may already have been adopted there, are questions that cannot be answered with certainty. However, even though a detailed reconstruction of the philosophy as a whole is not possible, at least a general idea of its principles and practices may be gained from the warnings in 2:8–23 and from certain other passages (1:9–10, 26–28; 2:2–4).

1. Ascetic Practices. The aspect of this philosophy which seems to be of most concern in Colossians is its teaching about the value of rigorous self-denial. It would appear that the technical term for this has been picked up in Col 2:18, 23 where the readers are warned about being led into "self-abasement" (*RSV*; the Greek word is *tapeinophrosynē,* which elsewhere in the NT is used of "humility" in a good sense). Various restrictive rules concerning food and drink (probably including fasting) and perhaps some form(s) of sexual abstinence were intended to check the desires of the flesh (2:16, 20b–23), and one was obligated to the ritual observance of special festivals and days including the sabbath (2:16). Like the asceticism condemned in 1 Tim 4:3–4, this teaching may have involved a rejection of the created order as such, but there is no specific evidence in Colossians that this was the case.

2. Worship of Angels. It is not clear exactly how the reference to "worship of angels" (2:18) should be interpreted since the phrase itself is ambiguous. Are the angels to be understood as the worshippers (Greek: subjective genitive) or as the objects of worship (Greek: objective genitive)? If the latter, as most interpreters believe (Lohse *Colossians* Heremeneia, 117–18; Gnilka, 148–50; Schweizer 1982: 159–60), then one may suppose that a cultic veneration of angels was one further act of self-abnegation required by the errant teachers. This would suggest, in turn, that the difficult word, *ethelothrēskia* in 2:23 (*RSV*: "rigor of devotion") should be interpreted as a reference to that kind of worship (perhaps "self-chosen worship"; Lohse, 126). The alternative interpretation developed by Francis (1973b: 176–81; adopted by O'Brien *Colossians* WBC, xxxvi–xxxviii, 142) regards the angels themselves as the worshippers. According to this reading, the much-debated phrase (*ha heoraken embateuōn*) should be translated, "which he has seen upon entering," and should be understood as a reference to the sort of heavenly journey and participation in the heavenly worship often described in Jewish apocalyptic literature (Francis 1973a, 1973b: 171–76; Rowland, 1983).

3. Cosmic Elements. The ascetic rules, the special calendar, and the veneration of (or worship along with) angels may all be related to teaching about the significance of the "cosmic elements." These are mentioned in 2:8, 20 (*RSV*: "the elemental spirits of the universe") and are probably to be identified with "the principalities and the powers" referred to in 2:15. To judge from what is said here in Colossians, the readers are being encouraged to believe that deliverance from the control of these cosmic forces is not complete without devotion to the specified ascetic, ritual, and cultic practices (2:20–23).

4. Full Knowledge of God. It may be that these practices were also regarded as necessary for gaining access to the full knowledge of God and of God's will. This seems a reasonable inference from the rather polemical way in which Colossians insists on the sufficiency of the knowledge (*epignōsis,* gnōsis), understanding (*synesis*), and wisdom (*sophia*) that are present and disclosed in Christ and the gospel (1:9–10, 26–28; 2:2–3; 3:10). It is possible, but by no means certain, that the false philosophy required some kind of rite akin to that of the Hellenistic mystery cults (Lohse, 117–20; Gnilka, 151; Schweizer, 161–62). At issue is whether the participle *embateuōn* in 2:18 is a technical term for entering into a mystery (Dibelius, 1973) or whether it must be taken here in a more general sense. If the former, the reference would be to having "visions … during the mystery rites" (Lohse, 114, 117). If the latter, it could be to the mystical ascent into heaven of an apocalyptic visionary (Francis 1973a, 1973b: 171–76; Rowland 1983).

There are a number of similarities between these beliefs and practices and those of the Jewish sectarians at Qumran, known from the Dead Sea Scrolls; e.g., the strict observance of the sabbath and other special days on the religious calendar (CD iii.13–16; x.14–xi.18; 1QS i.14; x.1–9), the emphasis on distinguishing between clean and unclean foods (CD vi.18), the use of the phrase, "body of flesh" (1QpHab ix.2; Col 1:22), the interest in angels (1QM x.10–11; Col 2:18), and the concern for special religious knowledge (CD ii.3; 1QpHab xi.1; 1QS xi.15–16). Some of these features are also present in gnostic teachings as those are known from the NAG HAMMADI CODICES. The notion of a divine "fullness" (*plērōma*) found in Col 1:9, 19; 2:9, 10 is prominent in gnostic teaching (*Ap. Jas.* 2, 28–3, 11; 3, 34–4, 22; 12, 27–31; Schenke and Fischer 1978: 162).

A few scholars would identify the errant teaching with some form of Judaism (Bruce *Colossians* NICNT, 17–26) or Gnosticism (Schenke and Fischer 1978: 162). With the majority, however, it seems best to regard it as a thoroughly syncretistic philosophy (Bornkamm 1973; Francis 1973a, 1973b; *RGG* 3: 1727; Lohse, 128) which includes elements drawn from several religious movements (including, perhaps, the mystery religions as well as Judaism and Gnosticism), but which may be, in this particular form, unique to the community being addressed (Lindemann *Kolosserbrief* ZBK, 84–85).

D. Authorship

1. Presuming Pauline Authorship. Paul's name occurs as the author of Colossians not only at the beginning and at the end of the letter (1:1; 4:18) but also in 1:23. Various other passages, especially those in which the apostle's friends or associates are named, seem to imply his authorship (1:7, 25; 4:3, 7–17). This is supported as well by the fact that Timothy is named as cosender (1:1; cf. 2 Cor 1:1; Phil 1:1; 1 Thess 1:1; Phlm 1) and by the similarity in overall structure between Colossians and other letters of the Pauline Corpus.

The earliest external attestation to the Pauline authorship of Colossians is provided by the mere existence of Ephesians—written in Paul's name by someone who, because he drew so heavily upon it, must have accepted Colossians as apostolic (see EPHESIANS). This attestation is of course only implicit and indirect. The earliest explicit reference to Colossians as Paul's is by Irenaeus (ca. 180; *Haer.* 3.14.1, quoting Col 4:14); but Marcion, too, must have accepted it as the apostle's, since he seems to have made significant use of it (Tertullian, *Adv. Marc.* 5.19). There is perhaps an allusion to Col 2:14 in the gnostic *Gos. Truth* (NHC I, 20.25–27), but alleged allusions to Colossians in the Apostolic Fathers (*1 Clem.* 49:2 and Col 3:14; *Ign. Trall.* 5:2 and Col 1:16; Polyc. *Phil.*: 12:2 and Col 1:12, 23) and in Justin's *Dial.* (85.2; 138.2) are by no means certain. Because the Church Fathers seem to have preferred Ephesians to Colossians, specific citations of the latter are relatively infrequent in the patristic literature (Frede 1969: 274).

2. Questioning Pauline Authorship. The case against the Pauline authorship of Colossians was first developed by Mayerhoff (1838), who claimed that significant lexical, grammatical, stylistic, and theological differences set it apart from the 6 letters that he regarded as most characteristically Pauline (Romans, 1 and 2 Corinthians, Galatians, Philippians, 1 Thessalonians). He also argued that the author has used Ephesians, which Mayerhoff took to be authentic, and that the kind of teaching which is opposed in this letter did not arise until after Paul's death. The two latter points no longer carry any weight, for there is now general agreement that Colossians must be earlier than Ephesians and that the teaching opposed in Colossians could well have antedated the apostle's death. However, the vocabulary, style, and theological viewpoint of this letter still pose problems. A further difficulty, to which Mayerhoff himself gave no specific attention, is the understanding of Paul's apostolic office that finds expression here. Finally, some interpreters believe that there is good evidence of the literary dependence of Colossians on one or more of the letters which can be safely attributed to Paul.

a. Vocabulary. Most of the lexical differences between Colossians and the letters that are certainly Paul's do not weigh very heavily against Pauline authorship. It is true that Colossians uses a total of 87 words that do not appear in the recognized letters and that 34 of these occur nowhere else in the entire NT (Lohse, 85–86). However, the figures for Philippians, a genuinely Pauline letter of comparable length, are not much different: 76 words are used in no other Pauline letter and 36 of these are present nowhere else in the NT (Percy 1946: 17). Moreover, one must allow for the possibility that the "non-Pauline" words in Colossians were used by the apostle himself to meet a special situation. Nor is it in itself decisive that some important Pauline theological terms are missing from Colossians ("righteousness" and related words: "law," "freedom," "promise," "to save," "salvation" [Lohse, 86–87]). It must also be shown that these are terms Paul would ordinarily use in addressing the topic at hand. It is more important that a number of connective words and inferential articles favored by Paul are missing from Colossians (Lohse, 87); but this verges on the matter of style.

b. Style. Mayerhoff's conclusion that Colossians is written in a style so unlike Paul's that one must assume a different author is not only supported but greatly strengthened in an important study by Bujard (1973). Bujard has shown, for example, that the sentences in Colossians are significantly longer and more complex than Paul's, because conjunctions are used less than half as often while participial constructions and relative clauses are employed much more frequently (1:3–8; 2:6–15; Bujard 1973: 74–75); that the sentences in Colossians are more loosely constructed, with less attention to the logical development of an argument (Bujard 1973: 72–73, 129); and that the use of many synonyms and appositional phrases makes the style of Colossians wordy and tautologous (Bujard 1973: 216–17). These kinds of detailed stylistic differences cannot be explained as merely modifications required by a different subject matter (against Percy 1946: 18–66; see Bujard 1973: 229–30), and they are present throughout the letter, not just where one may suspect the use of traditional materials (against Cannon 1983: 175; see Bujard 1973: 224–29).

c. Theological Viewpoint. Certain ideas that are present in the recognized Pauline letters make an appearance in Colossians as well. For example, Jesus' death (on the cross, 1:20, 2:14) brings reconciliation (1:22); believers have been "buried" with Christ in baptism (2:12); faith involves discarding one's "old" self and becoming a "new" person (3:9–10); the church is "the body" of Christ (1:18; 3:15); in Christ various kinds of worldly barriers that separate people from one another have been broken down (3:11); and all is to be done in love (3:14), with thanksgiving to God (3:17). Although a number of these ideas were already present in the church's traditions on which Paul himself was dependent, it is clear that Colossians stands within the specifically Pauline tradition, even if the apostle himself is not its author.

There are, nevertheless, striking differences between the theological outlook of Colossians and Paul's views as they are known from the undisputed letters. (1) The redemptive work of Christ is identified above all with "the forgiveness of sins" (1:13–14; 2:13; 3:13), whereas the apostle thinks of it mainly as an act of justification (Rom 3:24; 5:6–9, 15–21). (2) In Colossians, Christ is praised as the "head" of the body (1:18; 2:19) which includes the whole cosmos (2:10), but in 1 Cor 12:12–26, 27 and Rom 12:4–5 (where the body in its entirety is identified with Christ), no special status is accorded to the head (v 21), and the body has no special cosmic dimension. (3) While traditional eschatological language and motifs

are not entirely missing from Colossians (1:22; 3:4, 6, 24–25), the emphasis falls heavily upon the deliverance that believers have already experienced. Because "hope" is identified as the content of the gospel message, it is understood to be fulfilled in the preaching of Christ (1:5, 23, 27). Hope is not, as in Rom 5:2–5 and elsewhere in Paul's letters, primarily the act of hoping itself. Where Paul speaks of the believer's future resurrection with Christ (Rom 6:5, 8; Phil 3:11, 12), Colossians stresses the present reality of this (2:12–13; 3:1). The apostle's idea of salvation as "already" established but "not yet" fulfilled is missing, and there is no hint of his notion that the Holy Spirit is the down payment on that to which the believer is heir (2 Cor 1:22; 5:5; cf. Rom 5:5; 8:23). (4) It is often observed that one finds nothing in Colossians about such major Pauline topics as God's gift of righteousness, the meaning of justification, faith versus works of the law, the function of the law, or the meaning of freedom in Christ. The example of Galatians, where Paul is opposing teachings similar to those opposed in Colossians, suggests that these are precisely the themes that the apostle himself would have developed in Col 2:8–23. That they are not developed there, or anywhere else in Colossians, adds to the difficulty of accepting this letter as Paul's own.

d. Paul's Apostolic Office. The portrait of Paul that emerges from the pages of Colossians is not easy to reconcile with what the indisputably authentic letters disclose about Paul's own understanding of his apostolic status and role. Two points in particular cause difficulty.

First, Paul is presented here as an apostle without peer in the church. To him alone the preaching of the gospel has been entrusted and the universal spread of the gospel is to be credited (1:23, 24; cf. the emphasis on "every person" in 1:28). Thus, he is not just an apostle to those who have heard and received his gospel, but also to those who, like the Colossians and Laodiceans, have never even seen him (2:1–2; cf. "for you" in 1:25). His apostleship transcends the particularities of time and place and encompasses the world. In the genuinely Pauline letters, however, one meets no such universalist conception of Paul's mission; he regularly refers to other apostles (1 Cor 9:5; 12:28–29; 15:7–9; Gal 1:17, 19), he acknowledges that he is an apostle especially for the churches of his founding (e.g., 1 Cor 9:2), and he does not propose to enter fields into which others have already carried the gospel, or to claim jurisdiction over them (2 Cor 10:13–16; Rom 15:20; Gal 2:9).

A second difficulty is the way Paul's sufferings are interpreted in Colossians. The letter's closing admonition, "Remember my chains" (4:18), leaves no doubt that the readers are to pay special attention to these (Lindemann, 78). The reason for this is apparent in 1:24 where the sufferings that Paul endures as an apostle are interpreted as having a vicarious function. They "complete what is lacking in Christ's afflictions for the sake of his body, that is, the church" which means that they satisfy the quota of sufferings that God's people must endure before the Lord's return (Lohse 69–72). In the acknowledged letters, however, Paul interprets his sufferings as manifesting the sufferings and death of Jesus (2 Cor 4:8–13). He therefore gives them a kerygmatic and not a vicarious interpretation. Moreover, he does not understand them as having universal significance; the beneficiaries are, quite specifically, those to whom he has brought his preaching of the cross (2 Cor 4:15; Phil 2:17).

e. Literary Dependence on Other Letters. Colossians has several things in common with the one to Philemon. In both, Paul writes as a prisoner and Timothy is named as a co-sender; one of the 2 men being sent to the Colossians is Onesimus, on behalf of whom the letter to Philemon is written; 5 of the 6 people to whom greetings are sent in Colossians are also greeted in Philemon; and in Colossians a special appeal is directed to Archippus, one of the 3 individuals addressed in Philemon. Since there is little question about the authenticity of Philemon, it is often argued that these similarities establish the Pauline authorship of Colossians as well (Knox 1938; Cope 1985). However, one can also hold that these connections have been contrived by a later author who, writing in Paul's name, wishes to give an apostolic aura to Colossians (Lohse, 175–77; Schenke and Fischer 1978: 167–68). In this case there would be a literary relationship between the 2 letters but not necessarily a situational one. Evidence has also been adduced for the literary dependence of Colossians on 5 other letters that are certainly Paul's: Romans, 1 and 2 Corinthians, Galatians, and 1 Thessalonians. Using carefully formulated criteria for identifying verbal agreements, E. P. Sanders (1966) has concluded tht materials drawn from 3 or more of

these letters have been conflated in Col 1:15–16; 1:20–22a; 1:26–27; 2:12–13; 3:5–11—and in such a way that one can think only of the work of "a secondary imitator" (Sanders 1966: 40).

3. Conclusion. Those who defend the Pauline authorship of Colossians tend to discount the stylistic differences from the authentically Pauline letters, and generally argue that the theological differences amount to no more than changes in emphasis due to the peculiarities of the situation in Colossae (O'Brien *Colossians, Philemon* WBC, 43–44, 49). However, the stylistic differences run very deep, extending even to the manner of argumentation (Bujard); the altered theological outlook that one finds here is no mere change of emphasis; and in addition Paul is accorded a status that he himself had neither claimed nor achieved.

Various scholars have attempted to associate Colossians with Paul despite these non-Pauline features, but none can be judged to have succeeded. (A) The hypothesis that the author of Ephesians is responsible for Colossians in its present form, having greatly expanded an authentically Pauline letter in order to conform it to his own work (Holtzmann 1872; Masson *Colossiens* CNT, 10) overlooks the structural and material integrity of Colossians and reduces it to little more than a patchwork of interpolations. Moreover, on this view one is required to think of Colossians as secondary to Ephesians, whereas a careful comparison of the two letters demonstrates that Ephesians is dependent on Colossians. (B) It is equally speculative to hold that all or most of Colossians was composed at Paul's direction by one of his associates (Klöpper 1882; Schweizer, 21, 23–24; Ollrog 1979: 219–33, 236–42), perhaps because the apostle's circumstances in prison required that. Had someone like Epaphras (Klöpper) or Timothy (Schweizer) written the letter on Paul's behalf, would the first person singular be employed in the biographical notices at 1:23, 24–25, 29; 2:1–5; 4:7–8 (correctly, Lindemann 1981: 116)? And even if one could demonstrate that this was the case, Colossians would still be a "pseudonymous" letter, as Schweizer acknowledges (24).

In sum, the evidence strongly supports the conclusion that Colossians is not only pseudonymous but also post-Pauline (Bornkamm 1971; Lohse, 177–83; Gnilka, 19–26). The style is not Paul's, the theological outlook is in certain respects significantly different from his, and Paul's apostolic status and role are presented in a way that would not have been possible during his own lifetime.

E. The Date and Place of Writing

If this letter was either written or endorsed by Paul himself, it would have to be dated to some period of imprisonment. Since there is circumstantial evidence of an Ephesian imprisonment, one coud date Colossians that early (ca. 55?), as do Suhl (1975: 168), Schweizer (25–26), and Ollrog (1979: 241). On this view, however, it is almost impossible to explain why the theological outlook of Colossians is at points so different from that of Philippians (presumably written about the same time) and Romans (written later). The "theological development" hypothesis has no real force unless Colossians is dated as close to the end of Paul's life as possible, which means either to Caesarea (Acts 23:23–26:32) or to Rome (Acts 28:11–31). One thus arrives at a date somewhere between 57 and 60–61 (when Colossae was destroyed by an earthquake).

If Colossians is post-Pauline, one must allow for the passage of a few years after the apostle's death, which would put the earliest likely date of writing at about 65. A date much later than 90 is ruled out since Ephesians, by whose author Colossians has been used, was probably known to Ignatius, ca. 100. Any closer dating of Colossians seems impossible if the letter is taken as post-Pauline. Moreover, in this case nothing in it suggests a specific place of composition, not even the portrayal of Paul as a prisoner. However, since Colossae and the 2 other cities mentioned, Laodicea (2:1; 4:13, 15, 16) and Hierapolis (4:13), are situated in the Lycus River valley, a location in SW Asia Minor is probable.

F. Occasion and Purpose

This letter has been prompted by the author's concern about a false philosophy which threatens to undermine the readers' faith, luring them into practices which are not in accord with Paul's gospel (2:8–23). The purpose of the letter is stated indirectly in 1:23: The author wants his readers to "continue in the faith, stable and steadfast, not shifting from the hope of the gospel which [they] heard …" The danger posed by the false philosophy is certainly in mind here, just as it is in the summary exhortation of 2:6–7,

to be "rooted and built up in [Christ] and established in the faith, just as you were taught …" The errant teaching is more specifically in view in 2:4–5, which may be taken as yet another indirect expression of the purpose of the letter: "I say this in order that no one may delude you with beguiling speech. For though I am absent in body, yet I am with you in spirit, rejoicing to see your good order and the firmness of your faith in Christ." Many of the principal affirmations and appeals in Col 1:9–3:17, and most of the more specific counsels in 3:18–4:6, hark back to the missionary preaching and baptismal instruction with which the readers would have been familiar, because the author wants to remind them of their original commitment "to lead a life worthy of the Lord" (1:10; Meeks 1977: 209–10).

If one regards Colossians as Pauline, then the data that are available concerning its composition and dispatch can be readily summarized. Paul, in prison, has heard about the dangerous situation in Colossae from Epaphras (1:7b–8), who is himself a Colossian and the founder of the congregation (1:5b–7; 4:12–13). This letter is Paul's response and it is probably to be carried to Colossae by Tychicus and Onesimus who are going to tell the Colossians all about Paul's present circumstances and bring them words of encouragement (4:7–9).

If Colossians is actually pseudonymous and post-Pauline, one must doubt whether it was even intended for a congregation in Colossae, since there seems to have been no significant repopulating of the city following the earthquake in 60–61 until the second century (Schweizer, 13–14). Lindemann (1981; *Kolosserbrief* ZB, 12–13) argues that the letter was actually intended for the Laodiceans, whose city (some 10 miles distant) had been devastated by the same earthquake but quickly rebuilt; and the references to Laodicea in 2:1 and 4:15–16 give weight to this hypothesis. Addressing the letter to the Laodiceans themselves, Lindemann suggests, would have required the pseudepigrapher to formulate Paul's words as somewhat oblique prophetic warnings and counsels, provided some years in advance of the situation that the congregation now faces. But composing it as if it had been addressed to the congregation in Colossae allows him to represent the apostle in direct confrontation with doctrines like those now proving attractive to the Laodiceans. The pseudepigrapher must hope that the Laodiceans will recognize this and will hear in "Paul's" warnings to a neighboring congregation an authoritative word for their own (1981: 133; *Kolosserbrief*, 12–13).

The names and personal notices in Colossians (1:7–8; 2:1; 4:7–18) cannot be used as evidence of Pauline authorship, since they can be well enough explained as a pseudepigrapher's attempt to give his letter a believable setting within Paul's ministry. It is noteworthy, however, that Epaphras is singled out for special commendation both at the beginning and at the end of the letter (1:7–8; 4:12–13), perhaps an indication that his standing in the congregation needs bolstering. One could imagine that Epaphras himself is the author of this letter (Suhl 1975: 168, n. 93) but this is unprovable. The important thing is that the author, whoever he is, regards Paul as the church's one great apostle and that he does not hesitate to invoke Paul's authority as he summons the readers to stand firm in their faith, rejecting the teachings and practices of the false philosophy.

COMMAGENE (PLACE). Ancient Commagene lay just N of the centers of biblical activity, with which it remained involved. The kingdom arose from ancient roots, successfully uniting a Hellenic, Iranian, and Semitic populace, and presenting one of antiquity's most vivid examples of religious syncretism.

It lay W of the Euphrates, between Cappadocia and Syria. Further W ran the formidable barrier of the Taurus Mountains and Cilicia Pedias, which included cities such as Mopsuhestia and Tarsus. Across the Euphrates in Mesopotamia, Commagene fronted Osrhoene and behind it the Parthian Empire.

So placed, it benefited from trade routes running both E–W and N–S; it also controlled one of the most important crossings of the Euphrates. The consequent prosperity made Commagene, by late in the 1st century A.D., richest of the kingdoms allied to Rome, laden with "old wealth" (Tac. *Hist* 2.81.1). This background gave it an international influence disproportionate to its size.

Commagene lay open to influences from its diverse neighbors. At one time, it had been ruled by the Orontids of Armenia, and through a marriage it traced its descent back to Darius the Great of Persia (*OGIS* 388; 391). It had formed part of the Seleucid Empire, but rebelled under Ptolemaios, a local governor, about 163 B.C. as realignments occurred in much of the East (Diodorus 31.19a). Judas Maccabaeus probably made his initial contact with Rome in the preceding year, and events in Bithynia, Cappadocia, Media, and Egypt also reflected the growing tendency to involve Rome. The revolt of Ptolemaios succeeded, signalled by his adoption of the title of king.

A son of Ptolemaios, King Samos, succeeded him about 130 B.C. He probably founded Samosata, and after a reign of indeterminate length passed on the throne to his son, Mithradates I Kallinikos (*OGIS* 402). A state marriage allowed Mithradates to bring into his court a daughter of the Seleucid monarch, Antiochus VIII Grypus. This put Commagene in the top rank of dynastic houses of the East and led to further intermarriage, especially in Judaea and Emesa. A marriage into the Parthian dynasty completed Commagenian credentials in this regard (Dio 49.23.4; now confirmed by Wagner 1983: 208–224).

Perhaps as early as 87 B.C., Commagene fell to the fearsome Tigranes the Great of Armenia, by then "King of Kings" as successor to Mithradates II of Parthia, who was in the process of establishing an empire that stretched from Mesopotamia to Syria. During the 14 or more years that Tigranes ruled Syria, Commagene carried on its native dynasty and national traditions. Mithradates continued the religious cults begun by his 2 predecessors and destined for completion by his son.

Our first glimpse of Antiochus I, son of Mithradates, occurs in a context of 69 B.C., the year in which Tigranes had to leave Syria to defend his homeland against Lucullus.

The restored freedom of Commagene, now allied to Rome, allowed Antiochus leisure for his great religious expression still visible atop Nemrud Dagh. His remarkable fusions of Greek and Iranian gods

satisfied the composite population, which could now worship Zeus-Oromasdes (Ahuramazda), Heracles-Artagnes, and the grandly titled Apollo-Mithras-Helios-Hermes!

Antiochus trod a narrow path between Parthia and Rome. He came to blows with Pompey and capitulated; his inscriptions duly bear the title "Friend of Rome" (*Philoromaios: OGIS* 383 ff.). On the other hand, his coinage shows him in an Armenian tiara, which he assumed as a local "successor" to Tigranes. On at least one occasion, he was accused of partiality to the Parthians. Another coin uses Seleucid devices to remind subjects of his lineage on that side.

Both the disaster which befell Crassus in 53 B.C. and the Parthian invasion of Asia Minor in 51 B.C. threatened the stability of Commagene, but it emerged intact. The Roman civil war proved more difficult, and by 38 B.C. Antiochus had incurred the displeasure of Antony, who laid siege to Samosata, assisted by Herod of Judaea. A bribe sent them on their way.

Among the successors of Antiochus, Mithradates II supported Antony down to the battle of Actium in 31 B.C. (Plut. *Ant* 61). Internal problems suddenly beset the dynasty with a murder and 2 executions. Mithradates III, recognized by Augustus, acceded in 20 B.C. This king married the same Atropatenian princess—Iotape I—whom Antony had sought for marriage to his son Alexander Helios. The progeny of this pair spread into the dynasties of Emesa and Judaea through marriages of the successive Iotapes (Sullivan *ANRW* 2/8: 198–219, 296–354, 732–98). See also IOTAPE (PERSON).

Antiochus III had the melancholy distinction of losing the kingdom in A.D. 18, when Tiberius made it a province (Tac. *Ann* 2.56; Strabo 16.2.3.749). It remained that way for a decade, but in 38 Caligula restored it to the son of Antiochus. The new king, Antiochus IV, had been raised in Rome; with his sister-wife, Iotape VI Philadelphus, he was to enjoy a long and lively reign, from 38 until 72.

A mature man, with at least one child nearly of marriageable age, Antiochus assumed his kingdom by right of inheritance, as son of Antiochus III (Dio 59.8). He celebrated this connection in his inscriptions and sought to strengthen the ties of Commagene to other dynasties. A betrothal of his son, Epiphanes, to a Judaean princess collapsed over the issue of circumcision (*Ant* 19.355; 20.139). His daughter, Iotape VII, did marry into that dynasty; her husband, the later King Alexander of Cilicia, boasted descent from Archelaus of Cappadocia and from Herod the Great of Judaea.

Antiochus began well, thanks to his personal acquaintance with Caligula, who was "raised with" several Eastern princes (Dio 59.24; *IGRR* IV 145). Besides the paternal kingdom in Commagene, he also assumed responsibility for "the coastal portion of Cilicia" in Tracheia (Dio 59.8). Part of this became known as the "Regnum Antiochi," and coins attest his wide rule in Tracheia. Several towns founded by him there (e.g., Iotape; Antioch-on-the-Crag) remain largely unexcavated today.

Antiochus joined a complicated Roman effort to control difficult parts of Asia Minor through native kings. (Strabo 14.5.6.671.) Besides Antiochus, this "circle" involved Archelaus I of Cappadocia and then his son; Polemo II of Pontus and his uncle, Zeno-Artaxias, who ruled in Armenia; Sohaemus of Emesa and Sophene; the Judaeans Aristobulus, Agrippa, and King Alexander.

Antiochus ruled his divided kingdom efficiently despite the Roman vicissitudes which kept Eastern rulers watchful. For some reason, the warmth Caligula once displayed for him turned to anger, and Antiochus found himself deposed. Claudius reversed this, both for Commagene and for some part of Cilicia (Joseph. *Ant* 19.276; Dio 60.8).

Antiochus joined a meeting of dynasts in 44 hosted by the Judaean Agrippa I at Tiberias (Joseph. *Ant* 19.338 ff.). This provoked suspicion by the Roman governor of Syria, for they constituted a powerful group: Besides Agrippa, there attended Polemo II of Pontus, Cotys IX of Armenia Minor, Sampsigeramus II of Emesa, Herod of Chalcis, and Antiochus of Commagene.

Random glimpses reveal Commagene active militarily. In A.D. 52, Antiochus fought the wild Cietae in Cilicia. In 54, he joined Nero's mobilization against the Parthians. In 60, he participated in a defensive partition of Armenia (Tac. *Ann* 12.55; 13.7; 13.37; 14.26). He helped install the Judaean Tigranes VI briefly in Armenia.

The Jewish War drew Commagenian contingents, led by sons of Antiochus, to assist Vespasian and Titus. The tumultuous "Year of the Four Emperors" (A.D. 68–69) saw a Commagenian prince wounded while fighting for Otho (Joseph. *JW* 5.460 ff.; Tac. *Hist* 5.1; 2.25).

Despite assistance to Vespasian on his way to the imperial throne, Antiochus could still not relax. Vespasian had been concerned about a Parthian attack "from the rear" while Titus fought in Judaea (Tac. *Hist* 2.82). He therefore worried about "the proximity of the kings" of Commagene and Parthia, realizing that Commagenian control of the Euphrates crossings might afford Parthians "ready passage" should they wish access to Asia Minor; this might "involve the entire Roman Empire in war" out there (Joseph. *JW* 7.222 f.). Euphrates access could also be of importance should Rome wish to try again for control of Armenia, where an Arsacid dynast now ruled, having been recognized in A.D. 66 by Nero.

Accordingly in 72, Antiochus found Romans preparing for war on the charge of intrigue with Parthia. Some fighting did occur, and participants referred to it as the *Bellum Commagenicum* (*ILS* 9198; 9200; *JW* 7.220 ff.). The 2 sons of Antiochus escaped into Parthia, but Antiochus was taken to Rome. There where he had begun his career under the first Julio-Claudians, he ended it in honorable detention under the Flavians. He might have lived in the reigns of all 11 Roman emperors from Augustus to Domitian. He presided over the final decades of a kingdom by now 235 years old.

The 2 sons of Antiochus returned, and with the title of "king" they assumed an honorable place in society. Their sister became the queen of Cilicia for a time, married to King Alexander. Their children, especially Julia Balbilla and C. Iulius Antiochus Philopappus, took notable places in the new absorption of former kings into the Roman aristocracy. Balbilla accompanied Hadrian to Egypt and left extant poetry there. Philopappus became a Roman consul and left a monument on the Mouseion Hill in Athens, where it still faces the Parthenon. Continuation of the intermarriage led eventually to the families of the Emperors Marcus Aurelius and Elagabalus.

The kingdom of Commagene had taken an important role in the long transition from Seleucid to Roman rule, and had stabilized a crucial region between the Hellenic and Iranian societies. The innovations of Antiochus I long influenced religious thought in the vicinity. The old cult-sites remained in use for centuries, as attested by archaeological finds and by literary references. The new cities founded by the dynasty formed the basis for later ecclesiastical organization there.

Commagene greatly influenced the larger society around it even after it was gone.

RICHARD D. SULLIVAN

COMMANDMENT. The common translation of the Hebrew Bible's *miṣwâ* and the NT *entolē.* All but 8 occurrences of the Bible's *miṣwâ* are translated *entolē* in the LXX. In the Psalms (esp. Psalm 119, LXX), *entolē* is sometimes found as a translation of the Heb *piqqūdîm*. Modern English versions of the Bible sometimes also use "commandment" or "command" to render Heb *mišpaṭ* (Zeph 2:3), *ḥōq* (Amos 2:4), and *piqqūdîm* (Ps 103:18), and Gk *epitagē* (1 Cor 7:25).

Of itself "commandment" denotes that which is commanded by an authority, hence, an authoritative prescription, order, decree, or by extension a directive or instruction. "Commandment" occasionally occurs in the Bible with a secular meaning (2 Chr 35:10, 16; John 11:57; Acts 17:15; etc.), but its biblical usage is predominantly religious: The commandment is a divine ordinance. "Commandment" sometimes appears, somewhat indiscriminately, as one of a series of legal terms (e.g., Gen 26:5), but more often it is used in isolation from other legal terms.

In the Bible, *miṣwâ-entolē* emphasizes the authority of the God who commands rather than the content of the commandment as such. The commandment is the expression of God's will for his people. Rather than suggesting arbitrary demand or constraint, the terminology evokes God's moral authority. Jewish expressions of the significance of the commandments (i.e., their importance and the reasons for them) began to appear during the Hellenistic period (e.g., *Let. Aris.* 142–144; *4 Macc* 5:23–24). From the 2d century onward, largely in response to Christian attacks on the Law, many Jewish replies addressed the issue of the reasons for the commandments. In medieval times, Maimonides held that all commandments had a cause, i.e., a useful purpose.

Deuteronomy and the Deuteronomic literature (including Psalm 119) are the best sources for understanding the biblical notion of commandment. Indeed, the terminology appears but rarely in the prophetic literature (e.g., Isa 48:18; Exod 18:21; Dan 3:29). Commandment, *miṣwâ-entolē,* suggests a "double personal reference" (O'Connell 1960: 361), i.e., the loving God who commands and the one to whom the commandment is addressed. The proper response to a commandment is not merely external compliance, but a total personal response ("from the heart," *leb*). The virtual interchangeability between *miṣwâ-entolē* and *dābār-logos/rhēma,* i.e. "word," (e.g., Deut 5:22; 30:14; Esth 9:32) highlights the personal quality of the commandment. The ultimate significance of the commandments is to relate people to God. Accordingly the commandments are best understood within the covenant context.

The Pentateuch uses *miṣwâ-entolē* in reference to particular laws, and sometimes in the plural (e.g., Deut 15:5). However, in the Deuteronomic paraenesis of Deut 8:1–20, *miṣwâ-entolē* is used comprehensively for the whole law (Deut 8:1; cf. 5:31; 11:22; 19:9; 30:11–14). This is in keeping with the Deuteronomist's holistic view of the relationship between Yahweh and Israel. The commandment, which also has a revelatory function, is intended to make of Israel a holy people. Israel's prosperity is dependent upon its obedience to the commandment. Keeping the commandments indicates a pattern of life, i.e., one of human fidelity to the covenant.

From this perspective, some authors are inclined to identify the Decalog (the covenant prescriptions of Exodus 20 and Deuteronomy 5) as the preeminent referent of "commandment." Jewish tradition, however, going back to tannaitic times and shaped somewhat definitively in the school of R. Akiba, identifies 613 commandments (*taryaq miṣwōt*) in the Bible. Of these, 365 are proscriptions and 248 are prescriptions, as R. Simlai states: "613 commandments were revealed to Moses at Sinai, 365 being prohibitions equal in number to the solar days, and 248 being mandates corresponding in number to the limbs of the human body" (*b. Mak.* 23b). In Jewish writings (e.g., Philo, *Dec.* 29.154; *Num.Rab.* 13:15–16), the biblical commandments are often classified or summarized under the ten headings of the Decalog.

Reference to the developing tradition of the 613 commandments may be part of the background of several pericopes in the synoptic gospels, particularly in their Matthean version (Matt 5:17–20; Matt 19:16–22 = Mark 10:17–22; Luke 18:18–23; Matt 22:34–40 = Mark 12:28–34; Luke 10:25–28). According to Matthew's commandment theory, the entire law and the prophets depend on the two love commandments (Matt 22:37–40 = Mark 12:29–31; Luke 10:27; cf. Matt 19:19b). Matthew affirms that a similarity exists between these two, most probably because of the presence of *agapan* ("to love") in application of the *gezerah shavah* principle of rabbinic hermeneutics. This principle holds that if the same word occurs in two different scriptural passages, one passage may be used to interpret the other. Thus, Matthew stresses the organic unity of the commandments and attributes a summarizing priority to the two-fold love commandment.

Matthew's own catechetical tradition seems also to have underscored the importance of the Decalog among the biblical commandments (Matt 5:21, 27, 33; 15:19 = Mark 7:21–22). As in Deuteronomy, Matthew is aware that the commandments are addressed to the free will of human beings (Matt 19:17; cf. v 21). Matt 15:1–20 has taken over and somewhat modified the Markan controversy story (Mark 7:1–23), in which a precept of the Decalog, "honor your father and your mother," is identified as a commandment of God (Matt 15:3b–4; cf. v 6, "word of God"), distinguished from human precepts (Matt 15:9; cf. v 9 "your tradition"). Matthew's gospel also gives some evidence of intra-Christian debates about the significance of the commandments (Matt 5:17–20).

The Fourth Gospel likewise has a particular understanding of the commandments. In John, the term *entolē,* commandment, is used to characterize the task associated with the mission of the Son (John 10:18; 12:49–50; 15:8). The notion not only implies the Son's obedience to the Father (John 14:31); it also points to the authority with which Jesus fulfills his mission. A specifically Johannine understanding of the commandments is to be found in the idea of Jesus' own commandments ("my commandments," John 14:15, 21; cf. v 24, "my words"). To keep Jesus' commandments is to love him. These commandments are summed up in the love commandment, which is both Jesus' command (John 15:12, 17; cf. 1 John 4:21) and his gift (John 13:34). The love command is called a "new commandment" because of its christological basis (John 13:34; cf. 15:12). Caught up in an inter-Christian contoversy, the author of 1 John reaffirms the christological basis of the new commandment while maintaining that the love commandment is part of the traditional catechesis. As such it is both old and new (1 John 2:7–8).

A unitary understanding of the biblical commandments is also to be found in Paul, where the love commandment (Lev 19:18) summarizes several precepts of the Decalog (Rom 13:8–10). Keeping this commandment fulfills the law. A particularly significant Pauline notion is that the commandment (*entolē,* in the singular, apparently with reference to the 10th precept of the Decalog), although holy, just, and good, can be exploited by the quasi-demoniac power of sin (*hamartia*). The commandment reveals sin to be sin, leading to death (Rom 7:7–13).

In Pauline usage, with but one exception, *entolē* always refers to the biblical commandments (see Heb 7:5, 16, 18; 9:19). That exception is to be found in 1 Cor 14:37, where the expression "commandment of the Lord" (*Kuriou entole*) is similar to the phrase "commandment of the Lord" (*Kuriou epitage*) found in 1 Cor 7:25. In the NT, the use of commandment-*epitage* is found only in Paul and the Deutero-Pauline literature (Rom 16:26; 1 Cor 7:6, 25; 2 Cor 8:8; 1 Tim 1:1; Tit 1:3; 2:15). Although the term admits of a variety of usages, it appears to enjoy a comprehensive, salvific connotation in Rom 16:26; 1 Tim 1:1, and Tit 1:3. See *TWAT* 4: 1085–95; *EWNT* 1: 1121–25; *TDNT* 2:545–56; and *EncJud* 5: 760–92.

COMMUNITY. This entry consists of two articles, one covering the OT notion of community, the other covering the NT notion.

OLD TESTAMENT

Community in the Bible is a complex subject, amenable to no simple definition. The notion of community not only went through an evolution under the influence of both internal factors and foreign pressures, but frequently competing notions of community coexisted, vying for the allegiance of the people. Another factor complicates the subject. Israel began as a sacral community, that is, as a people organized tribally under the God Yahweh; with the introduction of kingship, however, tribal-theocratic structures gave way to the more secular structures of empire. The Yahwistic community therefore was obliged to assume the more modest status of a voluntary association within the larger society.

As in all other areas of biblical study, the subject of community has been enriched by new discoveries and new methods of analysis. Whereas an earlier age could study community on the basis of divine legislation conferred upon the people at Sinai, scholars today are attentive both to the evidence of social ideals and communal structures attested within the broader ancient Near Eastern environment and to scholarly reconstructions seeking to correlate such evidence with a critical reading of biblical texts.

Earlier in the century, Albrecht Alt (1925, 1930) and Martin Noth (1930) rejected as unhistorical the biblical view of a military conquest of Canaan and appealed instead to Nabatean inscriptions of the Roman period and to the structure of the Greek amphictyony. They argued that Israel's origins could be explained as resulting from the infiltration of nomadic elements into the agrarian-urban culture of Canaan. Today social-anthropological studies favor a dimorphic model for understanding the sociology of early Israel; that is to say, the tribes of Israel emerged not through the transplantation of desert nomads onto the soil of sedentary farmers, but within the perennial flux between urban centers and outlying regions. Detribalized elements banded together with disenfranchised city dwellers forming new coalitions and at times merging with older tribal units (Rowton 1976).

As we now examine the shape of Israelite community in its major phases of development, this brief reference to an ever-changing scholarly debate will serve as a reminder of the complexity of the task. Any critical reading of the biblical evidence must factor in archaeological evidence and take seriously methodological insights arising within ancillary disciplines.

A. Tribal Period

Bits and pieces gleaned from extrabiblical epigraphic sources can be combined with central themes found in Israel's epic as preserved in the Pentateuch to produce the following reconstruction of the origins of tribal Israel.

1. El and Kinship. The patriarchal legends reflect in general terms the migration of the Amorites into Mesopotamia and Syro-Palestine during the 2d millennium B.C.E. that is well documented in cuneiform sources. The Amorite personal names first studied by Theo Bauer and more recently by Herbert Huffmon reflect kinship patterns at home in tribal societies. Moreover, they reflect the centrality of the divine kinsman in the life of the tribal groups reflected in the ancestral legends of Genesis that later came to constitute the heart of Israel's concept of covenant. Further light is shed on the background of the divine kinsman of the ancestral stories by the deity El of the Ugaritic texts. El, the tent-dwelling, kindly creator-god and judge, has been plausibly argued to figure prominently in the origins of Israel's god Yahweh on the basis of shared epithets, attributes, and functions (Cross *CMHE*, 44–60). The conclusion to be drawn is this: At the time when Amorite peoples were establishing themselves as heirs to the earlier civilizations of Mesopotamia, related clans were sojourning in Canaan. The latter encountered a well-established feudal society, living under the hegemony of the royal house of Egypt with local rule exercised by Canaanite lords. Unable to supplant the feudal lords of the land, the Amorites (and whatever other elements merged with them within the dimorphic social structures of Canaan) were obliged to have their patterns of movement and settlement governed by opportunity. What identity they preserved over against the local population was likely derived from their kinship patterns; this included identification with the divine kinsman El (under one of various epithets).

2. ʿApiru. Also germane to the discussion of Israel's origins as a community are references to the *ʿapiru/habiru* found in various MB documents, with the Amarna Letters prominent among them. See also HABIRU/HAPIRU. Though etymologically and sociologically related to the entity referred to in the Bible with the gentilic *ʿibrim*, the groups designated as *ʿapiru* were not ethnically bounded. Instead they were socially defined by their lack of integration into the feudal system of Canaan and, insofar as the local rulers were concerned, by their lawlessness and insubordination. The *ʿapiru* likely included people from different backgrounds, including Amorites, since all that was required to receive this dubious distinction was detribalization or marginalization from village or city. The *ʿapiru* were not confined to Canaan, but wandered freely between countries driven by opportunity and hardship (such as famine). Many of them no doubt eyed the Hyksos interregnum in Egypt as an opportunity (a situation likely reflected by the Joseph legend). With the reestablishment of indigenous rule by the pharaohs of the New Kingdom (cf., Exod 1:8), the *ʿapiru* would have suffered the fate of vast numbers of foreigners, though as inscriptions from the worker-village of Deir el-Medina indicates, the memory of NW Semitic deities was preserved among them. It is a fair assumption, therefore, that the Hebrew slaves of Moses' generation still maintained a sense of separate identity grounded in their ancestral legends and in the sacred stories of their kinsman God.

3. Theocratic Unity. The first mention of Israel outside of the Bible is on the Merneptah Stele of ca. 1210 B.C.E., and it is noteworthy that the preformative designates Israel as a people, not as a nation. This Egyptian encounter with a people identifiable as Israel in 1210 elicits a question: What were the events leading from the rather amorphous tribal backgrounds described above to this more focused community identity?

Earliest Israel appears out of the earliest traditions of the Bible as a loosely confederated group of tribes whose unity centered around a common story featuring the God Yahweh as the central actor. The most likely source of Israel's community structure of tribal organization around the kinsman deity is its ancestral prehistory in Canaan. But the earliest hymnic/epic compositions of the people Israel indicate that the model was infused with a new narrative content and tied to a new divine epithet by subsequent events, namely the story of deliverance from the Egyptian pharaoh effected by the God Yahweh. The reappearance of this story with such regularity in Israel's earliest hymnody offers the following as the most plausible answer to the question of what happened between the shadowy Amorite prehistory and Merneptah's explicit reference to a "people Israel": A group of slaves belonging to the social category of *ʿapiru* managed to escape from their bondage in Egypt under the leadership of Moses, an escape they attributed to the gracious action of their kinsman God, whom they now called Yahweh. The Moses-Jethro story may offer a clue regarding the source from which early Israel derived the divine epithet Yahweh.

Reciting the story of deliverance became the central cult-act of the People Israel. The substitution of an epic in the place of the cult-myth common to most other ANE cultures had a dramatic effect on the community ideals that emerged among the new tribal confederacy. The rules governing the life of the community, though in part drawn from the common traditions of the pervading culture, increasingly included guidelines inferred from the epic of Yahweh's gracious deliverance. An open-ended, historical consciousness challenged the more static values of mythopoeic cultures. Ideals and institutions began to take shape that drew their motivation from "Yahweh who brought you out from the land of Egypt, out of the house of bondage." These ideals and institutions were mixed, to be sure, with those of the environment, as illustrated by the earliest collection of laws in the Bible, the book of the Covenant (Exod 20:21–23:19).

4. Characteristics of the Community. The chief characteristics of Israelite community during the tribal period (i.e., the period of the Judges) can be summarized thus:

First, the basic unit of community was the extended family under the pater familias, with each family in turn fitting into the larger clan and tribe.

Second, within this patriarchal structure, the status of women was defined by male property rights.

Third, ancient kinship patterns made the tribes resistant to urban-based monarchies and their tendency to aggrandize at the expense of small farmers and pastoralists.

Fourth, the autonomy preserved by the individual tribes was qualified by acknowledgement of the sovereignty of the God Yahweh. Therefore, on the level of cult the Israelite tribes were forged into a theocratic unity within 2 contexts: in annual pilgrimage festivals celebrating the common epic of divine deliverance, and in war construed in sacral terms.

Fifth, innovations inspired by the epic tradition coexisted with practices and values drawn from the Canaanite environment, just as the worship of Yahweh was practiced alongside of the rituals of the Baal cult (cf. the Baal names recurring in the book of Judges and the cult background reflected by the Gideon story in Judges 8).

Sixth, the survival and growth of the Yahwistic community in the period of the tribal league seems to be attributable to the religious power inherent in the confession of the God who delivered Hebrew slaves and to the ability of those committed to that confession to extrapolate from this context institutions, practices, and laws that reaffirmed some and challenged other antecedent religious and social structures and values. Among these antecedent structures and values were the ideal of the *naḥălâ,* i.e., the divinely guaranteed right of each family to use of a designated plot of land in perpetuity; protection of vulnerable classes like the alien, the creditor, the widow, and the orphan; the ongoing reform of common law on the basis of the

epic, as seen for example in the extension of manumission to women (cf. Exod 21:1–11 with Deut 15:12–18) and the proscription of slavery in Leviticus 25.

Seventh, the most serious structural weakness of the league appeared in the form of centrifugal tendencies, fed by the autonomism of the tribes, that threatened to overwhelm the sense of unity essential for defense against hostile neighbors. Judges 5 mentions simultaneously both the tribes responding to the call to militia duty and those failing to respond to the muster, bearing witness to that weakness. Likewise the ambiguous last verse of the book of Judges: "In those days there was no king in Israel; everyone did what was right in their own eyes." Israel's destiny-ridden response to the structural weakness of tribal-based community was monarchy.

B. Monarchy

The most dramatic example of the impact of foreign influence on community in Israel revolves around the introduction of kingship. The motive given in the elders' request for a king in the narrative of 1 Samuel 8 states this poignantly, "that we may also be like all the nations."

Though variations appear in the different cultures of the ANE, monarchy generally entailed the following common characteristics: (1) ascription of special (and usually to some degree, divine) status to the king, who was regarded as the earthly representative of the chief deity; (2) a hierarchical organization of the society; (3) legitimization of the social system through the cult myth (i.e., the structure of human society reflects the cosmic structure established "in the beginning" by the gods, thereby tying social order inseparably to the natural order); (4) a static ontology, according to which change, and especially revolutionary change, is interpreted as a threat to essential reality; and (5) location of the official cult within the central temple of the capital city with the king as patron.

The open-ended, experimental community ideal that developed over the course of the league period came to be viewed as a source of instability when falling under the intense pressure of rising Philistine power. The response was recourse to the form of governance most closely associated with military and economic might in antiquity: monarchy.

Embedded in the narrative structure of 1 Samuel 8–11 is a conflict between 2 attitudes toward kingship, and although a long and complex history of transmission separates the reader from the events described, the divisions raised within the community from the very onset of kingship seem to be accurately reflected by the text even in its received form. Chapter 8 is particularly interesting in this connection. Written from a critical perspective preserved within prophetic circles, it enumerates the *mišpaṭ hammelek*, that is, the royal ordinance that the king could be expected to impose upon the people. This entailed: (1) Conscription of the youth into military and court service; (2) confiscation of agricultural land belonging to the clans for use as royal grants awarded to servants of the king (e.g., retiring military officers); and (3) taxation to finance an elaborate military and court system.

That final entry in the list, about the military and court, drives home the main point: "and you shall be his slaves." That is, the freedom won by the exodus generation and fiercely defended by the tribes of Yahweh would vanish. As if the point were not yet sufficiently clear, a final phrase—an ironic echo of Exod 3:7–8—is added to indicate that the new generation abdicating its freedom for the security of kingship could not expect a second exodus as the response of the deity: "And in that day you will cry out because of your king, whom you have chosen for yourselves; but the Lord will not answer you in that day." The contrast is clear. Whereas the Hebrews in Egypt had not chosen their royal oppressor, the present generation had. And in so doing they had introduced a deep division into their community, for at important points the ideals developed by the league and royal ideology were incompatible.

Underlying all specific differences was a fundamental dispute over authority stemming from the struggles of the league period. The tribes had acknowledged only one qualification of their autonomy, namely, the claims of the divine suzerain Yahweh that governed Holy War, religious festivals, and the growing tradition of common law defining the moral structure of the community. The delicate balance between unity and freedom upon which the league system was based was safeguarded by the insistence that there could be no king but Yahweh; that is, there could be no human person claiming a privileged position of power and authorized to determine the laws and institutions of the land (Judg 8:23). Because it

introduced a human claimant to permanent divine authority, kingship was regarded by many as a direct threat to the central ideals of the community.

In the narratives describing the conflicts that plagued the monarchy, the key issues revolve conspicuously around the question of final authority, as for example: Is the king lord over the fate of his subjects (2 Samuel 11–12)? Is the king authorized to build a temple (2 Samuel 7)? Can the king reorganize the tribes into rational tax districts (2 Samuel 24)?

The result of the introduction of kingship was epoch-making. The community ideal deriving from the epic of divine deliverance and land conferral was removed from the central position that it had enjoyed in the tribal theocracy and became one religious option competing with others. But that ideal did not enter its new phase quiescently. As indicated by a prophetic rumination on the relation between kingship and true Yahwistic faith in 1 Samuel 12, the historical fact of monarchy was not denied in prophetic circles, but it was deprived of all of its mythologically grounded sanctity and ultimacy. Kingship was viewed as a product of human sinfulness, and therefore it possessed no final authority. For the prophets, the viability of the nation continued to be dependent on the archaic Yahwistic principle stemming from the league, obedience to God: "Only fear the Lord, and serve him faithfully with all your heart …" (1 Sam 12:25a).

This principle represented a fundamental qualification of royal ideology that few kings were willing to accept. One detects in David an honest attempt to strike a balance, but divisions within the nation were only deepened by the Bathsheba affair, by strife over the census, and above all, by the struggle over the issue of dynastic succession. Solomon emerged from court intrigue as a close replica of the ANE absolute monarch, and it is not accidental that his reign shaded into civil war. In the conflict between Rehoboam and Ahijah, the lines were drawn between a community ideal predicated on the authority of Yahweh and an imperial ideal resting on royal pretension.

C. Prophecy

1. Concept of Community. Prophecy emerged out of this struggle as a movement committed to preserving the essential values of the older Yahwistic ideal of community within the setting of kingship. Prophecy itself is a complex phenomenon, and the method of carrying out this mission varied from prophet to prophet. In cases like those of Elijah, Hosea, Amos, and Jeremiah, the primary modus operandi was opposition to the king. In the case of Isaiah, we find the attempt to redefine kingship along strictly Yahwistic lines. The underlying principle of divine authority led, nevertheless, to a remarkable consistency within the teachings of the prophets regarding the ideals of community and the relation of the king to them: (1) The king did not stand above the moral standards of the community, but was bound to its laws. (2) All members of the community were equal, and it was the responsibility of the nation's leaders to prevent the exploitation of the weak and the poor by the powerful and the wealthy and to protect the rights especially of vulnerable members of the community. (3) Social order was not identifiable with the natural order established by conflict among the gods, but was to be inferred from the historical example of God's delivery of slaves from their bondage. (4) The cult did not belong to a heavenly order transcending time, but was subservient to the traditional divine mandates of compassion and justice.

2. Reform Movement. The development of the notion of community as the gathering of those responding to God's call to obedience and service thus continued into the monarchial period as a reform movement within the larger society. The degree to which the prophets regarded the dominant society to have strayed from the Yahwistic ideal of community is indicated by the preponderance of indictments and judgments in their recorded words. This negative assessment of society was accompanied by a sober anthropology, epitomized by Jeremiah's words: "The heart is deceitful above all things, and desperately corrupt; who can understand it?" (Jer 17:9). Against this bleak assessment of society, the faithful community came to be viewed increasingly in terms of a remnant, preserved by God as a witness to divine purpose and as agent in the final redemption intended by God.

The reform efforts of the prophets and their followers were not entirely in vain. Asa, Jehoshaphat, Hezekiah, and Josiah paid attention to the traditional Yahwistic ideals, and placed the crown behind efforts to bring the nation into closer conformity with divine law. The tradition of pessimism that seemed

to accompany the prophetic movement apparently was vindicated by events, however, for even so godly a king as Josiah failed to secure the land. Jeremiah's bleak outlook (Jer 4:23–26) was supported by that of Ezekiel, who announced that disobedience leading to destruction was written ineluctably on the soul of the nation (Ezekiel 23). The Babylonian destruction of Jerusalem and its temple secured the pessimistic prophetic view against the more self-confident views of kings and prophets like Hananiah, and forced the exilic community that survived the national calamity into a period of reassessment.

D. Exile

Displaced from the familiar setting of temple and land and the traditions associated with them, exilic groups made various efforts to salvage materials for rebuilding their community: (1) Monumental achievements were accomplished by a "priestly" group in collecting traditional laws and placing them in an epic-narrative framework. (2) A prophetic circle associating itself with the name of Isaiah embraced a vision of restoration that broke out of the discredited royal nationalism in the direction of a more universal Yahwism; according to this, the remnant community would act as the servant of divine purpose in a coming age of salvation (Isaiah 40–55). (3) Deuteronomistic tradents adapted their David/Zion centered historiography to the harsh new realities of exile, as indicated by the editorial additions found in 1 and 2 Kings and Jeremiah. (4) Ezekiel and his disciples promulgated a program of restoration based on Zadokite temple theology and conceding a modest role to the royal house (Ezekiel 40–48).

E. Second Temple Period

After the return of a significant number of exiles following Cyrus' Edict of 538 B.C.E., the initiative in rebuilding a sense of Jewish community was taken by a group subscribing to Ezekiel's program. Benefiting from the support of the prophets Haggai and Zechariah, this group emphasized the centrality of a Zadokite-led temple cult as the key to communal vitality. Zechariah sounded a prophetic theme reminiscent of Isaiah that bound cult to faithful observance of the moral commandments. Chapters 56–66 of Isaiah preserve traces of a dissident group highly critical of the Zadokite temple theology and announcing imminent divine judgment on alleged unrighteousness of the majority of the community. The Second Temple Period thus began with competing perspectives on what constituted true community.

Conditions within the Jewish community did not soon improve, judging from the grim pronouncements found in the book of Malachi. Low professional standards within the Zadokite priesthood conspired with even lower standards of morality among the people to undermine community vitality. This bleak picture is confirmed by the books of Ezra and Nehemiah. There we find that the internal weakness of the Jewish community even elicited the attention of the Persian government, concerned as it was with maintaining reasonably stable buffer states between it and its major adversaries. Proponents of strict measures of reform based on the traditional laws collected in the exile by the "priestly" group thus found an unexpected ally in the Persian government. Ezra's being sent by that foreign power as "the scribe of the law of the God of heaven" marked an important turning point in the history of the Jewish community. As a result of his activities, that community received a clear charter that was to become the foundation of its survival through the next 500 years. Torah together with an interpretive process guided by the hermeneutic developed by Ezra and his successors (cf. Nehemiah 10) enabled the community to emerge in a vital new form that adumbrated many of the essential marks of classical Judaism.

This new formulation of community did not give equal emphasis, of course, to all earlier traditions. Conspicuously absent were certain themes favored by earlier visionary circles, such as messianic expectations and announcements of impending divine intervention in judgment and salvation. An orientation favoring careful application of Torah to all aspects of everyday life eclipsed more eschatological themes.

The powerful resurgence of apocalyptic themes in the 2d century B.C.E. indicates that visionary streams were not supplanted, but were merely suppressed by the scribal community. The oppressive measures of the Seleucids forced back to the surface concepts of community emphasizing the fallenness of the majority of the world (including the preponderance of the Jewish population) and the impending intervention of God to cleanse the earth and reestablish the community of the faithful (e.g., Daniel and *1 Enoch*).

In the 2d century B.C.E., therefore, a century well documented by writings from the Bible, the Apocrypha, the Pseudepigrapha, and the Dead Sea Scrolls, we are able to recognize the interplay of several competing notions of community, ranging from the apocalyptic other-worldliness of Qumran to the conservative this-worldliness of the Sadducees, with an increasingly popular proto-Pharisee party in between. It is from this wide range of alternative notions that emergent Judaism and Christianity would begin to forge their own definitions of community during the Roman period.

PAUL D. HANSON

NEW TESTAMENT KOINŌNIA

Biblical faith forms a community of those who worship God, who share with one another a common experience of God's salvation and a common call to bear witness to God's salvation-creating power in the world. The diverse descriptions of community found in Scripture reflect the changing religious, social, and political environment in light of which faith and life are constantly being adapted in new and meaningful ways. However, the biblical idea of community is always situated on a theological axis balanced by two convictions: first, that a good God finds forsaken persons who are alienated from all that makes for hope and well-being, and calls them into a covenant people reconciled to all that makes for peace and freedom; and, second, that this redeemed people then responds to God by embodying their experience of God's salvation in their relations with each other.

The development of the idea of community within the biblical tradition is further understood as dynamic and "self-correcting"; indeed, the maintenance of a proper balance between an appreciation of divine grace (orthodoxology) and human responsibility (orthopraxis) is at best tenuous. Throughout the histories of Israel and the Church, specific notions of community were developed to correct certain imbalances in the faith or life of God's people. These different notions of community, enshrined within Scripture, form a whole, greater than the sum of its parts, which provides the current people of God with a normative context for understanding what it means to "be" community and to do as this particular community ought.

———

A. The OT Idea of Community

The essential features of the NT idea of community are found in the OT. While influenced to some degree by pagan notions, primitive Christianity sought to understand its founding and formative events in light of biblical teaching, and believers assumed a fundamental continuity between their *ekklēsia* and the OT idea of a covenant people, Israel.

From its beginning as a tribal confederacy, Israel understood itself as a community covenanted to God and to each other by virtue of the Exodus event. See COVENANT. Israel experienced God's liberating grace as a people, and as a people who were called together to give adequate response to the God who

delivered them from slavery and set them on a course to freedom and *šalôm.* Community was first formed, then, to worship God "as the one who acted in a specific event of history to deliver the oppressed from their oppressor, thereby revealing self as the incomparable God, majestic in holiness" (Hanson 1986: 28).

As Israel sought to live for God in its world of competing deities and nations, its self-understanding as a community rightly related to its redeeming God developed to include an ethical dimension. The compassion of God exacted a demand upon God's people to resist in its own life the very oppression and exploitation from which God had liberated them. In this sense, the worshipping community was also a witnessing community, called forth to reflect in its common life the very character of its transcendent God. Eventually, Torah became the instrument by which the community's life of worship and witness was informed and so formed into a particular people, whose obedience to the Torah of a particular God made clear and concrete God's love and holiness in a pluralistic world.

As the social and political structures of Israel came to be defined by its monarchy, so too was its idea of community. Even as charismatic selection of the confederacy's leadership had given way to dynastic rule, so also were the old convictions about God attached to new, "royalistic" forms. David's covenant with God, and not the Sinaic covenant, became central to how Israel understood itself: God's rule was mediated through Israel's king. The former confederacy, tied together only by its worship of one God and by its muster for holy war on behalf of God, became a *nation* whose future was determined by political alliance and societal syncretism, often at God's expense. The worship of God was institutionalized during the reign of Solomon, who built a temple for God in order to compete with other national religions in the ANE. Under the pressures of international relations, then, the community's witness to God was domesticated. The worshipping community became an established cult, and its official priesthood helped the king as representatives of God on earth. Israel's religion was institutionalized as a critical part of the social order, so that now God's covenant blessing was construed in terms of national peace and prosperity. Accordingly, God, brought from heaven and placed within Solomon's temple, was worshipped as earth's Creator and as the king's God, more than as transcendent Redeemer of a people. God was now worshipped as a God of order, whose creation, like the king's realm, assumed a certain hierarchy into which all persons must fit without fuss.

Besides the deuteronomist's history of the monarchy, the priestly theology of the official cultus, and the advice offered by the prophets tied to the king's court, this community *qua* the king's nation is envisaged by OT Wisdom. According to Israel's sages, the community made wise by its "fear" of God is characterized by those same attributes called for in Torah. However, the deeper logic of Israel's sapiental tradition, especially clear in its preexilic stage (e.g., Proverbs 10–28), moves less from the God whose compassion for a special people is revealed in the events of salvation's history, remembered and interpreted by Israel's sacral institutions, than from human experience and insight into the nature of human relations (von Rad). Attention is now directed toward basic human living—how to cope and how to succeed. The community is informed by the sage's observations of those conventions which maintain the social order and thus enhance the prospects for political *šalôm* and economic prosperity—the very interests of the king.

Further, because David's covenant with God focused upon an individual's (i.e., the king's) relationship with God, so also did the sage's (Brueggemann 1972). Corporate concerns were replaced by individualistic ones, so that the wise individual assumes the primary responsibility to bear witness to God by those virtuous actions which secure his position within the nation. The logic of such "enlightened self-interest," of course, is that the whole Israel *is* the sum of its individual constituents, especially those from its more affluent and influential classes (Gordis 1944). Such an idea of community is more static and secular precisely because it is more hierarchal and institutional; like the monarchy, the concern of Israel's wisdom is for "law and order" and against those evils which promote social chaos, economic exploitation, and political uncertainty.

The prophetic idea of community, also envisaged by the OT, emerged on the fringe of the social order to challenge what Israel's prophets perceived as Israel's "royal consciousness" which was generated by

sapiental and sacral impulses alike. According to Brueggemann (1978), Israel, under the aegis of its kings, moved in 3 dangerous directions: (1) a concern for the well-being of the affluent led to the economic exploitation of the rank-and-file; (2) an enforced social hierarchy led to the political oppression of some, especially the social deviant, for the benefit of the state; and (3) the establishment of an official and syncretistic cultus, adopted to serve the king and his political alliances, led to the domestication of God.

The prophetic movement, and the idea of a counter-community it shaped, had two tasks: diagnostic and prognostic. The foundation of both tasks was the covenantal tradition of Moses which forged a community whose life and faith was in marked contrast to the established social order. In order to criticize Israel's social order, the prophet of God appealed to the Torah of Moses for an alternative vision of community whose life and faith are rooted in an economics of equality, a politics of justice, and a religion of divine transcendence. The prophetic call to repent enshrines, then, a reactionary agenda: It recognizes that what bourgeois Israel had become under its kings and their counselors is fundamentally opposed to God's intentions revealed in the Exodus event and the ministry of Moses. As such, the worshipping community bears witness in its particularity, on the margins of the mainstream, to a God who cannot be manipulated by those who manage the social order.

This tensive dialogue between prophet and sage which emerges within the OT can be profitably viewed as self-correcting (Wall 1987b). It is not, however, a conversation between equals. Unlike the shape of Israel's history, the final form of the OT canon is more prophetic than royal, even containing a "prophetic" reformation of the Wisdom tradition (Spina 1983). The OT idea of community is therefore centered through its prophetic voice: In reading its history as narrated by its Bible, Israel is shaped into a prophetic community.

Why then are the canonical voices of the "establishment" retained? Perhaps to prevent prophetic (i.e., normative) Israel from moving in dangerous directions as well. Indeed, the tradition of Israel's wisdom, along with its own canonical correctives, reminds Israel that its worship of an immanent God demands its witness to (and in) specific cultural settings, characterized by particular sociologies and economies. While Israel might continue to live on the margins of the mainstream, its Torah is heard and seen by the outsiders as relevant for their time and space. Further, wisdom reminds Israel that a transcendent God is also present with the necessary resources of human insight and institutions, which, when responsibly used, make it possible for each Israelite to work out one's own salvation with God. The dialectic thus makes clear that the covenant community is formed by a dynamic partnership between a God who freely redeems a people, the prophet's emphasis, and a redeemed people composed of those who each in turn freely respond by working out one's salvation "in the fear of the Lord," which the sage taught was the beginning of wisdom about life's possibilities and limitations.

B. The NT Gospel and Jesus' Idea of Community

The earliest Christians were not only a biblical people, who sought to live in continuity with their Scriptures; they were also disciples of a person, Jesus from Nazareth. Their worship of and witness to the God of Israel were decisively influenced by their conviction that Jesus was God's Messiah, and that through him God had begun a new Exodus for the restored, eschatological Israel. Because of this, the NT notion of community, which was developed and given ecclesial form after Jesus' death and resurrection, should be viewed as a discrete interpretation of Jewish religious history in the light of Jesus' life and teaching. While Jesus' own notion of community was often at odds with other Jewish communities (i.e., Pharisees, Essenes, Zealots, Sadducees) of his own day, there was no disagreement over those constitutive elements of a covenant people. He was a teacher, perhaps even a revivalist, in and of the Jewish tradition; indeed, many of the themes, especially eschatological, which characterize his ministry place him among the apocalypticists of the Second Temple period.

Although Jesus did not start a new organization, his messianic mission called forth a community of disciples who believed in his teaching as God's word and who followed the pattern of his life as God's will. According to the synoptic evangelists, at the very core of Jesus' proclamation of God's Gospel was the claim that God's kingdom, and the promised salvation with it, had drawn near through him (Mark 1:14–15). In forsaking old, "official" interpretations of God's reign, and in believing that Jesus'

interpretation of it was true, the messianic movement formed a people who were called away from worldly concerns (Luke 9:57–62) to a singular worship of God (Matt 6:24; cf. 4:9–10). Jesus "thus began with the heart of classical Yahwism, as it earlier had come to expression in the first commandment, the *šĕmaʿ,* and Isaiah's call to trust in God" (Hanson 1986: 399).

Luke's portrait of Jesus intensifies two aspects of Jesus' eschatological message which transformed traditional apocalyptical themes. First, Jesus taught that the messianic community could experience God's salvation "today" (4:21; 19:9; 23:43): The day of God's Jubilee, envisioned by the OT prophets and at the center of apocalyptical faith, had already dawned. Rather than awaiting God's future salvation and viewing the surrounding world in a detached way, the disciples were called to a life of engagement in which even enemies were ushered into God's salvation (Luke 10:25–42; cf. 6:36). Second, Jesus taught that anyone could belong to the messianic community. "Official" notions of membership, long tied to a theology of divine election in various Jewish communities, placed social, religious, or ethnic restrictions on those admitted to the covenant community. Jesus extended the membership list to the outsider—the least, last, lame, and lost of Israel (Luke 4:16–30; 7:36–8:21; 14:12–24; 19:1–10; 23:39–43).

According to Matthew's gospel, Jesus calls his disciples to a righteous life in obedience to his interpretation of Torah (Matt 5:17–48; 7:21–24); the Christian *ekklēsia* is a people of a new Torah which gives expression to God's will for the new age of God's salvation. Jesus' teaching about God's Torah, remembered by the ongoing community of his disciples, provides order for its life (18:15–20). The deeper logic of the ethical instruction of Matthew's Jesus follows directly from the Book of the Covenant: The righteousness and mercy of God, disclosed in the (old and new) Exodus events, should now be performed by the covenant people; thus, to love God (18:1–14) is to forgive and restore the neighbor (18:21–35).

This is also true according to the teaching of John's Jesus, although he restricts the scope of the disciple's love to other disciples (13:34; 15:12–17) thus forming a more sectarian idea of community whose essential mission is to nurture itself (21:15–17). Sharply put, then, Jesus taught that the yield of authentic worship is to bear witness in the worshipping community to God's salvation-creating love. In that Jesus' calculus emphasizes the community's love as a *response* to their experience of God's reign rather than as a requirement to enter into it, his teaching holds a tacit challenge to the legalistic (and perhaps antinomistic!) tendencies of other apocalyptic communities in Judaism.

Jesus not only taught by word but by deed. G. Theissen (1978) has called attention to the more charismatic expressions of community in the earliest Christianity as stemming from the radical nature of Jesus' own lifestyle. The pattern, narrated by the canonical gospels—of Jesus wandering on the margins of the social order, forsaking protection and possessions, lacking home and family—make vivid the eschatological claims envisaged by his teaching: The nearness of God's reign made concerns about "this evil age" irrelevant. This pattern of Jesus' itinerancy, and the eschatological hope it envisaged, was embodied in the earliest Christian communities which were profoundly influenced by their memories of him.

However important Theissen's sociological analysis is, it often neglects the relationship between Jesus' own perceptions of God's kingdom and his personal character and ministry as "Son of man." In fact, his understanding of a merciful God is disclosed in his forgiveness of and fellowship with sinners and in his healing of outcasts; his faithfulness to a righteous God is disclosed in his obedient life as God's servant-Son; his economics and politics reflect his commitment to God's vocation, for him more than a self-conscious response to the conditions of his Palestinian world; and in his execution as an innocent man, he makes clear the costs of following God in a world more ordered by ethical casuistry and religious customs than by the norms and values of God's kingdom.

This radical theocentricity, evident in his teaching and life, is at the very core of Jesus' own notion of community. The messianic community is centered by its singular worship of and obedience to the merciful and righteous God, whose reign has been brought near in Messiah's mission. Its life is contretemps, an idealized witness to alternative convictions about the God of the established order. It forgives those whom the society forgets; it welcomes those turned away by the "official" religion; it loves even the nation's enemy; it shares equally in the experience of God's promised *šalôm*; and it obeys the

Torah as interpreted and incarnated by Messiah. While accommodating itself to changing social realities and to developing theological understanding, the post-Easter Church retains these same elements at the center of its life: The *ekklēsia* of God is called forth in worship to bear witness to God's liberating grace which is disclosed in the new Exodus of Jesus Christ.

C. The Acts of the Apostles and the NT Idea of Community

The NT book of Acts bridges the canonical gospels to the letters, underscoring the continuity of ministry from Jesus to the apostles and the Church they founded (Wall 1988). In telling the story of the church's formation, Acts not only introduces the more didactic discussion of the Christian *ekklēsia* contained in the letters which follow, but also qualifies it in 3 ways. First, the Church is a missionary community; its essential role is to bear witness, by the Spirit's power, to God's resurrection of faithful Jesus, declaring him both Lord and Christ. Second, the Church is an apostolic community; God has authorized the 12 apostles to rule over the tribes of a new, eschatological Israel. The Church's worship of God and witness to what God has done through Christ and in Christ's Spirit is now guided by apostolic life and teaching. Finally, the Church extends Jesus' messianic mission beyond Jews to include Samaritans, proselyte Jews, and Gentiles: Eschatological Israel is characterized by a diversity of people, called together by God through a diversity of apostolic missions and kerygmata.

Yet, the marks of the messianic community have not changed. Disciples are still called together to worship God and bear witness to the Jubilee of God's salvation which has come through Christ. In Christ's absence, however, his earthly rule is effectively continued by the Spirit through the teaching and life of the apostles; their witness to Christ is now normative. Thus, their writings, which follows Acts in the NT, which re-present their witness, become the Word of God for the ongoing worshipping and witnessing community.

D. The Pauline Idea of the "Body of Christ"

Paul uses his important catchphrase "body of Christ" to relate Christ's death and resurrection to his understanding of the Church as a community of believers. According to Paul, Jesus' physical death is the messianic event in that it testifies to his devotion to God and God's plan of salvation. For him, God's resurrection of Jesus vindicates his scandalous death as truly messianic. The believing community actually participates in the Christ-event by which it enters into the promised New Age of God's salvation (Rom 6:4). This is the great indicative of the Church's redemption: Those who depend upon Christ's dependable work are reconciled with God and each other; it can "now" experience a Christ-like life, characterized by freedom from sin, from death, from legalism, and from all that alienates humanity from God's love (Romans 5–8). Thus, the community's faith in Jesus' faith simply restores a sense of community between God and humanity, and within humanity (2 Cor 5:11–21; cf. Eph 2:11–22). Second, even as the historical Jesus is a single "body," so also the church is "one body" in him. The merging of the two bodies, believer with Christ, underscores the mutuality of the community of believers found "in Christ." Human distinctions are dismantled; an egalitarian community is formed, fulfilling the prophetic vision (Gal 3:14–29). Third, the history of Christ's bodily existence is paradigmatic of the church's own history. Because Jesus is faithful to God, expressed most vividly on the Cross, God's salvation-creating righteousness is disclosed in history (Rom 3:21–26), especially by God's resurrection of Jesus (Phil 2:9–11). The same is promised for the eschatological community whose hope is that through its faith in Christ, God will recognize and exalt the community at the end of time; and whose commitment during the present time is to offer its own body, like the crucified Christ, publicly and concretely in service to God rather than in conformity to the current social order (Rom 12:1–2). Finally, "it is through the church that Christ continues to accomplish the final purpose for which He assumed human nature" (Whiteley 1974: 198). The Church is, in this sense, the ongoing arena for the activity of God on earth. The use of the catchphrase "the body of Christ" intends to underscore the continuity between Jesus' messianic mission and the Church's mission within the history of God's salvation. Is not this the meaning of the "eucharistic body" for Paul (1 Cor 10:14–22; 11:23–26)? Partaking in "communion" as a common act of worship recalls the ongoing foundation of the covenant community: All believers gather around the eucharistic

bread and cup to bear witness to God's salvation they continue to experience together since the death of Christ's body.

Paul's use of "body" to characterize the community of believers includes two different tensions. According to 1 Corinthians, tension is felt when individuals seek to understand the relationship of charismatic self to the charismatic community to which self and all the charismata belong. There is no swallowing up of human personality for Paul, but rather those individual believers who are equally baptized into one Lord (1 Cor 12:12–13) by one Spirit are given different gifts of grace (1 Cor 12:4–11; Rom 12:3) in order to effect different ministries for the common goal of edification. The eschatological fitness of the whole body is dependent upon the spiritual fitness of each believer, who uses one's different gifts to prepare the church for the future triumph of God and for its partial realization in the present age.

The second tension arises within the community which seeks to set limits around its newly found freedom in Christ. For example, among the households which comprised the Roman *ekklēsia,* some believers apparently thought that "staying in" the covenant community obligated them to observe a vegetarian diet in strict observance to the holiness code. The Paulinists, on the other hand, thought themselves free from such legalisms since the inauguration of the New Age (Rom 7:6–8:2). Again, in Corinth, where some believers purchased food once offered to pagan idols, other believers, perhaps converts from those very pagan religions, thought this to be a capitulation to an enemy of Christ (1 Cor 8:1–11:1). In Today's Church is a social institution; it no longer views itself as an eschatological community. Like every institution, its *ethos* and *mythoi* are largely shaped by the society's mores and cultural myths; its vision has become secular. Thus, the internal tensions between freedom and responsibility, between unity and diversity are inevitably resolved for the "good of the institution" rather than doxologically. Personal freedom is limited by the institution as well, so that individual charisms and contributions are swallowed up by the institutional demand for conformity.

The intent of this harsh criticism of today's church is to underscore a dangerous appropriation of the Pauline idea of community. Paul's commitment to the Gentile mission and his conviction that the full and final inbreaking of God's reign was imminent leads him to handle Christianity's relationship with the surrounding culture in ambiguous ways: He is more concerned about the changes within the community, which demonstrate the beginning of the age of God's righteousness, than he is about its relationship with the external world.

The NT collection of non-Pauline writings is clearer in this regard and checks those interpretations of Paul which move believers "into *and* of the world" (Wall 1987a). The pilgrim motif, which stresses the themes of separation and suffering, sustains a firmer, clearer distinction between Church and society. This sectarian impulse allows the whole NT canon to forward a view of the Church as witness to a transcendent God: The people of God live and believe in ways which conflict with the idols to Mammon. A pilgrim is an alien and finds reconciliation only from those resources found within the community of faith.

The pilgrim motif, which also stresses the themes of pilgrimage and destination, would have the Gospel and not the world set the Church's agenda. The inner logic of Paul's accommodation principle might lead one to accept the "adversary's" agenda as a tool of evangelism or even as a means of social acceptance. The pilgrim community knows its destination, and sets itself on a course which endures to that particular, "heavenly" end. This transcendent perspective challenges the social order whenever it interferes with the community's forward movement.

Thus, the pilgrim motif is the built-in corrective of Paul's accommodation principle. Yet, the reverse might also be true (Gager 1975). When a community maintains its witness to God's Gospel on society's margins, it tends to drift toward sectarian chaos, toward religious uniformity, toward legalism, and toward a form of witness which is viewed as irrelevant and meaningless by the surrounding society. It becomes a community which worships God without witness. Paul's notion of community, for all its potential dangers, is better able to handle the cultural and personal diversity of the Church catholic. Further, Paul's idea makes clearer the vocation of a missionary church, called to go to all nations and preach the gospel to all persons.

COMMUNITY, RULE OF THE (1QS). 1QS was among the first scrolls discovered by the bedouin at the beginning of 1947 in what came to be known as Qumran cave 1. Since the trustworthiness of the intermediaries who spread reports about it around Jerusalem could not be assumed, and their credibility was further compromised by contradictory statements, there was some initial hesitation regarding its authenticity (Trever 1965: 25, 75, 180), but this was quickly overcome. Plates and a transcription of 1QS were published with exemplary speed by Burrows, Trever, and Brownlee in 1951, and in the same year Brownlee furnished an annotated translation.

The script of 1QS dates it to the period 100–75 B.C. (Avigad 1958: 71; Cross 1965: 258 n. 116), making it one of the 3 oldest copies of the *Rule* (Cross 1961: 119). None is an autograph, and so the composition of the *Rule* must be pushed back into the 2d century B.C. (Cross 1961: 120). Ten fragmentary copies of the *Rule* were found in Cave 4. They remain unpublished, but Milik (1960: 411–16) has provided a list of variants (all minor), noting in particular that 3 mss offer a shorter and more intelligible version of col. 5 and that 1QS 8:16–9:11 is missing in one ms. 5Q11 contains part of 1QS 2:4–7, 11–14, and 5Q13 iv 2–3 cites 1QS 3:4–5 (Milik 1962), but since these come from texts that were originally independent of the *Rule*, it is not sure that they represent copies of the *Rule.*

The syntax of 1QS has been studied by Leahy, and the most convenient Heb text is that of Lohse (1964: 4–43), which has a facing German translation. Other important annotated translations are: French (Guilbert), English (Leaney 1966; Wernberg-Møller 1957; Vermes 1983; Knibb 1987: 72–144), Italian (Moraldi 1971: 113–72), and German (Maier 1960, 1:21–45). Reports on the state of research have been published by Bardtke (1973), and in somewhat less detail by Delcor (*DBSup,* 851–57).

Bardtke (1973: 263) perceptively highlighted different literary analyses of 1QS as the most important contributions; they necessarily exercise a decisive influence on all interpretations. The earliest commentators (Dupont-Sommer 1953: 90; Kuhn 1960: 652; Maier 1960, 1:21; Wernberg-Møller 1957: 56, n. 49) recognized the composite character of 1QS, but went no further. An effort by Guilbert (1959) to head off this approach by arguing that 1QS was entirely consistent in style and logical in development won no support. In fact, its effect was just the opposite. Close attention began to be paid to the limits and definition of the various literary units, and this led to a number of important insights and partial hypotheses.

The pioneer in this respect was J. Becker (1963: 39–42), who highlighted significant shifts in style and content, but did not get beyond the level of possibility in explaining their origin. The same is true of Leaney's commentary, and it is regrettable that the new edition of Schürer (*HJP²* 3/1: 383) has regressed to this level. Real progress was made by Denis (1964: 40–44) in his analysis of the crucial cols. 8–9, where he discerned 2 interpolations (8:10b–12 and 8:16–9:2). A more detailed examination of the same cols. by Klinzing (1971: 50–66) produced much less satisfactory results (Murphy-O'Connor 1972: 436–

38). Although it needed some refinement (Duhaime), von der Osten-Sacken's (1969: 17–27) discovery of 3 levels in the Instruction on the Two Spirits (1QS 3:13–4:26) was a major breakthrough.

The first attempt to find a comprehensive explanation for the composition of the *Rule* was made by Murphy-O'Connor (1969). Rejecting the view that it was a heterogenous compilation, an evolutionary hypothesis involving 4 chronological stages was proposed. The earliest stage was represented by 1QS 8:1–16 plus 9:3–10:8, followed in order by (2) 8:16–9:2; (3) 5:1–7:25; and (4) 1:1–4:26 and 10:9–11:22. This hypothesis was subjected to a book-length critical analysis by J. Pouilly. He found the 4-stage evolution to be correct, but convincingly argued that details needed modification. In consequence he assigned 8:10–12 to stage 2 and 5:13–6:8 to stage 4. His conclusions, which take into account all other contributions to the literary analysis and which have given rise to no serious objections (Davies 1987: 60), must be accorded a very high degree of probability, and can be set forth as follows:

Stage 1: 8:1–10a, 12b–16a; 9:3–10:8.
Stage 2: 8:10b–12a; 8:16b–9:2.
Stage 3: 5:1–13a; 6:8b–7:25.
Stage 4: 1:1–4:26; 5:13b–6:8a; 10:9–11:22.

Stage 1. This is the manifesto that led to the foundation of the Essene community at Qumran. When there have been found 12 men (= the 12 tribes) and 3 priests (= the levitical clans) who live the Law perfectly, "they will be separated from the midst of the habitation of ungodly men in order to go into the desert" (8:13; 9:20). There they will constitute a spiritual temple (8:5) and offer spiritual sacrifices (9:4–5) to expiate the sins of the land (8:6, 10). The hint of a breach with the Jerusalem temple is confirmed by the insistence on the importance of the authentic calendar (10:1–8). In this program the *maskil* has an essential role; he will be responsible for the choice and preparation of candidates (9:12–26). Ultimate authority in the future community will belong to the priestly members (9:7).

Stage 2. The community envisaged in stage 1 has been in existence for some time, and the problems of conventual life have manifested the need for basic penal legislation. The integration of such legislation into the foundation document indicates that the latter retained its value as a definition of the community. The severity of the sanctions is but the other face of the vitality of its idealism.

Stage 3. The life-situation demanded by the material of this stage is that of a large community at some distance from its origins. The redefinition of the community (5:1–6), underscored by the fact that the material of this stage was inserted *before* stages 1–2 in the arrangement of 1QS, clearly manifests the institutionalization and democratization characteristic of a late stage of development. The precise rules for the conduct of a general assembly (6:8–13) and the admission of new members (6:13–23), when taken in conjunction with the casuistry of the penal code (6:24–7:25), confirm this assessment. A significant increase in the numbers at Qumran about 100 B.C. is attested by the extensive building program of period Ib (de Vaux 1973: 5). See also QUMRAN and ESSENES.

Stage 4. This stage is the most complex because a number of elements had an independent existence before being incorporated into the *Rule.* Nonetheless, they are ascribed to the same stage because they all serve a single purpose, viz. revitalization of the fervor of the community. The intention to infuse a new "spirit" into the "letter" of the *Rule* is particularly evident in the way the redactor brackets stages 1–3 with material derived from the liturgy of the renewal of the covenant (1:1–3:12 and 10:9–11:22), whose message is that external observance is meaningless without genuine conversion of the heart. The Instruction on the Two Spirits (3:13–4:23a) had its own literary history (Duhaime 1977) before being adapted to its place in the *Rule* by the addition of 4:23b–26, which emphasizes the responsibility of the individual to choose good rather than evil. The function of the long interpolation 5:13b–6:8a is twofold, to insist on the stringent examination of new members and to highlight the importance of community life with particular stress on the need for continual study of the Law.

Besides attesting to the internal evolution of the Qumran community, the *Rule* is our best witness to its institutions, which are a key element in the identificaiton of its members as Essenes.

COMPUTERS AND BIBLICAL STUDIES. To achieve a useful level of detail in reasonable scope, this article is focused in two ways. First, it deals with "biblical studies" in the narrow sense of the study of the text, excluding ANE history, archaeology, and geography. Computer science has much to offer these ancillary disciplines, and some impressive applications have been developed, but the common focus of attention of all biblical scholars is the text, and it is there that we direct our attention. Second, this article is methodological, not historical. A history of the application of computers to the Bible would benefit those who study biblical studies (in contrast to the Bible itself), but the field is progressing so rapidly that such a history would immediately be out of date. Furthermore, because of advances in computer science, some of the most important projects historically offer little practical guidance to those planning new research efforts today. Instead, we identify the main stages in the exegetical process and show how computers have been and may be applied to them.

———

A. Introduction

As does any other science, exegesis involves formulating hypotheses, gathering data, analyzing these data in the light of the hypotheses, and presenting results. This ordering of events is only suggestive, as later stages frequently require repetition of earlier ones. Thus, as one gathers data, an informal analysis often takes place concurrently, leading to a reformulation of the underlying hypotheses and a revision of the plan for gathering data. Still, the division is useful for our purposes. Data collection always presumes some hypothesis about what is interesting or useful to observe and what is not; analysis requires data on which to operate; and effective dissemination of results requires an additional step after analysis is complete.

As we consider each of these steps, we will look both to what has been done and to what can be done. There is not space to describe each of the hundreds of past and present projects, and mention of one or omission of another does not constitute a recommendation or criticism. Surveys of particular projects in computer-assisted biblical (Parunak 1989b; Hughes 1987) and other literary studies (Patton and Holoien 1981), and discussion of technical issues in computer research design for the humanities in general (Hockey 1980), are available elsewhere. These references should be consulted for detailed information about projects and scholars named but not otherwise documented in this article.

B. Formulate Hypotheses

Science never proceeds from a tabula rasa. The scholar always brings to the text some set of ideas to be vindicated or disproven. The better articulated these hypotheses are, the more effective the research process will be, and the less danger there is of implicit hypotheses prejudicing the results.

Computer science, and in particular the specialties of cognitive science and artificial intelligence, have developed rich theoretical frameworks for describing language and thought. By drawing on these models, we can formulate hypotheses about the biblical text with greater precision than was previously possible. In each example in the following (nonexhaustive) list, we discuss how an insight from computer science has been or can be applied to biblical studies.

1. Case Grammar. Case grammar (Fillmore 1968; Cook 1979) is a linguistic model that emerged from the early machine translation work of the 1950s and 1960s. Case grammar focuses attention on the relation between verbs and nouns in sentences. Each verb has associated with it a case frame, which is a set of case slots. These case slots, while suggested by the classical cases marked in the surface structure of languages like German or classical Greek and Latin, differ in important ways from the classical cases. The central difference between the cases in case grammar and classical cases is that between the surface structure of a text and the deep structure of meaning that it represents. The surface level of language contains elements such as verbs, nouns, and (classical) cases. The world of meaning deals with actions, entities, and (case grammar) cases. The relation between these layers is skewed, so that, for example, a noun at the surface level (such as “death”) actually represents an action at the deep level. Case grammar cases describe the roles that entities fill with respect to actions at the deep level. For example, commonly used case slots include agent (the one who does the action), experiencer (the one who undergoes the

action), and beneficiary (the one who benefits from the action). Case slots are thus characterized semantically, in contrast with surface level (classical) cases (such as nominative, dative, genitive, accusative, vocative), which are syntactic.

Because surface level verbs correspond roughly to deep structure actions, one can associate deep structure case slots with the verbs corresponding to the associated actions. Verbs differ in the case slots they have. For example, "to ache" has an experiencer but no agent; "to hit" has both. At the surface level, a single classical case may correspond on different occasions to different deep structure cases. Thus the experiencer of "to ache" and the agent of "to hit" are both represented by a surface structure nominative, while the experiencer of "to hit" takes a surface structure accusative.

Unlike surface structure cases, case slots are invariant under voice changes or shifts such as those generated through inflection. For example, in both the active sentence "The boy hit the ball" and the passive "The ball was hit by the boy," "boy" is agent and "ball" is experiencer.

Case grammar offers biblical studies a rigorous theoretical framework for lexicography. Once we recognize that case frames do not vary with verbal inflection but do vary with the semantics of the verb, we can use them to classify the vocabulary of a language. It becomes both natural and provocative to classify verbs on the basis of their case frames and the semantic classes of words that can fill them, or to classify nouns on the basis of the case slots that they can fill. Because case slots are a deep structure phenomenon, they offer a theoretical basis for combining the semantic evidence furnished by verbs with that of associated verbal nouns, where the case slots typically appear as surface genitives.

2. Semantic Nets. The term *semantic nets* (Brachman and Levesque 1985) refers to a variety of models of meaning, all characterized by a collection of nodes (representing concepts) and relationships among them. Research in artificial intelligence (AI) has shown that computers need to be able to model large fragments of knowledge about the world in order to perform intelligently. An effective way to store this knowledge is as a network of concepts connected by relations. Two kinds of concepts (*class* and *instance*) and two kinds of relations (*AKO* and *ISA*) are common to the many individual schemes that have been proposed.

An *instance* concept corresponds to a single entity in some world, real or imagined, while a *class* concept is a test that can be applied to any entity and will say "yes" if the entity is a member of the concept, or "no" otherwise. From another perspective, one names instances but describes classes. For example, David, Saul, and Solomon would be instances in a semantic net representing the conceptual world of the Hebrew Bible, while "king of Israel" would be a class. A class may have only one member and still be a class rather than an instance if its function is to describe rather than to name. Thus "creator" is a class whose sole member in orthodox biblical thought is the instance YHWH. One may even have a class with no members (for example, again in orthodox biblical thought, the class "gods other than YHWH").

AKO ("a kind of") relations join related classes, while *ISA* ("is a") relations assign instances to classes. For example, the concept "Prophet" is joined to the concept "Person" with a chain of AKO links, since "Prophet" is a subclass of "Person." (That is, whatever one can describe as "Prophet" can also be described as "Person.") "Person" in turn is AKO "living being." To identify a specific individual (such as Isaiah or Jeremiah) as a prophet, an ISA link connects the instance corresponding to that person with the "Prophet" class.

Semantic nets tend to consist of networks of classes showing the relationships among concepts with a fringe of instances dangling from the bottom. For example, Exhibit 1 (Fig. COM.01) shows a fragment of a semantic net rooted at the concept "Living Being." The nodes printed in light font are all classes, related to one another by AKO links (indicated by bold arrows). At the bottom, in bold font, are specific instances, linked to their most specific classes by ISA links (dashed arrows). In addition to the links actually shown on the diagram, the logic of semantic networks permits us to deduce that "Righteous Person" is AKO "Person" (since any chain of AKO links is equivalent to a single AKO link), and "David" ISA "Living Being" (since an instance of a class is also an instance of any other class of which the first is a subclass).

The AKO and ISA relations are the most common but are not enough for complete semantic modeling. Additional relations among classes (such as *part-of* and *color-of*) are often invented ad hoc to satisfy a particular need but can be derived in a theoretically more satisfying way from the case frames of case grammar.

Semantic nets offer a methodology and framework for describing a semantic space and studying the place of various concepts within it. Together with case grammar, they are an important tool for formalizing lexicography. They also offer a powerful model for studying phenomena such as semantic parallelism in biblical poetry.

One popular theory of parallelism ascribes the repeated pairing of certain lexical items to the existence of a conventional tradition of pairs from which poets drew acceptable matches. If we collect the matched pairs from Ugaritic poetry or the book of Proverbs and arrange the words on a sheet of paper in such a way that the distance between two words is proportional to the frequency with which those words appear in parallel, the overall pattern falls into clearly delineated regions, each with its own semantic integrity, and the association of individual pairs is seen to be only a detail of the larger picture of regions of associated terms. Such a pattern is easily explained on the hypothesis that humans store their inventory of concepts as a network and tend to associate terms (whether as poetic parallels or in other ways) based on their proximity in the overall network. This overall network is the broader context within which theories about traditional pairs need to be discussed.

For example, Exhibit 2 (Fig. COM.02) distributes 66 nouns in two dimensions in such a way that the closer two words are on the page the more frequently they occur as poetic parallels to one another in Proverbs. Several clear semantic regions are visible. The upper left quadrant, spilling over into the lower left, is dominated by names for body parts. Those toward the right of the cluster are the organs of wisdom and morality, such as "soul," "heart," and "spirit," while those to the left are purely physical, like "foot," "eye," and "hand." Across the top, words like "Sheol," "death," length," "day," "riches," and "honor" reflect the consequences of various styles of life. A vertical region near the center contains nouns descriptive of rational beings (including "Lord," two words for "man," "son," "sinner," and "scorner"). It also contains adjectives that are commonly used as nouns identifying people, such as "wise" and "righteous." Terms at the bottom of the column describe people with regard to their moral condition, while those at the top reflect wisdom and folly. This column bridges two other clusters, one of wisdom terms and the other of morality terms. The rest of the words in the upper right quadrant are the names for wisdom and understanding, as well as their opposite, "folly." "Fear" is here because of its frequent occurrence in the phrase, "fear of the Lord," which is (as Proverbs often reminds us) the beginning of wisdom. Terms toward the lower right end of this cluster, such as "counsel," "discipline," and "reproof," deal with the communication of wisdom. Across the bottom, merging with the moral words for rational beings, are descriptions of morality and its manifestations, including "pride," "perversity," "rightness," and several metaphors ("road," "track," and "path") that describe the course of a person's life. The existence of such regions is persuasive evidence that parallel pairs are not a stylistic end in themselves but the hem of a whole fabric of semantic interrelations, as suggested by a semantic net model.

The observation that the second member of a poetic pair often intensifies, strengthens, or makes more specific the idea of the first member (Alter 1985) reflects the importance in general of AKO relations in the structure of conceptual spaces.

3. Discourse Analysis. Every exegete has diagrammed sentences to analyze the relations among words within clauses. Recently, interest has mounted in *discourse analysis,* which studies the relations among clauses and larger linguistic units. Much of the impetus for this study has emerged from workers in artificial intelligence, seeking to build formal models for the computational processes underlying human language. One particularly useful methodology, called "rhetorical structure theory," was developed specifically to enable computers to produce text that sounds natural to humans (Mann and Thompson 1987). Important contributions have also been made by the Bible translation community (Beekman and Callow 1974; Longacre 1976; Grimes 1975), but the underlying motivation for this work, as for so much

research in modern linguistic theory, is the move toward formal models of human behavior inspired by computer science.

The contribution of discourse analysis highlighted here is the formal definition of a set of relationships that clauses have with one another. Informally, some of these relations (such as Reason or Means) are familiar exegetical categories. The newer contributions offer much more complete sets of these relations than exegetes have been accustomed to using (over fifty in some systems). They provide an underlying theory for these relations (in one case, drawing on propositional calculus to define them precisely). They also show how these relations between clauses can be extended to relations between even larger textual units, thus providing a consistent theory of discourse structure at all levels from the clause to the complete text.

4. Modular Structure. The study of literary architecture, tracing patterns of repetition within texts and studying phenomena such as chiasm, alternation, and formal transitions (Parunak 1979, 1981b, 1983), goes well back before the computer, originating in Lowth's studies of Hebrew verse parallelism. Computer science offers insights that can strengthen and clarify architectural analyses of texts.

As computer programs have grown longer and more complex, new computer languages have provided sophisticated structuring aids to allow the program to be constructed as a series of segments, each with its own identity and function. Without such modularization, people cannot understand long programs, and errors become hard to find and correct. Program structures are an accommodation to human cognitive limitations. Both a structured and an unstructured program may produce the same result, but the structured one is easier for people to understand and manipulate. The development of structure in computer languages is thus a window into human cognitive structure in general and provides a model for analyzing other products of human cognition, such as extended literary texts.

For example, a basic rule in structured programming is the principle of locality of access. Variables used within one module of a program should not be susceptible to change by another module unless the module that owns them explicitly makes them available. This rule reflects the mind's need to package thought into relatively self-contained units and to control the interactions among these units to reduce complexity. Studies of literary architecture have identified a number of techniques for defining textual units, but the resulting analyses are often criticized by observations that a feature (such as a vocabulary item or a grammatical form) appears in several units, outside of the overall pattern of repetition. The principle of locality suggests that such repetition need not invalidate the overall modular structure, since features that are local to individual modules do not interact with one another. Clearly, this approach requires refinement to indicate under what conditions a feature may be considered local and what techniques a module uses to make a feature publicly available to establish relations with other modules. Just as clearly, the whole framework within which the hypothesis is posed, and the directions along which it may be tested and refined, are the results of cognitive tendencies that have been made clear in our attempts to program computers.

5. Transformational Grammar. We have already noted the indirect contribution of early machine translation efforts to linguistic theory in the form of case grammar. Another important contribution of these efforts is *transformational grammar,* developed by Noam Chomsky as a result of studies of the formal structures of mathematical languages. Transformational grammar models how a single semantic representation of an idea inside the mind can emerge as different streams of text. For example, it explains how passive and active forms of a sentence are related to a single underlying meaning.

This particular grammatical theory has been useful in several recent studies of Hebrew poetic parallelism (Collins 1978; O'Connor 1980; Geller 1979), where it has provided a framework for classifying and analyzing parallel poetic structures with much more discrimination than has previously been available. It allows the analyst to identify parallelism not only between words in the surface form of the text but also between elements in the underlying or deep structure, and thus provides a theoretical foundation for extending the application of parallelism to many poetic lines that at the surface level do not exhibit formal parallelism.

C. Gather Data

With a hypothesis in hand, we want to gather data from the text in order to test it. In the days before computers, biblical scholars collected their data by keeping ad hoc notes on various subjects encountered during general reading of the text; by reading the text while looking for a specific phenomenon; or through concordances. The computer was early recognized as a way to accelerate this process. Dozens of programs are available to support the data-gathering phase of exegesis, far too many for us to attempt to review in detail here. Hughes (1987) gives a good survey. We will mention a few that illustrate some of the capabilities we describe.

The two basic components of any computer system for gathering data from the biblical text are the *text base* itself and a *search program* that manipulates this text base. (These correspond respectively to the Bible and the scholar in the pre-computer scenario.) The text base contains at least the text to be studied, which may be in the original languages, translations, or both. (Some programs, like Akiyama's Bible Word program, permit users to consult multiple versions of the same text simultaneously.) It often includes annotations to the text and sometimes provides indices that speed up the search process. The search program is responsible for collecting the user's specifications for a search, applying them to the text base, and returning the results to the user in a useful form.

Data gathering systems differ widely in what is included in the text base, how it is stored, and how the search program manipulates it. Some objectives can be achieved either in the text base or in the search program. For example, if one needs to retrieve verbs according to their parsing, one might code each verb in the text base with its parsing or, alternatively, provide the search program with the capability of parsing verbs as it acquires them. In general (but with many specific exceptions), it is faster to store a linguistic analysis in the text base than to compute it during search, but a stored analysis strategy requires more space for the text base (for instance, a larger hard disk drive) than does one that parses on the run. As computers become faster and high-density storage technologies (such as CD-ROM) become less expensive, both constraints become less important.

1. Text Base. Text bases differ from one another in the detail with which they represent the basic text, the representation of annotations, and the storage strategy.

a. Detail of Representation. The degree of detail that needs to be represented in a coded text varies depending on the purpose for which the text is intended. In many early projects, texts were coded with a specific purpose in mind. For example, scholars interested in lexical and syntactical studies of the OT frequently ignore the cantillation of the text and often do not code it in their text base. Some Hebrew text bases even exclude the vocalization. The GRAMCORD search language (Miller 1984) does not rely on the accentuation of the Greek text, so the text base does not record this accentuation. Some popular computer editions of the KJV do not distinguish the italicized words (those inserted by the translators to smooth the English syntax) from the rest of the text.

Within the context of an individual research project with restricted goals, partial texts can reduce the cost of recording the data and control storage requirements. Also, it is often easier to design search programs if the text base is not cluttered with information (such as cantillation or accentuation) that the search program does not use. All too often, though, a researcher who has coded only some features of a text finds new questions arising in the course of research that require access to the omitted features. As the capacity of storage increases and computers grow faster, and as texts are assembled for general use in repositories such as the Center for Computer Analysis of Texts at the University of Pennsylvania and the Oxford University Computing Service (to name only two) instead of being custom coded for specific projects, text bases will tend to include all of the textual information found in a standard critical edition.

b. Annotations. Many exegetical questions involve the parsed form of words, rather than the form in which they appear in a text. For example, if one is searching a text for "mouse," one often wishes to retrieve at the same time occurrences of the plural form "mice." Though the text contains the string of characters "mice," the analyst may wish to manipulate it as though it had the notation "mouse + plural." This analysis records the "dictionary form" of the word (the entry in a dictionary that one would consult to find information about the word), and its parsing or grammatical code. The dictionary form is also

sometimes called the "lemma" (plural "lemmata") and a text that indicates the dictionary form of each word explicitly is thus called a "lemmatized text."

There is less need for lemmatization in English than in Greek and Hebrew. English words change comparatively little in different contexts. Internal plurals (such as "mice") are much rarer than those formed by adding a simple suffix ("houses"), and nouns do not have different forms in subject, object, and indirect object position. Verbs usually retain their basic form, with tense, person, and aspect marked through simple endings and helper verbs. Thus a search program for English can retrieve various inflections of a desired word just by specifying the beginning portion that is common to the various forms of the word.

This strategy is less successful in Greek and Hebrew. The heavy use of prefixes and suffixes in the verbal paradigms, and Hebrew's agglutinative use of prefixed prepositions and articles and postfixed pronouns, together with the less regular spelling characteristic of texts circulated in the centuries before printing, make it difficult to retrieve with a single search pattern all words that the dictionary classes together.

In principle, parsing can be done by the search program. After all, that is how people read texts. The mechanisms that people use, though, are not yet perfectly understood, and what we do know about them shows that they depend on context and even on general background knowledge about the world to resolve parsing ambiguities. Thus, most systems that permit retrieval by lemma or grammatical analysis code the parsing in the text base. Some systems (Morris and James 1975) record only lemmata and grammatical codes and omit the textual form of words entirely. Others record the textual form of each word together with a code indicating its grammatical analysis (Friberg and Friberg 1981), and still others include also lemmata for some (Miller 1984) or all (Radday 1973) words.

Currently available parsed text bases record surface level information. A rudimentary deep structure case scheme has been coded for some OT books and is useful for framing questions of the form, "List all verbs that take God as a patient." If one augments a text base with a semantic network modeling the conceptual world of the community within which the text originally circulated, one can then pose questions of the form, "What does this text have to say about morality?" Even if the word "morality" never appears in the text itself, the semantic network permits identification of subclasses of the concept "morality," and the retrieval can then search for the names of these more specific concepts. For example, a text base augmented with the semantic network of Exhibit 1 could be asked to list all verbs of which righteous people were the agent, and as a result would retrieve passages where "David" and "Jeremiah" occur.

One drawback to extensively parsed text bases is the need for large amounts of storage to record the analysis. Not every researcher requires the same kinds of analysis, and a text base detailed enough to satisfy the needs of all researchers may require so much storage that no researcher can afford to access it. "Adaptive parsing" is a strategy to address this problem. In this strategy, the search engine is able to recover a parsing either from a stored annotation to the text base or (more slowly) by computation from the textual form alone. Specialized parses are obtained by computation but, once found, are added to the text base as annotations. Thus, as one uses the system, it becomes more efficient in retrieving the kinds of information that the user has requested in the past and develops into a highly personalized research assistant.

c. Storage Strategy. In a well-designed retrieval system, the details of how the text is stored in the computer are hidden from the user. To understand how search programs work, though, and to trace the differences among various programs, it is useful to understand three issues concerning textual representation and storage: transcription schemes, indexing, and compression.

The first feature of Greek and Hebrew that strikes the English-speaking novice is that they use alphabets different from that of English. They place characters not only in line with one another but over and under each other, and Hebrew even writes "backward," from right to left instead of from left to right. How are such features represented inside the computer?

Though the average person thinks of interaction with computers as carried out in the Roman alphabet, this alphabet is no more natural to the computer than is any other. Internally, modern computers represent each character as a memory cell (called a "byte") that holds a number from 0 to 255. To store the letter *A* in a byte, the computer places the number 65 there. To store the character *3* (not to be confused with the number 3), the computer uses the number 51. Even the blank space has a number assigned to it (32). This association between numbers and characters is completely arbitrary. To represent Hebrew or Greek, the numbers are assigned to Hebrew or Greek characters instead of Roman ones. Since early programs could only display Roman characters, the assignment schemes for Hebrew and Greek usually assign characters to numbers that also represent Roman letters reminiscent of the Hebrew or Greek letter. For example, Heb *beth* and Gk *beta* are usually represented by the same number that stands for the Roman character *b*. In some cases (such as the Hebrew accents), two bytes together represent a single character. Internally, the computer does not distinguish between "right" and "left," and a suitably programmed terminal can print out Hebrew from right to left just as readily as a conventional one prints English from left to right. Some software, such as the Bible Word, LBase, and GRAMCORD's GRAMGREEK utility, can display and print text in Hebrew and Greek fonts as well as in transliteration.

The Bible is a fairly large text. The KJV, for example, contains about 4,500,000 characters, or nearly 800,000 words, in unlemmatized form. The addition of lemmata or grammatical codes can more than double this figure. Searching such a text by having the computer read it sequentially can be a time-consuming activity, especially if one is seeking a complex pattern.

To speed up a search, some programs follow the example of human readers, who typically search for a passage containing a particular word by looking up the word in a concordance. A concordance is an example of an index. Given the item of interest, it guides one directly to the places in the text that mention that item. In the same way, some biblical retrieval systems use indices to the text to speed up processing. Some systems allow users to build their own indices from sequential searches and use these to speed up future searches. This tactic is a simple version of the adaptive parsing strategy outlined above.

The size of the Bible requires significant external storage resources. Furthermore, one of the slowest operations in a computer is reading information from external storage into memory, so the size of the text slows down processing. To avoid these problems, many systems compress the text. One popular scheme is to replace common sequences of letters in the text with special byte codes that are not used for ordinary characters. For example, if each of the 930 occurrences of "Jesus" in the NT were stored as a single character, 3720 characters could be saved. Compression schemes such as this are one reason that the data files used by many popular retrieval systems must be accessed with their associated search programs and cannot be manipulated with a standard word processor.

2. Search Program. The text base is of relatively little use without a search program to retrieve information from it. Search programs range from general-purpose text manipulation languages (like SNOBOL, Icon, awk, or grep) that can process any ASCII file to programs tailored to the needs of biblical scholars. Their objective is to produce lists, counts, and indices of passages that meet criteria set by the user. Their most important differences are in the flexibility the user has to describe the passages that are to be retrieved, counted, or indexed. These differences concern both the entities out of which a search pattern is constructed and the kinds of constraints among these entities that the user can specify.

a. Search Entities. Every text base contains characters, and general file manipulation languages deal with characters as their basic entity. Character patterns are general and flexible, but most exegetical questions are not posed at the level of characters but in terms of higher-level entities, such as morphemes, phrases, clauses, or literary forms. A search program that manipulates text at the level of characters requires the user to translate search requests from the higher-level objects of exegetical interest into low-level character patterns. A program that explicitly manipulates higher-level groupings is easier to use. If a text base is lemmatized, a search program that understands the differences among text, lemma, and parsing annotations is needed to take full advantage of it. A particularly flexible implementation of such a scheme is Silver Mountain's LBase, which permits the user to define an arbitrary number of nested levels of analysis.

b. Pattern Constraints. A search program provides the user with a language to define relations among the entities that it recognizes. A description phrased in this language is called a *pattern*, and the entities that the pattern matches in the text are its *targets.* Some forms of patterns require that the text be divided into *segments* (typically, lines, sentences, or verses) within which a pattern must be satisfied.

The simplest form of pattern is a fixed list. Thus the character pattern "die" would match all strings of characters that include these characters in this order, including "die" and "died" (which the user probably wants), and also "audience" (which is probably not desired). A fixed list offers no way to retrieve both "of God" and "of our God" with a single pattern. Every character in the pattern must match a character in the target, and in the same order.

A common enhancement to fixed patterns is boolean combinations. This scheme permits the user to build a pattern from two or more simpler patterns (such as fixed lists), and to specify that both of two patterns must appear, or that one or another of two must appear, in an acceptable target. For instance, the pattern "love" and "God" would match every segment containing both the string "love" and the string "God." It would thus retrieve "the love of God" and "thou shalt love the Lord thy God," and also "they loved the praise of men more than the praise of God."

The next level of complexity after boolean combinations allows the user to restrict the order in which the subtargets occur and the material that may occur between them. The most common device for this purpose is some sort of "wild card." For instance, the pattern "." is commonly used to match any character, and * matches any sequence of zero or more occurrences of the preceding character. So the pattern "of.* God" matches all segments containing the string "of," followed by any series of letters, then a space, and finally "God." It thus matches both "of God" and "of our God." A variety of such devices are available in packages like the Bible Word that support the full class of string languages known formally as "regular expression" (Hopcroft and Ullman 1979).

Some pattern languages permit the user to constrain the intervening material in various ways. GRAMCORD, for instance, permits the user to exclude any specific grammatical category from intervening between specified patterns, making it easier for the user to focus in on phrases with a desired structure.

We have been using character patterns to illustrate search. With a search program like LBase that reasons with higher-level entities such as morphemes, words, and sentences, one may encounter fixed patterns, boolean combinations, and wild card possibilities at those levels too. Particularly powerful patterns are possible in a language that allows one to ask (for example) for all verbs that occur within three words of the phrase "in Christ," without intervening verbs. A high proportion of the targets matching such a pattern will be clauses in which the prepositional phrase in fact modifies the verb.

All of the patterns we have discussed up to this point match only on the basis of the collocation of words in the text, not on the basis of their grammatical relations with one another. A true syntactical pattern matcher can retrieve clauses based on words standing in specified relations of modification or dependency to one another. This capability requires either a search program that can effectively diagram the sentences in the text or a text base that is coded for grammatical dependencies. Both approaches are technically feasible, but neither is used in popularly available systems.

D. Analyze Data

In our four-phase model of scholarly activity, data analysis is the third phase, comparing the data gathered in the second phase with the hypotheses formulated in the first phase. From one perspective, analysis is the activity that confirms or disproves a hypothesis. From another perspective, the issue is not confirmation but exploration. The deviations between hypothesis and observation are the most important product of the analysis stage and fuel the formulation of new hypotheses for the next cycle of research. In this second view, a hypothesis summarizes economically the regularities in a set of data and focuses attention on the remaining irregularities.

Analysis can be either qualitative (dealing with categories, themes, and other symbolic, nonnumeric information) or quantitative (focusing on numbers extracted from the text). The computer offers tools to help with both.

1. Qualitative Analysis. Two common computer-based tools for qualitative analysis are the concordance and the data base management system, or DBMS.

a. Concordances. A concordance is a list of extracts from a text, ordered according to some linguistic feature of each. Usually the feature is the occurrence of a word, and the concordance allows us to see in a single place all of the occurrences of that word, together with some context for each one. We have already alluded to the use of a concordance as an index to aid in data gathering. A concordance also presents data in a form that is convenient for many types of analysis. A wide variety of computer-generated concordances is published by Biblical Research Associates in the Computer Bible series.

Concordances were an important tool for scholars for years before the advent of the computer, but the preparation of a concordance for a text the size of the Bible required a lifetime. Now computers collect the data for concordances much more quickly, and in various formats tailored to specific exegetical problems. The popular Key-Word-In-Context or KWIC format lines up the occurrences of the target word down the center of the page (the "gutter"). Within the article for a single word, the entries can be sorted by preceding or following context, permitting the user to note differences in constructions involving the word. Exhibit 3 (Fig. COM.03) shows a portion of a KWIC concordance on the Gk particle *ei,* "if," from 1 Corinthians, from Morton, Michaelson, and Thompson 1979. Because the context (in this case, the following context) is sorted, the entry brings together for convenient study such phrases as *ei de, ei de tis,* and *ei de christos.*

Reverse concordances sort words not by their beginnings but by their endings and are useful in identifying manuscript fragments that preserve the end of a word. From a fully analyzed text, concordances can be prepared that organize words by part of speech or conjugation and declension as well as by lemma or textual form. As on-line texts become more widely available and increased computing power becomes less expensive, the notion of a printed concordance will give way to concordance-like displays prepared as they are needed.

b. Data Base Management System. A concordance organizes a set of contexts on the basis of a single feature. A DBMS permits the user to explore the interaction of several features at once. In its simplest form, a DBMS stores information in the form of *records,* each containing a fixed number of *fields.* It is an automated version of the venerable box of index cards. For example, a data base supporting the lexical study of a particular noun might devote a record to each syntactic construction in which the noun occurs. One field of each record might record the biblical reference, another the kind of construction in which the noun occurs, a third the word in the construction to which the noun is bound, a fourth the kind of literature in which the passage occurs, and a fifth a brief definition appropriate to the noun in this context.

Defining the fields for such a data base amounts to constructing a hypothesis about the kinds of information that will prove relevant in determining the meaning of a word in a given context. Once the various constructions are recorded, the DBMS permits the user to sort and retrieve them on the basis of any field or combination of fields in order to explore correlations among fields. Typically, the result of the first day spent perusing such a data base is a redefinition of the fields, reflecting a refinement of the original hypothesis and often requiring a return to the data collection phase to fill out the new categories. The use of a DBMS permits repetition of this process more frequently and easily than is possible with physical index cards.

2. Quantitative Analysis. *Quantitative analysis* has gained in popularity among humanists with the advent of the computer and the development of packages of statistical software. To many people, "computer-assisted biblical studies" is almost synonymous with efforts to assess the authorship of biblical books from counts of stylistic features, such as vocabulary, vocabulary richness, grammatical usages, and idioms (Morton 1978; Radday and Shore 1985).

Modern statistics offers two classes of tools: confirmatory data analysis and exploratory data analysis. While confirmatory analysis has attracted much attention, it is often misapplied. Exploratory data analysis offers tremendous untapped potential for biblical studies.

a. Confirmatory Data Analysis. *Confirmatory data analysis* (CDA) is a mathematical incarnation of the side of analysis that seeks to confirm or disprove a hypothesis. The hypothesis defines a population,

from which the data purport to be drawn. CDA assesses this claim, by estimating how likely it is that the data indeed come from that population.

For example, in typical authorship studies, the analyst derives characteristics of an author's style from a sample of text known to be from that author. One hopes that the characteristics chosen remain fairly constant over all works of the author, but vary from one author to another. No one expects an author to produce exactly the same value for such characteristics in every text, but the variation among known texts can be measured and used to estimate how far the author might deviate from the average values. The analyst measures the corresponding characteristics from a text of unknown authorship and computes the probability that a population of texts exhibiting the values and range of variation shown by the known texts could also include texts with the values shown by the unknown texts.

CDA is also a useful set of tools for addressing grammatical and structural questions. For example, the word "spirit" occurs 26 times in Romans, 18 of them in chap. 8. Could such a concentration of vocabulary result from a random distribution of words over the text, or does it reflect the thematic structure of the book? CDA provides quantitative means to assess the significance of such concentrations.

Several challenges must be met by studies applying CDA. We will discuss them in terms of authorship studies, but similar qualifications exist for any application of these methods. For references and further discussion, see Andersen (1976). A model analysis is Mosteller and Wallace (1964).

The sample used to define the population must indeed be by the author in question. If we have no texts known to be by an author, we can hardly establish parameters for qualifying unknown texts.

If differences between the known and unknown samples are to be attributed to different authors, the samples should not differ in other ways (such as literary genre, subject matter, period of the author's life, later editorial activity, or linguistic register). If samples differ in several ways simultaneously, it becomes very difficult to determine which of the differences is responsible for differing values of the characteristics that the statistician is measuring. Literary studies sometimes seek to circumvent this problem by focusing on function words (like prepositions, conjunctions, relative pronouns, and the copula) rather than content words (like nouns, verbs, and adjectives) on the assumption that an author's usage will show more consistency in function words than in content words. This distinction may be true for subject matter but does not address differences in genre or register. For example, it is well known that some particles occur much less often in Hebrew poetry than in prose, independent of authorship.

In statistical studies in general, more data are better than less. The precision of results often tends to increase as the square root of the number of observations. To get twice as accurate an answer, one needs four times as much data. Landmark authorship studies in nonbiblical literature typically use on the order of 100,000 words of text, well beyond the amount of data available for biblical authorship studies.

Properly applied, CDA is an indispensable tool, but the promise of a "true-false" verdict that it holds out is seductive. It is easy to overlook the extensive methodological pitfalls and assume that, if a procedure yields a number, the answer is certain. Responsible application of these techniques requires close and extended collaboration between exegetes who understand what questions are meaningful in terms of the text and statisticians with a thorough grounding in the capabilities and limitations of their tools. Accessible introductions to CDA include Mosteller, Rourke, and Thomas (1961) and Mosteller and Rourke (1973).

b. Exploratory Data Analysis. Recent years have seen an explosion of statistical interest in *exploratory data analysis* (EDA). Where CDA epitomizes the view of a hypothesis as a claim to be proven or disproven, EDA implements the view that a hypothesis is a partial explanation of the data, whose effects need to be understood and removed so that further patterns may be seen. EDA does not render a verdict on hypotheses but gives one the mathematical equivalent of a magnifying glass, clarifying the data as input to scholarly discretion. Its techniques can reveal structure and order that would otherwise remain hidden in data. The cornerstone of EDA is Tukey (1977), together with Mosteller and Tukey (1977).

These techniques have been used, for example, to explore the distribution of boundary verbs among the tribes in Joshua 14–19. Beginning with a table indicating how many times each tribal boundary list uses each of the verbs, the EDA techniques of median polish and recoding suggest a strong preference for five

of the verbs in the boundaries of Benjamin, Judah, Ephraim, and Manasseh, while four other verbs dominate the boundaries of Zebulun, Issachar, Asher, and Naphtali. This observation, which would be difficult to make without these techniques, can be correlated in various ways with the context of the allocation of the land.

The techniques of Tukey (1977) can be applied with paper and pencil, though computer implementations are increasingly common. Other EDA techniques involve massive computations that require computer assistance. Among these are cluster analysis and multidimensional scaling (Parunak 1989a). Both of these techniques give ways to visualize the differences among a number of items (for example, vocabulary words or manuscripts). They begin with an estimate of similarity for each pair of items. Cluster analysis explores how well these similarities can be explained as arising from a set of different categories and seeks to retrieve the underlying categories. Multidimensional scaling (MDS) seeks to build a geometrical model of the set of similarities, thus permitting the scholar to view a spatial arrangement of the items that corresponds to the underlying similarities. Exhibit 2 (Fig. COM.02) is an example of the results of MDS.

A central tenet of EDA is that one picture is worth a thousand digits. Tables of numbers are difficult to understand even if one knows what one is looking for, but an appropriate graph or plot can lead the observer to unanticipated hypotheses. Computers can generate plots easily and thus take advantage of the insight that a picture can give.

For example, Linguistic Density Plots (Parunak 1981a) display the distribution of a linguistic phenomenon (such as a specific word or a grammatical construction) throughout a text, with location in the text on the horizontal axis and concentration on the vertical axis. The result is a series of peaks that show where in the text the phenomenon is concentrated. Such a plot gives the scholar a "feel" for concentrations that is almost impossible to achieve from a concordance list alone. It offers clues to literary structure that would be difficult to find without it.

Exhibits 4–6 show three Density Plots from Paul's Epistle to the Romans. Each dark bullet on the plot represents a separate occurrence of the word being plotted. An integer appears instead of a bullet if two or more occurrences are on top of one another. The horizontal or "REFERENCE" axis shows location in the book, with chapter beginnings labeled and each horizontal position representing four verses. The vertical or "DENSITY" axis is computed in such a way that the higher a point is plotted the closer it is to the adjacent occurrences of the same phenomenon.

Exhibit 4 (Fig. COM.04) shows a dramatic concentration of words beginning with *Israel* (such as "Israel" and "Israelite") in chaps. 9–11. This distribution is not a surprise to anyone familiar with the overall structure of Romans. Exhibit 5 (Fig. COM.05), though, of the verb *sozo,* "to save," and words beginning *soter* (like "savior" and "salvation"), is arresting. It shows that these words also, which many would suspect to be characteristic of the entire epistle, are concentrated in chaps. 9–11, and suggests that the restoration of Israel contemplated in these chapters is not just an afterthought to the book's preoccupation with salvation but an integral element in the discussion. Exhibit 6 (Fig. COM.06) shows that nouns and verbs describing "mercy" also predominate in these three chapters, this time in concentrations that form an inclusio at the beginning and end of the section.

Not all plots are created equal. Some computer graphics packages create showy graphs that in fact obscure rather than clarify data, and some kinds of displays are better than others at showing specific kinds of data. The ubiquitous pie chart, for example, communicates the preponderance of one category over another, but tests have shown that viewers cannot extract quantitative information from it as reliably as they can from a bar chart or a line graph. As another example, a change in the axes of a line graph or scatterplot (say, from linear to logarithmic or squared) can dramatically change the intuitions suggested by the data. Tufte (1983) and Cleveland (1985) are excellent guides to the graphical presentation of data.

E. Present Results

Biblical scholarship involves an ongoing conversation among the past, present, and future students of the text. The computer offers new tools for assisting and moderating this conversation, both through

making more effective use of traditional printed media and as a medium of communication in its own right.

1. Printed Media. The first introduction many humanists have to computers is as word processors. As mundane as this application seems, it has led to a dramatic increase in the ease and speed of moving ideas from mind to page. Corrections and modifications are much simpler to make than formerly, and many publishers can work directly from an author's machine-readable text, thus avoiding the time-consuming and error-prone rekeying of a manuscript for typesetting.

We have discussed concordances and plots as tools for analysis. The ease with which they can be tailored for a specific purpose also makes them attractive as aids to communicate to a reader the evidence that supports an author's arguments, while imposing an added responsibility on the author to ensure that they are clear and not misleading.

2. The Computer as Medium. As well as producing material for printed distribution, computers can themselves be the medium of scholarly activity. Perhaps the earliest example of this tendency is computer-aided instruction. For basic drill of vocabulary and paradigms in language study, computers offer a flexible version of the venerable flash card. More recent technologies that are transforming the computer into a medium of the scholarly conversation include networking and hypermedia.

a. Networking. Networking, the linking of computers together so that they can exchange information, is already a major means of daily scholarly interaction in the sciences. Electronic mail (Email) bypasses letterhead, secretaries, stamps, envelopes, and postal carriers, carrying messages directly from one scholar's computer to another's, with same-day service even across the ocean. Email is faster and more reliable than conventional mail, and (unlike telephone conversation) does not necessitate both parties being free at the same time.

The computer conference or bulletin board is the computer equivalent of a discussion. In its simplest form, it consists of a series of comments by participants on a topic of interest. Later participants can read the comments of earlier participants and offer their responses and observations. Networking permits people who are widely separated geographically to take part in the discussion. The participants usually do not take part at the same time. As with Email, the computer conference holds a record of the discussion so that at any time participants can review comments and add their own.

As more scholars prepare their research in electronic form, it becomes increasingly feasible for publishers to support submissions by networking. In the sciences, research is actively under way to permit the entire process of submission, review, and correction to take place by Email, without the need to circulate paper. The next step is the electronic journal, distributed to the final readers by network rather than on paper.

b. Hypermedia. Hypermedia is the generic term for a collection of information items linked together so that a user may move from one item to any of several associated with it, depending on need and interest. If the information items are restricted to text, one speaks of "hypertext." An encyclopedia is a simple example of hypertext, with the articles constituting the information items and the movement from one item to another guided by cross-references embedded in the articles. The fundamental characteristic of an information repository structured as hypermedia is that it helps the user move through it in many different sequences, rather than in a fixed linear order, as is customary with books and journal articles.

Exhibit 7 (see Fig. COM.07) illustrates SymEdit, one application of hypertext technology. Biblical literature makes extensive use of symmetrical repetitions of words, grammatical constructions, and ideas to define the kinds of structure that paragraph markings and chapter headings provide in modern literature (Parunak 1981b). To discover and analyze such structures, scholars commonly photocopy the passage, cut it into pieces with scissors, and try to arrange the pieces to bring similar sections close to one another for comparison. While the resulting displays are extremely useful, the mechanical manipulations needed to produce them are tedious and clumsy. SymEdit permits an analyst to arrange a text in columns (corresponding to parallel passages) and rows (which contain repeated features). Rows can be labeled to identify the features that they isolate. Individual rows and columns can be collapsed or expanded to bring other material closer together for comparison. The exhibit shows the beginning of four panels in

Deuteronomy 12, each of which follows the same structure in legislating worship at a central sanctuary. By expanding the one-dimensional structure of the printed text into two dimensions, SymEdit helps the scholar to identify and analyze repetitive structures. SymEdit is also useful in forming critical comparisons and in studying parallel narrative accounts.

While hypertext has existed for years in the form of encyclopedias, computer technology makes it more compact, easier to use, and more versatile. The volume of information contained in an entire 20-volume encyclopedia can be stored in electronic form on an optical disk less than six inches in diameter and an eighth of an inch thick. A computerized hypertext system can jump quickly from one item to another on such a disk with the touch of a key, without the need for the user to turn pages or change volumes. Because the disk can store sound and graphic images as well as text, such a system can provide full hypermedia.

For example, the CD-Word system currently under development at Dallas Theological Seminary will permit a user who is reading a biblical text in electronic form to call up various translations of a verse, to jump to a lexicon entry for any word in the text, or to access selected commentaries, grammars, and encyclopedias on a passage under consideration. The objective is to provide in a single computer system an environment comparable to that provided by a shelf of books and a desk in the conventional study. The CELLAR system, a design of the Summer Institute of Linguistics, will enable a linguist to sort field notes, organize lexical studies, and compare multiple translations while preparing a new rendering of a biblical text. Some designs permit users to add their personal annotations to the network of information, just as we now write notes in the margins of paper texts.

At first, such systems will be stand-alone electronic libraries, but the ultimate vision of hypermedia (Nelson 1987) couples the notion of linked information units with computer networking to anticipate a world in which the global resource of human knowledge is accessible from any computer.

H. VAN DYKE PARUNAK

CONANIAH (PERSON) [Heb *kônanyāhû* (כּוֹנַנְיָהוּ)]. Var. JECONIAH. The name of three men mentioned in 2 Chronicles. It means "Yahweh establishes or strengthens."

1. A Levite during the reign of Hezekiah who was given charge over the contributions, tithes, and other gifts given to the newly rededicated temple (2 Chr 31:12–13). His brother, Shimei, was appointed as his immediate deputy along with 10 assistants. One of them was Benaiah, who appears in 2 Chr 35:9 as a variant reading but is absent from the MT. The Masoretic marginal note (the *kĕtîb-qĕrê*) records an orthographic variant spelling omitting a *waw,* which indicates a scribal change from the *polal* ("Yahweh is strengthened") to the *qal* ("Yahweh strengthened") stem of the verbal root *kwn* (*HALAT,* 444). This could be for theological reasons (Yahweh could hardly need to be strengthened or made righteous) or the change could be a dialectical difference in the pronunciation between the two vowels *ā* and *ô* or a historical difference (early vs. a modernized pronunciation).

2. A second person of that name with the same *kĕtîb-qĕrê* mentioned above lived during the time of Josiah, king of Judah (2 Chr 35:9). He was a leader of the Levites, along with his two brothers (or colleagues) and three others mentioned in the text. They contributed 5000 lambs and 500 head of cattle for the Levites' use during the first celebration of the Passover in Josiah's reign. In the parallel account in 1 Esdr 1:9, Jeconiah occurs as an alternate form of this name.

3. An official and judge from the levitical family of Izhar appointed during the time of David (1 Chr 26:29). His administrative duties along with his sons specifically had to do with matters outside of the temple area in the nation at large (*Chronicles* ICC, 288). His name is also spelled with a *šĕwâ* in the first syllable with the LXX and Vg apparently reading an original long *ā* instead.
KIRK E. LOWERY

CONCEPT OF OUR GREAT POWER, THE (NHC VI,*4*). *The Concept of Our Great Power* (NHC VI,*4*) is the fourth tractate of codex VI (pp. 36–48) of the Nag Hammadi codices. This sole witness to the text is well preserved except for minor lacunae at the tops of most pages (Parrott 1979: 6). A Coptic translation from a Greek original, the text is written in the Sahidic dialect with minor Subachmimic and Achmimic influences (Krause and Labib 1971: 48–52, 63). See also LANGUAGES (COPTIC).

Great Pow. preserves an apocalyptic presentation of salvation history (Wisse and Williams 1979: 291). In this history, ultimate salvation belongs to those who know "our Great Power," the supreme being discussed in the text. Their names will be inscribed in the great light, and they will survive the final purification by fire, which will consume the flesh and everything that burns (matter).

Great Pow. incorporates themes from Genesis, the Jesus traditions, and apocalypticism in a triadic periodization of history. The three periods, which are presented in the text in two versions, include the aeon of the flesh (antediluvian period), the psychic aeon (the postdiluvian period), and the aeon that is to come. The creation of the universe began the aeon of the flesh. This aeon, during which the soul was created, drew to a close with the call of Noah and the flood. The presentation of the psychic aeon, which then ensues, includes the origin of evil, the appearance of the Savior (Jesus), his descent into Hades to humiliate the archons, the rise of an imitator or antichrist, and the final consumption by fire. This

consumption will usher in the aeon to come, which is the unchangeable aeon. Matter and flesh will be consumed by the fire and the pure souls (pneumatic) will be joined by the souls that have undergone punishment and become pure (psychic).

The text has been styled as a Christian gnostic apocalypse (Wisse and Williams 1979: 292). While no distinct gnostic cosmogony is outlined, themes and imagery abound which fit into a gnostic world view. The god of Genesis, for example, is called the "father of the flesh" (38,19).

The clarity of the account is clouded by grammatical and logical inconsistencies, the source of which can be traced to the complex literary history of the text (Wisse and Williams 1979: 291–92) and the Coptic translator's failure to fully understand the Gk *Vorlage* (Fischer 1973: 169). The use of the term *anomoean* (40,7; literally meaning "dissimilar things"), if understood as a reference to the Anomoean heresy, offers a *terminus a quo* after the middle of the 4th century. The reference, however, may be a later interpolation (Wisse and Williams 1979: 292, 304). Linguistic analysis has suggested an earlier date for the original text (Cherix 1982: 6, 62).

Great Pow. offers a valuable example of the syncretistic use of Jewish, Greek, and Christian elements in the formation of a periodizing apocalyptic salvation history. It illustrates the far-ranging influence of apocalyptic ideas in the early Christian era and their compatibility with gnostic beliefs in certain circles. The complex literary history of this text, if properly understood, could offer valuable insights into the development of apocalyptic ideas in Jewish, Christian, and gnostic circles.

CONEY. See ZOOLOGY.

CONFLATE READINGS IN THE OT. Conflation is the combination of readings from different texts or parts of a text. More specifically, conflate or double readings in a ms combine two or more variants from two or more mss. These alternative readings can be found in the Hebrew ms tradition (MT, Dead Sea Scrolls, medieval mss), and/or in the ancient versions of the OT, as well as in biblical quotations in Apocrypha, NT, patristic, and rabbinic literature. Conflation by copyists of doubly transmitted texts in related to conflation as a redaction technique, by which two or more variant accounts of the same subject were synthesized by an editor or redactor. There are numerous examples in the Samaritan Pentateuch (e.g., the theophany at Mt. Sinai, Exodus 20), in biblical mss from Qumran (the Sabbath Command, 4QDeut^{n} 5:12–15), in the ancient versions (the two LXX accounts of the rise of Jeroboam in 1 Kgs 11:26–12:24 and 12:24a–z), or in other extrabiblical literature (*Jubilees* and the *Temple Scroll*).

Double readings may have developed early in the composition and transmission process of biblical books. They may witness to different oral or written traditions or to elements introduced in the process of composition or redaction of a biblical book. Conflate readings reflect the textual pluralism that characterizes the history of the biblical text before its standardization around the end of the 1st century A.D. They prove that copyists had great respect for every existing variant reading transmitted in the mss.

This phenomenon is frequent in parallel texts (2 Kgs 18:13–19:37 and Isaiah 36–37, or 2 Kgs 24:18–25:21 and Jeremiah 52), in different versions of a given text (2 Samuel 22 and Psalm 18 contain conflate readings), and it is common in the parallel books of Samuel-Kings and Chronicles. Conflate readings occur mostly in later texts that combine variants of earlier texts or multiple mss: in Isa 37:9, 1QIsa^{a} *wyšm*ʿ

wyšwb and LXX *kai akousas apestrepse* combine MT *wyšmʿ* ("he heard it") and 2 Kgs 19:9 *wyšb* ("again").

Double readings are discovered by comparing two or more witnesses of a same text. They are best observed when each item is preserved independently in different textual witnesses: in 2 Sam 22:43, the MT combines two variants *ʾdqm ʾrqʿm* ("I crushed them, I mashed them"). The LXX^{B} text preserves only the first reading and 4QSam^{a} the second. Another characteristic is that one of the two items is sometimes ignored in a part of the textual tradition, because it is a secondary development dependent on the older item: in Ezek 1:20 the MT adds *šm hrwḥ llkt … šmh hrwḥ llkt,* repeating the phrase "wherever the spirit wanted to go." Some Heb manuscripts, LXX, and Syriac do not contain the second phrase.

A. Classification

Conflate readings can be classified according to different criteria, such as their sources, the extent of the duplication, their location in the sentence, their content, and the particular text-critical phenomenon involved. A comprehensive presentation of these different types of conflate readings follows:

(1) Variant spellings. 1QIsa^{a} (1,1) has the Masoretic reading *bymy,* "in the days of," miscorrected toward the Aramaic morphology by superscribing a *waw* above the first *yod* (Talmon 1964: 78). In 1 Sam 10:19 the Targum reading *lw lʾ* ("to him: 'No!' ") combines the MT *lw* and *lʾ,* the equivalent of LXX *ouchi.*

(2) Different vocalizations. Two possible vocalizations of the same Heb consonantal text may generate two readings. In 1 Sam 11:5 and Gk Lucianic *prōi katopisthen tōn boōn* ("early, behind the oxen"), followed by the OL *(mane—post boves),* interprets *hbqr* as both Heb *habbōqer* ("the morning") and Heb *habbāqār* ("the oxen").

(3) Variants in the consonantal text. 1 Sam 10:27 *kmḥryš* ("like someone who keeps silent") is a corruption of *kmw ḥdš* ("about a month"). This reconstruction is attested by 4QSam^{a} and suggested by LXX *hōs meta mēna,* which equals Heb *kmḥdš* (see F. M. Cross 1980; McCarter *1 Samuel* AB, 199–200; for a different opinion Barthélemy 1982), however, the Gk Lucianic conflates both readings, *kai egenēthē hos kōpheuon kai egeneto meta mēna hēmerōn,* "and he was like someone who keeps silent and a month later …"

(4) Syntactical alternatives. The MT of 1 Sam 23:20 makes a syntactic break after *rd* (*lrdt rd wlnw,* "to come down, come down! And it will be our task …"), while the OG agrees with the Heb reading of 4QSam^{b} in making no break there (*lrdt yrd ʿlynw,* "to come down, let him come down to us"), and the Syr essays a conflation of both readings. McCarter (*1 Samuel* AB, 377) and Barthélemy (1982) come to opposite conclusions about the "original text" of this verse.

(5) Scribal errors. The OG translation of Judg 1:15, "and Caleb (Heb *klb*) gave her according to her heart (Heb *klbh*)" may have resulted from an accidental dittography in the tradition represented by the OG. The opposite occurrence, haplography, is also possible in the MT. In 2 Sam 19:8, LXX^{B} combines MT *wrʿh* ("and will be worse") with the erroneous LXX reading *wdʿh* ("and know").

(6) Juxtaposed synonymous expressions. One expression is sometimes supplemented by another which has the same or a similar meaning and which is probably intended somehow to explain the first. In Isa 51:17 and 22 the *hapax legomenon qbʿt* ("bowl") is followed by *kws* ("cup"), which is omitted in the LXX and the Syriac and is generally agreed to be an explicative gloss (Elliger 1974: 131). Such conflation of synonymous pairs is frequent in the longer text form of the book of Jeremiah transmitted by the MT and is missing in the shorter text form reflected by the LXX. MT of Jer 1:15 adds the first item of the pair *lkl mspḥwt mmlkwt* ("all the clans of the kingdoms"), which is lacking in the LXX *egō sugkalō pasas tas basileias* ("all the kingdoms"); the second item of the pair *qṭr—ʿbd* is added in MT Jer 44:3, *llkt lqṭr lʿbd lʾlhym ʾḥrym* ("to go to burn incense, to serve other gods"), the LXX attesting the shorter reading, *poreuthentes thumiąn theois heterois* ("… to burn incense to other gods"). Also the conflation of juxtaposed pronominal and nominal variants is frequent in Jeremiah. Personal names are extensively filled out in the MT as in Jer 41:3 *ʾtw ʾt gdlyhw* ("with him with Gedaliah"); OG omits the nominal variant. Occurrences of expressions containing a common and an uncommon word are a particular type of juxtaposition: in Isa 11:6 the older Gk reading *boskethesontai* reflects an uncommon Heb verb, probably

ymrʾw, "shall grow up" (1QIsa[a] *ymrw*); the alternative reading in the same verse *kai tauros* translates a more common noun *wmryʾ,* "the fatling" (MT 4QIsa[c]).

(7) Attraction of an associated text. In Gen 17:14, "if the flesh of his foreskin has not been cut away," the SamPent and LXX *tę̄ emerą tē ogdoę̄* add *bywm hšmyny,* "on the eighth day," from Lev 12:3 to specify the day of the circumcision.

(8) Assimilation of parallels. In 2 Sam 3:23 the Syr combines MT *hmlk* ("the king") and 4QSam[a] (LXX *dauid*) *dwd,* "David." The reading "David" may be an assimilation to 20:21 (Barthélemy 1982) or, on the contrary, MT may have substituted "the king" in anticipation of v 24 (Ulrich 1978; McCarter *2 Samuel* AB, 109).

(9) Variant locations. Jer 6:13–15 is repeated in 8:10–12, but the OG omits the latter verses.

(10) Exegetical development. The Gk Lucianic in Ezra 6:4 and the A text in 6:24 *kainon enos,* "new one," combine the MT reading *ḥdt* (Aramaic equivalent of *ḥdš,* "new") and the OG *hd* ("one"), which seems to be an exegetical development.

The components of a double reading may be placed side by side, connected with the copulative *w-,* or could form a single syntactical whole. 1QIsa[a], *ʿd ykyn wʿd ykwnn,* "until he establishes and sets up," preserves two variants connected with *w-,* of which MT knows only the first. The MT of 2 Sam 22:38–39, *ʿd klwtm wʾklm,* embraces two readings which grammatically adjust the text: *ʿd klwtm,* "until finishing them," and *ʿd (ʾšr) ʾklm,* "until I finished them." One of the alternative readings may also be placed outside the syntactical context at the end of the sentence. Conflate readings could also enter into the text from marginal or interlinear notations. In Isa 21:17 1QIsa[a] has *gbwry qdr,* "heroes of Kedar," but the word *bny* has been inserted above the line, bringing the shorter reading in line with the conflate MT *gbwry bny qdr,* "the heroes of the sons of Kedar" (Talmon 1964: 119).

The purpose of textual criticism is to establish a critical text by ridding it of all conflation. This is true for the LXX translation and for nonbiblical classical literature. But as far as the Hebrew biblical text is concerned, this is by its very nature a "variant text." Its formative period extended in some books for many centuries and continued even when the textual transmission had already begun. The variant interpretations to which the text was subjected have also left their traces in the text. Therefore the task of editors and critics is not to reduce the plurality and diversity of variants and doublets but to take account of all of them and to try to explain their origin and meaning. Particularly in cases of pairs of synonymous readings, which combine expressions used alternatively in a given context (*ʾdm-ʾys,* "man"; *ntn—śym,* "to give, to put"), neither term can be said to claim textual primacy. Textual and stylistic aspects are here intimately connected (Talmon 1975: 344–57). Conflate readings help the critic in examining phenomena that may have occurred at three different levels in the history of the text. It is not always possible to decide to which of these three levels a given phenomenon is to be assigned.

B. Conflation in the Hebrew Text

Conflation may arise at three different phases in the history of a text. The first is the process of literary formation. At times conflate readings derive from parallel traditions. By inserting the words *wyʿl ʾbytr,* "and Abiathar came up," in 2 Sam 15:24 the redactor blended two traditions which attributed the honor of carrying the ark to different priests, Zadok or Abiathar (Talmon 1960: 189); an editor may also have attempted to remove the reference to Abiathar from the context (Wellhausen 1899: 197).

A second phase at which conflation may arise is the editorial process. The readings of 1 Sam 18:6 *bbwʾm,* "When they came," and *bšwb dwd,* "When David returned," are editorial insertions ignored in the LXX. Their purpose is to connect the following section with two preceding episodes: (1) women came out to meet King Saul on David's return after slaying Goliath the Philistine (17:54); (2) women came out at the approach of Saul and David after their meeting at court (17:55–18:5, omitted in the OG).

The third phase is that of textual transmission. In 2 Sam 13:39, the Targum *npsʾ ddwyd mlkʾ,* "the spirit of David the king," and Gk mss *to pneuma tou basileōs Daueid* combine the OG *to pneuma tou basileōs,* "the king's enthusiasm," which is confirmed by 4QSam[a] *řaḥ hmlk,* "the spirit of the king," and MT *dwd hmlk,* "David the king." The MT reading is a secondary development, because the verb agrees with *řaḥ* (feminine), not with the name "David." Different types of textual changes may occur. In 2 Sam 18:3 the

Targum *ʾry kʿn ʾt ... wkʿn,* "for you … and now," combines the MT and OG reading *ky ʿth = hoti kai nun* ("for now") and a proto-Masoretic reading *kyʾth* ("but you"), which is reflected by ^{B} *hoti su* and seems more suitable to the context. Many texts have additions. The Vg of Jer 28:8 reads *et de adflictione et de fame,* which conflates MT *wlrʿh,* "and affliction," and *wlrʿb,* "and famine," supported by many Heb mss. This variant is due to the influence of the following *wldbr,* "and pestilence," which adapts *rʿh* to the usual pair *rʿb* and *dbr;* both words *(wlrʿh wldbr)* were successively added to an older and shorter text reflected by the OG. Enclosed glosses creep into texts, too. The conflate variants in 1 Sam 2:31b *mhywt zqn bbytk* ("so that there will not be an old man in your father's house") and 32b *wlʾ yhyh zqn bbytk* ("and there will not be an old man in your house") form a resumptive repetition that encloses the gloss of v 32a, omitted by.

C. Conflation in the Versions

The conflate readings present in the versions can have arisen in the Hebrew original/s (Vorlage), in the translation process, or along the textual transmission of the version. It is not always possible to establish a clear distinction between these different levels.

Double readings occur in the Hebrew original(s). A translator or a later reviser may have interwoven two renderings drawn from different MT variants. In 2 Chr 23:14, LXX *kai exēlthen ... kai eneteilato* conflates MT *wywṣʾ,* "brought out," and 2 Kgs 11:15 *wyṣw,* "gave orders to," which is the older reading. One part of the translation may be based on the MT, while another item may translate a divergent non-Masoretic original. For example, in 2 Sam 18:14, OG *dia touto arxomai* (Heb *lākēn ʾaḥălla,* "therefore I shall begin") was supplemented by the proto-Theodotionic reviser with a more literal rendition of the MT *loʾ kēn ʾōḥîlâ=ouch houtōs menō,* "Not thus shall I tarry." A particular type of conflation is that produced because of different interpretations of the Hebrew Vorlage: the LXX of 2 Sam 21:22 *tōn giganton en geth tō rapha oikos,* "of the giants in Gath, to Rapha a house," combines two variants *bgt,* "in Gath," and *byt,* "house," by confusing *g* and *y.*

Double translation is also used as a translation technique. Two alternate renderings or independent equivalents in the target language represent a single parallel item in the parent text. This type of change is to be distinguished from exegetical amplifications or glosses. In Exod 3:8 the verb *lh ʿlwtw mn ... ʾl,* "to bring them up out … into …," is translated in the Greek with two verbs *exagagein* and *eisagagein* in order to express the two aspects provided by the Hebrew verb.

The same Hebrew word may be rendered by two equivalents with the same meaning. These equivalents may be: (1) synonymous readings, as in Exod 22:16 where the verb *mʾn ymʾn,* "he absolutely refuses," is rendered by two equally appropriate verbs *ananeuōn ananeusē kai mē boulētai,* "he absolutely refuses and does not want"; (2) a rendering in good Greek alongside a literal one: In 2 Kings the OG translates the Heb *yhwh ṣbʾwt,* "Lord of the hosts," by *kyrios pantokratōr,* "Lord Almighty" (attested by the Gk Lucianic in 2 Kgs 19:15; 20:16), corrected by the proto-Theodotionic reviser to *kyrios tōn dynameōn,* "Lord of the hosts" (2 Kgs 3:14; 19:31); (3) a regular translation accompanied by a transliteration, 1 Sam 24:23 MT *hmṣwdh,* "the stronghold," is rendered *tēn Messara stenēn;* or (4) it is replaced by a transliteration, 2 Kgs 25:13, 16 *mknwt,* "the trolleys," is rendered by the OG *baseis,* corrected to *mechonoth* in the proto-Theodotionic recension.

This kind of conflation can sometimes be interpreted in different ways, either as preserving an original longer reading or as the result of an inserted gloss. In 1 Sam 16:20, MT *ḥâm̃r,* "ass," appears transliterated in LXX as *gomor,* reflecting the vocalization *ḥōmer.* The Gk Lucianic *kai elaben Iessai onon kai apetheken auto gomor artōn,* "Jesse took an ass and ladened it with an omer of bread," and the similar OL *et accepit lesse asinum et imposuit super gomor panis* may preserve here an original longer reading *ḥmwr wyśm ʿlyw ʿmr lḥm* (McCarter, *1 Samuel* AB, 280), or may combine the LXX reading, "took an omer of bread," and a glossed reading attested by the Syr, "took an ass and ladened it with bread" (Barthélemy 1982).

The same Hebrew word is sometimes translated by two equivalents with two different meanings, either for semantic considerations, as in Dan 2:11 *yqyrh=barys esti kai epidoxos* ("heavy" and "esteemed"), or because of different etymological derivations, as in Prov 6:3 *rʿk=kakōn dia son philon* ("the evil through

your fellow"), where *r‹k* is derived from *r‹‹,* "evil," and *r‹h,* "fellow," or according to two different traditions of translation, as in Isa 41:7 "*p‹m=hammer*" and "at the right time," where the Targum has *bqrns› zmn›,* "with the mallet, then," and LXX *sphurē ... pote,* "hammer … then" (Elliger 1974: 134).

A translator who is careful to render his Vorlage as literally as possible is not expected to have recourse to double readings. On the contrary, a free or nonliteral translation like the LXX of Isaiah, which borders on the Midrashic, may be suspected of using such a technique.

Double readings arise in the transmission process of the versions. A copyist or reviser may have interwoven two renderings drawn from different sources. This conflation is characteristic of the Gk recensions, particularly of the Lucianic. In elucidating the priority of one or another of the two renderings, Lagarde's criterion is applied: the free translation is generally older than the literal one. Similarly, the item that translates a divergent Hebrew Vorlage is generally to be preferred to the item based on the MT. This is in accord with a tendency present in the later LXX books to produce a more literal rendition and with a similar tendency of the Gk recensions to bring the original text in line with the increasingly authoritative Hebrew text which served as the base for the Vorlage.

The components of a double translation are usually located next to each other and connected with a copula *(kai).* Sometimes they appear unconnected, as in 1 Kgs 3:25 *hyld,* "the child," *=to paidarion to thēlazon,* "the child the sucking baby." They may also be interwoven with one another, creating a genitive relation between them, as in Josh 9:22, the MT *bqrbnw yšbym=egchōrioi (este) tōn katoikountōn en ēmin,* "the inhabitants of the country, who live among us."

CONSCIENCE. The idea of a human conscience "has existed over since the final verdict of guilt was spoken within man himself, when the true Furies were recognized as the consciousness of guilt" (Dibelius and Conzelmann *Pastoral Epistles* Hermeneia, 19). According to Gooch (1987), the Church has developed three distinct concepts of conscience (Gk *suneidēsis*) as morality's "inner voice": there is (1) a minimal sense by which the term refers to one's self-consciousness (derived from its earlier cognate for "consciousness," *suneidos*) or private knowledge (from the reflexive for knowing one's own knowledge, *sunoida emautō*); (2) a more robust notion where *suneidēsis* refers to "the pain of recognizing that one has done something wrong or bad" (Gooch 1987: 245; also Pierce 1955); and (3) the more recent and

common use of *suneidēsis* as an autonomous agent; the repository of moral convictions, which legislates actions in accord with God's will.

A. Background

The first meaning of *suneidēsis* is also earliest and has its origins in popular Hellenistic usage (Maurer *TDNT* 7:898–907; Davies *IDB* 1: 671–74). Although not prominently used prior to the 1st century B.C.E. (e.g., *suneidēsis* does not appear in Aristotle's *Ethics*), the term was used to describe in a general way a person's moral self-awareness. The conscience was that part of the inner person which continued to judge human actions—usually wrong (a "bad" conscience; Xen. *Ap.* 24). Such a judgment derives from a rational nature and does not have its direct source in a deity (although one's "nature" may be traced to God). Further, conscience bears witness in an immediate sense to a particular act rather than preparing for it to do right or wrong.

From the 1st century on, *suneidēsis* is used more frequently, especially by the Latin rhetoricians, and was taken up into the language of philosophical ethics, most notably by the Stoics (although see Davies *IDB* 1: 671–76). However, its meaning remained essentially the same: an inherent capacity which allows a person to act in accord to what he or she knows is right. Cicero and then Seneca did speak of a "good" conscience *(conscientia)* as directive toward the happy life—a point also made by Epicurus. While not a central notion in Stoicism, Epictetus speaks of conscience as that faculty which helps to override moral timidity and do what one knows is good (cf. *suneidos, Diss. 3.22.94).*

The term also appears in Hellenistic Judaism, especially with Philo, who uses *suneidēsis/suneidos* in common with the Greco-Roman world. However, Judaism's usage carries a religious nuance and is informed by their Scriptures. Thus, the conscience bears witness to biblical truth and produces pain when Torah is not observed. Maurer further argues that Philo's positive use of the notion is in line with the Wisdom tradition in that the truth to which the conscience bears witness directs, even converts, a person onto the path which leads to *šalom* (911–13).

Philo did, however, appropriate the language of conscience from its secular usage, since the OT (LXX) use of the *sunoida* family is quite sparse. That the OT does not have a word for conscience astonishes some but can readily be understood by the Bible's general resistance to an introspective and autonomous anthropology (cf. Stendahl 1976): truth is revealed by God and the individual is encircled (and so limited) by a community covenanted with God and itself. The RSV does translate the Heb *lēb,* "heart," as "conscience" in 1 Sam 25:31, even though the LXX translation is *estai soi touto bdelugmos,* "it (the abomination) will (not) be upon yourself." (The most one can say is that *estai soi* here is perhaps idiomatic for moral self-consciousness.) Wolff (1974) contends that *lēb* "comes to take on the meaning of 'conscience' … [in that] what is being described is the reaction of the ethical judgment formed by the conscience" (51). According to OT anthropology, *lēb* is the center of human self-consciousness devoted to making decisions in accord with the word of God. In this sense, the essence of the OT idea of *lēb* is compatible with the general conception of *suneidēsis* in the Greco-Roman world; and it is this conception which provides the background for the NT idea of conscience to which we now turn.

B. Pauline

The connection between the OT notion of *lēb* and the NT *suneidēsis* is nowhere clearer than in Rom 2:15. For Paul, conscience is a universal human capacity which condemns or recommends one's fitness before God against an internalized Torah. As in Hellenistic Judaism, then, Paul ties conscience to the word of God (i.e., Torah) as self-conscious judge of and witness to the community's observance of it.

As with most theological and ethical convictions he inherited from Judaism, Paul further qualifies conscience by linking it to his own apocalyptical gospel, which is focused here on God's eschatological judgment at Christ's Parousia. Thus, human conscience evokes a sense of imminent and inward (*ta krypta tōn anthrōpōn,* Rom 2:16) recognition, whether one stands under God's wrath because of disobedience (which is presumed the case for those outside of Christ, Rom 1:18) or under God's righteousness because of obedience which comes by faith (Rom 2:5–11; cf.1:5). With the exception of 1 Cor 8:1–11:1, other occurrences of *suneidēsis* in Pauline texts (Rom 13:5; 2 Cor 1:12; 4:2; 5:11) reflect this more typical and only modestly refined use of the idea which was current in the Greco-Roman and Jewish worlds.

The most important and innovative text in its use of *suneidēsis* within the Pauline corpus is 1 Cor 8:1–11:1 (Jewett 1971: 421–32). In this passage, Paul seeks to settle a controversy surrounding the permissibility of eating food once offered to idols. His essential point is that under certain circumstances some believers should refrain from eating such food because of negative consequences to the spiritual nurture of other believers. The conscience's pivotal function is twofold: on the one hand, it detects those who are "weak" because they lack and have need of Pauline *gnōsis* (8:7); while, on the other hand, it guides those who are "strong" because they have such *gnōsis* and who now must use it in ways which edify the whole community—to keep the "weak" from returning to idolatry.

The first two meanings of conscience given by Gooch (1987) are discernible in 1 Cor 8:7–13: the scrupulous conscience of the "weak" is pained by the apparently idolatrous acts of the "strong" (vv 7, 12) because it has been informed by previous experiences of idolatry and so bears witness to a non-Christian morality (v 10)). Conscience, then, marks the consistency of a particular act with a particular standard of morality; and when inconsistency to that standard is perceived, pain is produced. Yet the pain produced in the conscience of the "weak" is really the result of competing conceptions of *gnōsis* which have in turn produced competing consciences between those who live either in accord with Pauline *gnōsis* or with pagan *gnōsis*. Thus, the conscience of the "weak" is not itself weak or faulty; rather, it distorts the truth, turning an innocent act (according to Pauline teaching) into an evil one, because of a misguided standard of truth (or *gnōsis* contrary to Pauline teaching).

Paul has, however, already established his working moral principle in 1 Cor 8:1: conscience must bear witness to *love* of others rather than to self-knowledge since the yield of the latter is arrogance (and naturally division) and of the former is edification (and so unity; 8:6). The truth by which any particular act is apprehended by the *suneidēsis* is relational and communal rather than individual and juridical, and is as much a problem for the theologically "strong" as for the "weak" —which seems to be the point of the ironical 8:10 (Jewett 1971: 422–23). Here, then, Paul redefines the current notion of *suneidēsis* by regarding its role as supervising one's relationship with others rather than to a particular *gnōsis*.

Thus, in 1 Cor 9:1–10:22 Paul turns to a discussion of those limits to personal freedom which make this new standard of truth clearer to his readers. Paul contends that even as he and other Christian missionaries adjust their behavior and assessment of personal rights to meet the redemptive needs of others, so also certain Corinthian believers must adjust their behavior, even giving up their rights to certain foods, to keep other believers from going back into idolatry. *The new role of conscience is to regulate this sort of moral accommodation which purposes to edify other people*—to know when and how long to abstain from those "lawful" acts which might, however, "cause a co-believer to stumble."

Paul resumes his discussion of *suneidēsis* at 1 Cor 10:23 and adds yet another meaning to the notion. Especially the use of *krinō* with the individual's *suneidēsis* in 10:29, following the succession of the formulaic *dia tēn suneidēsin* (10:25, 27, 28), suggests an element of autonomy which can help determine obedient acts ahead of time (however, see Gooch 1987: 251–52). The believer's conscience, now armed by the principle of love and delimited by the demand to preserve the commitment of those prone to idolatry, makes "judgments" whether certain behaviors will bring glory to God (10:31) by saving the many (10:33) in agreement with the apostle's gentile mission (11:1). The idea of conscience as an internal and autonomous moral agent, fully developed during the Church's medieval period, has its biblical mooring here.

The early catholicizing tendency of the post-Pauline situation is reflected by the use of *suneidēsis* in the Pastoral Epistles (1 Tim 1:5, 19; 3:9; 4:2; 2 Tim 1:3; Titus 1:15; cf. Acts 23:1; 24:16). The author's concerns are more institutional and less apocalyptical than found in earlier Pauline writings. Thus, the special attributes of the conscience are those found in the "man of God" who is a "good citizen" and best able to rule over the Church of *this* world (1 Tim 1:19; 3:9; cf. Acts 23:1; 24:16; Dibelius and Conzelmann *Pastoral Epistles* Hermeneia, 20). Further, the "good" conscience is shaped by the Church's traditions of the historical Paul (2 Tim 1:3), who is chief exemplar of Christian conduct and teacher of truth; only that conscience which bears witness to apostolic piety and teaching is able to distinguish adequately between orthodoxy and heterodoxy, orthopraxis and heteropraxis (1 Tim 4:2; Titus 1:15). As

such, the "good" conscience of the Church's leadership is an element of ecclesiastical *hugiēs* (esp. Titus 1:13–16), "soundness," and is therefore an essential ingredient in maintaining loyalty to "the faith" and its codes and creeds not only in a pluralistic world but also within a Church where the authority of Paul is being challenged. In this context, then, the institutional function of conscience provides for doctrinal as well as moral discernment and stability for the whole Church rather than only for its individual leader.

C. Non-Pauline

The concept of conscience in the Pauline corpus is essentially concerned with human relations. This also seems true of 1 Pet 2:19 and 3:16, where *suneidēsis,* bound to God's will, evaluates behavior toward outsiders. More than Paul, however, the author is concerned with the particular difficulties of living as the Church within an antagonistic (and not simply pluralistic) society; suffering is a real possibility if not already a reality. Conscience, then, is the consciousness of a certain moral particularity which belongs to a divinely elect community of "aliens and strangers" (1 Pet 1:1–2; 2:9–11) and whose common life resists certain sociopolitical standards of behavior; it is an awareness of one's own deviance with the likely result of suffering. Christian baptism inaugurates a manner of life during which the "cleansed conscience" (3:21) seeks to maintain an undivided and difficult loyalty toward God in a world where Christian conduct only marginalizes the people of God. The hope, of course, is that his path of suffering will save the baptized soul (1:3–9; 2:21–25).

The author of Hebrews assumes the essential meaning of *suneidēsis* in the Hellenistic world: the conscience "is the internal faculty within man that causes him to be painfully aware of his sinfulness and, as a result, to experience a sense of guilt" (Selby 1986: 148). However, unlike Paul, who is primarily interested in human relations, the author of Hebrews depicts a guilty conscience as the "one real barrier to an individual's approaching and living in fellowship with *God.* The guilty conscience is thus the impediment to real confidence and stability for the Christian" (ibid).

References to the conscience in Hebrews are gathered together in 9:9, 14 and 10:2, 22, and so at the focal point of the author's exposition on the new covenant. What is "new" in the relationship between God and eschatological Israel is that the work of the priestly Christ has purified Israel's conscience and has made it possible to "draw near" to God (10:22) with inner confidence (10:2; cf.4:16) and to worship God forever (9:11–14). The author's prophetic interest in internal and spiritual transformation (against Judaism's perceived interest in cultic ritual and legal rights) only intensifies the importance of a purified conscience. Judaism's priestly theocracy does not provide a lasting means of ridding Israel's guilt and making easy access to God. Because the priestly Christ offered himself up to God as a "perfect" sacrifice (Heb 7:11–8:13; 10:5–18), the conscience has been cleansed of these legalistic "works which lead to death" (9:1–10; 10:2); indeed, it is the conscience which has now been redeemed in fulfillment of Jeremiah's promise of a new covenant (cf. 8:10).

CONTRIBUTION FOR THE SAINTS. A project headed by Paul whereby funds from his gentile churches were collected for the poor among the believers in Jerusalem (the recipients are variously named as "the saints," "the poor among the saints," and "the poor").

A. The Contribution in the Letters of Paul

There are references to this project in four of Paul's letters (Romans, 1 and 2 Corinthians, and Galatians). It is generally thought that at least the references in 1 and 2 Corinthians and in Romans refer to different stages of one great project (Hurd 1965: 205, n. 1).

In Rom 15:25–32 Paul speaks about the final stage of the collection as he is on his way to deliver it to Jerusalem (15:26). If the significance of the collection was as a symbol of the unity of the Church (Knox 1950: 54) it may be that Paul's worry over the acceptability of the collection (Rom 15:31) is a concern over whether the Jerusalem church might consider that he had failed to provide such a symbol. The churches of Galatia, who were involved in the project at some stage (1 Cor 16:1), do not appear in Paul's last reference to the collection (Rom 15:26).

In 1 Cor 16:1–4 Paul gives instructions about the contribution. He has previously introduced the collection project to the Corinthian church, perhaps in the previous letter (Hurd 1965: 233), and is now giving more specific instructions about how to proceed, probably in order to encourage a more sizeable contribution (Hurd 1965: 202).

2 Corinthians 8 and 9 are most likely two communications written at separate times (Bornkamm 1965: 77). Betz (*2 Corinthians 8 and 9* Hermeneia, 71) has shown that 2 Corinthians 8 has some of the characteristics of a legal contract in which the mandate given to Titus is set out (2 Cor 8:6) along with a description of his credentials and the task assigned to him (2 Cor 8:16–23). Paul also commends two anonymous brothers (2 Cor 8:18, 19, 22) who, since only Titus is Paul's own partner (2 Cor 8:23b), are under the authority of Titus.

In 2 Corinthians 9, Paul's sending of "the brothers" is explained as necessary in order that the gift will be ready when he arrives with the Macedonians (2 Cor 9:1–5a). 2 Cor 9:5b expresses Paul's concern that the original intention of the contribution not be lost among the Corinthians (Betz, 96).

The three main options for explaining the reference in Gal 2:10 are: (1) that it is an exhortation to continue a standard practice that accompanied Paul's missionary activity (de Burton 1921: 99); (2) that it refers to the collection that Paul subsequently commenced as evidenced in 1 and 2 Corinthians and Romans (Knox 1950: 57); or (3) that it alludes both to the great collection referred to in these letters and to Paul's previous efforts, recorded in Acts 11:17–30, when he and Barnabas brought aid from Antioch to Jerusalem during the famine (Nickle 1966: 59).

B. The Contribution in Acts

There are only two references to the contribution in Acts: in 11:27–30, as referred to above, and in 24:17 where Paul tells Felix that part of the reason he has come to Jerusalem is to bring to the Jews "gifts for the poor."

C. The Significance of the Contribution

That Paul considered the collection project to be highly significant is indicated by the fact that he continued to push for funds even when faced with lethargic and rebellious responses (2 Corinthians 8 and 9) and was willing to risk his life to deliver it (Rom 15:31). It is generally taken that the significance the contribution for the saints had for Paul was as a symbol of the unity of the Church. The collection was meant to represent, primarily to the Jewish Christians in Jerusalem, the unity of both gentile and Jew in Christ, and thereby to be a means of reconciling the Jewish and gentile branches of the Church (Knox 1950: 54). The generosity of the gentile churches was meant to prove the validity of gentile salvation to the church at Jerusalem (Nickle 1966: 127).

CONVERSION. The word "conversion" and the related noun "convert" and verb "to convert" appear infrequently in English translations of the Bible. When they do, they translate the Heb word *šûb* ("to turn") and the Gk *epistrephein*. However, understandings of what conversion involves and what it means are conveyed in diverse ways and cannot be confined to the study of particular terms. To explore the biblical understandings of conversion involves not only a study of particular words but an examination of the varying imagery for conversion.

The unclarity that surrounds the English word "conversion" complicates any discussion of conversion in the Bible. In his classic study of conversion in early Christianity, Arthur Darby Nock defined conversion as "the reorientation of the soul of an individual, his deliberate turning from indifference or from an earlier form of piety to another, a turning which implies a consciousness that a great change is involved, that the old was wrong and the new is right" (Nock 1933: 7). While this definition adequately describes certain uses of the term, it also implicitly eliminates some changes that are customarily described as conversions (e.g., Ruth, whose conversion appears to be a matter of an allegiance to Naomi and her customs; the Ethiopian eunuch and Cornelius, neither of whom appears to undergo a radical change of consciousness). If the term "conversion" is applied more widely than Nock's definition would allow, then there are numerous biblical texts that warrant consideration as examples of conversion.

A. Conversion in the Hebrew Bible

Although the religion of Israel primarily concerned people who were born into Israel, the Bible also speaks of those strangers or sojourners *(gērîm)* among the people. Restrictions governed their participation in Israel's religious life (Exod 12:43–45), but they could offer sacrifices to God and, on condition that males had been circumcised, they could even participate in Passover celebrations (Num 14:13–15; Exod 12:48–49). The best-known example of a sojourner who takes Israel's God for her own is that of Ruth, who apparently acts out of her relationship to her mother-in-law Naomi.

In addition to this motif of the sojourner who converts to Israel's worship is the prominent prophetic motif of the call for Israel's return *(šûb)* to God. Two texts that illustrate this motif are Jer 3:1–4:4 and Isaiah 55. Despite Israel's faithlessness (Jer 3:1–4), she will be allowed to return and will find mercy and pardon (Jer 3:12–13; Isa 55:1–9). What is necessary is that the people sincerely repent and return to God in truth and justice (Jer 4:1–4), a move that itself requires God's strengthening of Israel (Jer 3:22) and that will in turn lead to a renewed relationship with God. This return is not a conversion in the sense of a change of religious affiliation, but the transformation called for here does coincide with part of Nock's definition.

B. Conversion in the New Testament

The Synoptic Gospels portray both John the Baptist and Jesus as preachers of repentance (Gk *metanoia*). While Mark comments merely that John preached "a baptism of repentance for the forgiveness of sins," Luke and Matthew characterize John's preaching as a polemic against those who do not reflect their repentance through good deeds (Matt 3:7–10; Luke 3:7–9). In common with the prophetic motif of repentance and return to God, John's preaching declares God's final judgment on those who do not repent.

While the Synoptic Gospels also present Jesus' preaching as a call for repentance (Mark 1:15; Matt 4:17), it is Jesus' parables that reveal an implicit understanding that repentance involves a converted or transformed understanding of God. For example, several of the parables challenge conventional ways of understanding God (e.g., Luke 15:11–32; Matt 20:1–16) and thereby encourage the reinterpretation of who God is and how God works in the world. The very riddle of the parables presses for new or converted ways of thinking and acting in response to God.

Despite both the vivid accounts in Acts and its well-established place in Christian imagination, Paul's conversion occupies only a fragment of his letters. Indeed, because Paul says so little about this topic, and because he does not speak of changing religions, many students of his letters insist that it is inappropriate to speak of Paul as having experienced a "conversion," and prefer the term "call" in order to capture the

motif of the prophetic call that appears in Gal 1:15–16. It has also been suggested that the term "transformation" be used for Paul's particular conversion, since it is not a change of religions but a radical reinterpretation of his understanding of God's actions in and will for the world. This debate itself reflects the previously noted confusion about the English word "conversion."

Whatever term is applied to the change Paul experienced, the evidence about it in his letters is slender. He indicates that he was a faithful Jew whose zeal surpassed that of his peers (Phil 3:5–6; Gal 1:14). Nevertheless, his experience of the risen Jesus (1 Cor 9:1–2; 15:8–10) inaugurated a radical transformation (Phil 3:7); contained within that transformation was Paul's call as apostle to the gentiles (Gal 1:15–16; 1 Cor 9:1–2; 15:8–10). While some interpreters still see in Romans 7 an indication that Paul was driven to his change by guilt over his inability to keep the law, the predominant view is that Romans 7 reflects on some aspect of the human situation and is not an autobiographical reflection. Of the dramatic details included in Acts 9, 22, and 26, Paul says nothing, not even that he was traveling to Damascus (see, however, Gal 1:17).

When referring to the conversions of others, Paul often speaks of God as calling (1 Cor 1:2), purchasing (1 Cor 6:20), liberating (Rom 6:17–18), or giving grace (Rom 3:21–26) to human beings. This is consistent with his conviction that it is God who takes the initiative with the world in a new way in the gospel rather than human beings who act to placate or please God. When he does use the language of converting or turning to God, it is in very traditional contexts that refer to gentiles taking up the worship of the true God, such as in 1 Thess 1:9 (cf. Gal 4:9). More often, he refers to the point at which persons acknowledge God's action in Jesus Christ as "faith" or "belief" (Rom 13:11), which results in radical transformation, a transformation that is still God's gift (Rom 12:1–2).

Because Luke's second volume, the Acts of the Apostles, narrates the formation of the Church and its mission in the gentile world, it is understandable that Acts contains a number of stories of conversion, not only the conversion of Saul or Paul (Acts 9, 22, 26) but also the ETHIOPIAN EUNUCH (8:26–40) and CORNELIUS (10:1–11:18), as well as large numbers of converts who remain unnamed (e.g., 2:41–42; 4:4; 9:35, 42). The first story of the conversion of a group of people comes at the event of Pentecost and appears to present Luke's understanding of conversion, for Peter concludes his sermon with these words: "Repent, and be baptized every one of you in the name of Jesus Christ for the forgiveness of your sins; and you shall receive the gift of the Holy Spirit" (2:38). Later stories do not necessarily conform to this pattern, however. For example, nothing is said about the Ethiopian eunuch repenting or receiving the Holy Spirit (8:26–40). The story of Saul's conversion makes no reference to his repentance (although his behavior might be said to reflect such a change). In the Cornelius episode, there is again no reference to repentance, and here the gift of the Holy Spirit precedes baptism. This inconsistency indicates that Luke is not presenting a systematic interpretation of conversion but is employing the various accounts to weave a story of God's actions in and through the Church. Even the stories of the conversions of individuals are, in Luke's accounting, less about those individuals than they are about God.

In addition to the gospel accounts in which John and Jesus call for repentance, the language of revelation and transformation in the letters of Paul, and the narratives of Acts, some NT texts use imagery of new birth and new life to refer to conversion. This language occurs in both Jewish and pagan literature roughly contemporaneous with the NT, so that its use in the gospel of John and in 1 Peter draws on well-established religious language. The gospel of John includes a story in which Jesus says to Nicodemus: "Truly, truly, I say to you, unless one is born anew *(gennethe anothen),* he cannot see the kingdom of God" (3:3). This statement turns on a word play, since the Greek word translated "anew" in the RSV also means "from above." While Nicodemus responds to the former meaning of the word, what Jesus intends is clearly the latter. As this birth "from above" stands in its Johannine setting, it refers to life that has its origin in the Spirit, life in radical discontinuity from life in "this world," and life that involves a new relationship with Jesus (e.g., John 15:1–7, 18–19; 17:6–10). In 1 Peter the language of new birth (1:3–5, 14, 23; 2:2) helps to affirm the believer's movement inside the boundaries of a new community. As is the case of John as well, new birth in 1 Peter has ethical as well as social and theological implications, since

those who are in the community are enjoined to be holy in their conduct (1:14–15) and to act out of love (1:22–23).

COOPS, PIGEON. See ZOOLOGY.

COPPER SCROLL (3Q15). In March 1952 a team of archaeologists discovered in Qumran Cave 3 a scroll engraved on two copper sheets which had originally formed one whole 2.40 × 0.30 m in size (de Vaux 1953: 85–86). In 1955/56 H. W. Baker (1956) at Manchester University in England solved the difficult task of opening the brittle and heavily oxidized scroll by sawing it into segments.

Even before the scroll was opened K. G. Kuhn (1954) examined the visible part of the engraving and came to the conclusion that the scroll contained a list of hiding places of the accumulated wealth of the Essenes. Upon further examination the scroll was found to list to twelve columns 64 underground hiding places in various regions of the land of Israel. The deposits include certain amounts of gold, silver, aromatics, scrolls, and also a copy of a more detailed inventory (col. XII, lines 11–13) of the treasures.

J. M. Allegro (1960), who gained access to the newly opened scroll at Manchester, published a transcription and interpretation of it before the official edition was published. His secretive digging around Qumran and elsewhere in search of hidden treasures was severely criticized by the official team. J. T. Milik (1959), a member of the team, published a translation and commentary of the Copper Scroll and maintained that it had no connection with the Qumran Essenes. He declared the scroll a mere compilation of legendary treasures concocted by someone around 100 C.E. (cf. Baillet, Milik, and de Vaux 1962: 199–302). Many scholars were not ready to accept his conclusions. They maintained the reality of the treasures but differed as to their origin. Some ascribed them to the Essenes (Dupont-Sommer 1962: 383–89; Pixner 1983), to the temple of Jerusalem (Kuhn 1956; Rengstrof 1960: 26–28), to the Zealots (Allegro 1964), to other Jewish refugees before 70 C.E. (Golb 1980; 1985), to a collection of money for rebuilding the destroyed sanctuary (Lehmann 1964), or even to the Bar Kokhba revolt (Laperrousaz 1961; Luria 1963). These discussions were summarized by H. Bardtke (1968), Vermes (*HJP²*, 467–69), and M. Wise (1987: 232).

Despite the intricate difficulties posed by the interior structure of the Copper Scroll, a decisive argument for its dating and origin can be derived from a careful examination of Cave 3Q and its history (Pixner 1983: 334–35). In its original state the cave contained many jars with a variety of documents, which were almost completely destroyed when the outer ceiling collapsed. The few surviving fragments (Baillet, Milik, and de Vaux 1962: 94–104) are universally accepted as genuine Qumran documents. The shape of the cave and the hiding place of the Copper Scroll in it make it inconceivable that this double scroll could have been deposited at a later date while the jars with the other documents were still in place. F. M. Cross dated the scroll on paleographical grounds within the broad limits 25–75 C.E. (Baillet, Milik, and de Vaux 1962: 217–21). Its early Mishnaic Hebrew is not unique among the Qumran documents (Baillet, Milik, and de Vaux 1962: 222). The use of a precious material like copper and the prosaic, factual style of the Copper Scroll argue against a mere folkloristic composition.

Dupont-Sommer (1962: 383–84) points out that even the high sum total of the treasures (ca. 4500 talents) mentioned in the Copper Scroll does not necessarily exclude its reality (contra as J. T. Milik 1959). Since the Essenes had a community of goods and were preparing for the eschatological war (War Scroll) and the rebuilding of the temple (Temple Scroll), the amount of their common wealth is not surprising. The various assets of the community could also be considered a substitute or counterbank to the temple treasure, which the Essenes shunned (Pixner 1983: 339–40).

Since the Copper Scroll was meant to be an aide-mémoire for a secretive team of diggers, it apparently avoids well-known geographical terms. This fact makes it difficult to pinpoint the described hiding places. All scholars believe that some of the hiding places were situated around the monastery of Qumran, named Secacah (cf. Josh 15:62) in the Copper Scroll (IV,*13*–V,*14*; cf. de Vaux 1973: 93). This is another argument for the Qumran relationship of the scroll. Also Jerusalem and its surroundings, e.g., Shiloah (X,*15–16;* cf. John 9:7) and Bethesda (IX,*11–14;* cf. John 5:2), are generally (except Luria: 1963) considered as locations of hidden treasures. While Milik (1959; also in Baillet et al. 1962) and Allegro (1964) find that the caches were haphazardly distributed all over Palestine, Pixner (1983) professes to see a systematic order in their distribution: nos. 1–17 near the Essene Gate (Jos. *JW* 5.145) on the SW hill of the city, suggesting a special quarter there (Pixner 1983: 342–47; Reisner 1985); nos. 19–34 in and around Qumran; nos. 35–47 in the Yarmuk Valley area ("Land of Damascus"?; cf. CD VII,*15–19*); nos. 48–60 again around the holy city; and nos. 61–64 at diverse locations in the N of the country. The solution to the intricate problems of the topography of Copper Scroll could be of utmost interest, because it might make us understand the general distribution of Essene centers of settlement. The rather poor quality of the original photos has certainly contributed to the divergence of interpretation (Thorion 1985). A new set of pictures of Copper Scroll taken with the help of modern techniques could further advance the research of this very important document.

COPTIC LANGUAGE. See LANGUAGES (COPTIC).

COPTIC VERSIONS. See VERSIONS, ANCIENT (COPTIC).

COR [Heb *kōr* (כֹּר)*; kôr* (כּוֹר)]. See WEIGHTS AND MEASURES.

CORBAN [Gk *korban* (κορβαν)]. The word "corban" appears in Mark 7:11 (cf. Matt 15:5), "As a man should say to his father or mother, That which you should have had from me is *corban,* that is, a gift [to God] …" Matt 15:5 has the same basic text, but without the transliterated Semitic word *cōrbān.* The equivalence *cōrbān=Gk doron* [*tou theou*], "gift [to God]," is also attested by Josephus, *Ant* 4.73, where he links it with (a) vows and procedures for gaining release from them, and (b) oaths (cf. also *AgAp* 1.167). This use is now attested in an Aramaic ossuary inscription from Jebel Hellet et-Turi (Fitzmyer

1971), which runs "everything which a man may find to his profit in this ossuary [is] an offering *(qrbn)* to God from the one within it." If it is given to God, then it is banned to men, just as appears in Mark 7:11. The terms *qrbn* and *qwnm* occur in these senses in the Mishnah and Talmud. Thus, in *m. Ned.* 1:4 we read, "If a man said, May what I eat of thine be the Korban, or 'as a Korban' or 'a Korban,' it is forbidden to him." It thus appears in (a) prohibitions of use, and (b) dedication formulas of the 1st century A.D. Further confirmation comes from the finding of a stone jar from the 1st century inscribed with the word *qrbn*, and recalling *m. Maʿaś. Š.* 3:10, "If a man found a vessel and on it was written Korban …" (Fitzmyer 1971: 96). In Mark 7:11 the word may thus represent either Hebrew or Aramaic. Matt 27:6 presents the related form, *korbanas*, probably reflecting the Aramaic emphatic state *(qwrbn)*, meaning "treasury" and thus equivalent to the Gk *gazophylakion.* The very same use of the term occurs also in Josephus, *JW* 2.175, but so far it does not seem to have been attested in 1st-century Aramaic sources.

MAX WILCOX

CORINTH (PLACE) [Gk *Korinthos* (Κορινθος)]. CORINTHIAN. A city on the Peloponnesian coast of Greece (35° 56′N; 22° 56′W) where Paul met Aquila and Priscilla and where he spent eighteen months preaching and teaching (Acts 18:1–18). He later wrote at least two letters to the congregation at Corinth (1 Cor and 2 Cor; but cf. 1 Cor 5:9, 11).

A. Geographic Setting

The 4-km^2 site occupies two broad natural terraces that step up from the coastal plain to the height of Acrocorinth (575 m). This is limited on the E and W by two of the gullies that drain Acrocorinth. The 10-km wall follows the optimum defense line along the edges and is anchored by Acrocorinth. The built-up area never expanded as far as the walls; in times of danger the extra space could shelter the people and flocks of the agricultural area that fed Corinth. Long walls 2.5 km long and 1.2 km apart linked the city to the port of Lechaeum. See Fig. COR.01. Its artificial double harbor covered 460,000 m^2 and was bordered by 7 km of quays; only a tiny portion of the harbor area has been excavated (Roux 1958: 103). Corinth's second port, CENCHREAE, lay some 9 km to the E on the Saronic Gulf. The artificial harbor enclosed only 30,000 m^2. A large building dominated the N breakwater, and four blocks of warehouses were aligned along the inner part of the S mole (Scranton, Shaw, and Ibrahim 1978: 14, 41).

Control of these two harbors, and its position virtually astride the 6-km-wide isthmus linking the Peloponnese to mainland Greece, made Corinth the great crossroads of the ancient world (Strabo 8.6.20). Set on the edge of a plain whose richness was proverbial, with a tradition of high productivity, and so situated as to be able to levy a percentage on both E–W and N–S trade, the coffers of Corinth were always full. From the time of Homer (*Il.* 2.570) the adjective associated with Corinth was always "wealthy" (Dio Chrysostom, *Or.* 37.36). Today the name Korinthos belongs to a small city on the Peloponnesian coast of the Gulf of Corinth 2.4 km W of the Corinth Canal. Its origins go back only to 1858 when the old city was destroyed by an earthquake. The "light of all Greece" (Cicero, *Leg. Man.* 5) is now represented by the poor village of Archaia (or Palaia) Korinthos, located 5.6 km SW of the modern city.

B. History of Excavations

The first excavations at Corinth were conducted by the German Archaeological Institute (Dörpfeld 1886). In 1896 the American School of Classical Studies at Athens assumed responsibility for the site and has conducted excavations there ever since. Preliminary studies appear in *American Journal of Archaeology* and *Hesperia*, and final reports in the series of volumes entitled *Corinth* (1930–). Remains of all periods from the Early Neolithic have been brought to light. Elsewhere in the Corinthia, major excavations have been carried out at Isthmia (1952–60 and again from 1967 to 1978), and at Cenchreae (1963–68). Final reports on Isthmia have been published by Gebhard (1973) and by Broneer (1971; 1973), and on Cenchreae by Scranton, Shaw, and Ibrahim (1978).

C. History of Corinth

The history of Corinth is long and complex, but the fundamental distinction is between the Greek city, which came to an end in 146 B.C., and the Roman colony founded by Julius Caesar in 44 B.C.

The origins of the city in the 5th millennium and its subsequent development to the 4th century B.C. have been documented by J. B. Salmon (1984). For long centuries Corinth enjoyed unusual social and political stability, partly because of excellent management by the ruling class, who anticipated rather than opposed change, and partly because of an exceptionally diversified and productive economy. In addition to the celebrated Corinthian bronze (Murphy-O'Connor 1983b), the city was renowned for its ceramics, textiles, shipbuilding, and architecture. In order to develop E–W trade a canal joining the Corinthian and Saronic gulfs was mooted as early as the 6th century B.C. (Diog. Laert. 1.99). When the project came to nothing, Periander (ca. 625–585 B.C.) built a paved road (the *diolkos*) across the isthmus, which permitted light ships to be hauled from one sea to the other on a platform running in grooves cut in the pavement. Excavations have revealed a dock and 460 m of the road on the W side of the isthmus. The width varies from 3.4 to 6 m, and the grooves are 1.5 m apart (Wiseman 1978: 45–46). Repaired many times, it remained in use at least until the 9th century A.D., and would also have served for the movement of goods. These facilities permitted merchants to avoid the voyage around Cape Maleae, which was so dangerous as to be proverbial: "When you double Maleae forget your home!" (Strabo 8.6.20).

Such success inevitably provoked the envy of those less fortunate in their location and less industrious in their habits, and so in the 5th–4th centuries B.C., Athenian writers made Corinth the symbol of commercialized love. Aristophanes coined the verb *korinthiazesthai*, "to fornicate" (*Fr.* 354). Philetaerus and Poliochus wrote plays entitled *Korinthiastēs,* "The Whoremonger" (Athenaeus 313c, 559a). Plato used *korinthia korē,* "a Corinthian girl," to mean a prostitute (*Rest.* 404d). These neologisms, however, left no permament mark on the language, because in reality Corinth was neither better nor worse than its contemporaries. It was not dedicated to the goddess of love, Aphrodite (Saffrey 1985), and Strabo's story of 1000 sacred prostitutes (8.6.20) has been shown to be pure fabrication (Conzelmann 1967).

The events leading to the destruction of Corinth in 146 B.C. have been summarized by Wiseman (1979: 450–62). Even though Rome had granted freedom to the cities of Greece after the Second Macedonian War (200–196 B.C.) and permitted them to unite in various leagues, it came to see the latter as a threat. In defiance of a Roman attempt to break up the Achaian League, of which Corinth was a prominent member, the league asserted its independence by going to war to discipline Sparta in 146 B.C. When Metellus reached the isthmus from the N after defeating three Achaian armies, he was joined by the fleet of the consul Lucius Mummius, who assumed command. Corinth, the bastion of Achaia, had only a ragtag army of 14,000 infantry and 600 cavalry recruited from untrained slaves and citizens to face a Roman force of 23,000 infantry and 3500 cavalry plus auxiliaries. The result of the battle on the plain was a foregone conclusion.

The looting of the city is recorded by an eyewitness, Polybius (preserved only in Strabo 8.6.23), but the inference from excavations that the city was neither totally destroyed nor completely depopulated (Wiseman 1979: 494–95) is confirmed by Cicero, who visited Corinth between 79 and 77 B.C. (*Tusc.* 3.53; cf. Feger 1952). Corinth was too natural a market center ever to be abandoned completely, and those citizens who escaped the net cast by Mummius would surely have returned (Dio Cass. 21).

The establishment of the Roman colony is attributed to Julius Caesar by a number of classical authors (all the Greek and Latin references to the colony are conveniently assembled in Murphy-O'Connor 1983a: 1–128), but only Appian gives a precise date, namely 102 years after the sack of Carthage (*Hist.* 8.136), i.e., 44 B.C. Inscriptions show that the new name of the city was Colonia Laus Julia Corinthiensis (Kent 1966: 60, 70). Since the region had been peaceful for over a century and no danger threatened, Caesar's concerns can hardly have been military or political. The economic potential of Corinth was well known in Rome (Cicero, *Leg. Agr.* 1.5; 2.51, 87; cf. E. Salmon 1969: 135), and that this was his motive appears to be demonstrated by the fact that the construction of a canal across the isthmus was part of the project (Suetonius, *Iul.* 44).

Strabo's assertion that the new settlers were for the most part freed slaves (8.136) harmonizes with Appian's view that they were *aporoi* (*Hist.* 8.136), provided that this adjective is understood to apply to those who felt themselves locked into a certain socioeconomic level through lack of opportunity. Thus they were not Romans but had been brought originally from Greece, Syria, Judea, and Egypt (Gordon

1924: 94–95). In a new colony they had everything to gain. Distance would have made their ties to former masters meaningless, and their children would be free. As a group they had the technical, financial, and administrative skills to make the project work. Their enterprise and industry are attested by the fact that, though they had to begin by robbing graves, they quickly found a lucrative market in Rome for the bronze vessels and terra-cotta reliefs that they discovered (Strabo 8.6.23). The great demand for the former prompted some of the wilier colonists to recommence the production of bronze (Stillwell, Scranton, and Freeman 1941: 273), and other traditional industries were soon reestablished.

Once the colony was securely based, it attracted entrepreneurs from Greece and the major trading countries of the E Mediterranean. Such infusions of new capital in a prime commercial situation inevitably generated more wealth, and within 50 years of its foundation many citizens of Corinth were men of very considerable means. The clearest evidence of this is an inscription commemorating L. Castricius Regulus, who assumed the presidency of the first restored Isthmian Games sometime between 7 B.C. and A.D. 3. He refurbished the facilities, which had not been used for a century, and offered a banquet to all the inhabitants of the colony (Kent 1966: 70). Commercial development demanded banking facilities, and by the mid-1st century A.D. Corinth was an important financial center (Plutarch, *Mor.* 831A).

Urban expansion is also a significant indicator of the city's increasing prosperity (Wiseman 1979: 509–30). The early colonists displaced the center of the old city to the S of the archaic temple, where a racetrack had preserved a large open space. It became the forum (Robinson 1965: 23). A number of ancient elements, e.g., the South Stoa, the Well of Glauce, the Peirene Fountain, were incorporated, but new structures quickly appeared. Ten monumental edifices were erected before the end of the reign of Augustus (31 B.C.–A.D. 14). A further six are ascribed to the long reign of his successor, Tiberius (A.D. 14–37). Thus, the city center at the time of Paul can be reconstructed with a very high degree of accuracy (Murphy-O'Connor 1984). See Fig. COR.02. The ruined walls were still visible but served only as a quarry of cut stone. In an era of great political stability their repair was seen as a completely unprofitable investment.

The Corinth that Paul knew was severely damaged by an earthquake in A.D. 77 (West 1931: 18–19). In gratitude for imperial aid in rebuilding, the city was renamed Colonia Julia Flavia Augusta Corinthiensis (Kent 1966: 42), but the original name returned in the early 2d century A.D. (Edwards 1933: 28–29). The tax-free status accorded the city by Hadrian (Wiseman 1979: 507) stimulated a building boom in the mid-2d century A.D. This was the city depicted (about A.D. 174) by Pausanias in his *Description of Greece* (2.1.1–5.5).

The most attractive residential and recreational area in Corinth was the suburb of Craneum on the lower slopes of Acrocorinth (Plutarch, *Mor.* 601B). According to legend, it was there that Diogenes the Cynic (ca. 400–325 B.C.) lived in his barrel (Dio Chrysostom, *Or.* 8.5) and asked Alexander the Great to move a little to one side because he was blocking the rays of the sun (Plutarch, *Vit. Alex.* 14). In terms of recreational facilities, its only competitor was the Asclepieion and Lerna complex just inside the N wall (Roebuck 1951; Lang 1977). The latter offered a fine swimming pool, while the dining rooms of the latter could have been the setting for 1 Cor 8:10 (Murphy-O'Connor 1983a: 161–67).

When Achaia was set up as a senatorial province in 27 B.C., Corinth presumably was the capital, but this is not confirmed by any direct evidence (Wiseman 1979: 501). In A.D. 15 Tiberius attached Achaia and Macedonia to the imperial province of Moesia (Tacitus, *Ann.* 1.76, 80), but Achaia was restored to the Senate by Claudius in A.D. 44 (Suetonius, *Claud.* 25). Thus, Rome was represented by a proconsul, who served for one year from June 1 to May 30 (Dio Cass. 57.14.5). The most celebrated proconsul is Lucius Iunius Gallio (June 51–May 52), not because of his personal character or achievements but because he is mentioned in Acts 18:12 and so provides the key date in Pauline chronology (Murphy-O'Connor 1983a: 141–52). Since he did not complete his term of office (Seneca, *Ep.* 104.1), Paul must have met him in Corinth in the summer of A.D. 51.

The municipal government was a miniature of that of republican Rome (Kent 1966: 23). Citizen voters, divided into twelve tribes (Wiseman 1979: 497), elected four annual magistrates, who on retirement

became eligible for membership of the city council. These offices were open to freedmen (Duff 1928: 66). The senior magistrates were *duoviri iure dicundo,* and to date the names of 58 are known (Kent 1966: 24–26, but the dates there given are subject to revision; Wiseman 1979: 498, n. 224). In addition to juridical duties, they were the chief executive officers of the city. Those elected every fifth year were known as *duoviri quinquennales* and had the additional responsibilities of taking the census and naming new members of the city council.

The *duoviri* were assisted by two *aediles* (11 are listed in Kent 1966: 27). They functioned as city business managers and so presumably were responsible for commercial and financial litigation. An inscription in the paving of the square E of the theater, dated to the mid-1st century A.D., mentions an *aedile* named Erastus. The rarity of the name generally and its absence elsewhere at Corinth (Kent 1966: 99) strengthens the identification of this individual with the Erastus mentioned by Paul as the *oikonomos* of Corinth (Rom 16:23). *Oikonomos,* "steward," however, is not a standard rendering of *aedile,* and Erastus may have occupied a lower office when Paul wrote (Theissen 1982: 79–83). If so, his conversion to Christianity did not block Erastus' advancement. In times of food shortages a *curator annonae* was appointed to ensure supplies at his own expense (Wiseman 1979: 499).

The greatest honor that Corinth could bestow was the presidency of the Isthmian Games, which were celebrated every two years in the spring at the sanctuary of Poseidon at Isthmia. Responsibility for this, the second greatest of the panhellenic festivals, had passed to Sicyon in 146 B.C., but the new colony must have pressed the traditional right of Corinth from the beginning, since great economic benefits flowed from the presence of huge crowds (Strabo 8.6.20). It would have succeeded in this claim, however, only when some of the settlers had become sufficiently wealthy to accept the financially onerous office of *agonothetes.* Paul could have attended the games of A.D. 51 (Kent 1966: 31); it can hardly be coincidental that his first use of athletic imagery appears in a letter to Corinth (1 Cor 9:24–27). The fact that winners at Isthmia were crowned with withered celery (Broneer 1962a) may have stimulated Paul to think of salvation as an imperishable crown (Broneer 1962b).

In addition to furnishing information on the officials and benefactors of the city, inscriptions also document a shift in the official language. Those published by Kent reveal that, of the 104 inscriptions dated prior to the reign of Hadrian (A.D. 117–38), 101 are in Latin and only 3 in Greek, while thereafter there are 39 in Greek and 17 in Latin. There may have been exclusive use of Latin in the early days of the colony, but Greek was the language of trade and commerce, and as the population expanded it would have become the most commonly spoken tongue. Its promotion to an official position, however, was delayed until the 2d century A.D.

The religious and ethnic diversity of the population of Corinth is graphically attested by excavated remains. The imperial cult is attested by a temple just off the forum (Stillwell, Scranton, and Freeman 1941: 168–79), but also by additions to the Isthmian Games. A series of competitions known as the Caesarea and run on a quadrennial basis was added under Augustus, and the imperial contests appear under Tiberius (Kent 1966: 28). Numerous shrines dedicated to Apollo, Athena, Aphrodite, Asclepios, Demeter and Kore, Palaimon, and Sisypus witness to the continuity of Greek cults (detailed references in *2 Corinthians* 32A, 15–18). Egyptian influence is documented by the worship of Isis and Sarapis (Smith 1977). The physical evidence for a Jewish community is late (possibly 4th–5th century A.D.) and meager, only a marble impost inscribed with three menorahs separated by lulab and etrog (Scranton 1957: 26, 116) and a cornice stone reused as a lintel and bearing the lettering [*syna*]*gōgē* hebr[*aiōn*] (West 1931: 78–79).

The complete absence of Jewish remains from the early Christian centuries is rather surprising, since Philo's specification of Corinth (and Argos), in counterdistinction to geographical regions in the rest of his description of the Diaspora, would seem to imply a particularly large and vital Jewish community at Corinth (*Leg.* 281). Jews may have fled to Sicyon in 146 B.C. (1 Macc 15:23). If so, they would have returned to join their coreligionists among the settlers of the new colony (*2 Corinthians* 32A, 20). Whether Corinth benefited by the expulsion of Jews from Rome by Tiberius in A.D. 19 (Smallwood 1981: 201–10) must remain an open question, and Luke's hint (Acts 18:2) that Jews came to Corinth as a result of the so-called Edict of Claudius in A.D. 41 should be treated with extreme skepticism (Murphy-

O'Connor 1983a: 130–40). The community would have increased significantly after A.D. 67 when, according to Josephus, Vespasian sent 6000 Jewish prisoners to work on the canal begun by Nero (*JW* 3.540). Most of them would have become freedmen eventually, because work on the canal did not last long, even though a tremendous amount of work was accomplished (Wiseman 1978: 48–50). Other Jews came from Palestine during and after the revolt of A.D. 132–35 (Justin, *Dial.* 1). On the basis of what is known about conditions elsewhere in the Diaspora, the Jewish community at Corinth would have been recognized as a *politeuma,* a corporation of aliens with permanent right of domicile and empowered to manage its internal affairs through its own officials (Smallwood 1981: 225). Jews, therefore, enjoyed a civic existence but were not citizens in the full sense, though individuals might achieve this status.

Modern writers adopt a view of the moral character of the colony that derives more from Athenian slanders of the 4th century B.C. (see above) and from Athenian envy of the 2d century A.D. (Alciphr. 15 and 24 [3.51, 60]) than from convincing contemporary data. If we exclude the evidence for gladiatorial shows (Apuleius, *Met.* 10.18), which Dio Chrysostom mentions only to indicate that the situation at Athens was worse (*Or.* 31.121), and the mildly erotic tale of a young man in the toils of a vampire (Philostratus, *V.A.* 4.25), all that remains is Apuleius' salacious tale of a woman copulating with a donkey (*Met.* 10.19–23), an act that others considered suitable for the theater (10.34–35). The fact that this episode is set in Corinth (it does not appear in the original Greek novel) owes less to reality than to Apuleius' sojourn in Athens, where he earned the title of the "Platonic philosopher" (Millar 1981). It speaks more of what he learned there than of actual conditions at Corinth. The proverb "Not for everyone is the voyage to Corinth" is used by Strabo in a sexual sense (8.6.20) but, as Horace makes clear (*Epist.* 1.17.36), the original meaning referred not to the danger of losing one's virginity but to the danger of losing one's shirt in the intense cutthroat competition of a boom town.

In choosing as one of his main missionary centers a city in which only the tough were reputed to survive, Paul demonstrated a confidence oddly at variance with his protestations of weakness. Corinth, however, offered advantages that outweighed its dangers. In addition to excellent communications, the extraordinary number of visitors (Dio Chrysostom, *Or.* 37.8; Aelius Aristides, *Or.* 46.24) created the possibility of converts who would carry the gospel back to their homelands. In contrast to the closed complacency of Athens (Geagan 1979: 378–89), Corinth was open and questioning, eager for new ideas but neither docile nor passive, as Paul's relationship with the Christian community there amply documents.

A. Introduction

The letter known to us as 1 Corinthians consists of the longest fully extant letter from the correspondence between Paul and the church at Corinth founded by him. The entire correspondence, however, it not extant. A previous letter mentioned in 1 Cor 5:9 has not survived, and from letters subsequent to 1 Corinthians there are one complete and several fragmentary letters now included in 2 Corinthians (whether 2 Cor 6:14–7:1 originally had anything to do with Corinth is not clear). This situation of having substantial parts of an ongoing correspondence is unique as compared with the other letters of the apostle because in all other instances we possess only one letter (Galatians, 1 Thessalonians, Philemon) or some fragments combined in a letter (Philippians, Romans). Methodologically, this requires that all parts of 1 and 2 Corinthians be interpreted not only on their own terms but also within the context of the correspondence as a whole, as far as it is extant. This correspondence consists not only of successive exchanges of letters but also of personal visits, all of it reflecting an important period in the earliest history of the church in Corinth, a period which was decisive for the history of the early Christian mission.

1 Corinthians is characteristically different from the letters included in 2 Corinthians in a number of respects. Being not only the longest of the extant letters sent to Corinth, 1 Corinthians also has its own literary genre and function. The arguments made in this letter have no parallel in 2 Corinthians, although there are many connections between the letters. Issues and events discussed in the later letters (2 Corinthians) can be properly understood only by comparison with the previous letter of 1 Corinthians. To some degree the reverse is also true: 1 Corinthians becomes clearer when one sees from 2 Corinthians what happened to the issues and events later.

1 Corinthians is rich in historical information. The letter reports on the earliest history of the Corinthian church and contains some important clues to Paul's own biography and career as an apostle. It provides just enough data concerning Paul's opponents to generate a plethora of hypotheses as to the character and theological views of these opponents. On the whole, 1 Corinthians contains the apostle's response to the

first phase of the Corinthian crisis which threatened the very existence of that church. Scholarship, especially in the 20th century, has clarified many problems posed by 1 Corinthians, but major challenges still need to be tackled. These pertain to the literary and rhetorical aspects in particular: the problems of literary genre, function, and composition are still being discussed. Also, a consistent interpretation of the letter within the correspondence as a whole is still needed. Considerable progress has been made regarding social history (Hock 1980; Theissen 1982; Malherbe 1983; Meeks 1983); history of religions (Klauck 1982; Willis 1985); and rhetoric (Bünker 1984; Betz 1986; Welborn 1987; Mitchell 1989).

1 Corinthians is comparatively well attested in antiquity (Moffatt 1918: 114–16). *1 Clement* knows it and quotes from it (37:5; 47:1–3; 49:5), as do Ignatius of Antioch (*Eph* 16:1; 18:1; *Rom* 5:1; 9:2; *Phld* 3:3; see Schoedel *Ignatius of Antioch* Hermeneia, 9–10) and Marcion (Harnack 1924: 47–48, *79–*96). In the Muratorian Canon the two Corinthian letters head the list of the Pauline epistles. Early papyri have preserved 1 Corinthians in its entirety (esp. P 46, ca. A.D. 200) or in fragments (Conzelmann *1 Corinthians* Hermeneia, 1–2; Aland 1987: 83–102).

B. Date and Place of Writing

The place of composition of 1 Corinthians is clearly Ephesus, as Paul states in 16:8. The same verse indicates that the letter was composed in or near springtime, as Paul is awaiting Pentecost at Ephesus, yet plans to journey to Corinth and perhaps to winter there (16:6). Beyond the time of year, 1 Corinthians gives us no further specific information about its date of composition.

If we allow evidence from the Acts of the Apostles into the discussion of Pauline chronology, we have two other date markers, not for the composition of 1 Corinthians per se, but for Paul's visit(s) to the city of Corinth (Murphy-O'Connor 1983: 129–52; Lüdemann 1987: 202–12). However, neither of these two date markers is unambiguous.

In Acts 18:1–2 we are told that Paul, upon reaching Corinth, met Aquila and Priscilla, who had just come from Italy because the Roman emperor Claudius (41–54 C.E.) had expelled all the Jews from Rome. The Roman historian Suetonius (*Claud.* 25.4) corroborates the existence of such an event (and adds that these were disturbances at the instigation of a "Chrestus") but gives no date. Parallel accounts supplied by Dio Cassius (*Hist.* 60.6.6) and Augustine's pupil Orosius (*Hist. contra Pag.* 7.6.15–16) provide conflicting testimony in regard to the date and description of such an occurrence involving Claudius and Jews at Rome. Traditionally scholars have supported Orosius' testimony, which dates the Edict of Claudius in 49 C.E., thus roughly compatible with the term of office of Gallio (Conzelmann Hermeneia, 13; Jewett 1979: 38). Challenges to this position have recently been made by Luedemann (1984: 170) and Murphy-O'Connor (1983: 136), who prefer 41 C.E. (with Dio Cassius) for the Edict of Claudius.

In Acts 18:12–17, Paul is said to have made an appearance before the Roman proconsul of Achaia, Gallio, whose name is contained in a fragmentary inscription found at Delphi which is dated to the 26th acclamation of Claudius as emperor. The Gallio inscription permits us to date Gallio's term in office from either 51/52 or 52/53 (Conzelmann, 13). Scholars differ in regard to whether the account in Acts 18 is simply historically unreliable (Murphy-O'Connor 1983: 140) or whether Luke has fused events from more than one Pauline visit to Corinth. G. Luedemann (1984: 162–73) champions the latter position, dating Paul's initial visit to Corinth in 41 C.E. (coinciding with the Edict of Claudius) and places Paul's presentation before Gallio in 51/52 C.E. during Paul's third visit to Corinth. Generally, however, scholars have tended (with Luke) to fuse the two events and date the founding visit to Corinth (which was at least one year and a half in duration according to Acts 18:11) ca. 51 C.E. Proceeding from this date, and allowing enough time for Paul to return to Ephesus from the missionary tour of Acts 18:22–23 results in a date for the composition of 1 Corinthians in the range of 53–55 C.E. (53/54 Barrett *1 Corinthians* HNTC, 5; 54 Bornkamm 1969: 70; 55 Conzelmann, 4, n. 31; 55/56 Jewett 1979: 104).

C. Occasion of the Letter

In 1 Cor 3:6 Paul states that he "planted" the church at Corinth, claiming himself as its founder, while Apollos, he says, "watered" it. This accords with the traditions about the church at Corinth preserved in Acts 18 and 19. According to Acts 18:1–11, Paul arrived in Corinth and, after meeting Aquila and Priscilla, first took his message into the synagogue and persuaded both Jews and Greeks to the gospel.

Many Corinthians believed and were baptized (cf. Acts 18:8, 10). Paul encountered Jewish opposition (18:6, 12–17), and we are told that he stayed with Titius Justus, a God-fearer whose house was next door to the synagogue (18:7). Jewish opposition was not unanimous, as two synagogue leaders, Crispus (Acts 18:8; 1 Cor 1:14) and Sosthenes (Acts 18:17; 1 Cor 1:1), became Christians, but it was serious, as Paul was led before the Roman proconsul Gallio (18:12–17).

After remaining in Corinth for more than a year and a half (18:11, 18), Paul set out for Syria and other parts E with Aquila and Priscilla (18:18–22), who stayed at Ephesus when Paul moved on. While Paul was on an extended missionary tour (18:18–23), Apollos, an Alexandrian of rhetorical skill, met Aquila and Priscilla in Ephesus (18:24–26). After they had correctly instructed him in the Christian faith, Apollos, armed with a letter of introduction, journeyed to Achaia and its capital, Corinth (18:27; 19:1). Acts 19:1 explicitly states that Paul and Apollos were not in Corinth at the same time. 1 Corinthians itself demonstrates that it postdates Apollos' appearance at Corinth (1:12; 3:4–6; 4:6; 16:12). Acts 19 recounts a long sojourn by Paul in Ephesus (19:8, 19). This is usually taken to be the time when Paul wrote 1 Corinthians (Barrett, HNTC, 5; Hurd 1983: 14).

1 Cor 5:9 indicates that Paul had written a letter to the Corinthians prior to the letter we know as 1 Corinthians. Most probably this letter is lost (although some scholars identify it with the letter fragment in 2 Cor 6:14–7:1).

Much communication between Paul and the church at Corinth preceded the composition of 1 Corinthians and in fact instigated it. Sosthenes (usually identified with the leader of the synagogue who was persecuted among the Christians in Acts 18:17) is with Paul and is the co-sender of the letter (1:1). "Chloe's people" have come and reported to Paul about the divisions among the community (1:11). A letter has been sent to Paul (7:1) and Paul has also received another delegation of Corinthians including Stephanas, Fortunatus, and Achaicus (16:17). Apollos has left Corinth and is apparently also at Ephesus (16:12). It is impossible to tell which if any of these communiqués belong together (i.e., if one of the delegations brought the letter, if Chloe's people are identical with the group named in 16:17, etc.).

Within 1 Corinthians, Paul explicitly responds to the report by Chloe's people that the community was divided (1:11; cf. 11:18) and to a letter from some members of the church (7:1). The news from Chloe's people (probably confirmed by the other communiqués) is that in Paul's absence the church community has been divided into various groups. The slogans Paul cites in 1:12 show that Corinthian factions claim allegiance to Paul, Apollos, and Cephas, and perhaps Christ. Specific issues are at the heart of this divisive scene: sexual morality, civil litigation, marriage, idol meat consumption, hairstyles, proper behavior in community worship (the Lord's Supper, manifestations of the spirit), and resurrection. This is the situation to which Paul responds in 1 Corinthians.

D. Corinthian Parties and Opposition to Paul

The question of Paul's opponents in Corinth has been under discussion ever since Ferdinand Christian Baur (1845: 259–332; for the history of research, see Räbiger 1847; Hurd 1983: 96–107; Lüdemann 1983: 103–25). The discussion has led to famous theories not only about Corinth but also about developments in early Christianity generally (the so-called Tübingen School). Concerning the opponents in Corinth, however, there is no reliable evidence apart from Paul's polemical and apologetic arguments. This situation raises the methodological problem of how to reconstruct historical facts from strongly biased reports (Berger 1980; Welborn 1987). Basically, these questions must be distinguished: (1) What was the origin and nature of the opposition to Paul? (2) How as the anti-Pauline opposition related to the factions in the church at Corinth? (3) Do 1 and 2 Corinthians presuppose the same opposition, or has the opposition changed after 1 Corinthians?

(1) 1 Corinthians shows that the opposition to Paul originated because of his own claim to be of the same rank as the Jerusalem apostles (1 Cor 9:1–2; 15:3–11). Paul's role as a missionary apostle must not have raised objections, but his claim to higher authority and even independence must have provoked criticism even prior to the writing of 1 Corinthians. See APOSTLE. The apostle's defensive remarks in 9:1–2 and 15:8–9 presuppose such criticism, if not in Corinth, then elsewhere. Paul's self-commendation as the model to imitate (4:16; 11:1) may have intensified the opposition to him. Since there is no reason to

doubt that Paul founded the Corinthian church (1:14–17; and many passages in 1/2 Corinthians, Romans, and Acts), this in itself must have looked illegitimate to his opponents. We would know more if more information were available about what actually happened at the founding of the church. It appears that the opposition was in some way related to rivalry between different house churches. In Corinth there seem to have been several house churches (16:15; cf. 11:22) and a full assembly, called *ekklēsia* (1:2; 11:17–34; 14:23, 26).

(2) Since Paul was close to the houses of Stephanas (1:16; 16:15–17) and Gaius (1:14; Rom 16:23), perhaps the opposition arose in other house churches unfriendly to Paul (see Klauck 1981). Such rivalries may stem from their different histories and resulting outlooks. Was the church a union of several house churches? Such a possibility is even suggested by the report in Acts 18:1–17. If this can be assumed, Paul's goal for the church may have been to solidify union among divergent house churches, rather than to prevent an already healthy union from breaking up into factions. Paul's exhortation that the whole church should submit to the leadership of Stephanas (16:16) seems to show that no generally accepted leadership existed at that time.

The four factions named by Paul (1:12; 3:4, 22–23), however, do not seem to have existed at the beginning but emerged later. Because of this development the original founders (1:14, 16; 16:15–17; Acts 18:7–8) were reduced to the Paul party and found themselves competing with other parties named after Apollos, Cephas, and Christ. Little is known about the party of Apollos (1:12; 3:4–6, 22; 4:6; 16:12; Acts 18:24; 19:1); there is no evidence that this party was opposed to Paul (differently, Sellin 1982; cf. Hurd 1983: 97–99). Most likely the Cephas party was the center of the anti-Pauline opposition (1:12; 3:22; cf. 9:5; 15:5). Since Paul tries to dissociate Apollos, Cephas Peter, and even himself from the parties acting in their names, it is difficult to say how much they were involved in the disputes. Although Paul certainly was involved, Apollos does not seem to have been (cf. Paul's commendation in 16:12), while it is not certain whether Cephas ever went to Corinth (Barrett, HNTC 1–12; Hurd 1983: 99–101; Vielhauer 1975: 341–52). No doubt a difficult relationship existed between Paul and Cephas after the conflict at Antioch (Gal 2:11–14). The anti-Pauline opposition in Galatia seems to have been connected with similar opposition in Corinth, Philippi, and Rome. Greatest is the uncertainty with regard to the Christ party mentioned in 1 Cor 1:12 but not in 3:4 and 3:22. In Paul's own view, the Christ party would be the one to which all Christians belong (1:13; 3:23; also 1:2; 2 Cor 10:7). This party would be identical with the "Body of Christ," of which all Christians are "members" (1:4–9, 30; 6:15; 10:16–17; 11:3, 27, 29; 12:12–27). Therefore, did a Christ party exist in Corinth in distinction from the church and in competition with the other parties? Or was the Christ party Paul's invention, intended to show the absurdity of the other parties? Or was the slogan "but I am Christ's" (1:12) a gloss later inserted by a scribe who had well understood Paul's point? Even if Paul invented the Christ party it could also have been invented by somebody else for the same reason. The fact that this party is mentioned only once in 1:12 makes it most likely that it represents an ironic addition by the apostle as he describes the noisy sloganeering (Lüdemann 1983: 118, n. 48).

About Apollos we know almost nothing and even less about people acting in his name. The Cephas party no doubt subscribed to the Cephas/Peter ideology (3:10–15; cf. Matt 16:17–19; Rom 15: 20). In the history of research much attention has been paid to the elusive Christ party (Baur 1845: 261–322; Hilgenfeld 1865; Räbiger 1847; Lütgert 1908; Rohr 1911; Schlatter 1914; Weiss 1917: 257–58; Hurd 1983: 101–6). More recently Walter Schmithals, building on the work of Lütgert, characterized the opponents of Paul as gnostics who had an already developed gnostic mythology and theology and who identified themselves as "christs" *(christoi)* (Schmithals 1971: 199–208; 374–77). Conzelmann has rightly objected that there is not enough evidence for Schmithals' far-reaching theories. There certainly are "traces of the beginnings of the formation of what later presented itself as 'Gnosticism,' that is, 'Gnosticism *in statu nascendi*. The Corinthians could be described as proto-Gnostics" (Conzelmann, 15). Was this incipient gnosticism represented by one of the parties? Or did it characterize the theology of the whole church? Or if Reitzenstein (1978: 68–89; 426–500) is right, Paul himself may be the gnostic who shared many ideas with the Corinthian enthusiasts, so that the opposition to him may have been anti-

gnostic. If the opposition to Paul was connected with the Cephas party, Paul's critique of gnosticizing ideas may not be aimed at his opponents but at wrong conclusions drawn by some from his own earlier preaching. This assumption would explain why Paul, on the one hand, has no fundamental disagreements with the Corinthian "people of the spirit" *(pneumatikoi)* while, on the other hand, he criticizes theological propositions that could have been derived from his own teaching.

(3) While Schmithals still defends his view that the Corinthian gnostics were Paul's opponents in both letters (Schmithals 1983: 107–24), Georgi (1986) has renewed his thesis that, after 1 Corinthians, intruders in Corinth had introduced new opposition. There is no doubt that the letters give the impression that the opponents are different in 1 and 2 Corinthians, a fact insufficiently recognized by Schmithals. On the other hand, Georgi has difficulties in explaining what connections there must have been between the opponents of 2 Corinthians and those of 1 Corinthians. This question, therefore, remains unsolved.

E. Literary Analysis

1. Literary Composition. a. Division Theories. Questions regarding the number of letters Paul wrote to Corinth and their literary integrity began with Johann Salomo Semler (1725–91) and his students (Betz *2 Corinthians 8 and 9* Hermeneia, 3–36). During this debate also the unity of 1 Corinthians was questioned (for surveys and bibliography, see Clemen 1894; Moffatt 1918: 113–14; Kümmel 1975: 276–78; Vielhauer 1975: 140–41; Hurd 1983: 45–58). The theories of Johannes Weiss have been of great influence. In his commentary (1910: xl–xliii) he proposed that 1 Corinthians is the work of a redactor who created the letter out of two letters and who added his own interpolations: Letter A is the epistle mentioned in 1 Cor 5:9, sent from Ephesus and containing 2 Cor 6:14–7:1 and then 1 Cor 10:1–23; 6:12–20; 9:24–27; 11:2–34; 16:7b–9, 15–20. Letter B was sent from Macedonia and contained 1 Cor 1:1–6:11; 7; 8; 13; 10:24–11:1; 9:1–23; 12; 14; 15:1–16:7a; 16:10–14, 21–22. Redactional glosses and interpolations are, according to Weiss: 1:2; 4:17; 7:17; 11:16 (these interpolations giving the letter a "catholic" appeal); and 14:34–35; 10:29–30; 11:11–12. While these theories were meant to be merely suggestive, they became part of the ongoing discussions. By his last work (*Das Urchristentum*, published posthumously in 1917), Weiss had revised his theory, speaking now of four letters: Letter A, a rigorous exhortation to break with paganism, includes 1 Cor 10:1–23; 6:12–20; 11:2–34; 16:7(?), 8–9, 20–21(?); 2 Cor 6:14–7:1. Letter B-1 was written in response to questions from the Corinthians and included 1 Cor 7–9; 10:24–11:1; 12–15; 16:1–6, 7(?), 15–19(?). Another letter, B-2, reacts anxiously to bad news arriving from Corinth (1 Cor 1:1–6:11; 16:10–14, 22–24[?]). Letters C and D are from sections of 2 Corinthians (Weiss 1917: 271–72). While the debate subsided in the thirties, after World War II it was revived by Walter Schmithals in a number of important publications. Schmithals also kept changing his theories. In his dissertation of 1956 he proposed two letters (Schmithals 1971: 87–110, 332–43): Letter A begins with 2 Cor 6:14–7:1 and continues with 1 Cor 9:24–10:22; 6:12–20; 11:2–34; 15; 16:13–24. Letter B contains 1 Cor 1:1–6:11; 7:1–9: 23; 10:23–11:1; 12:1–14: 40 (with chaps. 13 and 14 reversed); 16:1–12. Subsequently Schmithals proposed completely different hypotheses, dividing 1 and 2 Corinthians into 9 (1973: 263–88) and later 13 letters (1984: 19–85). The period between ca. 1950 and 1980 saw the emergence of ever changing division hypotheses by Dinkler (*RGG*^{3} 3: 17–21); Schenk (1969: 219–43); Suhl (1975: 203–13); Jewett (1978: 389–444); Schenke and Fischer (1978: 92–94; 98–100); and Senft (*Corinthians* CNT, 17–19).

These division hypotheses (also called "partition theories") respond to the following incongruities perceived in 1 Corinthians (for discussion of these arguments, see Weiss 1910: xl–xliii; Schenk 1969; Schmithals 1971: 87–101; 1973; Conzelmann, 2–5; Suhl 1975: 203–13; Jewett 1978; Senft CNT, 17–19; Hurd 1983: 43–47; Merklein 1984):

(1) Contradictions Between 4:17–21 and 16:5–11. In 4:17 Paul announces that Timothy has been sent, but in 16:10 he talks of Timothy's visit conditionally and with a concern for his cordial reception which was absent in 4:17. In 4:19 Paul announces that he will come "quickly" but in 16:8 says that he will remain until Pentecost in Ephesus. The section 4:16–21 with its exhortation and travel plans is characteristic of a letter-closing formula but inappropriate for the middle of a letter (Schenk 1969: 235; Schmithals 1973: 266; Senft, 18). Schmithals has made the same argument in regard to 11:34b (1973:

281). Weiss also argued that the reference in 15:32 to a past persecution in Ephesus is strange if indeed the letter was sent from Ephesus as 16:8 indicates (1910: xli–xlii).

(2) Different Epistolary Occasions. The visit of Chloe's people and their report of divisions in the community seems to provide a different reason for Paul's writing from the Corinthian's letter mentioned in 7:1. In 1:16 Paul refers to the house of Stephanas without further comment, whereas in 16:15–18 he suddenly announces the arrival of a delegation including Stephanas. Most importantly, in 1:11 Paul knows from Chloe's people that divisions exist in the church, but in 11:18 seems ignorant of that fact and of the seriousness of the situation (Weiss 1910: xli, 278; Schmithals 1971: 90–91). 1 Cor 5:9 speaks of a previous Pauline letter to Corinth which is lost if our canonical 1 and 2 Corinthians are unified letters. This "lost letter" has been reconstructed by scholars from 2 Cor 6:14–7:1 and sections of 1 Corinthians (Weiss 1910: xli; Schenk 1969: 221–23; Schmithals 1971: 94–95).

(3) Literary Breaks. It has been argued that all sections of 1 Corinthians beginning *peri de,* "and concerning …" (7:1, 25; 8:1, 4; 12:1; 16:1, 12) respond to the Corinthians' letter mentioned in 7:1, and thus must belong to the same letter by Paul, the so-called *Antwortbrief* ("letter of response") (Schmithals 1971: 91; 1973: 268–73; Schenk 1969: 229; Senft, 19). Because "it is to be expected that Paul carries through the answering of the letter without any major digressions" (Schmithals 1971: 91), all sections in chaps. 7–16 not introduced by *peri de* (9:1–11:1; 13:1–15:58; 16:13–24) must belong to a different letter or letters. In general, proponents of division theories have perceived hard transitions throughout 1 Corinthians, which call the unity of the letter into question (5:1; 6:12; 7:1; 9:1; 9:24; 10:1; 10:23; 11:2; 12:1; 13:1; 15:1). In particular, dual treatments of idol meat in chaps. 8 and 10 (one lenient and the other harsh), and spiritual gifts in chaps. 12 and 14, in each case interrupted by the intervening arguments in chaps. 9 and 13, have been of significance for such theories (Weiss 1910: 212; Schmithals 1973: 268–73).

Each division theory resolves these apparent inconsistencies by dividing 1 Corinthians (and often parts of 2 Corinthians) into several distinct letters and constructing a historical scenario to which the letter fragments correspond. Schenk (1969: 242–43), Suhl (1975: 203–13), and Jewett (1978: 398–444) have attempted to reconstruct the redactional work responsible for our canonical 1 Corinthians. The sheer variety of the division theories proposed demonstrates a lack of scholarly consensus as to both proper methodology and specific analysis of the text (Barrett HNTC, 17).

b. Unity Theories. As noted above, the unity of 1 Corinthians went virtually unquestioned until the late nineteenth century (Clemen 1894: 19–57). Since the rise of division theories, the unity of 1 Corinthians has more often been assumed (Marxsen 1968: 76; Bornkamm 1969: 244) or conceded (Barrett, HNTC, 14–17; Conzelmann, 2–4) than argued for. The harsh transitions in the letter have been explained as a result of pauses in dictation (Barrett, 15; Conzelmann, 3, n. 20; Fascher *1 Korinther* THKNT, 44) or of fresh news received by Paul (Barrett, 15).

The first sustained argument in favor of the literary unity of 1 Corinthians was made by J. C. Hurd (1983). Hurd contends that the variety in tone and content within 1 Corinthians is a result of the different kinds of information Paul had received (1983: 47–58). He distinguishes three stages of oral and written communication between Paul and the Corinthians prior to 1 Corinthians: (1) Paul's first preaching in Corinth and the founding of the church; (2) his previous letter to the Corinthians (5:9–10); (3) "Information in reply, partly oral and partly written, brought to Paul from Corinth by Stephanas, Fortunatus and Achaicus and by Chloe's people. Some of this information was in the form of questions addressed to Paul by the Church; some in the form of comments on the situation at Corinth by some or all of the travellers" (Hurd 1983: 58). Hurd also proposes (1983: 213–39) that this Corinthian reply provided the outline for 1 Cor 7–16, where the apostle responds point by point to the Corinthians' questions and objections to his first letter. In sections where Paul responds to oral information (1:11–6:11 except 5:9–13a; 11:17–34), this tone is "aroused, even angry," whereas the sections which reply to the Corinthians' letter (5:9–13a; 7:1–11:16; 12:1–14:40; 16:1–9, 12) are "calm and balanced" (1983: 61–94).

Hurd's theory is significant in its attempt to prove rather than assume the unity of 1 Corinthians, but depends perhaps too much upon historical reconstruction and psychologizing. The assumption behind Hurd's thesis is surprisingly the same as Schmithals' (1971: 91), that by the *peri de* formula Paul

responded point by point to the Corinthians' letter. Recent works have argued that, in the arrangement of topics in 1 Corinthians, Paul was governed by his own rhetorical purposes and was not confined to the order of the Corinthians' letter (Lührmann 1986: 305; Mitchell 1989). Similarly, rhetorical rather than historical reasons can account for some of the "inconsistencies" between 4:17–21 and 16:5–11, and between 1:11 and 11:18. An important critique of the bases of partition theories of 1 Corinthians was provided by Merklein (1984: 153–82), who argued for the literary coherence of the letter.

2. Compositional Analysis. The following brief analysis of 1 Corinthians argues for the unity of the letter. 1 Corinthians demonstrates both thematic and rhetorical unity when seen as a deliberative letter convincing the Corinthians to be reconciled and end their factionalism (for a detailed argument, see Mitchell 1989).

1:1–3 Epistolary Prescript.

1:4–9 Epistolary Thanksgiving, forming the *exordium,* which introduces key terms of Corinthian debate and of the epistle (Betz 1986: 26–39). The *exordium* ends appropriately with a call to unity in the *koinōnia* ("partnership") of Jesus Christ.

1:10–17 Statement of Facts, or *narratio,* of the argument in the body of the letter. Verse 1:10 is the *prothesis* or thesis statement of the argument of the entire letter, which calls on the Corinthians to end their factions and be reconciled with one another. In the brief *narratio* Paul rebuts any factionalists' claims resulting from baptism by the leaders (1:13–17).

1:18–15:57 Proof or *probatio,* in 4 subsections.

1:18–4:21 *First Proof Section,* which contains Paul's analysis and interpretation of the terms of the formula in 1:5 ("rich in every form of speech and in every form of knowledge"). The concepts of "speech" *(logos)* and "wisdom" *(sophia)* are discussed in 1:10–2:16, while "knowledge" *(gnōsis)* is examined in 3:1–23 (Betz 1986: 26–39). Corinthian boasting, an obvious expression of party politics, is rejected (1:26–31; 3:18–23).

This section lays the groundwork for the rest of the argument in three ways: (1) Paul redefines the goals and standards by which the Christian should make decisions (a common strategy in deliberative rhetoric); (2) he demonstrates their need for his advice for unity by censuring the Corinthians (chaps. 3–4, which contain epideictic elements); (3) Paul argues that he is the best one to advise them by describing his own apostolic office and responsibility in comparison with the Corinthians (esp. 4:14–16). "Therefore, I urge you, brothers, be imitators of me" in 4:16 points both backward (it forms an *inclusio* with 1:10) and forward to Paul's rhetorical strategy throughout 1 Corinthians. He will present himself as the example of the nondivisive behavior he urges the Corinthians to adopt (7:7; 8:13; 9:1–27; 10:33–11:1; 14:18–19).

5:1–11:1 *Second Proof Section* in which Paul treats the specific issues now dividing the community as subordinate arguments in his overall argument to convince the Corinthians to be unified. This section treats relations between Corinthian Christians and outsiders, and among Corinthian Christians within the larger context of the city of Corinth.

Ch. 5–7 *Porneia.* These arguments are grouped around the central issue of *porneia,* "sexual immorality" (mentioned in 5:1, 9, 10, 11; 6:9, 13, 15, 16, 18; 7:2).

5:1–13 *A case of porneia.* Paul begins the second proof section with a discussion of sexual immorality for two reasons: (1) *porneia* stands at the beginning of the list of vices which must have been known to the Corinthians from the beginning (5:10, 11; 6:9–10); (2) before arguing for the unity of the church community Paul must define clearly the boundaries between "insiders" and "outsiders" (5:9–13). Paul executes a legal decision in regard to this man who has married his father's wife. He is to be expelled from the community (5:13) and thus is not included in the unity to which Paul calls the church.

6:1–11 *Court Battles.* In 6:1–11 Paul continues to draw distinctions between "insiders" and "outsiders" (6:1–6). Some persons are taking fellow Christians to civil court. This is another cause and

manifestation of the divisions within the community. Paul urges the Corinthians to deal with such issues within the community and not before outsiders.

6:12–20 *Another discussion of porneia,* along with a treatment of the Corinthian definitions of freedom which justify such actions (6:12), Paul counters these slogans with an appeal to expediency (a part of Paul's argument of redefinition of both freedom and expediency in 1 Corinthians (6:12, 19–20; 8:9; 9:1–27; 10:23–11:1). The "body of Christ" image is introduced (6:15–17) as a corrective to Corinthian individualism and divisiveness; image is fully expanded in chap. 12.

7:1–40 *Marriage and Status.* The section begins "concerning the things you wrote." This *peri de* formula (see above) is used also in 7:25; 8:1, 4; 12:1; 16:1, 12, and introduces a new topic for discussion. The general principle Paul evokes in each of the various cases in chap. 7 is—don't seek to alter your social status (7:8, 17–24, 27, 40) but realize your calling *(klēsis)* (7:15, 17–24; cf. 1:9, 26).

Ch. 8–10 *Idol Worship and Freedom.* Since idol worship *(eidōlolatria)* comes after *porneia* in the vice catalogue (5:10, 11; 6:9), the issues in 8:1–11:1 may be subsumed under this term (see 10:7, 14; cf. 8:1, 4, 7, 10; 10:7, 14, 19). The two complementary treatments of idol meat in chap. 8 and in chap. 10 frame Paul's self-exemplification of the proper use of freedom in chap. 9. The *peri de* formula in 8:1 does not mean that Paul here responds to the Corinthian letter in its order, but is simply a common formula for changing a topic (Mitchell 1989).

8:1–13 *Idolatry, First Treatment.* Paul urges love *(agapē)* over knowledge *(gnōsis)* as the fundamental value. It is true that idols do not exist (8:4–6) but the issue is more complex. 8:9 states a general ethical principle: "lest this your *exousia* ("liberty") might be an offense to this weak." One should sacrifice small freedoms for the sake of the many (8:13).

9:1–27 *Paul the example of proper use of freedom.* Paul establishes that he has the right to support from the gospel (9:3–12a) but has freely renounced that right (9:12b, 17). Such self-renunciation, translated into accommodating social behavior (9:19–23), is what he urges on the Corinthians. 9:24–27 stresses the eschatological goal as the fundamental context of Christian decision making.

10:1–22 *Idolatry, Second Treatment.* A series of rebellious episodes from Israel's wilderness traditions are presented as types (10:6, 11) of Corinthian factionalism and strife. The Corinthians are warned not to destroy themselves as the wilderness generation did—by desiring food, idolatry, and *porneia.* The unifying role of the eucharist in establishing the *koinōnia* of the community is appealed to.

10:23–11:1 This passage provides a conclusion to the second proof section (8:1–11:1). The new ethical principle of *agapē* is stated: "Let no one seek his/her own advantage, but that of the other" (10:24; cf. 13:5). Paul again presents himself as the example of this nonfactionalist behavior (10:33), who is to be imitated, as he imitates Christ (11:1).

11:2–14:40 *Third Proof Section.* Manifestations of Corinthian divisiveness when they come together in worship are discussed, as Paul continues to appeal for unity.

11:2–34 *Corinthians and Tradition.* The two subsections 11:2–16 and 11:17–34 are subsumed under the topic of tradition (11:2, 23; cf. chap. 15).

11:2–16 *Hairstyles in Worship.* A woman should be veiled in prayer but a man should not (11:4–10). Paul rejects the contentiousness which finds expression in the hairstyle controversy (11:16).

11:17–34 *Disorders at the Lord's Supper.* Corinthian factions manifest themselves in changing the celebration of the Lord's Supper. Paul calls the Corinthians to unity in the sacrament by appealing to the original tradition (11:23–26). This important text is our earliest witness to the tradition history of the eucharistic formula in the early Church.

12:1–14:40 *Spiritual Gifts.* Again two treatments of the same topic: spiritual gifts (chaps. 12 and 14) frame an exemplary argument, here on love (chap. 13). Paul urges unity and order in worship as 14:40 forms the conclusion to the third proof section.

12:1–31a *Spiritual Gifts. First Treatment.* Paul applies the political image of the body, theologized into the body of Christ, to the factionalism at Corinth. The goal, as in 1:10, is the end of *schismata,* "divisions" (12:25). Each person has a *charisma,* and all are given, not for individual, but for the communal advantage (12:4–11).

12:31b–13:13 *Love.* This "encomium on love" serves to exemplify the greatest gift—love *(agapē)*—by which the community will be reunified (see esp. 13:4–7). This chapter plays the same rhetorical function as chap. 9, by extrapolating and developing the general unifying principle which Paul embodies.

14:1–40 *Spiritual Gifts. Second Treatment.* Paul tells them to seek those spiritual expressions which promote unity (prophecy and interpretation of tongues, 14:3–5, 13), rather than speaking in tongues, which is divisive (14:2, 6–12). Paul exhorts the Corinthians to build up the church (14:4–5, 26) and stop their partisanship and separation from one another. He urges peace (14:33) and orderliness (14:40) in Corinthian worship.

15:1–57 *Fourth Proof Section.* It is only fitting that chap. 15, dealing with the resurrection from the dead, stands at the end. Divisiveness is caused by the fact that some at Corinth deny the resurrection (15:13), a view here refuted by Paul on the basis of the tradition of Christ's resurrection (15:1–11, 12–28), and an argument on the resurrected body (15:35–57). This eschatological section highlights the final goal in relation to which the Corinthians should make all their decisions. Eschatology plays this role in the *exordium* (1:7–8) and throughout the argument (3:12–15; 4:1–5; 6:3; 9:24–27).

15:58 Conclusion or *peroratio.* Paul sums up his argument in 1:10–15:57 by urging the Corinthians as they stand in expectation of the *eschaton* to follow the course of unity, for it will prove to be to their advantage ("your work is not in vain in the Lord"). This conclusion corresponds to the *exordium* (1:4–9), as it should.

16:1–24 Epistolary Closing, containing travel plans, final admonitions, and greetings.

16:1–12 Information about forthcoming visits of Paul (16:1–9, including instructions on the collection for the saints), Timothy (16:10–11), and Apollos (16:12).

16:13–18 First Paul reiterates the argument in the letter (16:13–14), "Let all things be yours in love" and then supplements this general advice for unity with a concrete political dictum: the Corinthians are to obey the house of Stephanas (16:15–16).

16:19–21 Customary epistolary greetings (16:19–20), to which Paul adds his by his own hand, which serves as an authentication formula (16:21).

16:22–24 Solemn curse (16:22a) and the prayer *maranatha* ("Our Lord, come" [16:22b]). The letter appropriately concludes with a two-part final blessing (16:23–24), for grace *(charis)* and love *(agapē).*

F. Theological Significance

Some scholars have criticized 1 Corinthians for its poverty of theological doctrine (Bauer 1971: 219), while others (Conzelmann, 9) have argued that the letter contains "applied theology." The problem with that view, however, is that all the letters of Paul are applied theology. What is then distinctive about 1 Corinthians? First, there are a number of formal features which make the letter unique: 1 Corinthians as a letter is part of a sequence of exchanges, written and oral, and its theology must be derived from the sequence as a whole as well as its particular expression in this letter. In this dialogue 1 Corinthians represents Paul's answer to a number of questions addressed to him by the Church (7:1, 25; 8:1; 12:1; 16:1, 12). Together with preceding (5:9) and following letters (2 Corinthians), messengers and visitors coming from and going to Corinth, 1 Corinthians is part of an ongoing process of educating the Church in the belief and practice of the new Christian religion (Betz 1986: 26–27). This educational process does not simply consist of Paul delivering authoritative doctrines and rules for behavior, but the apostle makes his readers partners in a theological debate. His methods of argument show influences from what may be called the Socratic tradition (Betz 1972). Paul not only instructs his readers, he also stimulates their own thinking and elicits their own answers. At any rate he presumed that the matters regarding Christian belief

and behavior can be argued in a rational way, especially since rationality was believed to be informed by the Holy Spirit.

In terms of theological doctrines, attention must be given to the situation of the Church in general and of the Corinthian church in particular, to the practical and theological problems at hand, to the presuppositions and conclusions involved on each side of the arguments, and to Paul's own doctrinal stance as he develops his recommendations. The situation of the Corinthian church provided Paul with a novel experience. This church was founded in one of the centers of Hellenistic culture (see the studies on social history by Malherbe 1983; Theissen 1982; Meeks 1983). In Corinth the Pauline mission had succeeded—seemingly for the first time—in winning converts from the better-educated and cultured circles of a prosperous and cosmopolitan city. The congregation had access to material as well as spiritual wealth, both proverbial assets of the city of Corinth. From the scarce evidence available to us we can infer that the church was diverse in its makeup. There were in it sharp distinctions socially, intellectually, and probably ethnically. The considerable number of travelers to the church meant connections with and influences from outsiders, relating to various groups inside. Early on, various members of the church seem to have interpreted Paul's gospel in diverse ways. Some seem to have developed it further in conformity with Hellenistic religiosity. This must have led to changes in the performance and understanding of rituals Paul found disagreeable (1:13–17; 15:29; 11:17–34; Klauck 1982; Willis 1985). The older Jewish-Christian ethos as reflected in the moral catalogs (1 Cor 5:9–11; 6:9–10) gave way to the lifestyle of the big Hellenistic city, where freedom from tradition and convention, experimentation with new ideas, and excitement about spiritual experiences were the standards for achievement. Consequently it is not surprising that the values of Hellenistic city life and religiosity dominate the discussion.

The picture of the Corinthian church which Paul depicts shows a bewildering mixture of positive and negative developments that have taken place since Paul's founding visit. Positively, the church was flourishing; negatively, however, internal dissension threatened to tear it apart. Party slogans (1:12; 3:4; 6:12; 10:23) advocated "political rhetoric" rather than thorough theological thinking. Some church members apparently acted more as an avant-garde, while others expressed a cautious conservatism. One group's expression of freedom must have been a scandal to other groups. Thus, to the apostle the church presented a rather distressing picture: so-called spiritual experiences justifying excesses and abuses of freedom in complete disregard for the life of the community, all signs of a disintegrating community.

As far as we can tell, this situation was without precedent in Paul's missionary experience and thus presented him with a new challenge. In 1 Thessalonians and Galatians the apostle had advocated life in the spirit without reservations. Confronted with the Corinthian problems, however, he was forced to marshal all his available resources in a new way in order to come to grips with the issues. Theologically, Paul begins with the self-understanding of the Corinthians as he sums it up in 1:5: "in everything you have been made rich in him [Christ], in every form of speech and in every form of knowledge." This claim of possessing an abundance of speech and knowledge (*logos kai gnōsis*) becomes the focus of Paul's argumentation throughout the letter and even in 2 Corinthians (Betz 1986: 26–48). Applying to it the christology of the Christ crucified (1:13, 17, 18–25; 8:11) and the doctrine of justification by faith (1:26–31), Paul analyzes critically the notions of speech (*logos*), wisdom (*sophia*), and knowledge (*gnōsis*) in 1:18–3:23. Originally developed in confrontation with the Jewish doctrines of Torah possession and observance, the apostle applies these doctrines to their Greek analog, the claim to possess eloquence and knowledge. This demonstrates Paul's flexibility in applying the principles of his theology to new and different circumstances and problems.

Without denying the Corinthians their claimed abundance of eloquence and knowledge, Paul argues that their spiritual wealth should not simply be taken to coincide with maturity in Christian faith. In fact, he points out, there is an obvious discrepancy between what the Corinthians claim and what they really are. While he concedes that they have plenty of eloquence and knowledge, there are serious shortcomings in the area of practical "deeds" (*erga;* 1:7; 3:13–15; 15:58; 16:10). This discrepancy points to a contradiction between claim and reality and renders their faith "immature" (3:1–4). As long as there is no balance

between the claims of eloquence, knowledge, and practice, the goal of "perfection" (cf. 2:6; 3:1, 18; 4:8) cannot have been reached. Paul's argumentation is designed so as to advise the Corinthians how to bring their praxis (*erga*) up to the same standards as their eloquence and knowledge. This goal is behind the long section of arguments in chaps. 5–15. The key concept in these chapters is that of Christian love (*agapē*; 4:21; 8:1; 13:1–13; 14:1; 16:14, 24), specifically defined as "what which builds up" the community (8:1; 14:4–5; cf. 3:9–15).

Paul, however, does not attempt to talk the Corinthians out of their spiritual wealth. His goal is, on the contrary, to enable them to verify that claim by the practice of the Christian *agapē.* For this purpose Paul develops his lengthy ethical arguments and positions in chaps. 5 and 15. Although several of these arguments show signs of their origin in a Jewish-Christian context, in 1 Corinthians they are clearly applied to the confrontation of new gentile Christians with their Hellenistic pagan background and past. The threat as Paul perceives it is their "Hellenization" in the negative sense of the term. (See HELLENISM). Since no agreed standards yet existed, Paul had to develop rules for behavior anew. How should the new converts conduct their lives with regard to polytheism and its communal and religious practices such as prostitution, the courts of law, the meat markets, invitations to dine in pagan temples, and so forth?

One of the major theological contributions of 1 Corinthians is in the area of ecclesiology. The body of Christ image for the Church runs throughout the epistle (1:13; 6:15–20; 10:16–17; 11:29; 12:4–27; for the extensive literature on this topic, see *sōma* in *TDNT*). Paul confronts the divisiveness of the Corinthian community with a political analogy common in Greek and Roman literature for social cohesion, the body (for references, see Lietzmann *An die Korinther* HNT, 61–63, and Conzelman, 211–14), here radically Christianized. This appropriation provides another example of the apostle's adaptation and transformation of Hellenistic concepts in his theological formulations. The Church is the body of Christ, a unified structure in which each member has a part and function (12:4–27). This ontological reality has ethical implications: the Christian does not own his/her body (6:19), should make decisions on the basis of the entire Church and not merely the self (10:23–11:1; 14:5), and must manifest his/her full solidarity with the other members in both joy and sadness (12:25–26; cf. 13:6). The ecclesiological doctrine of the body of Christ, first introduced by Paul in 1 Corinthians, appears also in Romans (12:3–8) and is later transformed in the deutero-Pauline letters into a spiritual-cosmological doctrine in which Christ appears as the head of the body (Eph 1:22–23; 4:4–16; 5:22, 30; Col 1:18, 24; 2:16–19).

Apart from the specific issues discussed in the letter, 1 Corinthians receives its unique importance because it is only here that Paul develops his theological ideas about Greek cultural and religious values. These values include subjects such as rhetoric, wisdom, and knowledge, that is, the experience of the Christian faith as intellectual enlightenment and inspiration, including forms of ecstasy. In the practical area Corinthian notions of freedom need to be redefined in terms of new forms of Christian communal and individual life (6:12; 8:9; 9:19–23; 10:23–11:1). What Paul is primarily concerned with is the need to safeguard the Christian character of what is advocated as the new life in Christ. The most impressive part of Paul's deliberations is the attempt to spell out rules for Christian behavior vis-à-vis the polytheistic and pluralistic environment within which the Church found itself. Christian theology has never made another such attempt, so that modern Christianity which finds itself again in this situation will become Paul's advice, even if it is conditioned by the situation of the 1st century.

A. Introduction

The letter we call 2 Corinthians abounds with fascinating insights into the activity and mind of the apostle Paul. Some of the passages show how he worked as an administrator, a pastoral adviser, and an ecumenical church leader. The careful reader discovers valuable information about historical developments in the churches of Corinth and elsewhere, finds data concerning the life and personality of Paul, and uncovers aspects of the theologies of Paul and his opponents which do not appear in the apostle's other letters. All these perspectives contribute to an engrossing view of the Pauline mission.

2 Corinthians does not yield its information readily and thus poses problems for its readers and interpreters. Understanding these problems is indispensable not only for 2 Corinthians but also for the interpretation of 1 Corinthians. As with all other correspondence, the letters must be interpreted consecutively and in their entirety, for every section has its place in the context of the entire correspondence. Earlier statements may explain why later events occurred, just as later statements may throw light on what was said earlier. In literary terms, a correspondence contains components of an ongoing conversation, the missing parts of which must be reconstructed to as great a degree as possible. Such reconstruction is a major task for the interpretation of 2 Corinthians.

The publication of 2 Corinthians presents the interpreter with a second difficulty. While there is strong evidence for an early (1st century) attestation of 1 Corinthians, the second letter is not attested before the middle of the 2d century, when its name appears in the canon of Marcion (ca. 140–150; see Harnack 1924: 96*–102*, 128*). It received a second notice a few decades later in the Canon Muratori. Prior to these two lists, however, no external evidence exists for the circulation of the letter. Despite this paucity of attestation, no one in antiquity doubted the letter's authenticity. Thus the circumstances which led to the appearance of 2 Corinthians remain shrouded in mystery.

In light of such interpretative difficulties, we are fortunate to have an extensive history of research on 2 Corinthians. At present, this research is in the midst of a new productive phase. For surveys of the older period, see Moffatt (1918: 116–30) and Windisch (1924: 5–31); for recent developments, see Furnish (*2 Corinthians* AB, 29–54); Betz (*2 Corinthians 8 and 9* Hermeneia, 3–36); Georgi (1986: 333–45), and Welborn (1987).

B. Literary Composition

As most scholars now agree, Paul's second letter to the Corinthians is a collection comprised of fragments from several originally independent letters. The decisive step toward the discovery of these constituent letters was taken by Semler (1776), when he recognized seams in the text between both chaps.

8 and 9 and chaps. 9 and 10. He concluded that 2 Corinthians was composed of pieces of originally separate letters.

Since Semler's discovery, the scholarly debate concerning the division of the letter has not ceased. Questions remain as to whether the letter should be partitioned and, if so, how many sections there are and which passages they comprise (for surveys, see Furnish AB, 30–54; Betz Hermeneia, 3–36). The second of these questions is becoming the more important, as few scholars continue to defend the unity of 2 Corinthians (Hyldahl 1973; Kümmel 1975: 287–93; see Furnish, 33–35, for names and a summary of the arguments).

Important progress in the literary investigation of 2 Corinthians has been made in this century by Bornkamm (1961), who divided 2 Corinthians into fragments from six different letters: (1) an earlier apology (2:14–6:13; 7:2–4); (2) the "letter of tears" (10:1–13:10); (3) the "letter of reconciliation" (1:1–2:13; 7:5–16; 13:11–13); (4) a letter of recommendation for Titus and his companions (chap. 8); (5) a letter to the churches of Achaia (chap. 9); and (6) an interpolated passage (6:14–7:1). Bornkamm assumed that the present letter of 2 Corinthians was the creation of a later editor/redactor. This partition theory, often in somewhat modified form, is now held by a large number of scholars (for a survey, see Betz, 20–25). Furnish (35–41), however, supports the two-letter hypothesis previously held by Windisch, Bruce, and Barrett: 2 Corinthians consists of parts from two originally separate letters: (1) chaps. 1–9 and (2) chaps. 10–13. On the other hand, we have Schmithals' complicated partition theories. Most recently, he has proposed that Paul's Corinthian correspondence consisted of thirteen letters which are now found not only in 1 and 2 Corinthians but in Romans as well (Schmithals 1984: 19–20).

As divisions continue to be discussed, the methodological questions prove to be of primary importance. Since no existing manuscripts of 2 Corinthians show traces of division, evidence for partitioning must come from the internal criteria of philology and comparative literary analysis. Such analyses have been proposed by Betz (Hermeneia) for 2 Corinthians 8 and 9 and by Welborn (1987) for the "letter of reconciliation" (1:1–2:13; 7:5–16; 13:11–13). In addition to careful analyses of the letter fragments, an investigation of the methods and ideas of the redactor who was responsible for the final composition of what we call 2 Corinthians will also be necessary (for interesting suggestions on the redactor's work, see Bornkamm 1961: 24–32).

C. The Letter Fragments in Chronological Sequence

(1) The "first apology" (2:14–6:13; 7:2–4) begins with an expression of thanks to God and a description of the apostle's missionary activity expressed through a field of metaphors which create the image of a triumphal procession (2:14–17). In this procession, Paul functions as the herald (4:5; 5:20–6:2; 6:11–13; 7:2–4). Embedded in the use of this image are arguments in which Paul defends his adequacy for the apostolic office. As an apostle, he describes himself as a "servant of the new covenant" (3:6), which is explained in 3:4–6:10. Although the exact nature of the argumentation is far from clear, Paul additionally uses the occasion to present major christological and soteriological doctrines. The conclusion contains a plea for acceptance and trust (6:11–13; 7:2–3) as well as a confession of confidence and joy (7:4). Since such statements are appropriate to the conclusion of letters, it would seem that only the epistolary pre- and postscripts are omitted.

(2) The "second apology" (10:1–13:10), or "letter of tears" (as it is later characterized in 2:4), was doubtless provoked by Paul's unsuccessful earlier attempts—in particular the earlier apology—to clear himself of suspicion (10:1–2). Yet an escalation must have pushed the matter to a crisis. Facing it, Paul realized that if he were to prevail he must mobilize extraordinary rhetorical armaments (Malherbe 1983: 143–73) and confront the accusers directly (Betz 1986: 40–44). In 10:10, Paul actually quotes from what seems to be a critical report concerning his presence: "His letters," he [or: the report] says, "are weighty and strong, but his physical presence is weak and his speech is contemptible."

The origin of this three-pronged personality profile is unknown. Paul attributes it to a person, but it is not clear whether that person acted as an individual or as the leader of a faction, whether this individual was identical with the unnamed person called "the offender" (7:12), and whether he had any official function. Was an investigator appointed by the church whose report was communicated to Paul (cf. 13:3)?

The statement in 10:10 looks like a summary of an investigative report on Paul's performance as a public speaker; it is entirely negative. In order to refute these charges, Paul felt he could only adopt the pose of the fool (11:1; 12:11) and deliver a so-called "fool's speech" (11:1–12:10 [or 12:13]). In this wild and brilliant self-parody, the apostle demolishes the presumptions of his adversaries. He restores his credibility by discrediting theirs through the use of his entire arsenal of irony, sarcasm, and parody. In this fool's speech he demonstrates that, if he wished, he could conform to the standards of his critics but that he had good reason not to do so. In the role of the fool he performs—without actually doing—that which he judges to be inappropriate.

If the critics doubt his skills as a rhetorician, he sheepishly agrees with them: "If I am a layman in speech, I am not in knowledge" (11:6). If they demand the "signs of the apostle," he is ready to deliver them (Betz 1972: 70–100). He presents a testimony about ascending into heaven only to bring back nothing (12:1–4; see Betz 1972: 89–92) and follows with an appeal to a miraculous healing which turns out not to produce the healing (12:7–12; see Betz 1969: 288–305; 1972: 92–100). Paul's own criteria are different (12:11–13). He glorifies God in his weaknesses (12:9, 10; cf. 10:1, 10; 11:21, 23–29; 12:21). He does not accept financial support from the Corinthians (11:7–12; 12:13, 14:18; see Betz 1972: 100–17), and he refuses to be judged in comparison with the other apostles (11:5, 13–15; 12:11–13; see Betz 1972: 118–32). After evaluating his fool's speech, Paul turns to the future, announcing his forthcoming third visit to Corinth (12:14–21; 13:1–4). Typical of a Pauline letter, the last section contains paraenesis and a summary of his concerns (13:5–10). Again, this conclusion suggests that little was omitted by the redactor at the close of the letter.

(3) The "letter of reconciliation" (1:1–2:13; 7:5–16; 13:11–13) is extant in its entirety and provides the frame into which the redactor has inserted the other letter fragments. For an investigation of this "letter of reconciliation," see Welborn 1987.

The letter begins with the epistolary prescript (1:1–2) naming the sender, Paul, with his official title, and the cosender, Timothy, with his rank. There follow the addresses, the church in Corinth and "all the saints living throughout Achaia." The prescript concludes with the usual salutation.

The exordium begins with a praise of God, a *běrakâ* or *eulogia* (1:3–4), rather than with the usual prayer of thanksgiving *(eucharistia).* The main theological concepts of this prayer in praise of God, "affliction" *(thlipsis)* and "consolation" *(paraklēsis),* are them briefly introduced in preparation for the role they will play in the main body of the letter. Paul's design here is to describe his relationship with the Corinthians, particularly in terms of the crisis just passed, as a partnership in Christian suffering and consolation (1:5–7). In a short narrative (1:8–11), the apostle then demonstrates by his own example—his recent escape from almost certain death in Asia Minor—how God's consolation works in concrete life situations.

From these theological presuppositions the apostle enters into a lengthy discussion of his previous letter (1:12–2:4), the "letter of tears" (10:1–13:10). After giving assurances of his integrity and friendly intentions (1:12–14), he explains apologetically and with some apprehension why he had decided to change his travel plans several times and why these changes should not be construed as evidence of his unreliability and fickleness (1:15–22), the charges by his critics to the contrary. He explains further why he had postponed his third visit to Corinth and why in the meantime he had written the "tearful letter." The intention of that letter had not been to inflict "distress" *(lypē)* on the Corinthians but to make them understand his great love for them (1:23–24; 2:1–4). If the letter had caused severe distress among them, it was not so much due to the letter itself as to the provocations of "the offender" (2:5), an unnamed person in Corinth who fomented the whole crisis. Since this offender had meanwhile been reprimanded by the majority of the church, Paul now generously recommends that they forgive him and, should they do so, he, too, would forgive him (2:5–11). The apostle then describes how in great anguish he went to the Troad and to Macedonia, where he awaited Titus, who was due to come from Corinth to meet him (2:12–13, continued in 7:5). This terrifying "affliction" *(thlipsis)* only ended when Titus appeared with the good news of the accomplishment of a reconciliation (7:6–7).

The report then turns to a theological (and even psychological) analysis of the experience of "distress" *(lypē),* which Paul admits having caused among the Corinthians with his letter. As he points out, this distress had a positive result in that it turned the Corinthians around and brought them to their senses (*metanoia* [7:9–10]). This change of mind in turn led to Paul's great joy at learning of the reconciliation, which occurrence also confirmed his original confidence in them (7:8–12). In other words, for Paul no less than for the Corinthian church, the whole crisis was another experience of affliction turned into consolation and thus not to be regretted. Paul is now full of joy, pride, and confidence at things having turned out so well (7:13–16), and in these emotions lie the reason for the praise of God at the beginning of the letter (1:3–4). A warm and exuberant postscript concludes the letter (13:11–13).

(4) The "administrative letter" of chap. 8 (see Betz *2 Corinthians 8 and 9* Hermeneia, 37–86, 131–39) was sent to Corinth together with the delegation consisting of Titus and two "brothers." The letter has two parts, an advisory section regarding the collection for the Jerusalem church (8:1–15) and a legal section commending and authorizing the members of the delegation (8:16–23). The letter concludes with a peroration (8:24). Compared with literary and documentary parallels, the fragment is similar to letters of appointment given to political or adminstrative envoys.

(5) The "administrative letter" of chap. 9 (see Betz, 87–128, 139–40) is addressed to the Christians of Achaia and, like chap. 8, is concerned with the collection for the church in Jerusalem. As a literary unit, its purpose is advisory: it seeks to enlist the help of the Achaians in bringing the collection in Corinth to completion. Its two main sections contain information and explanation on the delegation sent to Corinth (9:2–5) and a theological statement about the purpose of the collection (9:6–14) and it concludes with a peroration, an expression of thanksgiving to God (9:15).

(6) The interpolated passage of 6:14–7:1 reflects a situation different from 2 Corinthians' other components: it does not reflect on Paul's relationship with Corinth or on the Jerusalem collection. This difference has resulted in the view held by most scholars today that 2 Corinthians 6:14–7:1 is a non-Pauline interpolation (see Furnish, 360–68, 371–83, with further references), while Betz (1973) has argued that it is even anti-Pauline in its theology, originating perhaps with (some of) Paul's opponents. If this passage did indeed come from Paul's opponents, it might even reflect the party against which Paul had to defend himself elsewhere in his correspondence with the Corinthians. Regardless, the piece is a carefully composed exhortation warning against teaming up with "unbelievers," whoever they may be. Its theology is strongly dualistic and Jewish-Christian. The origin of the piece is as much a puzzle as is the question of how it became mixed up with the Corinthian correspondence.

D. Historical Developments in Corinth

The preceding chronological ordering of the letter fragments provides some clarification of the turbulent events following 1 Corinthians. In 1 Corinthians 16, Paul mentions certain events he expects to take place after the dispatching of that letter. The collection for the church of Jerusalem, begun with Titus during an earlier visit (2 Cor 12:16–18; 8:6), will proceed according to the guidelines set forth in 1 Cor 16:1–2. After the collection, when it is to be taken up to Jerusalem, Paul plans to visit Corinth for the second time. He intends to arrive there from Macedonia, perhaps to spend the winter before going on to Palestine (16:6); however, he is undecided whether he himself will lead the delegation which will deliver the gift to the Jerusalem church (16:3–4). Meanwhile, until his departure for Macedonia, his presence in Ephesus remains crucial (16:8–9). Then he announces the forthcoming visit of Timothy. For reasons we do not know Paul fears that Timothy will not find a friendly reception (16:10–11; cf. 4:17). The letter fragments in 2 Corinthians, however, show that all of these plans could not be carried out as Paul had hoped.

When 2 Corinthians says that Timothy is at Paul's side (1:1), there is no mention of Timothy's visit to Corinth. He probably did go there but upon arrival found the church hostile and in turmoil (see Conzelmann 1973: 104; differently Bornkamm 1961: 9) and returned to Ephesus to inform Paul of the situation. This information, presupposed in 2 Corinthians, included a complete change in the Corinthian situation. While in 1 Corinthians Paul could remain above party factionalism, he now could not avoid facing a full-blown rebellion against him. The problems of his legitimacy, incipient in 1 Corinthians (15:8–10), had worsened, apparently in connection with the collection, which his opponents saw as

evidence of a scheme to line his own pockets. Since these charges are already considered in the "first apology" (2 Cor 2:14–6:13; 7:2–4), where Paul responds to accusations of "inadequacy for office" (2:16; 3:5–6) and "peddling the word of God" (2:17; cf. 4:2; 6:3; 7:2; 12:16–17), this letter may be part of his first response and written either before or after Timothy's return to Ephesus. Although Timothy may have taken this letter to Corinth, we have no evidence to substantiate such a hypothesis. At any rate, this "first apology" did not prevent further deterioration in Paul's relationship with Corinth.

At this point, Paul changed his travel plans. The "letter of reconciliation" (2 Cor 1:1–2:13; 7:5–16; 13:11–13), written after the resolution of the conflict, contains lengthy explanations for these changes. His report in 2 Cor 1:15–16, however, indicates that he must twice have altered the plans presented in 1 Cor 16:5–8, for he says that he intended to go from Ephesus to Corinth, passing through Macedonia, and then perhaps to Judea. Upon receiving the bad news about Corinth, he quickly decided to go there directly, and apparently unannounced, to face the opposition head on. This visit, the so-called "sorrowful visit," resulted in a fiasco for the apostle which he says he would not wish to repeat (2:1–3; 12:21; 13:2). Indeed, he postponed his third visit to Corinth (12:14; 13:1) until the conflict had been resolved. At the center of this conflict appears to have been one whom Paul calls "the offender" (7:12) who apparently brought a charge of embezzlement against Paul (12:16–18; 8:20; see Betz *2 Corinthians 8 and 9*, Hermeneia, 76–77). Such suspicion of fraud of course jeopardized Paul's whole credibility. It is possible that the church may even have appointed an investigator, from whose devastating report Paul himself quotes in 2 Cor 10:10 (cf. 11:6; 13:3, 6).

Rejected by his own church as a charlatan and a fraud, Paul made a final desperate attempt to regain his reputation. He wrote the "letter of tears" (10:1–13:10); most likely after he returned to Ephesus, and sent it on to Corinth, probably with Titus and a "brother" (12:18). As we learn from the subsequent "letter of reconciliation" (2 Cor 1:1–2:13; 7:5–16; 13:11–13), both the "letter of tears" and Titus' mission were successful, although Paul was unaware of this fact until much later. In a state of "great tribulation and anguish of heart" (2:4) he left for the Troad in NW Asia Minor; there, anxiously awaiting Titus, he became so restless that he set sail for Macedonia (2:12–13). Titus finally arrived there, bringing with him the good news of the reconciliation (7:5–7). In great joy, the apostle then sent from Macedonia the "letter of reconciliation."

One result of the Corinthian crisis, of course, was the collapse of the collection for the church in Jerusalem from that city. The Macedonian and Achaian churches had finished their part of the collection (8:2–5; 9:2), and at this point the Macedonians proposed to recommence and complete the Corinthian collection (8:4–5) with Titus volunteering to return to Corinth to reorganize the drive (8:17). Paul thus appointed Titus (8:6, 16–17, 23) and two "brothers" (8:18–23; 9:3–5), a carefully chosen delegation representing not only Paul but "all the churches" as well (8:18). Their letter of authorization is extant in chap. 8. In addition, Paul enlisted the aid of the Achaian Christians, who had already completed their part in the endeavor (chap. 9).

From Rom 15:25–31 we learn that the advance team had succeeded in finishing the collection, that Paul had arrived, and that a delegation was ready to take the money to Judea. Paul now decided to lead that delegation, whose members may be listed in Rom 16:21–23; Acts 20:4 (see Betz *2 Corinthians 8 and 9* Hermeneia, 51, 56). His departure from Corinth meant that he would never see Greece again (Acts 19:21; 20:22–25, 36–38).

This reconstruction of events clarifies the otherwise confusing sequence of visits by Paul and his collaborators. Paul made three visits to Corinth, the first being the foundation visit accompanied by Silvanus and Timothy (1 Corinthians *passim;* 2 Cor 1:19; Acts 18:1–18). The second visit, announced in 1 Cor 16:2–9, was made in haste and without advance notice; it became the "sorrowful" visit (2 Cor 2:1). A third visit had been planned but had to be postponed until the crisis had passed (2 Cor 2:1–3; 12:14; 13:1–2). This final visit became a reality when Paul arrived in Corinth to head up the Judean delegation (Rom 15:25–31). Timothy, named as cofounder of the Corinthian church in 2 Cor 1:19 and Acts 18:5, also visited Corinth three times. If his second visit, announced in 1 Cor 16:10–11 (4:17), was carried out, his third visit occurred when he accompanied Paul to Judea (Rom 16:21; Acts 20:4).

Three visits must also be assumed for Titus, whose assignments were closely related to the collection efforts (cf. Gal 2:1–10 for his presence at the Jerusalem conference). His first visit must have occurred prior to the writing of 1 Corinthians because of the subsequent guidelines for the collection as stated in 1 Cor 16:1–4. On this visit he began the fund raising (2 Cor 8:6). His second visit was made in the company of one "brother" (2 Cor 12:18); the main objectives appear to have been the delivery of the "letter of tears" (2 Cor 10:1–13:10) and the attempt to reconcile the church with its apostle. Paul apparently chose Titus rather than Timothy because the Corinthians did not trust the latter (see 1 Cor 16:10–11). Bringing the news of the reconciliation to Paul in Macedonia (2 Cor 7:6–7) quickly led to Titus' third visit to Corinth, accompanied by two "brothers," to restart and finish the collection (2 Cor 8:6, 16–23; 9:3–5). Having completed this task as well, Titus is mentioned no further and his name is not included in the lists of the delegates to Palestine (Rom 16:21–23; Acts 20:4).

E. Dates

Scholars disagree as to whether precise dates can be assigned to the events emerging from the letter fragments of 2 Corinthians. Such variant views depend primarily on the overall view of the chronology of Paul (see CHRONOLOGY (NT)). If Jesus' death is dated early (27 C.E.), Paul's conversion falls in the year 30 C.E.; but if Jesus' death occurred in 30 C.E., Paul's conversion and all other events must be dated later. For Luedemann, who favors earlier dates (see the chronological chart in Luedemann 1984: 262–63), the events involving 2 Corinthians fall in the years 49 (or 52) to 51 (or 54). Jewett (1979; see his appended chart) and Furnish (54–55) date these events in the years 55–56. According to them, Timothy's second visit to Corinth took place in 55 C.E., the year which saw most of the events reported in the letter fragments in 2 Corinthians. Paul spent the winter of 55–56 in Macedonia, went to Corinth in 56, and left for Palestine in the spring of 57. These dates are probable, but good cases can be made as well for two to three years earlier or even for somewhat later (see Schenke and Fischer 1978: 47–63; Vielhauer 1975: 156).

F. Paul's Opponents

Recent decades have seen extensive discussion regarding Paul's opponents in (1 and) 2 Corinthians (for surveys and references, see Barrett 1982: 60–86, 87–107; Barnett 1984: 3–17; Furnish, *2 Corinthians* AB, 48–54; Georgi 1986: 333–450), and notable clarification of the problems and options has been achieved. It is now clear that the issues concerning the factions and Paul's opponents in 1 Corinthians must be distinguished from the factions and Paul's opponents in 2 Corinthians. We can no longer assume that both letters deal with the same kind of opponents. Earlier, Schmithals had advanced the thesis (1971; still defended 1983: 107–24) that there was only one, gnostic, opposition to Paul. Schmithals needs this hypothesis to support his thesis that thirteen letters comprise 1 and 2 Corinthians; most scholars, however, do not accept it (Conzelmann, *1 Corinthians* Hermeneia, 14–16), preferring rather the views of Bornkamm (1971: 169–71) and his student, Georgi (1964), who argue that new opponents moved into Corinth after 1 Corinthians was written.

The discovery of these intruders and their efforts at provocation and agitation sent Timothy back to Ephesus to inform Paul, who then embarked upon his second, unsuccessful, visit to Corinth. The apostle's sarcastic polemics in the subsequent "letter of tears" (2 Cor 10:1–13:10) suggest that these new opponents hold views akin to Hellenistic-Jewish concepts of the "divine man" *(theios anēr).* As was typical of Jews (1 Cor 1:22), these rival Jewish-Christian missionaries has succeeded in persuading the Corinthians to demand from Paul "the signs of the apostle" (2 Cor 12:1, 7, 12), that is, miracles and revelations which serve as evidence that Christ speaks through the apostle (13:3).

Unfortunately, Paul's polemics do not yield much detail on the views these opponents actually held. To obtain such data, Georgi has therefore interpreted Paul's opponents against the religious background of Diaspora Judaism and that branch of the Church which handed down the miracle stories of the gospels and Acts. Despite the methodological problems of extracting hard data from polemics and counterpolemics, not to mention the slim evidential base generally, Georgi's direction is the right one for future research (see also Betz 1969; 1972; *RAC* 12: Cols. 231–312; Koester 1982, 1: 126–30; Georgi 1986).

If one adopts this line of thought, one immediately sees other questions: Did Paul's opponents in 2 Corinthians have any connection with the factions in 1 Corinthians, and, if so, with which faction(s)? Was there a connection with anti-Pauline forces in Jerusalem (Käsemann 1942; Barrett 1982)? If there was such a connection (2 Cor 11:13–15, 21–23, 24), how do these opponents compare with those against whom Paul defends himself in Galatians? In Galatians, the points of contention surround the Torah and circumcision, not miracles and revelations; thus these opponents must have been different, despite their common goal of discrediting Paul. From the first chapters of the book of Acts it is quite obvious that apostles with different outlooks did mission work under the supervision of the Jerusalem church. Unlike the opponents in 1 Corinthians, those targeted in 2 Corinthians were intruders from outside the city (2 Cor 10:13–16; 11:4, 19–20). Yet the adversary called "the offender" (2 Cor 7:12) was in all probability a resident of Corinth. How was he connected with the parties of 1 Corinthians and the intruders of 2 Corinthians? After the reconciliation, we are told, forgiveness was to be offered to this "offender"; but it is inconceivable that such simple forgiveness was granted to the "pseudo-apostles" and "messengers of Satan" (2 Cor 11:13–14). What happened to these intruders after the reconciliation we do not know. These and other questions may never be answered without the discovery of new sources.

G. Perspectives on the History of the Early Church

The crisis which shattered the relationship between Paul and his church in Corinth had repercussions far beyond Corinth. This particular crisis was just one more piece of evidence that Paul's main mission of bringing the Christian gospel to the gentile world was increasingly threatened from both inside and outside the churches he had founded. Paul's own ambiguous biography had been a source of bewilderment and suspicion from the beginning, and 2 Corinthians shows how well his opponents used this, his Achilles' heel, to undermine his credibility. These doubts about Paul's integrity were compounded by the self-doubts of the Corinthians concerning their salvation. It was not so much that they intended to turn their backs on Christianity altogether as that they had opened themselves up to other Christian missionaries hostile to Paul. These missionaries apparently had better credentials from and connections with the mother church in Palestine. In addition, they offered religious experiences which were more impressive and persuasive in the eyes of people of a Hellenistic religious mentality. Miracles and revelations were easier for the Corinthian Christians to handle than were Paul's complicated theological discourses.

The issue that seemed to have become the focus of the alienation, however, was a monetary one, the collection that Paul had organized in Macedonia and Achaia for the benefit of the church in Jerusalem. Charges, or at least suspicions, of financial irregularities had led the Corinthians to believe that the whole fund drive was a scheme designed to enrich the apostle himself. Their mistrust was justified by the fact that many religious quacks and swindlers with similar schemes operated throughout the Roman Empire. Had one of these con artists duped them? Paul's letter of chap. 9 reveals that the purpose of the collection was to maintain a bond of brotherhood between the Greek churches and the mother church in Jerusalem, thus forestalling their growing alienation from becoming total separation. See also Gal 2:10; GALATIANS.

As the story tells it, Paul's struggle was desperate. Having been driven out of Corinth, he had only a slim chance of regaining his former position. Nevertheless, by the sheer skill of his pen and the diplomatic talents of his envoy Titus, he managed to turn things around, an accomplishment paralleled only in Galatians. Had Paul failed in Corinth, his whole mission work in Greece would have collapsed and passed into other hands. The successful completion of the collection, however, as reported in Rom 15:25–31, meant that he could conclude his mission work in the East and turn his attention to the West, to Rome and Spain (Rom 15:14–24).

H. Theological Significance

The letter fragments assembled in 2 Corinthians give evidence of Paul's methods in dealing with severe crises in his churches. Involving the full repertoire of administrative instruments (visits, envoys, and letters) as well as rhetorical strategies, his major goal was that of theological education. Completing what had been started in the (lost) letter mentioned in 1 Cor 5:9, the letters of 1 and 2 Corinthians have taken

the Corinthians through an entire course of theological education. In this course, theological doctrines, rhetorical strategies, and practical experiences went hand in hand (Betz 1986). At the end, Paul could testify that the Corinthians had learned their lessons well. According to 1 Cor 1:5, they could claim an abundance of eloquence and knowledge but lacked mature faith and love. 2 Corinthians can restate this claim in a different form and add another challenge as well: "As you have abundance in everything, in faith and eloquence and knowledge as well as in every kind of zeal and in that kind of love which came from us and dwells in you, you should have abundance in this gift of charity, too" (2 Cor 8:7).

Theological doctrines used in the arguments include here, as elsewhere, those concerned with God, Christ, and Christian salvation, but in the center stands Paul's peculiar doctrine about his apostolic office (see APOSTLE). Much more explicitly than in other letters, Paul devotes two major sections to explanations of his office as an apostle. The "first apology" (2:14–6:13; 7:2–4) contains a self-portrait as the representative of the death and resurrection of Christ. The "letter of tears" (10:1–13:10) goes over this ground again but in a highly sarcastic tone and in the form of an ironic self-parody (the "fool's speech").

While in 1 Corinthians the doctrine of justification by faith (see JUSTIFICATION) is applied to the claim to possess "eloquence and knowledge" (1 Cor 1:18–31), that same doctrine serves in 2 Corinthians (see, especially, in chronological order, 2 Cor 5:17–21; 10:17–18; 12:9–10; 13:3–4; 1:3–7, 18–22) to distinguish between true and false claims of legitimacy. Most important, finally, are the statements and procedures that Paul sets forth concerning the formation of the Church as a theological community of love (see, especially, 2 Cor 5:14; 6:6, 11:13; 11:11; 12:15; 2:4, 8; 13:11, 13; 8:7, 8, 24; 9:6–14).

HANS DIETER BETZ

CORINTHIANS, THIRD EPISTLE TO THE. One of the so-called apocryphal epistles, forming the last part of an apocryphal correspondence between Paul and the Corinthians contained in the *Acts of Paul.* It is preserved in several textual traditions of varying quality: in Armenian through several NT mss; through five rather fragmentary Latin mss; a 6th-century Coptic translation of the *Acts of Paul;* in Greek from the 3d-century Bodmer papyrus (see BODMER PAPYRI); and is attested in Ephrem the Syrian's commentary on the Pauline epistles (*NTApocr* 2: 326–27; Klijn 1963: 2–4). English translations may be found in Schneemelcher and in James.

The Syriac and Armenian churches regarded *3 Corinthians* as authentic and included it with the Pauline letters. Even though it circulated independently and was quite popular among certain groups of early Christians, as early as 1892 Zahn proposed that it was part of the *Acts of Paul* (Zahn; Enslin IDB, 679; *NTApocr* 2: 326; Klijn 1963: 2–5). Discovery of the Coptic Heidelberg papyrus in 1894 showed Zahn to be correct. The Coptic text also indicated that it was written originally in Greek. This was subsequently verified by the discovery of a Greek text which was published in 1959 (Klijn 1963: 5).

While it is now quite apparent that *3 Corinthians* is part of the *Acts of Paul,* opinions vary as to whether the author created the correspondence between Paul and the Corinthians or whether he used already existing writings (Klijn 1963: 10–16; *NTApocr* 2: 340–42).

Establishing the date, place of composition, and the identity of the author of *3 Corinthians* is complicated by its relationship to the *Acts of Paul.* Tertullian says (*De Bapt.* 17; approx. A.D. 200) that the *Acts of Paul* was written by a presbyter in Asia Minor, and the work itself indicates that it was most likely written in Asia Minor. A date between 170 and 195 is usually posited for the composition of the *Acts of Paul* (Klijn 1963: 4; *NTApocr* 2: 351). *3 Corinthians* is at least this early. If *3 Corinthians* was an earlier writing which was used by the author of the *Acts of Paul,* then it is impossible at this time to establish its precise date, place of composition, or the identity of its author.

3 Corinthians is located within the Philippi episode of the *Acts of Paul* and forms part of a correspondence between Paul and the Corinthians. The Corinthians first wrote Paul telling of two men, Simon and Cleobius, who arrived in Corinth and distorted the faith by teaching things they had not heard from Paul or the other apostles. They taught that the Corinthians should not "appeal to the prophets, and that God is not almighty, and that there is no resurrection of the flesh, and that the creation of man is not God's [work], and that the Lord is not come in the flesh, nor was he born of Mary, and that the world is not of God, but of angels" (*NTApocr* 2: 374). This letter was delivered to Paul in prison in Philippi by Threptus and Eutychus. *3 Corinthians* is Paul's response to the Corinthians' request that he either visit or write concerning these teachings.

3 Corinthians begins with a rather typical Pauline greeting, followed by an acknowledgment that his own tribulation is a sign that the teachings of the evil one are gaining ground. Paul then assures the Corinthians that he taught them what he received from the apostles. This is followed by a refutation of the teachings of Simon and Cleobius, which makes up the bulk of the letter. In turn, this is followed by an assurance for those who accept his teachings and condemnation for those who do not. The letter closes with an urge for them to turn away from the false teachings and a blessing of peace, grace, and love.

DANA ANDREW THOMASON

CORMORANT. See ZOOLOGY.

CORNELIUS (PERSON) [Gk *Kornēlios* (Κορνηλιος)]. According to the book of Acts, Cornelius is the first gentile to become a convert to Christianity (Acts 10:1–11:18, cf. 15:6–11). Although the episode occupies a significant place in Luke-Acts, Luke conveys little information about the man himself. Study of the episode has concentrated primarily on the historical development and literary composition of the narrative and its significance in the unfolding story of Luke-Acts.

At the beginning of the Cornelius narrative, Luke notes that Cornelius resides in Caesarea and describes him as "a centurion of what was known as the Italian Cohort, a devout man who feared God with all his household, gave alms liberally to the people, and prayed constantly to God" (10:1–2). This introduction identifies Cornelius in two important ways. First, that he is a gentile may be deduced from the fact that he is a Roman soldier, since being in the military was incompatible with the observance of Jewish law (Joseph. *Ant* 18.84).

Second, with several phrases Luke signals that Cornelius is a religious man. Together with his entire household (cf. 11:14) Cornelius fears God. Whether this statement means that Cornelius belongs to a distinct group of gentiles known as "God-fearers," (i.e., gentiles who worshipped the God of the Jews but did not become proselytes) is a matter of debate. What is not subject to debate is the positive connotation attached to this statement and the ones that follow. Cornelius is charitable toward "the people" (Gk *laos*), a term Luke often employs for the people of Israel; and he prays to God without ceasing. While Cornelius is a gentile, Luke takes care to introduce him as an exceptionally good and pious gentile whose conversion almost becomes a response to his behavior. Indeed, the angel who appears to him and instructs him to send for Peter says that Cornelius' behavior has become a memorial before God (Acts 10:4).

Since Martin Dibelius' essay (1956) on the Cornelius account, interpretation of this episode has revolved around his thesis that the story has its origin in an earlier and simpler story of conversion, such as Dibelius understood had been preserved in the story of the ETHIOPIAN EUNUCH. Dibelius argued that the following elements conflicted with this earlier version of the story and, hence, that they were later additions: (1) Peter's vision (10:9–16) does not appear to be connected with the surrounding narrative, since the vision has to do with food laws but the larger story focuses on the inclusion of gentiles; (2) the description of the arrival of Peter and his colleagues at Cornelius' home (10:27–29), which is literarily awkward; (3) Peter's speech (10:34–43) appears to be a later addition because, according to Dibelius, early conversion stories did not contain speeches and because this particular speech seems to have been modeled on Peter's other speeches; and (4) Peter's defense of his actions in Jerusalem (11:1–18), since it focuses on Peter's social relations with gentiles, which Dibelius finds to be insignificant in the story itself.

Following Dibelius' essay, other interpreters of the Cornelius episode sought to refine his thesis. For example, while Ernst Haenchen (1965) expressed doubts about Dibelius' assumption that the early Church preserved legends about conversions (a criticism more recently revived by Klaus Haacker [1980]), Haenchen's own suggestion was that Luke had received the Cornelius story, in the form Dibelius had suggested, from traditions preserved at Caesarea. Ulrich Wilckens (1958) examined Peter's speech in 10:34–43, contending that this speech is more catechetical than Peter's other speeches in Acts, which are kerygmatic in content. François Bovon (1970) connected Peter's vision (10:9–16) with the Jerusalem discussion in 11:1–18 and argued that together they suggest that within the Cornelius account a second motif pertains to food laws. Karl Löning (1974) has argued that Peter's vision is an integral part of the Cornelius story, even in its earlier forms.

Despite Löning's attempt, the feature of Dibelius' analysis which has been most widely accepted is almost certainly his claim that Peter's vision is extrinsic to the narrative and is, hence, an addition to an earlier and simpler account. However, Dibelius neglected two features of ancient narratives that undermine his argument. First, numerous narratives in the ancient world use the device of double dreams,

that is, two characters have separate dreams within one narrative episode (see, for example, Jos. *Ant* 11.321–39). The closest example, of course, occurs in Acts 9, where Saul and Ananias each have a vision concerning the eventual visit of Ananias to Saul. Thus, there is good reason to suspect that the two visions in Acts 10 also belong to the same narrative. The second narrative feature Dibelius neglected is the literary role of dreams or visions. Dibelius found the vision of Peter insufficiently related to the larger narrative, but that is to overlook the fact that dreams or visions often occur at the beginning of an episode, but their significance only unfolds as the story itself unfolds. For example, in Plutarch's treatment of the life of Cicero, he tells of a dream in which Cicero sees Octavius, whom he had actually never met; on the next day, however, Cicero does meet Octavius (*Cic.* 44; cf. *Cim.* 18; *Luc.* 10.23.3–4; *Brut.* 20.8–11). Similarly, in Achilles Tatius' story of *Leucippe and Clitophon,* one of the Hellenistic romances, Clitophon dreams that he has been attached to a wife and then the attachment is severed by someone else. When Clitophon's engagement to Calligone is broken, the dream is fulfilled, and it is fulfilled yet again when Clitophon is separated from Leucippe by a series of misadventures. Numerous such examples suggest that, while Peter's vision does not explicitly address the conversion of gentiles, it may nevertheless be an integral part of the narrative.

The literary structure of the Cornelius account, when read as a unified story, consists of a sequence of parallel scenes: (1a) the vision of Cornelius, in which he receives instructions concerning Peter (10:1–8); (1b) the vision of Peter, in which he receives instructions concerning Cornelius (10:9–16); (2a) Cornelius' agents arrive at Peter's house and are welcomed there (10:17–23a); (2b) Peter and his companions arrive at Cornelius' house and are welcomed there (10:23b–29); (3a) Cornelius speaks to explain the events that have occurred to him (10:30–33); (3b) Peter speaks to explain his insight about God's impartiality and to recount the gospel (10:34–43); (4a) God's impartiality is confirmed by the Holy Spirit and through baptism (10:44–48); (4b) God's impartiality is confirmed by the community gathered in Jerusalem (11:1–18).

Luke narrates this particular story in a careful and even dramatic manner, at least in part because it is a major turning point in his story of the early Church. Beginning in Acts 1:8 (or even Luke 2:32), Luke has laid the groundwork for the inclusion of gentiles within the Christian community. Initially preaching the gospel only within Jerusalem, believers leave Jerusalem when they are forced to do so because of persecution (8:1). With the conversions in Samaria, the conversion of the Ethiopian eunuch, and the conversion of the archenemy Saul, Luke continues to widen the boundaries of the Christian community. The similarities in the stories of the Ethiopian, Saul, and Cornelius suggest that for Luke they are part of one continuous event.

Not only does the Cornelius account bring to a culmination much of Luke's story up to this point, but it paves the way for the Jerusalem council in Acts 15. There, during a debate about the restrictions that ought to be placed upon gentile Christians, Peter refers indirectly to the Cornelius episode (15:6–9). The agreement that then becomes the launching pad for Paul's continued mission among gentiles has as its starting point this conversion of a pious gentile.

By means of this carefully crafted story, Luke conveys several points that are indicative of his theological perspective. Most obvious among these is the understanding that it is God and God alone who determines what the boundaries of the Christian community are to be. In the face of Peter's threefold resistance to the vision (10:9–16) and the Jerusalem community's complaining when Peter joins in table fellowship with gentiles (11:3), God's will has its way. In multiple ways Luke insists that this inclusion is God's will: the vision of Cornelius, the repeated vision of Peter, the gift of the Holy Spirit prior to baptism with water. The conclusion is clear: the inclusion of gentiles was the direct result of God's intervention and was not a merely human act. Despite the reluctance with which Peter becomes the instrument of Cornelius' conversion, his role in this story also conveys an important element in Luke's theological viewpoint. In keeping with the central importance Peter has in the Jerusalem community from the beginning of Acts, he alone is the apostle who has the authority to take this bold step. A third theological issue in this text has to do with the nature of Christian hospitality. Crucial to the Church's inclusion of gentiles is the problem of table fellowship. That is an explicit issue, of course, in Gal 2:12,

but it also plays a role in this story with its recurrent motif of hospitality and the sharing of food (10:23, 28, 48; 11:3).

BEVERLY ROBERTS GAVENTA

CORNER GATE (PLACE) [Heb *sĕʿar happinâ* (שַׁעַר הַפִּנָּה); *šaʿar happôneh* (שַׁעַר הַפּוֹנָה); *šaʿar happĕnîm* (שַׁעַר הַפְּנִים)]. Gate of Jerusalem first mentioned during the reign of Amaziah (2 Kgs 14:13; 2 Chr 25:23) that became increasingly strategic to Uzziah (2 Chr 26:9) and to Hezekiah. After the destruction of Jerusalem in 586 B.C.E., Jeremiah and Zechariah refer to the Corner Gate (Jer 31:37—Eng 38; Zech 14:10) as the westernmost boundary of a future Jerusalem. Where the Corner Gate should be located greatly depends on whether or not there was an Israelite settlement on the Western Hill of Jerusalem and on whether it was included inside the walls of the city (for a full summary, see Simons 1952: 226–81, 447–58). These questions were, for the most part, answered by the archaeological excavations on the Western Hill from 1968 to 1971 with the discovery of pottery, figurines, ostraca, and the more significant "broad wall" and "Israelite tower" dated to the 8th–7th centuries B.C.E. and most likely should be attributed to Hezekiah (Avigad 1980: 23–60). It is at the W end of this 8th-century wall, built along the Transversal Valley to protect the vulnerable NW approach of the city, that the Corner Gate should provisionally be located. The gate most likely began as an avenue of ingress and egress for the settlement on the Western Hill. After Amaziah's defeat at Beth-shemesh, Jehoash, king of Israel, came to Jerusalem and destroyed 400 cubits of a city wall between the Gate of Ephraim and the Corner Gate. Uzziah later strengthened the Corner Gate with defensive towers (2 Chr 26:9) to enhance strategically its vulnerable position for lack of a valley or ravine to protect the gate. The Corner Gate then became the westernmost point of Hezekiah's "broad wall." It ran E–W along the Transversal Valley from the temple enclosure to the Corner Gate where the city wall turned S along the Hinnom Valley (Gibson 1987: 86–87). Nehemiah's lack of reference to the Corner Gate may be attributed to his reinforcing of only the old defensive lines of the smaller City of David and temple area (Avigad 1980: 61–62; Williamson 1984: 85–87).

DALE C. LIID

CORPORATE PERSONALITY. "Corporate personality" is a term used in English law. It refers to the fact that a group or body can be regarded legally as an individual, possessing the rights and duties of an individual. The membership of such a group may change through the death of members or the recruitment of new ones, without affecting the rights and duties of the group as a whole.

Although Wheeler Robinson in 1907 had alluded to the concept in his commentary on Joshua, it wasn't until 1911 that he introduced the term "corporate personality" into biblical interpretation. He believed that it helped to explain features of the OT that were puzzling to modern readers. For example, in Joshua 7, the whole household of Achan was destroyed, even though Achan alone had disobeyed the divine command not to take spoil from Jericho. If Achan's household was a corporate personality, the whole group was

culpable, even though only one of its members had offended. Again, in some of the psalms (e.g., 44:5–9—Eng 44:4–8), the language switches abruptly from "I" to "we." If the psalmist belonged to a corporate personality, he could think of himself ("I") as embodying the whole group; yet his sense of solidarity *with* the group allowed him also to employ "we" language.

According to Rogerson (1980), Robinson employed "corporate personality" in at least two different senses: (a) corporate responsibility (e.g., the Achan punishment) and (b) corporate representation (e.g., the corporate "I" of the psalms). Like many scholars of his day, Robinson believed that ancient Hebrew thought was similar to that of "primitive" societies and was impressed by the work of anthropologists on this "primitive" mentality, especially that of Lévy-Bruhl. He believed that the Hebrews analyzed the relation between the individual and the group in ways very different from those of modern man. For example, the Hebrews did not place limits on their individuality but felt themselves to belong to a group in such a way that an individual could be or become the group. Again, a remote ancestor, although dead, could embody the group in such a way that a living member of it could feel the closest identity, even identification, with the ancestor.

Although Robinson took the idea of corporate personality from English law, he applied it to the OT in an imprecise fashion. In English law a corporate personality cannot be punished for the misdemeanor of one of its members. If, however, the offender acted as an authorized representative of the group, then the group as such could be indicted. Furthermore, the idea of a bond of consciousness or identity between individual and group, such as is presupposed in explaining the corporate "I" of the psalms, is foreign to the legal notion adopted by Robinson in order to describe what he believed to be a basic and primitive characteristic of Hebrew thought, one to which modern thought had no parallel.

Since the 1930s many OT scholars believed that Robinson had discovered an important way of avoiding reading modern Western notions of individuality into the OT. Many also believed his work to be confirmed by Pedersen's (1926) mystical account of how Israelites experienced the world. Corporate personality was thus used to explain the individual and collective traits of the servant in the four Servant Songs of Isaiah 42–53 (Robinson 1955; Eissfeldt 1933), the phenomenon of pseudonymity in apocalyptic literature (Russell 1964), the identity between a messenger and the person who sent him (Johnson 1961: 28), and the close affinity between saga characters and Israelite readers of the sagas (Koch 1969). However, the anthropological theories on which Robinson based his notion of Hebrew mentality have since been largely abandoned by anthropologists.

Robinson must be credited, nevertheless, with focusing attention upon an important question: did the Israelites regard a group as a collection of individuals or as a body with various members? In some cases the answer seems to be that a group is regarded primarily as a body whose members are so bound together that they must share a common fate. In Gen 19:22–32, the alternatives are that either Sodom will be destroyed or it will be reprieved should it contain ten righteous persons; that the righteous should be spared and the wicked destroyed is not an option. The city is dealt with as a collective whole.

However, care should be taken not to press this principle into service without careful thought. In the Achan incident there is clear indication of individual responsibility. Achan is identified as the culprit, and, although the people as a whole had been punished by defeat at Ai, it is only Achan's household that is put to death. This punishment need not depend upon corporate personality; it has been explained in terms of the need to execute all those who were defiled by contact with spoil devoted wholly to God (Porter 1965). It has also been seen as an instance of ruler punishment.

The classic instance of ruler punishment (Daube 1947) is 2 Sam 24: 1–17, where David's punishment for holding a census results in the death of 70,000 men. Here again, the idea of individual responsibility is clear: David erred, but his punishment falls upon his property, the 70,000 men.

The above examples should serve as a warning against those who attempt to fit OT texts into simplistic categories. In OT law the principle of individual responsibility was fundamental from the earliest times. Yet some individuals held power over others that might cause them, although innocent, to be punished for the actions of the head. In OT religion the fear of defilement of the whole people by the presence within it of a group or individual that had violated the boundary separating the sacred from the profane was strong

enough to require the execution of those responsible. Again, the OT employs the devices of personification and synechdoche: Israel can be described as a virgin girl (Amos 5:2), or a king can represent the whole of his people (Ezek 28:2, 12).

It would be wrong to assume without further investigation that Israelites perceived the relation between the individual and society in exactly the same way as modern scholars. It is equally wrong to suppose that the OT can only be understood by positing a special Hebrew mentality, radically different from that of modern Westerners. Even in modern society, where individualism is a more dominating concept than in the OT, there exist experiences and resources which can be used sensitively to explain features of OT narrative that are at first sight puzzling and alien.

CORPUS HELLENISTICUM NOVI TESTAMENTI. A research project whose purpose is to collect and publish Greco-Roman parallels elucidating the contents of the NT.

A. The History of the Project

Before the 17th century NT exegesis was mainly of a dogmatic nature, both in Protestant and in Roman Catholic circles. The exegete was obligated to "explain" the sacred texts in such a way that the dogmatic interests of the Church were defended. Although as early as 1572 the classical philologist Joachim Camerarius had stated that the NT could only be explained against the background of the linguistic usage of ancient authors (Kümmel 1970: 26–28), it was not until the 17th century that this view became more influential. This period saw the birth and growth of a strictly philological approach to the NT. In the so-called *Observationes* and *Annotationes* literature, the text of the NT books was elucidated on the basis of parallels from one or more classical authors. The most important examples from both the 17th and 18th centuries are works by D. Heinsius, H. Grotius, J. Cappellus, P. Colomesius, J. Dougtaeus, J. B. Carpzovius, C. H. Langius, C. F. Munthe, J. Pricaeus, G. Raphelius, J. T. Krebsius, L. Bos, J. Alberti, C. F. Loesnerus, and J. Elsnerus (for bibliographical details, see Ros 1940: 49–56 and Delling 1963a: 1, n.1). Although *Observationes* and *Annotationes* cannot be strictly distinguished, one may say that, whereas the *Observationes* often merely listed parallels from Greek and Latin authors, the *Annotationes* for the most part have the character of a commentary in which also aspects other than simply elucidating parallels are treated (see the collection of *Annotationes* literature in Pearson 1666).

The practice of collecting classical parallels to the NT reached its zenith in J. J. Wettstein's *Novum Testamentum Graecum* (1751–52). This work, intended to be a new critical edition of the Greek NT, has remained a highly useful tool to the present day (it was reprinted in 1962), not for its edition of the NT, but for its extensive apparatus containing quotations of parallels from Greek, Latin, and rabbinic literature; more than 175 classical authors had been scrutinized by Wettstein over a period of more than

forty years in his search for parallels to the NT (see Hulbert-Powell 1938; van Unnik 1964a: 196–99; Mussies fc.). Neither before nor after him has such a comprehensive and systematic collection of materials relevant to the NT been published. Although Wettstein himself declared that much remained to be done (2: 876), after his death this kind of work gradually came to a standstill. In the 19th century historical-critical questions occupied NT scholars much more than philological matters. But by the beginning of the 20th century the climate had again changed. The discovery of papyri in Egypt, excavations in the E Mediterranean area, and the rise of religiohistorical research brought the relationship between the NT and its cultural milieu into focus again. Shortly before World War I, C. F. Georg Heinrici, a Leipzig professor of NT, developed plans for a large-scale project, called by him "a new Wettstein," and later renamed (probably by E. von Dobschütz) *Corpus Hellenisticum Novi Testamenti* (CHNT). Rabbinic writings were excluded from the project when it became known that Paul Billerbeck was working on this material for his monumental *Kommentar zum Neuen Testament aus Talmud und Midrasch* (1926–28). Heinrici enlisted as his collaborators Ernst von Dobschütz, Hans Lietzmann, Hans Windisch, Adolf Deissmann, and Johannes Leipoldt (von Dobschütz 1922: 146–48; van Unnik 1964a: 200–1). During the initial stage of the project, Heinrici died (in 1915) and his responsibility passed to von Dobschütz in Halle. Von Dobschütz organized the project with great enthusiasm and, after World War I, set a great number of assistants (more than fifty, at several universities) to work on it. They checked Wettstein's quotations against modern critical editions, updating and supplementing his material, all of which was recorded on file cards. Soon it was discovered that a team of scholars in England (under F. H. Colson's direction) was also working on a new edition of Wettstein, to be published by SPCK (Hulbert-Powell 1938: 273). Scholars like G. N. L. Hall, G. H. Whitaker, E. R. Bernard, W. O. E. Oesterley, W. Scott, W. K. Lowther Clarke, and others had been collecting materials from Plutarch, Seneca, Josephus, Vettius Valens, Stobaeus, the Corpus Hermeticum, and the Magical papyri. Once von Dobschütz had succeeded in convincing the British that the German project was in a far more advanced stage, they put all their materials at the disposal of the Germans and discontinued the enterprise (von Dobschütz 1922: 147–48).

Between the years 1918 and 1933 much work was done. In 1928 von Dobschütz (1928: 49) wrote that the project could be completed in a few years. However, with the rise of National Socialism the project gradually broke down, the more so after the death of von Dobschütz in 1934. When his successor, Hans Windisch, who hoped to finish the project in the near future (1935: 125), died within a year, the work came to a complete halt (Aland 1955–56: 218). Together with the individual workers, many of the file cards disappeared in the years before and during World War II. In 1941 the Halle NT scholar Erich Klostermann came to an agreement with Anton Fridrichsen in Uppsala that the pagan portion of the materials (the Pagano-Hellenisticum) should be transferred to Uppsala, while the Judeo-Hellenisticum would remain in Halle (Fridrichsen and Klostermann 1941: 255). Fridrichsen had a long-standing interest in the project and had himself written a series of articles with CHNT materials (Bauer 1954: 128). But owing to a long-lasting illness and his early death in 1953, he was not able to advance the project. Only one contribution, a dissertation by one of his pupils (Almqvist 1946), was made in the years between 1941 and 1953. The untimely deaths of J. Schniewind and H. Preisker also considerably slowed progress in the Halle branch.

In 1955 a new start was made. Fridrichsen's successor, Harald Riesenfeld, and the Dutch NT scholar Willem Cornelis van Unnik agreed, after international consultation in the Society of New Testament Studies (van Unnik 1956–57; Aland 1955–56), that the Pagano-Hellenisticum part of the CHNT would be transferred to Utrecht under the direction of van Unnik, while the Judeo-Hellenisticum would remain in Halle, to be directed by Gerhard Delling (Aland 1955–56: 218–19; Delling 1963a: 5). Like von Dobschütz and Windisch, van Unnik, too, expected that the wish to publish a new Wettstein would soon be fulfilled (van Unnik 1964a: 202). In 1956 the file cards arrived in Utrecht and were studied, checked, and reordered by temporary assistants. In the 1960s two full-time researchers began collecting new materials from Hellenistic authors. In 1966 a new branch of the project was begun at the Institute for

Antiquity and Christianity in Claremont, California, under Hans Dieter Betz, who had previously published a contribution to the CHNT (Betz 1961).

By this time it had become clear that the ultimate goal, i.e., the publication of an updated and completed Wettstein, could not be reached as easily and quickly as had been wished, both because of the immense amount of ancient literature to be studied and because of the very limited number of researchers who were available to the project. Hence it was decided to aim provisionally at an interim goal, namely, the publication of a series of monographs discussing the relevance of one particular author (or corpus) to the NT. This series, the *Studia ad Corpus Hellenisticum Novi Testamenti* (published by Brill), began in 1970 and continues to the present time (see Petzke 1970; Mussies 1972; Betz 1975 and 1978; Grese 1979; van der Horst 1980). In addition, a series of articles on minor authors (van der Horst 1973, 1974, 1975, 1981, 1983a), and on NT chapters, pericopae, verses, or themes in their relation to Hellenistic literature (van Unnik 1964b, 1970a, 1973a; Betz 1979; van der Horst 1983b, 1985; Mussies 1986) has been and continues to be published in various scholarly journals.

Within these publications, both monographs and articles, three different approaches can be discerned. In the first, the order of the NT text is the point of departure, and the parallels are quoted *seriatim,* from Matthew 1 through Revelation 22, with little or no comment (as in Wettstein). In the second, the order of the writing(s) of the pagan or Jewish author becomes the point of departure, and to it parallels from the NT are quoted, with or without comment. In the third, the material is arranged thematically, with topics from the pagan literature or the NT as the focus; these are elucidated through parallels drawn from the other corpus. Each of the above divergent approaches has its advantages and they are complementary.

Since van Unnik's death in 1978, the work of the Utrecht branch of the CHNT has been continued by his former collaborators Gerard Mussies and Pieter W. van der Horst. Under Delling, and also, since his retirement in 1975, the Judeo-Hellenisticum branch in Halle has been active mainly in bibliographical work (Delling 1975). With Betz's move to Chicago in 1979, the American branch of the Pagano-Hellenisticum moved from Claremont to the Divinity School of the University of Chicago.

In the seventy years of its existence, progress of the project has seriously been hampered by four causes: the First and Second World Wars; the untimely deaths of several of its directors (Heinrici, von Dobschütz, Windisch, Schniewind, Priesker, Fridrichsen, van Unnik); a serious underestimation of the amount of work involved; and in recent times the increasing number of nonresearch duties imposed upon investigators at the universities. The future of the project lies in the steady continuation of the series of books and articles on individual pagan authors or writings and on pericopae, chapters, or themes of the NT.

B. The Purpose of the Project

The primary purpose of the CHNT is to further the understanding of the NT in its cultural context, not only from a religiohistorical, but also from a literary, philosophical, and historical point of view. The work done at this project is necessary in order to learn to hear the words of the NT with the ears of 1st-century people and so to discover the emotional value of these words for the earliest readers or hearers. The aim is to investigate everything that has been preserved from Greek and Roman antiquity in relation to its significance for a proper understanding of the NT (van Unnik 1980: 202, 208). Van Unnik described the project's purpose with the maxim, "Words come to Life" (van Unnik 1971: 199). This does not mean that the project is of a lexicographical nature. In the early *Observationes* literature, as well as in Wettstein, there was a heavy emphasis on lexicographical matters. This was necessary since there were no (or only very inadequate) lexicons in those days. Now with the advent of Walter Bauer (BAGD) and *TDNT*, much of the relevant lexical parallels are easily accessible (Delling 1963a: 8). Moreover, G. H. R. Horsley has undertaken a new collection of lexical material from papyri and inscriptions for a revised Moulton-Milligan (Horsley 1981–87). Of course, there are still several lacunae in NT lexicography, and occasionally CHNT researchers have been able to fill the gaps (see, e.g., van Unnik 1962; Mussies 1978; van der Horst 1976–77, 1978). But more often it is rather the specific combination of words (not indicated by the lexicons) that appears to be relevant. For example, it no longer makes sense to collect occurrences of *gnōmē,* "purpose, mind," and the numeral *heis/mia/hen* in Greek authors; however, it does make sense

to collect instances of *mia gnōmē,* "one mind," since only then does it become clear that the author of Revelation is employing a political technical term, which evoked very specific associations (Rev 17:13, 17; van Unnik 1970b).

The main emphasis in CHNT research, however, is on conceptual parallels, which, more often than not, are phrased differently than in the NT so that there is no or only little verbal agreement (the main reason why the computer is of very little use to this project). This is, of course, most obvious when the parallels are found in Latin writings. For example, to the use of spittle in the story of the healing of the blind man by Jesus (Mark 8:23; cf. John 9:6) the closest parallel is Tacitus' story of Vespasian's healing of a blind man by means of the emperor's spittle (*Hist.* 4.81; also Suet. *Ves.* 7.2). Since the languages are different here, there is no verbal agreement, although Greek parallels can be verbally dissimilar as well. As for the story of the ascension in Acts 1:9, there are many pagan parallels, none of which agree verbally (van der Horst 1983b: 20–23). The same applies even to such a motif as the tongues of fire, a manifestation of divine presence or grace in Acts 2:3; here the many parallels in Greek, and especially Latin, sources show little or no verbal similarity (van der Horst 1985: 49–50). Several aspects of Jesus' genealogy in Matt 1:1–17 can be clarified against their Hellenistic and Jewish-Hellenistic background despite the lack of verbal agreement (Mussies 1986). Also Jesus' raising of the widow's son at Nain (Luke 7:11–17) has a striking parallel in a story of Apollonius of Tyana (Philostr. *VA* 4.45), but again there is no verbal agreement (Petzke 1970: 129–30; cf. Betz 1961: 161). In general, there are many pagan parallels to the miracle stories, especially the healing miracles (Betz 1961: 147–60; cf. Weinreich 1909).

Sometimes the agreement between an expression in the NT and its parallels is only partially verbal while conceptually complete. For instance, to the expression *to pneuma mē sbennute,* "Do not quench the Spirit," in 1 Thess 5:19 there are only partial verbal parallels in Plutarch, but nonetheless the background of the concept of extinguishing the spirit can be illuminated from Plutarch, whose writings on inspiration make Paul's meaning clear, i.e., let not rational considerations and the fear to look ridiculous in the eyes of others restrain the activity of God's spirit within you (van Unnik 1968). The formula in Rev 1:19, "what you have seen, what is now, and what will be hereafter" (NEB), has no exact counterpart in Greek and Latin literature, but comparable (as far as meaning is concerned) formulas from Homer through late antiquity make it abundantly clear that this phrase is a formula describing prophecy (van Unnik 1962–63). When in Acts 9:1 it is said that Saul was still "breathing threats and murder" (NEB) against the disciples of the Lord, the use of various verbs for "breathing," with an object in the accusative or genitive to indicate strong emotions at dramatic high points, can again be traced from Homer down to the later imperial period; all such instances are found, significantly enough, in higher literary sources (van der Horst 1970). Acts 22:28 offers an example of a more historical nature. The Roman commander's statement, "It cost me a large sum to acquire this citizenship (NEB), is illustrated in a discourse by Dio Chrysostom (*Or.* 34.23, early 2d century C.E.) where it is stated that one had to pay five hundred drachmas in order to become a Roman citizen of Tarsus (Mussies 1972: 133). The belief of the inhabitants of Jerusalem that Peter's shadow would heal the sick (Acts 5:15) finds its explanation in the whole complex of ideas both in pagan and in Jewish popular belief about the power of an individual's shadow (van der Horst 1976–77, 1979).

A wide variety of parallels have been considered. Sometimes, but not often, they are only lexical. More often they are of a stylistic and literary nature, helping to clarify the linguistic and literary stratum to which the NT writings belong. The most important parallels are the conceptual ones, both in the sphere of the history of religions and in that of ethics and *realia.* "The Corpus Hellenisticum will be a collection of all parallels and antiparallels in expression and contents that exist between the Greek and Roman world and the NT" (van Unnik 1971: 204). All the material collected helps us to see how deeply the earliest Christian writers were rooted in Hellenistic-Roman culture. This is not to deny or doubt the fundamentally Jewish character of the NT writings. The aim of the CHNT is to show what these basically Jewish writings have in common with Greco-Roman and Jewish literary documents. It should also help to measure to what extent 1st-century Jewish (and through it, Christian) thought and diction have been influenced by Hellenistic ideas and modes of expression.

The nature of the work at the CHNT involves the risk that attention is mainly drawn to points where there seems to be a certain agreement or similarity between pagan and early Christian documents, whereas it may rather be the absence of parallels that is significant. Hence it should be stressed that one of the important facets of the project is that, the more work has been done in this field, the better we can identify those passages and concepts in the NT to which no parallels are to be found. Only then will the really distinctive ideas and usages of the NT be brought out in full relief.

CORRECTIONS OF THE SCRIBES. See SCRIBAL EMENDATIONS; TEXTUAL CRITICISM; MASORAH.

CORRUPTION, MOUNT OF (PLACE) [Heb *har hammašḥît* (הַר הַמַּשְׁחִית)]. A site mentioned in 2 Kgs 23:13 which tells how King Josiah desecrated "the high places that were east of Jerusalem on the south of the Mount of Corruption." According to 1 Kgs 11:7, this is probably where Solomon had erected shrines to Ashtoreth, Chemosh, and Molech. The specific location of the Mount of Corruption on the hill E of Jerusalem is not exactly clear but seems to have been located on the S end of the hill; in later times it was specifically identified with the S part of the ridge, an area probably to be understood as E of the City of David and up the slope from the modern village of Silwan (Finegan 1969: 89); this area is to the S of the slight depression which separates the N sections of the hill (including the first N summit, Mount Scopus, and the central summit, the Mount of Olives) from the S section of the hill. The same Heb term, used in 2 Kgs 23:13, is also found in Jer 51:25 and translated, "Destroying the Mountain," but in the latter instance refers to Babylon's invasion. The Vg of 2 Kgs 23:13 uses the term Mons Offensionis (Mount of Offense), and this term and a similar one, Mons Scandali (Mountain of Scandal), are often used today to describe the area. Rabbinic tradition identifies the hill by the term, "The Mountain of Anointment," which may have been the earlier name for the hill, because the olives harvested there were used for anointing (Mount of Olives). On this assumption the name of the hill was later changed to "Mount of Corruption" because of Solomon's desecration.

W. HAROLD MARE

COS (PLACE) [Gk *Kō* (Κω)]. Small island (approx. 80 stadia in circumference; Strabo 14.2.19) in the Aegean Sea, SW of Asia Minor, with a city by the same name. The Mycenaeans settled on Cos by 1425 B.C.E. and it was heavily populated, according to Homer (*Iliad* 2.184; 14.225; 1 Macc 15:23; Acts 21:1). The island fell to the Dorians sometime after the 12th century B.C.E. and subsequently received settlers from Epidaurus (Str. 14.2.6; Th. 7.57.6). Cos was a major shipping port, exporting excellent wine (Pliny 15.18; 17.30), costly ointments (Athen. 15.688), purple dye, and fabrics of a transparent texture (Hor. *Od* 4.13.7; Tibull. 2.4.6). Cos was celebrated for its Temple of Asclepius (a Greek god associated with healing), as the birthplace of Hippocrates (the so-called father of medicine), and its legendary medical

school. In the 3d century B.C.E., Cos developed an outstanding library and several Ptolemaic princes were educated there.

When Judah the Maccabee's emissaries were returning from Rome to Judea in 161 B.C.E., they received a letter of safe-conduct from the Roman consul to the authorities of Cos (*Ant* 14.10.15 §233). The Roman Senate sent a letter to the inhabitants of Cos warning them not to join forces with Tryphon against Judea (1 Macc 15:23). Josephus, quoting Strabo, mentioned that the Jews of Asia Minor deposited their money on Cos during the Mithridatic War (*Ant* 14.7.2). Julius Caesar later issued an edict in favor of the Jews of Cos (*Ant* 14.10.15). Herod the Great conferred many favors on Cos (*JW* 1.21.11) and an inscription also associates Herod Antipas with the island. Another inscription from the island refers to a Jewess or possibly to a "God-fearer" from the island. Cos is mentioned once in the Bible in Acts 21:1. After Paul's third missionary journey, the apostle sailed from Miletus to Cos, where he spent the night before sailing the next day to Rhodes.

SCOTT T. CARROLL

COSAM (PERSON) [Gk *Kōsam* (Κωσαμ)]. The father of Addi and son of Elmadam, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:28). D omits Cosam, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Cosam occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of eighteen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 501). Kuhn's (1923: 214–16; endorsed by Schürmann *Luke* HTKNT, 201, n. 95) attempt to find a source for Cosam, as part of the group from Neri through Er, in corrupted forms of names in 1 Chr 3:17–18 MT, is particularly unconvincing, especially since there is serious question whether the genealogy at this point is based on 1 Chronicles, which does not have Cosam in 3:18 MT or LXX (Marshall *Luke* NIGTC, 164; cf. Jeremias 1969: 295–96).

A. Definitions

Cosmogony and cosmology are both terms whose etymologies remain helpful in defining them for the purposes of discussing their place in biblical thought. The first element in both words is obviously the same Greek word that lies behind the English "cosmos," and thus refers to the entire universe as an organized entity. A cosmogony (*kosmos* + *genia* = "birth") is thus an account, usually in the form of a mythological tale, about the genesis or birth of the structured universe. A cosmology (*kosmos* + *logia* = "report") is a blueprint or map, in the widest sense, of the universe as a comprehensible and meaningful place.

Occasionally, scholars have maintained that it is important to make a firm separation between these two terms—a separation between cosmogony, on the one hand, as a mythical account of the original events that produced an ordered universe, and cosmology, on the other hand, as speculation about meaning and value in the universe in the most general sense and even in the absence of any mention of originating events. Though such a terminological division may be useful in discussing nonbiblical religions, the fact is that the locus of almost all cosmological thought in the Hebrew Bible and in the NT is in cosmogonic texts. Hence, the two terms have traditionally been used almost interchangeably in discussions of early Judaism and Christianity; and they will be so used here.

The present treatment of cosmogony and cosmology in biblical texts is composed of three major sections. The first and much the longest is devoted to the Hebrew Bible, whose lengthy history of composition and transmission has led to a striking variety of quite different cosmological views. A second and shorter section is concerned with cosmological materials in the NT. Finally, the concluding section will concentrate on a series of questions posed by historians of religion but too often neglected in treatments of biblical cosmogonic lore: What is the role of cosmological speculation in religious thought generally? Why is it that almost no religion's scriptures omit some discussion of the origin of the universe?

B. Cosmogony and Cosmology in the Hebrew Bible

1. The Significance of Cosmological Material for Biblical Religion. Initially, one might ask if statements about the origin and meaning of the universe played a significant role in the religion of ancient Israel. Both internal evidence from the Hebrew Bible and the conclusions of a previous stage in biblical scholarship suggest that such a potentially troubling question is not out of place. With regard to the biblical evidence, it has been noted that there is no single word in biblical Hebrew which bears the weight carried by the Greek word *kosmos.* The notion that the universe is a rationally comprehensible totality is one that is met with frequently in Greek thought and that is represented already by the use of this term *kosmos.* The postbiblical usage of the Hebrew word "ancient," "everlasting" *(ʿōlām)* carries similar connotations; but *ʿōlām* is not used in such a cosmic sense within the Hebrew Bible, and other expressions ("earth" [*tēbēl*], "heaven and earth" [*haššāmayim* wĕhāʾāreṣ], or "the all" [*kol*]) are similarly limited. Secondly, only rarely does the Hebrew Bible concentrate at sustained length on cosmogonic narratives. Though hints and allusions abound to what must be assumed to be a popular reservoir of thoughts on the origin and shape of the universe, accounts that extend beyond a few verses are essentially limited to those in Gen 1:1–2:4a and 2:4b–25; and of these, the second is more correctly seen as an account of the origin of humanity (an anthropogony).

On the basis of these observations and others, many scholars, especially those working during the early and mid-20th century, concluded that cosmogonic thought was very much a subsidiary and probably too, a quite late concentration for ancient Israel. Thus, the well-known German form-critic Gerhard von Rad, who placed historiographic concerns at the heart of Israel's theology, urged repeatedly that "Israel's faith is based on history rather than cosmology" (*ROTT* 2: 347). The historian of religion Mircea Eliade concurred: "This God of the Jewish people is no longer an Oriental divinity, creator of archetypal gestures, but a personality who ceaselessly intervenes in history … the Hebrews were the first to discover the meaning of history as the epiphany of God, and this conception, as we should expect, was taken up and amplified by Christianity" (1959: 104). Von Rad, Eliade, and others then went on to claim that

historiographical, functional, and soteriological concerns dominate in the religion of Israel as speculative, cosmological concerns dominate elsewhere, for example in ancient Egypt, Mesopotamia, or India.

However, the position that cosmological thought plays but a secondary role in the Hebrew Bible is one that has found fewer defenders in the most recent period. The internal evidence most cited for revising the earlier, minimizing assessment of the role of cosmology in biblical religion is, first, that the present shape of the Hebrew Bible does accord primacy to two separate creation accounts. Thus, from a canonical perspective, the ancient Jewish community which based its beliefs and rituals upon the Hebrew Bible clearly saw cosmogony as basic to its religion. Secondly, and especially in the years following the recovery of the ancient, mythological texts from Ugarit (Ras Shamra) on the Syrian coast, the number of allusive references to cosmogonic battles in the Hebrew Bible has been given renewed appreciation.

Beyond this evidence, progress in the study of comparative religion has suggested that no religion entirely omits cosmological reflection. Thus, the French sociologist Emile Durkheim, whose *The Elementary Forms of the Religious Life* has been perhaps the single most influential volume for the study of comparative religion, argued both that "there is no religion that is not a cosmology" (1915: 21) and that "all known religions have been systems of ideas which tend to embrace the universality of things, and to give us a complete representation of the world" (1915: 165). Durkheim's view is that all religions offer their adherents a satisfying explanation of the world, so that cosmology can be sought and found in many texts that are not overt cosmogonies. The analyses of Durkheim and others have begun to persuade biblical scholars that the older view was too limiting and too much in the service of demonstrating the uniqueness of Israel's religion. The position that the Hebrew Bible is essentially concerned solely with history or with soteriology, to the exclusion of cosmology, has had a similar fate. Two recent summaries of Israelite cosmogony can therefore conclude, in opposition to the older view, that creation is not to be seen in the Bible as transformed and historicized, but rather remains fundamentally mythical (McKenzie 1976: 199) and that "at all points in the cosmogonic traditions, even in places where Israel's election or deliverance from enemies is involved, there is a more fundamental level of meaning: the nature of reality itself" (Knight 1985: 134).

Hence, the view commanding increasing assent is that cosmological thought is of greater significance for both ancient Judaism and early Christianity than earlier critics had judged. Still, it remains true and worth accenting that various religious traditions do place a different weight upon such thought, and that on any chart measuring comparative attention granted to cosmology the biblical religions would not rank near the top. Among the neighbors of ancient Israel, both Egypt and Mesopotamia seem to have engaged more fully and at an earlier date in speculations about the origin and the basic blueprint of the cosmos than did Israelites; and early Greek thought shows a similar concentration upon questions of origin and rational organization. Perhaps the most elaborate religious cosmologies are those developed in India, whose chronologies of the ages of the universe are especially noteworthy (*EncRel* 4: 107–13) and contrast greatly with the very brief (cosmically speaking) time spans narrated in the Hebrew Bible and in the NT. Among the reasons for this relative dearth of cosmogonic speculation may be the composite origins of the biblical portrait of Yahweh, the God of Israel. It has been pointed out that elements of both the god Baʿl Haddu and the god ʾEl from the religion of most ancient Syria-Palestine have gone into the Israelite descriptions of Yahweh (*CMHE)*; and the developing polemic against Baʿl Haddu, whose myths are throughout cosmogonic tales, may have militated against the utilization of the full repertoire of cosmogonic myths in portraying Yahweh.

2. Varieties of Cosmology in the Hebrew Bible. A second, prefatory remark about the most general role of cosmology in biblical thought is that this thought displays a notable lack of uniformity and consistency. There is perhaps just sufficient uniformity to allow for the construction of a general world view (see sec. B.9 below); but the contrasts between, for example, the allusions to an original cosmic battle against the forces of chaos, on the one hand, and the portrait of Wisdom's controlling role in the orderly creation of a rational cosmos, on the other hand, remain what is most striking.

The reasons for this lack of uniformity are not difficult to discover. In the first place, the process of the composition and transmission of the materials now in the Hebrew Bible was one that stretched over

something like a full millennium. It should not, therefore, occasion surprise if the cosmogonic accounts which appear to have originated in premonarchical Israel differ dramatically from those now found in Proverbs or the book of Daniel. Secondly, one of the distinctive attributes of the religion of Israel is the allowance for and the preservation of quite different theological positions. Such tolerance of diversity obtains in the area of cosmology as it does elsewhere, so that a recent scholar is on quite firm ground when he concludes of cosmological materials in the Hebrew Bible that "at this point, as in many others, Israel was able to maintain and affirm pluralism as a distinct aspect of her heritage and identity" (Knight 1985: 137).

Of course, both the recent move toward widening the definition of cosmology to include materials previously omitted in discussing cosmology in the Hebrew Bible and the absence of uniformity within this collection of texts create difficulties for any attempt to construct a schematic portrait of cosmology in the Hebrew Bible. In what follows, cosmological materials are treated in rough chronological order, with the frank recognition that the assignment of absolute dates to many strands in the Hebrew Bible must be done with greater hesitancy than was true only a generation ago. Nor is there any attempt, given the constraints of space, to be truly comprehensive. For example, neither the flood story in Genesis 6–9 nor the accounts of the significance of the temple in Jerusalem (e.g., in 1 Kings 8 or Ezekiel 40–48) receives attention below; and yet each could be seen as presenting material of cosmological significance and must be covered in any fuller account.

3. The Cosmic Battle Pattern. Already at the end of the 19th century the great scholar of Israel's preliterary traditions, Hermann Gunkel, noted that a careful reading of the Hebrew Bible revealed allusions to a common ANE cosmogony based upon a primordial combat between the creator and the forces of chaos (Gunkel 1895). Prior to the uncovering and translation of the Ugaritic texts, the source of these traditions was regularly seen to be Mesopotamia, the location of the creation tale *Enuma Eliš* with its account of the battle between the god Marduk and the dragon goddess Tiamat, and perhaps too in Egypt, which knew the tradition of a fundamental combat between the creator god Re and the dragon Apophis. The mythological texts from Ugarit in Syria now demonstrate that there is no need to go so far afield in the search for the literary and theological models which Israelite poets found so useful. These texts, as best the narratives they relate can be reconstructed at present, tell of a primeval battle between the god Baʿl Haddu (familiar as Baʿal in the Hebrew Bible) and the forces of chaotic destruction and death. The latter are called by such titles as Prince Sea *(ym)* and Judge River *(nhr)* in the primary version of this combat tale, while what appear to be alternate versions of the same, basic tale label these forces Lotan (*ltn*, the equivalent of the biblical Leviathan) or the seven-headed serpent (Herdner 1963: CTCA Text 2 or 5).

On the basis of these texts from ancient Syria and of their transformations in the Hebrew Bible, a common Syria-Palestinian pattern for the shape of the cosmogonic battle myth can be reconstructed. This pattern consists of four rounds: (1) a Divine Warrior goes forth to battle the chaotic monsters, variously called Sea, Death, Leviathan, Tannin; (2) the world of nature responds to the wrath of the Divine Warrior and the forces of chaos are defeated; (3) the Divine Warrior assumes his throne on a mountain, surrounded by a retinue of other deities; and (4) the Divine Warrior utters his powerful speech, which leads nature to produce the created world (*CMHE,* 162–63). Though there is no single biblical text which relates this battle in its fullest form, once the pattern is made clear, it seems undeniable that it lies behind and is responsible for a great number of biblical allusions which should be accounted as cosmogonic. For example, the titles Leviathan, Sea, River, Sea Monster (*tannîn* or the like), and Dragon *(rahab)* all are used of opponents of Yahweh the God of Israel in settings describing the earlier days of the cosmos.

The recognition of the existence and the continued power of this cosmic battle pattern has brought to life the cosmogonic significance of a number of biblical texts whose importance for the study of Israelite cosmology had long gone unrecognized. In some cases, the briefest of allusions suggests resonance with a widespread knowledge of this cosmogonic struggle tale. For example, Psalm 29, which was perhaps first composed in honor of Baʿl Haddu and only later transformed into a hymn honoring Yahweh, portrays the victorious God of Israel enthroned upon the "Flood dragon" (*mabbûl;* Ps 29:10). In Ps 68: 22–23 (—Eng

68:21–22) we read of God defeating both the "Serpent" and the "Deep Sea" (see Dahood *Psalms II* 51–100 AB, 131, for the text and translation here). Ps 74:13–14, in the midst of a section explicitly devoted to creation, tells of Yahweh's victory over "Sea" *(yam)* and the crushing of the heads of the "Sea Monster" *(tannînîm)* and of Leviathan. Another hymn to God as creator (Psalm 89) refers to Yahweh's reign on the back of "Sea" *(yam)* after defeating the dragon Rahab (Ps 89:10–11—Eng 89: 9–10). Psalm 104, long of special interest because of its similarities with the Egyptian celebration of creation called the Hymn to the Aton, again mentions Leviathan among other watery demons defeated by Yahweh.

It now seems likely that early audiences of all these psalms will have been able to fill out such brief allusions with the larger story so similar to them. Nor are these allusions confined to the Psalter. The hymn in Habakkuk 3, now generally regarded as a very early hymn inserted into a later context, has "River" and "Sea" as the enemies of Yahweh (Hab 3:8). Later prophetic texts display the same awareness of the creator's battle prowess in the struggle against chaotic foes which preceded the present cosmic order. The fire which Yahweh directs, according to one of Amos' visions, devours the "Great Abyss" (*tĕhôm rabbâ*), which appears to be a reference to a sea serpent (Amos 7:4; Wolff *Joel and Amos* Hermeneia, 292–93); and another of this prophet's visions portrays Yahweh commanding the "Serpent" (*nāḥāš*) who dwells in the underworld below (Amos 9:2–3). Leviathan in Isa 27:1 is seen as a "Sea Monster" (*tannîn*), and perhaps too as a fleeing, wriggling snake, if the mythological monsters in this verse are all various epithets for the same cosmic foe. But perhaps the most elaborate series of allusions to this primeval scene made by an Israelite prophet are those contained in the hymn in honor of Yahweh's great strength now to be found in Isa 51:9–11. The setting here is clearly that of the earliest days of the world, the days and generations long past, when Yahweh smote Rahab, pierced the "Sea Monster" (*tannîn*), and dried up the waters of "Sea" (*yam*) and the "Great Abyss" (*tĕhôm rabbă*). A recent study of this hymn observes that "the allusion is to the cosmogonic myth, the battle of creation, in which the monster of chaos is slain by the God who thereby establishes kingship" (*CMHE,* 108).

Demonstrating both the longevity and the power of this theme in a variety of different Israelite settings, another series of similar allusions are to be found in the poetry of the book of Job (Pope *Job* AB). Job 3:8 refers to Leviathan, 7:12 to the "Sea Monster" *(tannîn)* as cosmic foes of the created order, while 26:12 credits God again with smiting Rahab. At much greater length, the second speech from the whirlwind in Job 40–41 contrasts God's powers over Behemoth and Leviathan with the powerlessness of one such as Job. Leviathan is now well known as Lotan, the enemy of Baʿl and ʾAnat from the Ugaritic cosmogonic myths; and, while Behemoth may refer to the hippopotamus in some biblical texts, here the beast is best seen as another power of universal chaos, perhaps even equated with the bull of heaven slain by Gilgamesh and Enkidu in the Epic of Gilgamesh (Pope *Job* AB, 322).

The cumulative effect of all these allusions, tantalizingly brief and vague though each may seem when seen in isolation, is impressive. The texts' very brevity bears witness to the familiarity with the cosmic battle pattern that the author of each could assume on behalf of his listeners. Just as the briefest mention of words and phrases like the Pilgrims, the Founding Fathers, or the Gettysburg Address will resonate widely to an American audience, so too the very spare report of the Sea, the Dragon, or of Yahweh's splitting a sea monster will have called forth for an Israelite audience the entire myth in which these cosmic enemies attempt to play their destructive roles.

Earlier scholars were troubled by the implications of these battle scenes, since they so clearly compromise later Jewish and Christian understandings of the Hebrew Bible as consistently monotheistic. But the Hebrew Bible itself bears clear witness to monotheism as a slowly developing notion within early Israel, and one that for many centuries found no difficulty in portraying Yahweh's creative activity in the terms of the familiar cosmogonic battle pattern.

4. The Creation of the First Humans. The narrative that runs from Gen 2:4b through the remainder of Genesis 2 is, as was observed above, more properly an anthropogony ("human creation account") than a cosmogony. This story is normally credited to the Yahwist or the "J" source of the Tetrateuch. The Yahwist's activity is traditionally placed in the 9th century B.C.E.; but renewed doubt has been expressed of late about our ability to assign a date to this narrative strand with much confidence. The story of the

creation of the first man and the first woman in Genesis 2 is surely situated in the remotest past, but as surely this story occurs after the initial cosmogony. About the only clear reference here to events of that earlier, cosmogonic event is that to the underworld reservoir of water which irrigated and hence brought fertility to the otherwise dry and sterile ground (Gen 2:6). The Hebrew word used to designate this reservoir *(ʿd)* is a loan word from Mesopotamia (Sum ID, Akk *edu*), demonstrating again the reliance of many of the details in the primeval history (Genesis 1–11) upon traditions developed in the Tigris-Euphrates Valley.

As is true both of much of the Yahwist's materials in Genesis and of the recently more fully understood Epic of Atrahasis from Mesopotamia, the chief concern in this anthropogony is to describe accurately the status of humanity, and thereby to distinguish humanity from the attributes of the gods (Oden 1981). Another concern of the narrative in Genesis 2, as in so many accounts of the genesis of humanity throughout religious myths, is the origin of the distinction between the sexes (Trible 1978: 72–143). Yahweh here creates humans by forming or shaping them, working as does a potter (Gen 2:7, 19) and using bits of soil as the basic material. As a deity, Yahweh possesses both great wisdom and immortality. Humans initially lack both attributes but hunger ceaselessly for a higher status; and it is this lust for a different position on the cosmic hierarchy that continually causes trouble for humanity. The facts that the tale is set in a garden, so often associated with royalty in the ANE, and that the concern is both the wondrous powers and yet the limitations of humanity have led several scholars to propose the Israelite royal court as the original setting for the narrative's generation and transmission (Coats 1983: 39).

Genesis 2 is not the only account of the creation of primal humanity in the Hebrew Bible, even if it is at once the most familiar and the most sophisticated. Another and related report is to be found in Ezekiel 28, the prophet's lament over the prideful fall of the king of Tyre. Here we encounter again allusion to the creation of early humanity (using the special biblical term for divine creation, *bārāʾ*) in the setting of a garden. And here too read of a human's wickedness and violence requiring his expulsion from the garden. In both stories, the glory of humans as originally created is stressed, but so too is the human propensity to strive pridefully for a status that belongs properly to God.

5. The Role of Second Isaiah in Centralizing the Cosmological Argument. The 6th-century B.C.E. author of the poems now contained in Isaiah 40–55 (and perhaps of material found elsewhere in the book of Isaiah) was hardly the first in ancient Israel to credit Yahweh with creation). But this poet may have been the first to expand upon the series of cosmogonic allusions noted above (B.3) to establish something like a full cosmological argument for the unique and incomparable abilities of the God of Israel. Of the biblical occurrences of the Hebrew word "to create" *(bārāʾ),* used solely of divine creation, over a third occur in this section of the book of Isaiah. Isa 40:12–26 offers a quite complete description of the cosmos shaped by Yahweh, a description of the earth founded upon the seas and of Yahweh enthroned above the vault or disk of the tentlike earth. For this poet, Yahweh is the "Creator of the ends of the earth" (*bōrēʾ* qĕṣṭ hāʾāreṣ, Isa 40:28), who created both darkness and light (Isa 45:7).

Many have asked why Second Isaiah first combined the previously scattered allusions to Yahweh as creator into a coherent argument for the superiority of Yahweh over all other so-called deities. An answer ready to hand is provided by the setting in which Second Isaiah's prophetic activity occurred. Isaiah 40–55 are the work of a prophet of the Babylonian Exile, whose Israelite audience will have been bombarded by the cosmogonic claims made on behalf of Mesopotamian deities. These claims are countered and thereby refuted by Second Isaiah's full articulation of the cosmological argument in service of the worship of Yahweh.

6. The Priestly Account of Creation. Both because of its present position opening the Hebrew Bible and because of stylistic features lending to it a tone of high formality and comprehensiveness, the priestly account of creation (Gen 1:1–2:4a) has long been the normative cosmogony for Judaism and Christianity. Like Second Isaiah, those responsible for the composition of this overture have self-consciously utilized the announcement that the God of Israel is creator as a major theological confession. The seven-part, climactic structure helps to indicate that everything in the cosmos is due to the power and generosity of this deity; and the parallelism so noticeable between the various stages in creation adds a tone of

purposeful structure (Knight 1985: 144). The rhetorical style of this account, in addition to both a manifest concern for cultic matters and a repetition of blessing formulas, have long pointed to priestly circles for its origin. According to the traditional documentary hypothesis, these indications would assign to Gen 1:1–2:4a a fairly late date, perhaps in the 6th or 5th century B.C.E. However, several scholars have questioned so late a date for any part of the so-called "P Work," and others have observed that even if the seven-day cosmogony here owes its present formulation to activity after the Exile, this cosmogony's remoter origins may lie much earlier in the history of Israel (*ROTT* 1: 140).

Though the creation of humanity is surely accented as the climactic achievement of God's creative activity, the priestly account of creation concentrates less upon anthropogony than does the Yahwistic narrative which follows and does offer something much more in keeping with traditional cosmogonic lore. This almost symphonic overture truly does situate the reader "in the beginning." This remains true whether or not one adheres to the traditional rendering of the first words of Genesis ("In the beginning") or rather adopts the alternative suggestion that the first verses of Genesis 1 are to be read as a dependent clause and hence translated something like "When God set about to create the heaven and earth" (Speiser *Genesis* AB, 3, 12).

The portrait here is of a mighty or divine wind hovering over watery and dark undifferentiated matter. The phrase describing this undifferentiated matter (Heb *tōhû wā-bōhû*), the formless abyss over which the mighty wind of God soars, has prompted two areas of inquiry. The first concerns the origin and meaning of these puzzling words. The phrase is probably best seen as a hendiadys, that is, the use of two words to express but a single notion, in this case that of vast formlessness (Speiser, 5). As such, the matter which existed prior to the formation of a structured cosmos here is much in keeping with other cosmogonies, for example, that of India where again " 'At first there was only darkness wrapped in darkness' " and where everything " 'was only unillumined water' " (Rigveda; *EncRel* 4: 107). Secondly, references in some material which is remotely of Phoenician origin suggest that here too, as in so many areas of the religion of ancient Israel, the ultimate source of the priestly vocabulary and of the resulting portrait is the cosmological speculation of ancient Israel's Canaanite neighbors. The Phoenician cosmology, now found among the works of the church historian Eusebius of Caesarea (3d–4th century C.E.) but attributed to an ancient worthy called Sanchuniathon, mentions both "gas and chaos" as the material existing prior to creation and a certain "Baau" which might well be related to the Heb *bōhû* (Attridge and Oden 1981: 36–39, 75–80). If Phoenician speculation played a role in helping Israel to formulate the priestly account, this is not to say that other influences are not felt as well; for example, the portrait of the cosmos in Psalm 104 is discernibly similar to that in Genesis 1, and the Egyptian nature of this psalm has been noted above.

Out of this mass of undifferentiated and dark primal matter, God creates the cosmos by the power of speech alone. This mode of creation, which is to be encountered elsewhere in the Hebrew Bible (for example, Ps 33:6, where the heavens and their inhabitants are made by Yahweh's "word" and "the breath of his mouth"), is one familiar throughout the ANE. To both the Babylonian deity Marduk, who in *Enuma Eliš* causes a constellation (probably not a "garment," as in older translations) to vanish and then to reappear by speech alone, and to several Egyptian gods is attributed this same awesome power. A question which greatly exercised later theologians is that of whether or not we have to do here with *creatio ex nihilo.* This formulation is surely known elsewhere, for example in Egypt where a creator is called the one who begot himself, in Polynesia where a god is called the parentless (though there is some suggestion that later, Christian influence may be here operative), and also in India. The formulation also does appear in postbiblical Judaism, probably first in 2 Macc 7:28 from the 1st century B.C.E. But the priestly account in Genesis 1 seems not concerned with either affirming or denying *creatio ex nihilo:* it moves very quickly from the simple statement that the world was an undifferentiated waste without limit to a concentration upon the fullness and the surpassing quality of what God created.

The incomparability of the divine creative activity is accented by the priestly account, not just by the formality with which creation's stages progress toward a well-structured fullness, but also by a distinctive vocabulary. Rather than utilizing available terms which suggest that God shaped or formed the cosmos on the model of various human activities, the priestly writers are careful to reserve the term *bārāʾ,* "to

create," for God's action alone. Still, if the use of such vocabulary reinforces the theme of the Yahwist's narrative that human status is never divine status, it remains true that the seven-day cosmogony in Gen 1:1–2:4a does grant powerful rank and fearsome responsibility to humanity. Humans are the "image" *(ṣelem)* and "likeness" *(dĕmût)* of divinity itself, and human authority over the earth is overtly portrayed on the analogy of God's own authority over all of creation (Gen 1:26).

7. The Wisdom Tradition. Affirmations of the unique creative power of Israel's God are to be found not only in royal circles and among priests, but also within the wisdom or sapiential tradition. This tradition is that which finds extended expression in genres long designated as works of wisdom, materials such as Proverbs or Job, but additionally in other results of Israel's literary and religious heritage, for example prophetic statements. To Jeremiah is attributed the statements that Yahweh made the world through his "wisdom" *(ḥokmâ)* and "understanding" *(tĕbûnâ)* (Jer 10:12); and Second Isaiah as well portrays Yahweh's creative capacity as part of a comprehensive and comprehendible scheme for the structure of the cosmos (Isaiah 40). If the relatively recent trend in biblical scholarship to attribute a most significant role to the wisdom tradition in shaping the religion of Israel should continue to command assent, then it is quite possible that the major impetus to cosmological thought in ancient Israel resulted from this tradition which attempted most directly to understand and categorize the universe's structuring principles.

The most extended report of creation in this context is that now to be found in Prov 8:22–31 as a part of an entire chapter devoted to extolling the concept of "Wisdom" *(ḥokmâ).* Wisdom is here portrayed as the oldest of all created things. Wisdom attended upon Yahweh in the formation of the oceans, the mountains, and the earth, and in the stabilizing of various cosmic features. Given the continued interest in Israel and elsewhere in first things and in the order of creation, a long debate has ensued concerning the question of whether Wisdom was "begotten," "acquired," or "created," with the balance of probability now leaning toward the last of these renderings for the Heb verb *qānâ* on the basis of the word's use in the Ugaritic texts (McKane *Proverbs* OTL, 352–54; Dahood 1968: 513). In any case, the emphasis throughout is clearly upon the almost unimaginable intellectual power of Yahweh's attribute of Wisdom in supplying a reasoned blueprint for the cosmos. Toward the conclusion of this cosmogongy from the wisdom tradition, the figure of Wisdom is portrayed both as a child delighting the resulting cosmic order and as perhaps a master craftsman or technician (Prov 8:30–31). The latter description is dependent upon the correct understanding of the noun *ʾāmn* (Prov 8:30), which may mean "artisan" but might also suggest again "child," or "teacher," or perhaps "faithful companion" (McKane *Proverbs* OTL, 72).

As with the cosmogonies in Genesis 2 and Genesis 1, considerable attention has been granted to the questions of the origin of the role assigned to Wisdom in Proverbs 8 and of the resulting stages in the creation process. Egyptian tradition long established a position of preeminence for the concept of wisdom, often spoken of in terms of a deity called Maat who accompanies the creator's activities, so that here as in the case of Psalm 104 direct Egyptian influence is certainly possible. But the full appreciation of the Ugaritic texts has demonstrated conclusively that Canaanite tradition is the immediate point of impact upon multiple areas of Israel's thinking, whatever may be the more remote origins of any of these thoughts, so that we should probably again look to Canaan for the most direct source of the inspiration for Prov 8:22–31. But the many uncertainties surrounding the origin and translation of these verses should not obscure their chief point, which is to recognize the orderly cosmos as an object of great delight and wonder. As such, Proverbs 8 is very much in keeping with the trajectory of later biblical thought and of Jewish and Christian thinking beyond the biblical period (Philo, for example) with regard to cosmological matters.

8. Cosmogony in Apocalyptic Thought. Eschatology, as teachings about final things, and apocalyptic thought, which reports revelations about these same final matters, might initially seem the least likely locus for cosmogonic materials. However, as soon as one reflects that eschatological speculation is in fact but the future translation of cosmogony, then the bearing of such materials upon cosmology is perhaps clear. Eliade, for example, has noted that the chronological setting of cosmogonies in the remotest period, a period that Eliade labels *in illo tempore,* is in fact repeated in apocalyptic materials: "*in illo tempore* is

situated not only at the beginning of time but also at its end … The only difference is that this victory over the forces of darkness and chaos no longer occurs regularly every year but is projected into a future and Messianic *illud tempus*" (1959: 106). Thus, if cosmogonic myths recount the origins of the intelligible universe, apocalyptic myths recount this same universe as created anew in the future.

The initial stages in Israel's development of an apocalyptic tradition are apparent already in the prophets of the exilic period; and it is likely that the apocalyptic tradition is to be traced quite directly to the unfolding of prophetic thought (Hanson 1975). The phrase "in later days," "in following eras" *(ʾaḥărît hayyāmîm),* sometimes refers to a kind of hazy boundary between the near future and the far, clearly eschatological future (as in Jer 23:20), but in later biblical texts has become a technical term for the end of history as previously experienced (*TDOT* 2: 211–12). Perhaps the single and clearest results of this developing apocalyptic tradition are to be seen in Zechariah 14. Those responsible for this chapter extend the thought of Second Isaiah with regard to the revelation of new things and that of Third Isaiah regarding "new heavens and a new earth" (Isa 65:17) to arrive at a portrait of a final cosmogonic battle which will erase the former created order. Zech 14:6–8 shows with particular clarity the announced end of series of paired concepts (day and night, heat and cold, seasons of planting and harvest) which had served to define the originally structured cosmos (Hanson 1975: 376–79). But the very conclusiveness of the former created order's giving way to a new order reveals that such apocalyptic thought should be thought of as additional cosmogonic material within ancient Israel.

9. The Hebrew Bible's Portrait of the Cosmos. The variety in date, origin, and scope of the Hebrew Bible's cosmological materials means that achieving a single, uniform picture of the physical universe is hardly possible. Still, sufficient overlap does obtain between the many accounts of the universe, however these may vary in their details, to allow for a few generalizations. The earth on which humanity dwells is seen as a round, solid object, perhaps a disk, floating upon a limitless expanse of water. Paralleling this lower body of water is a second, similarly limitless, above, from which water descends in the form of rain through holes and channels piercing the heavenly reservoir. The moon, sun, and other luminaries are fixed in a curved structure which arches over the earth. This structure is the familiar "firmament" *(rāqîaʿ)* of the priestly account, perhaps envisioned as a solid but very thin substance on the analogy of beaten and stretched metal.

Though some texts appear to convey a picture of a four-storied universe (Job 11:8–9 or Ps 139:8–9), the great majority of biblical texts assume the three-storied universe so clearly assumed in other, ancient traditions. Thus, the Decalog's prohibition of images specifies "heaven above," "earth below," and "water under the earth" as the possible models for any such forbidden images (Exod 20:4). If we understand the common term "earth" *(ʾereṣ)* as designating at times the "underworld," then the combined references in Ps 77:19 to heaven, the "world" *(tēbēl),* and the "earth" *(ʾereṣ)* are another appeal to the universe as a three-storied structure (for other texts where *ʾereṣ* may refer to the underworld, see Stadelmann 1970: 128, n. 678). Clearer reference still to the same structure is to be found in Ps 115:15–17, where we find grouped together "the heaven of heavens," "the earth," and the realm of "the dead" (cf. Ps 33:6–8 and Prov 8:27–29).

The curving, solid structure which arches over the realm of humanity is sometimes called a "disk" or "vault" (*ḥûg;* Isa 40:22; Prov 8:27). That which allows the heavenly abyss to water the earth are occasional interruptions in this solid structure, openings called variously windows, doors, or channels. In some texts, that which suspends the habitable earth above the underworld's waters (see 1 Sam 2:8 for another reference to these rivers) are pillars or some such foundational structures. These seem envisioned in Job 38:4–6; Pss 24:2; 104:5; Prov 8:29, and elsewhere. Finally, the realm beneath the arena of human activity is not only imagined as one of watery chaos but also given the specific designation "Sheol" *(šĕʾôl),* usually translated "the underworld." In the different elaborations upon just what one should imagine Sheol as including, again there is little consistency. At times, Sheol is personified, with a belly or womb and a mouth (Jonah 2:3—Eng 2:2); Prov 1:23; 30:16; and Ps 141:7), while at others Sheol is rather more architecturally portrayed (Isa 38:10; Job 7:9–10; 14:20–22; 17:13; 18:17–18), as a dark and forgetful land or city (Stadelmann 1970: 166–76).

C. Cosmology in the NT

1. Sources of Early Christian Cosmological Thought. References to the origin of the cosmos and to this cosmos' structure are rather less frequently to be found in the NT than in the Hebrew Bible. This cosmological spareness is to be accounted for partly, and most obviously, because of the smaller size of this collection of texts from early Christianity and partly because the essentials of the portrait painted in the Hebrew Bible are assumed. However, another important reason for the absence of much cosmological lore in the NT is based upon the conclusions of research into the situation in which early Christians felt themselves to lie. Throughout the 20th century, biblical scholarship has confirmed in general the view that the first Christians expected the second coming of the Messiah imminently, and this notable eschatological immediacy does not allow for such speculation as obtains in many religious traditions. One might here contrast Chinese Buddhism, whose expectations of the coming of a future Buddha Maitreya (*EncRel* 4: 116) are certainly messianic; but these expectations still sit quite easily within a vast chronological scheme.

The first and chief source of such NT cosmogonic thought as is to be found is, of course, the material from the Hebrew Bible reviewed above. Especially fruitful ground was found in the cosmological thought of the wisdom tradition, both within the Hebrew Bible and then in later, Hellenistic Judaism. Greek notions of the cosmos' administration through principles of rational organization were also important. To the extent that a fully developed portrait of a cosmic redeemer had been developed within pre-Christian Gnosticism (and the extent of this development remains the subject of scrutiny and disagreement), this portrait too will have exercised its influence upon the first Christian writers, especially in regard to an important departure from Hebrew Bible thought. For gnostic thought, the created world is no longer a divine blessing but is rather evaluated negatively and seen as under the domain of demonic powers. The view of redemption by Christ as redemption from this world obviously shares elements of such thought.

2. Cosmological Assumptions in Pauline Theology. The references to cosmology in letters generally recognized to be of Pauline authorship appear largely, or wholly, to be allusions to pre-Pauline confessional formulas. Thus, the affirmation in 1 Cor 8:6 that there is one God from whom "all things *(ta panta)* come" and also one Lord, Jesus Christ, "through whom all things are" reads like a development of the Jewish confession that Yahweh is one into a twofold formula of one God and one Lord (Conzelmann *1 Corinthians* Hermeneia, 144). God as creator of the cosmos is here affirmed, but the affirmation is assumed rather than developed, and is plainly subsidiary to a confession of Christ's soteriological role. Much the same could be said of the hymn, widely seen as pre-Pauline and often attributed to gnostic influence, in Phil 2:6–11. This hymn insists upon the cosmic and preexistent status of the Christian Lord, whose role in rescuing humanity from domination by earthly powers is again stressed. Indeed, it is perhaps worth accenting that confessions of Christ's cosmic role are at the heart of NT cosmology.

At several places in Paul's letter to the Romans one can again catch glimpses of the cosmological foundations of early Christian thought. In his expansion upon the theme of justification in Romans 4, Paul notes that the God of Abraham is the one who calls into being that which was not (Rom 4:17). As with Gen 1:1–3, this verse has been read as a reference to *creatio ex nihilo,* though in the context of Paul's argument the chief intent is plainly to emphasize the power of God rather than to address this issue at all. Rom 8:19–22 alludes to a position never fully developed, that of creation's pained and groaning longing for release from futility; the background here might equally be gnostic speculation (Bultmann 1951: 174, 230) or the laments about the present world order expressed in Jewish apocalypticism. Finally, quite in keeping with 1 Cor 8:6 is Paul's statement in Rom 11:36 that "everything" *(ta panta)* is from God.

3. The Johannine Tradition. Much as the priestly account of creation in Gen 1:1–2:4a has become determinative for later Jewish and Christian theology, so too the preface to the fourth gospel is the most readily cited piece of cosmogonic teaching in the NT. The literary style of John 1:1–18 once more, as in the case of Phil 2:6–11, has suggested to many scholars an origin in a ritual hymn. In deliberate imitation of Genesis 1 in the LXX version, this preface too opens "In the beginning," here to emphasize the cosmic and remotest origins of the Logos ("Word") figure. Though there is no reflection on the mechanisms of creation at all, that everything was created through the Logos is affirmed by this preface in clear terms

(John 1:3). Similarly not reflected upon are a host of questions about this figure which have exercised later theologians and scholars: the Logos is of cosmic status and existed with God from the beginning of all, but how exactly is one to imagine this figure? As a person, or as the personified revealing and creating abilities of God? And how does one deal with the apparent paradox of the Logos as both fully equal with God and yet equally and clearly subordinate to the Father? The question of the origin of the Logos concept in Johannine thought is similarly difficult to answer, with both the wisdom speculation of Jewish thought and the gnostic redeemer scheme possible sources. What is clear throughout John 1:1–18 is just what had been stressed by Paul, the soteriological function of the Logos who became flesh for the salvation of humanity.

The final book in the present NT canon, the book of Revelation, returns in fairly elaborate fashion, to the cosmogonic battle scenes witnessed allusively throughout parts of the Hebrew Bible (Collins 1976). In addition to affirmations of God as the creator of all (Rev 4:11), and as the omnipotent being *(pantokratōr)* who is at once beginning and end (Rev 1:8; 21:6; 22:13), four visions in the book of Revelation are devoted to allegorical rehearsals of the old cosmic battle scenario, as first Gunkel recognized nearly a century ago. In Revelation 12, the chaotic enemy is the serpentine dragon, reminding us of the Sea Monster figure *(tannîn)* in the Hebrew Bible. Revelation 13 introduces two such forces of chaos, perhaps Leviathan and Behemoth in their cosmically destructive modes (Ford *Revelation* AB, 217). The description of the great harlot in Revelation 17 reminds one of many of the Hebrew Bible's allusions to the threat posed by undifferentiated water; and again in Revelation 21 the sea as enemy recalls the opponents of Yahweh's cosmogonic task. In all of these visions, the function of apocalyptic in repeating and renewing the original cosmogony is thus especially clear.

4. Later NT Thought. Even after the initial, creative period of Christian self-expression, little extended discussion of cosmological issues, at least as these are standardly defined, is to be found in the NT. This suggests that the spareness of early Christian cosmology is at least as much the result of a Christian hesitancy to formalize, much less to make of creedal significance, such issues as it is a consequence of the sense that the second coming of the Messiah was imminent. Col 1:15–20 is perhaps the fullest of these brief expressions of what was assumed on behalf of early Christianity about the cosmos. Here, another likely instance of a hymn reutilized in a different context, Christ is affirmed as uniquely preceding all creation, and as the being through whom everything was established. These affirmations recall most centrally the role accorded Wisdom in Proverbs 8 and in postbiblical Jewish thought, though such views, without, of course, the identification of Christ as the medium of creation, can also be found expressed throughout Hellenistic thought. Finally, 2 Peter 3 returns one to the cosmogonic formulations of the Hebrew Bible, in attributing creation to divine speech and in comparing the coming destruction of the known cosmos to that familiar from the biblical flood tale.

D. The Functions of Religious Cosmogonies/Cosmologies

Most scholarly accounts of the place of cosmogonic lore in the religions of Israel and of early Christianity dwell upon the origin, the initial cultic setting, and the eventual literary context of this lore. Given biblical scholarship's understandable concern for questions of historical origin and transmission (Oden 1987: 1–39), this concentration is hardly surprising. But such concentration requires supplementing with questions of function and meaning. Why is it that few, if any, religious traditions omit some attention to cosmology? Why are the religious communities responsible for collections of sacred texts so concerned, some might say obsessed, with inquiry into the earliest days of the cosmos? Some attention must be paid to these and similar questions here, though the fact that cosmological materials are most frequently to be found in the context of cosmogonic myths means that the following discussion overlaps to some extent issues raised in any account of the origin and role of myths in religion most generally. See MYTH AND MYTHOLOGY.

1. Older Views. Since cosmogonic myths standardly treat data like the shape of the universe, the ultimate sources of meteorological phenomena, and the origin and meaning of the moon and stars, a view long popular was that cosmology is primitive science. This view can be found expressed even in antiquity; but it commanded especially wide assent in the 19th century, during the early days of the

systematic study of comparative mythology and of the origin of modern anthropology. However, analyzing cosmologies as strictly analogous to scientific inquiry has never ceased to find a few proponents and has most recently witnessed a revival.

Humans need, this view affirms, satisfying answers to some basic questions about the world of nature; and, this explanation continues, as science answers such questions for moderns, so cosmological narratives answered them for traditional societies. Predictably for the 19th-century heyday of this explanation, cosmogony was thus readily accommodated to an evolutionary scheme. Early humans were seen as adequately served by religious cosmologies; but modern humanity was credited with evolving more demanding standards which could be met only by fully scientific, verifiable explanations. Applying this view to the combat myth in biblical texts, for example, one might say that the origin of such myths was the desire to explain the alternating wet and dry seasons. This desire was long fulfilled by cosmogonies which deified the powers of wetness or aridity; today, however, such early cosmogonies no longer continue to provide satisfactory answers and hence have been replaced by impersonal accounts.

A second explanation, often placed in tandem with the model of cosmogony as primitive science, was the myth-ritual hypothesis. According to this view, all myths originated as rituals. Traditional humans, the proponents of myth-ritualism asserted, acted before they reflected. The myths which have survived are the later attempts to make sense of the primary and generative rituals. These myths are, to use an analogy much favored by myth-ritualists, the libretti to the more fundamental ritual dramas. Assertions about the cultic origins of much biblical material owe a great deal to the base assumptions of the myth-ritual model. For example, we have seen that a setting in the priestly cult is often posited for the seven-day cosmogony in Genesis 1, and a royal cult origin for the anthropogony in Genesis 2.

Attractive as each of these hypotheses is, neither has been able to sustain itself fully in the face of more recent research into the role played by cosmologies in various religious traditions. With regard to the former hypothesis, 20th-century ethnological work has established that so-called "primitive" or "traditional" cultures are fully as capable of scientific, rational, and empirical thinking as are their modern counterparts. If religious cosmologies can exist, as they do, side by side with accounts that must be judged scientific, then it must be that these cosmologies play a role somewhat different from that played by scientific thought. Cosmogonies thus do not necessarily give way in an evolutionary scheme to scientific thought.

With regard to the myth-ritual model, demonstrating that all myths originated as rituals has proved exceptionally difficult. The favored example of the myth-ritualists, the alleged origin of the Babylonian *Enuma Eliš* myth in the setting of the Akitu festival, now turns out to be an example which may rather be that of an earlier myth only later adapted to a ritual setting (Smith 1982: 92). Hence, if some myths originated as rituals, other rituals appear to have begun as myths. Additionally, positing a ritual origin for all cosmogonic myths offered no real explanation of these myths; it only postponed the question of explanation, offering instead a genetic description. That is, even if research should document the general priority of ritual over myth, one would still be left wanting a sustainable account of the meaning and function of ritual.

2. Recent Formulations of the Place of Cosmology in Religion. Given the apparent inadequacy of older hypotheses, many 20th-century scholars have sought alternative explanations for the demonstrable concern on behalf of so many religious traditions to answer cosmological questions. In fairness, it must be said that many or all of these latter explanations have also been found wanting, so that a major agendum for future research remains inquiry into the deepest role played by cosmological materials.

The explanatory model which has continued to play the largest role for contemporary students of cosmology is the so-called "charter" position, in its various formulations. This position, that cosmologies provide a charter for all behavior and for the meaning of all actions to religious communities, is one that received major impetus in the work of Emile Durkheim. According to Durkheim, all of the classification systems to be encountered in religious traditions, including preeminently religious cosmologies, "are modelled upon the social organization" and "have taken the forms of society for their framework" (1915:

169). All such classifications are hierarchical; and, since "hierarchy is exclusively a social affair," these classifications are taken "from society and projected … into our conceptions of the world" (1915: 173).

This essential perception that cosmologies owe their origins to human social formations was then greatly extended and worked out in detail by the anthropologist Bronislaw Malinowski. His field work demonstrated to him that "religious faith establishes, fixes, and enhances all valuable mental attitudes, such as reverence for tradition, harmony with environment, courage and confidence in the struggles with difficulties and at the prospect of death" (1954: 89). A cosmological myth "fulfills in primitive culture an indispensable function: it expresses, enhances, and codifies belief; it safeguards and enforces morality; it vouches for the efficiency of ritual and contains practical rules for the guidance of man"; such a myth is thus no "idle tale," nor "an intellectual explanation or an artistic imagery," but rather "a pragmatic charter of primitive faith and wisdom" (1954: 101).

Many subsequent students of religious cosmogony have found further support for the position first defended by Durkheim and Malinowski. C. Long, for example, has very recently argued again that "the cosmogonic myth provides a model that is recapitulated in the creation and founding of all other human modes of existence"; this myth provides "a charter for conduct for other aspects of culture" (*EncRel* 4: 94). So too Bolle's summary of cosmological thought concludes that "views of the cosmos are in harmony with the social order in a tribe or tradition, and as a rule reflect the prevailing mode of production" (*EncRel* 4: 102). Nor is it simply that a cosmology reflects in some fashion the social formation. As charters, cosmologies also carry with them ethical implications: "the behavior required of man is often described and always implied in the account of the world's structure" (*EncRel* 4: 104).

The historian of religion who has devoted the greatest attention to cosmological thought is surely Mircea Eliade. Eliade's position is in many regards a combination of several noted above. Cosmological thought for him often has a ritual origin, satisfies an intellectual need to provide explanations of puzzling phenomena, and is also a comprehensive charter for ethical conduct. Eliade begins by affirming the absolutely central role of cosmogonic lore in traditional societies. Indeed, he repeatedly proposes the presence of cosmogonic lore as the defining characteristic of traditional as opposed to modern, historically based societies: "Whether he abolishes it periodically, whether he devaluates it by perpetually finding transhistorical models and archetypes for it, whether, finally, he gives it a metahistorical meaning (cyclical history, eschatological significations, and so on), the man of the traditional civilizations accorded the historical event no value in itself" (1959: 141). In the alleged absence of a developed historical consciousness, traditional humans, argues Eliade, turn always to accounts of what occurred in the earliest days of the cosmos. Only things that happened "in the beginning, 'in those days,' *in illo tempore, ab origine*," have full significance for traditional societies (1959: 4).

If this schematic presentation of two worlds of thought offers for Eliade a rationale for the setting of cosmologies in remotest antiquity, their function is then accounted for by utilizing a version of the charter position. Hence, cosmogonic myths "preserve and transmit the paradigms, the exemplary models, for all the responsible activities in which men engage" (Eliade 1959: viii). But, as noted previously, Eliade goes on to combine cosmogonic myths' charter function with the view that these myths also satisfy intellectual needs: "primordial, sacred history … is fundamental because it explains, and by the same token justifies, the existence of the world, of man and society … It relates how things came into being, providing the exemplary model and also the justifications of man's activities" (1984: 141).

The many writings of Eliade possess the clear virtue of offering a comprehensive account for the role of cosmological thought, an account evidenced by material drawn from the widest array of religious traditions. Still, the very comprehensiveness of his position means it remains open to some of the same criticisms offered against its component parts. For this reason, others have attempted a fresh approach to the questions of the meaning and function of cosmogony. At once the most novel and the most controversial of these attempts is that provided by the French anthropologist and philosopher Claude Lévi-Strauss. See MYTH AND MYTHOLOGY. Lévi-Strauss begins by stressing the primacy of language. He thus looks to modern linguistics, rather than to sociology or biology, as providing the disciplinary paradigm upon which study of cosmogonic myths should be founded. The unique

phenomenon of language means that human beings are caught in a kind of cosmic contradiction: they are at once animals, hence a part of nature, and yet also distinct from the rest of nature since through language they create the mental world in which they live. This contradiction is then found to be mirrored in any number of cultural creations, including kinship structures and religious myths.

Given Lévi-Strauss' prioritizing of linguistics, his analyses of myths always concentrate upon structures of relationship, rather than upon individual items in any mythological repertoire. As meaning in language is always relational rather than essential, so too meaning in myths must be sought structurally. Perhaps the best, brief example of how Lévi-Strauss' structural method works when applied to cosmological myths is his analysis of the British Columbian myth of Asdiwal (1976: 146–97). Although he analyzes this myth in terms of four distinct levels (the geographical, the technoeconomic, the sociological, and the overtly cosmological), he discovers that each level in fact is a redundant expression of the same message. This message is the attempt "to justify the shortcomings of reality" (1976: 173). Similarly, Lévi-Strauss' well known and early analysis of the Oedipus myth concludes that, "although experience contradicts theory, social life validates cosmology by its similarity of structure. Hence cosmology is true" (1963: 216). That is to say, the human situation as one caught in the web of various contradictions has given rise to the repeated articulation of cosmogonic myths whose structures makes these contradictions, not disappear, but in a sense become mentally tolerable.

Though the search for an adequate explanation for the function of cosmologies is hardly completed, many scholars have adopted a version of Lévi-Strauss' analytical model. For example, Jonathan Z. Smith has recently argued that "those myths and rituals which belong to a locative map of the cosmos labor to overcome all incongruity by assuming the interconnectedness of all things, the adequacy of symbolization (usually expressed as a belief in the correspondence between macro- and microcosm) and the power and possibility of repetition" (Smith 1978: 308–9). Finally, Geertz too sees the problematic issues of human religious life, such as the classic theodicy dilemma, giving rise to "the uncomfortable suspicion that perhaps the world, and hence man's life in the world, has no genuine order at all—no empirical regularity, no emotional form, no moral coherence. And the religious response to this suspicion is in each case the same: the formulation, by means of symbols, of an image of such a genuine order of the world which will account for, and even celebrate, the perceived ambiquities, puzzles, and paradoxes in human experience. The effort is not to deny the undeniable—that there are unexplained events, that life hurts, or that rain falls upon the just—but to deny that there are inexplicable events" (Geertz 1973: 108).

COURT NARRATIVE (2 SAMUEL 9–1 KINGS 2). Traditions about the Davidic court culminating in the accession of Solomon in 2 Samuel 9–20 and 1 Kings 1–2 have been widely regarded as a single narrative unit usually designated the "Court History" or the "Succession Narrative." Within the larger narrative are several more or less distinct smaller narrative units: the story of David and Bathsheba (2 Samuel 10–12); Absalom's revolt, including the account of the rape of Tamar (2 Samuel 13–19); and the accession of Solomon (1 Kings 1–2). 2 Samuel 9 is loosely connected to the larger narrative by David's relations to the house of Saul, and the Sheba rebellion (2 Samuel 20) is part of the aftermath of the Absalom revolt.

———

A. Content and Structure

1. David and the House of Saul. The narrative begins with David's expression of concern for the house of Saul (2 Samuel 9). He restored Saul's estate to Mephibosheth, the son of Jonathan, and granted him a permanent right to eat at the king's table. It ends with the accession of Solomon to the throne and the execution of Joab, Shimei, and Adonijah, and a concluding editorial comment in 1 Kgs 2:46: "And the kingdom was established in the hand of Solomon." The account of David's kindness to Mephibosheth is linked to the rebellion of Absalom by Ziba's accusation against Mephibosheth, his master, who, he charges, is expecting the return of his father's kingdom (2 Sam 16:1–4). A further narrative link appears in Mephibosheth's own welcome to David after the death of Absalom (2 Sam 19:24–30).

2. The Ammonite War. A distinct narrative unit appears in the account of the Ammonite war (2 Sam 10:1–11:1; 12:26–31). At the accession of Hanun to the Ammonite throne, David sent condolences to him

over the death of his father, Nahash. Hanun rejected David's emissaries, accused them of being spies, and humiliated them by shaving their beards and cutting their garments in half up to their buttocks. David responded by sending Joab into battle against the Ammonites and their allies, the Arameans. This account, which may derive from royal annals contemporary with the events, provides the setting for David's adultery with Bathsheba. Some scholars have noted points of contact with the account of David's exile at Mahanaim in 2 Sam 17:24–29 (Flanagan 1972: 176; McCarter, *2 Samuel* AB, 275–76), which would place the siege of Rabbah, the Ammonite capital, after Absalom's rebellion.

3. David and Bathsheba. The account of David's adultery with Bathsheba (the Chronicler refers to her as Bathshua: 1 Chr 3:5) and its direct consequences is set within the framework of the account of the Ammonite war (2 Sam 11:2–12:25). It is linked to this context by the notice in 2 Sam 11:1: Joab, his servants, and all Israel were sent to battle against Ammon while David remained in Jerusalem. Some have detected a negative connotation in the observation that David remained in Jerusalem. From his roof, David observes Bathsheba, the wife of Uriah the Hittite, cleansing herself from menstrual impurity. He has her brought to his palace, lies with her, and she becomes pregnant. David's sin with Bathsheba is in clear violation of the prohibition of adultery in Deut 22:22 and, according to that law, both should have died.

David's behavior is set in stark contrast to the loyalty of Uriah, her husband, who declined David's deceptive invitation to him to go down to his house and lie with his wife. His refusal was apparently grounded in the rules of holy war which precluded sexual activity in times of battle. The sin of adultery is compounded by murder when David sends Uriah back to the battlefront carrying instructions to Joab which will result in his own death. After Uriah's death Joab sends a messenger to David with a general report on the battle, instructing the messenger to mention Uriah's death should David became angry over the high number of casualties. This report to David concerning Uriah's death contains a narrative link to the account of the death of Abimelech reported in Judg 9:50–57. After Bathsheba's appropriate period of mourning for her husband had passed, David took her to his house and she became his wife, bearing him a son.

In one of the few explicit references to Yahweh's activity in this history, Yahweh sent the prophet Nathan to rebuke David for his adultery and murder. Nathan's condemnation of David took the form of a juridical parable *(māšāl)* eliciting self-judgment, a parable about a rich man who spared his own flock and slaughtered the pet lamb of the poor man to feed a traveler. Whereupon David became enraged and declared that the man doing this deserved to die and must repay fourfold, the restitution specified in Exod 21:37—Eng 22:1. However, many scholars since Wellhausen have preferred the LXX reading "sevenfold" as more in keeping with David's intense anger or with the Deuteronomic use of the number seven (Carlson 1964: 154). Nathan's parable elaborated the relationship between the poor man and his one little ewe lamb. The lamb ate from its owner's food, drank from his cup, and lay in his bosom (*bĕhêq̃ tiškāb*). Nathan's rebuke to David contains a reminder of Yahweh's graciousness to David. In addition to rescuing David from the hand of Saul, Yahweh had also given David Saul's wives "to lie in his bosom." This expression occurs again at the end of the Court Narrative in the account of David and Abishag (1 Kgs 1:1–4) which prefaces the account of Solomon's accession, thereby providing a subtle narrative link between the two episodes.

Nathan's parable may not be original to the narrative. Gunkel (1921: 35–36) stressed the lack of fit between the circumstances of the parable and David's actions. On the basis of the namelessness of the characters, the contrast between the rich man and the poor man and the exaggeration of the relationship between the poor man's family and the pet lamb, he characterized the account as a fairy tale *(Märchenstoff)* which is not original to the narrative of David and Bathsheba. Other scholars (Simon 1967; McCarter, *2 Samuel* AB, 299) have, however, stressed the compatibility of the parable and David's actions, identifying the crimes of both David and the rich man as abuses of power.

In an oracle of judgment condemning David for the murder of Uriah and taking his wife for his own, Nathan announces that, because David had slain Uriah with the sword of the Ammonites, the sword will never depart from his house. One of David's own house will arise against him and will lie with his wives

in the sight of the sun. In contrast to the secrecy of David's action, this humiliation will be public. Although Yahweh has spared David's life, the son who will be born to David and Bathsheba will die. Some scholars regard this account of Nathan's judgment of David (12:7b–12) as a secondary addition to the larger narrative.

When the child born to Bathsheba became ill, David sought God on behalf of the child, refusing food and lying on the ground, behavior typical of mourning. In a striking reversal of custom, David upon receiving word of the death of the child immediately rose, bathed, anointed himself, and asked for food. At this juncture the narrator records the birth of Solomon, who will ultimately succeed David on the throne, observing that the Lord loved him. Some scholars have suggested that the story of the death of the child is a fiction inserted here to establish the legitimacy of the birth of Solomon (Veijola 1979: 230–50; Würthwein 1974: 32).

This section of the history is rounded off by the report of the conclusion of the Ammonite war. Joab reports success in his siege of Rabbah of the Ammonites and summons David to participate in the conquest so that he will receive the credit for the success of the siege. David's return to Jerusalem concludes a narrative unit which began with David sending his servants to the Ammonite king. There is a concentric and climactic arrangement of 2 Samuel 10–12. The narrative begins with a departure from Jerusalem, the goal of which is Rabbah-Ammon's welfare, and ends with a return to Jerusalem after the destruction of Rabbah-Ammon. Ammon's arrogance stands at the beginning, its fall at the end (Roth 1977). The report of the Ammonite war has thus been skillfully utilized as a framework for the Bathsheba episode.

4. The Rape of Tamar and Absalom's Revolt. Just as the expression "afterward" *(wayhî ʾahărê kēn)* marked the beginning of the narrative unit in chaps. 10–12, the same expression in 13:1 marks the beginning of a new literary unity focusing on Absalom (2 Sam 13:1–20:26). This unit begins with a largely self-contained episode, Amnon's rape of Tamar. Absalom's brother Amnon is lovesick with desire for his beautiful half-sister Tamar. He is advised to feign illness and to ask David to send Tamar to prepare food for him in his chamber so that he might eat from her hand. His request is granted. Tamar is sent to him to prepare food for him and Amnon, seizing the opportunity, rapes her. Having assaulted her, he brutally expels her from his presence. The violence of rape is thus compounded by the violence of expulsion. The language of expulsion reduces Tamar to a disposable object since the Hebrew, contrary to many translations, has only the demonstrative pronoun *this* (cf. Trible 1984: 48).

Absalom bides his time for two years after which he invites the king's sons to a sheep shearing at which he arranges the assassination of Amnon. Scholars have devoted considerable attention to this narrative, stressing, in particular, the skill with which the story is told. The kinship element is stressed by the repeated use of the terms *ʾāḥ,* "brother," and *ʾāḥ̃t,* "sister" (Rideout 1974: 76).

The episode develops in part on the basis of Amnon's deceptions. He first deceives David, then Tamar about his intentions with the ruse of his illness. The denouement also involves deception, Absalom's deceptive invitation to the sheep shearing. The story pivots on the dramatic reversal of Amnon's feelings in v 15: "Then Amnon hated her very greatly; Indeed, the hatred which he had for her was greater than his former love for her." There are striking similarities between the story of this Tamar and Tamar, the daughter-in-law of Judah (Gen 38:1–30). In both narratives there is a foreign woman named Bathshua (the name given Bathsheba in 1 Chr 3:5) and a woman named Tamar who remains unmarried. Both women are eventually vindicated at a sheep-shearing festival and both lose their first child (Blenkinsopp 1966). To this list might also be added the element of deception present in both narratives. On the one hand, Tamar and David are both deceived as to Amnon's intentions and, on the other hand, Judah's daughter-in-law Tamar deceives Judah by disguising herself as a prostitute in order to bear his child.

The rape of Tamar and the consequent elimination of one of the possible successors to the throne (Amnon) sets the stage for the extended narrative of Absalom's revolt beginning in chap. 14. Having murdered his brother, Absalom flees to Geshur to live in exile with Talmai, his maternal grandfather. At the end of three years Joab, in an elaborate ruse, arranges for the return of Absalom to Jerusalem. He enlists the services of a wise woman from Tekoa who is to pretend that she had two sons, one of whom

was slain in a quarrel with the other, and she informs David that the relatives now seek to kill the remaining son as an act of blood vengeance. She will thus be bereaved of all possibility of posterity. David's response to this "self-judgment eliciting story" is to extend protection to the surviving son, thereby trapping himself into the necessity of allowing Absalom to return from exile, although he continues to be banned from the presence of David.

At the end of two more years Absalom enlists Joab's help in lifting that ban, and Absalom is summoned to the king and, in a customary gesture of obeisance, he bows on his face to the ground in what will prove to be a false expression of allegiance. Absalom then acquires a chariot and horses and fifty men running before him. Stationing himself at the gate, he greets those coming to have their cases adjudicated before the king, assuring the petitioners that were he king they would receive satisfaction. Having thus stolen the hearts of the men of Israel, Absalom is ready for action. At the end of four years Absalom comes before the king, asking permission to go to Hebron (where David had himself first become king over Judah) to fulfill a vow he had made while in Geshur. David sends him in peace unaware, apparently, that this is merely a ruse. His supporters are rallied by messengers who instruct the people to proclaim at the sound of the trumpet, "Absalom is king at Hebron."

The rapid growth of Absalom's conspiracy leads to David's withdrawal from Jerusalem. Taking his loyal servants and the Cherethites, Pelethites, and Gittites, he leaves ten concubines behind to administer the house. The narrative then describes a series of events some of which figure in David's eventual success in thwarting Absalom's coup. And all of them portray a generous, humbled, loyal, and noble figure in contrast to the royal arrogance portrayed in the Bathsheba episode. In a touching episode, Ittai the Gittite asks to join with David's beleaguered force, but David encourages him to return home with Yahweh's blessing. Ittai, however, insists and David accepts his aid. Abiathar, Zadok, and the Levites come bearing the ark, setting it down until all the people with David have passed over the Kidron. David then instructs that the ark be returned to Jerusalem, expressing the hope that he may again find favor with Yahweh and eventually be permitted to see the ark in its proper setting. Zadok and Abiathar, the priests, and their two sons, Ahimaaz and Jonathan, are sent back to Jerusalem with the ark to serve as informants to David and his men. In this context, David and his loyal band of followers are portrayed ascending the Mount of Olives weeping and with their heads covered. David is himself barefoot. At the summit he is met by Hushai the Archite, who comes in mourning with his coat torn and dirt on his head. David, rather than accepting Hushai's offer of support, sends him back to Jerusalem "to defeat the counsel of Ahithophel," Absalom's adviser. The introduction of Hushai in the narrative anticipates the eventual reversal of Absalom's success. At this point, Ziba, Mephibosheth's servant, comes with supplies for David and his men, slandering his master by asserting that Mephibosheth has remained in Jerusalem, anticipating the return of the kingdom to the house of Saul. At Bahurim, David and his men are cursed by Shimei, whose life David orders spared.

A pivotal point in the narrative is reached here. David has arrived at the Jordan and Absalom and all the people with him, including Ahithophel, come to Jerusalem. Absalom is on the verge of success in his effort to become king, while David and his loyal band of followers are on the verge of defeat and death. Ahithophel responds to Absalom's request for council by advising him to go in conspicuously to David's concubines, who have been left behind in Jerusalem. This action, to which may be compared Adonijah's request for Abishag (1 Kgs 2:17–25) and Abner's relations with Rizpah, one of Saul's concubines (2 Sam 3:3–11), is usually regarded as a public symbol of the takeover of the royal prerogatives (cf. Tsevat 1958: 241). This action also explicitly fulfills the judgment Nathan uttered against David.

To this advice, Ahithophel, whose counsel is regarded as equivalent to an oracle of God, adds strategic advice. He describes David's desperate situation, of which the reader has already been informed, and he counsels a swift military action of small scale to take David unaware, killing only him and thus avoiding the further alienation which would result from massive bloodshed. The advice is precisely appropriate to the circumstances. However, Absalom also asks Hushai for advice, and he provides him with a strategy which will gain time for David to consolidate his forces. He proposes mustering the troops from Dan to Beersheba, which Absalom will then lead in person to destroy David and his entire force. Absalom's

acceptance of this deceptive advice signals the beginning of the end of his rebellion. The rejection of Ahithophel's counsel is attributed to Yahweh, who wanted to bring evil on Absalom (2 Sam 17:14).

David, warned by Jonathan and Ahimaaz, crosses the Jordan to Mahanaim where he is received by a number of local leaders and given provisions for his army. As David and his men prepare for the coming battle, the king says to the men, "I myself will also go out with you." His men, however, refuse this offer, indicating that he is worth ten thousand of them and will better serve the cause by remaining behind to send help from the city if needed. There is irony here in that the entire narrative begins in circumstances in which David does *not* go forth to war against the Ammonites and must ultimately be summoned for the final surrender. In this instance he wants to lead but is refused. In the ensuing conflict, Absalom's forces are routed and Absalom himself is killed, having been caught in an oak while the mule on which he was riding continued on its way. Despite David's order to Joab that the young man Absalom be spared, Joab thrusts three darts into Absalom's heart and his armor bearers strike him and kill him. Although the text does not mention his hair, there is a long tradition of interpretation which links this account to the description of Absalom's beauty and hair (cf. McCarter *2 Samuel* AB, 406). If the narrator indeed intended the reader to make that connection, there is tragic irony in the account. The overriding irony and reversal in the narrative, however, is in the deception of Absalom by Hushai's false counsel. Seen from the perspective of folklore, the entire narrative of Absalom's revolt may be characterized as a story of the deceiver being deceived.

David's reaction to the death of Absalom and the rout of his army evokes another surprise. David does not rejoice in his victory but deeply and publicly grieves for his slain son. This public and excessive grief turns the victory into mourning, the people stealing away as though disgraced (2 Sam 19:1–2). When Joab rebukes David for grieving for his slain enemy, David finally arises and takes his seat in the gate and the people come before him. David's response to the death of Absalom, seen from a personal and family perspective, is appropriate. However, it is behavior, as Joab reminds him, which is not allowable for a king. The narrator, by emphasizing David's grief over his son who is also his enemy, by contrasting David's behavior with that of Uriah, and by noting the ease with which he was dissuaded from going into battle with Absalom (18:4), portrays David as a thoroughly incompetent person in his role as war leader of the kingdom (cf. Ishida 1982: 184).

The strife within David's family is mirrored in the resulting strife over the issue of returning David to the throne (2 Sam 19:1–15). Having won the acceptance of Israel and Judah, David prepares to cross the Jordan and return to Jerusalem. Shimsi and Ziba rush down to meet the king and to assist him across the Jordan. Ahishai, the son of Zeruiah, wants to kill Shimei because he has cursed David, but David orders his life spared. Mephibosheth himself arrives on the scene and expresss loyalty to David, claiming that Ziba has slandered him to the king. Although it appears that Ziba did indeed slander Mephibosheth, David's response is equivocal. Having previously given the estate of Saul to Ziba, David now orders that it be divided between the two of them. Another of the individuals who gave David succor at Mahanaim, Berzillai, comes down to escort David across the Jordan. He refuses David's invitation to come to Jerusalem and to allow David to provide for him. His refusal is based on the infirmities that go with age, and he asks David to take with him in his stead Chimham, who is presumed to be his son. This series of meetings parallels the series of meetings linked to David's flight from Jerusalem (2 Sam 15:13–16:14). The chapter ends with another reference to the strife between Judah and Israel. Thus, within the narrative even the account of David's return to power is surrounded by strife, an implicit reminder of Nathan's prophetic announcement that the sword would never depart from David's house. This strife culminates in a revolt of Israel led by Sheba, the son of Bichri, a Benjaminite. After David returns to Jerusalem he sequesters the ten concubines he had left behind and they live shut up as in widowhood, their plight echoing that of Tamar. The final episode in the revolt of Absalom is the pursuit and elimination of Sheba (2 Sam 20:4–22). The narrative concludes with a list of David's officials which seems to be a variant of the summary list in 8:16–18. (Chaps. 21–24 of 2 Samuel are usually regarded as appendices interrupting the main narrative.)

5. The Accession of Solomon. The resumption of the Court Narrative in 1 Kings 1 presupposes an intervening period. David has become old and cannot get warm even though covered with clothes. The servants offer a solution: a young maiden should be found for the king who will wait upon him and who will lie in his bosom. They search for a beautiful maiden and find Abishag the Shunamite. They bring her to the king and she serves him as a nurse. The narrator, however, informs us that David did not have sexual relations with her (1:4). These details are striking and can best be understood in light of the earlier scene in which David takes Bathsheba. These two scenes form an *inclusio* and they derive their dramatic power in part from their irony. In the opening scene David takes Bathsheba, an illegitimate act from which flows a steady stream of tragic consequences; ironically, in the closing episode, he is incapable of sexual relations with the beautiful virgin Abishag. This kind of ironic reversal seems to be a favorite literary device of the narrator.

The narrative immediately shifts to the account of Adonijah's abortive effort to succeed Solomon. Like Absalom, he prepares for himself chariots and horsemen and fifty men to run before him. The text also notes that, like Absalom, he was a very handsome man and that he was born next after Absalom (1 Kgs 1:6). Adonijah enlists the aid of Joab and Abiathar and invites all his brothers and all the Judean officials to a sacrificial feast at the Serpent's Stone beside En Rogel—with some notable exceptions (1:10). Nathan alerts Bathsheba to Adonijah's actions, advising her to go in to David and to remind him of his promise to her that Solomon will rule after him; while she is speaking, he will come in and confirm her words. There clearly has been no public indication that Solomon is to succeed David. On the contrary, every indication was that Adonijah would be king (1 Kgs 2:15). In terms of the principle of primogeniture, Amnon, Absalom, and Adonijah each would have had a more secure claim to the throne than did Solomon. The strategy of Nathan and Bathsheba works, however, and David orders that Solomon be mounted on the royal she-mule and go down to Gihon where Zadok and Nathan will anoint him king over Israel (1:32–40). This is the third reference to mules in the Court Narrative. The first reference is in the context of the assassination of Amnon. The narrator informs the reader that the other royal sons escaped on their mules (2 Sam 13:29). Again, Absalom met his death when his mule rode out from under him, leaving him hanging helpless before Joab (2 Sam 18:9). These references provide a subtle ironic link between the failed rebellion of Absalom and the accession of Solomon.

When word of Solomon's accession reaches Adonijah, he seizes the horns of the altar and elicits a promise from Solomon that he will be permitted to live if he proves to be an honorable man (1:50–53). Solomon's opportunity to execute his potential rival comes when Adonijah requests (through Bathsheba) that Abishag be given to him. On instructions from David, Joab is executed for his murder of Abner and Amasa. Abiathar is spared because of his role in bearing the ark of the Lord before David, but he is exiled to Anathoth. Shimei violates the order to remain in Jerusalem and he, too, is executed in accordance with the instruction of David. On this note the narrative concludes with the affirmation that the kingdom is securely established in the hand of Solomon. It is in these first two chapters of 1 Kings that the succession motif is most obviously present. Those who see in the Court History a succession document regard the accounts of the murders of Joab and Shimei as efforts to absolve Solomon from full responsibility by shifting some of that responsibility to David. Likewise, Adonijah's request for Abishag is construed as an act of lese majesty necessitating his death.

B. History of Scholarship

1. Sources, Extent, and Genre of the Court Narrative. The traditions which we have called the Court Narrative have by and large been seen as either a distinct narrative unit or a sequence of somewhat independent narrative units. However, some scholars have attempted to trace the sources of the Pentateuch into the books of Samuel. Among these are Karl Budde (*Samuel* KHC) and Otto Eissfeldt, who regarded the court stories of David as a continuation of the J source as well as a masterpiece of Israelite historical writing (1931; 1965: 276–77). Steuernagel was able to trace two sources through 2 Samuel 8, but identified the traditions in 2 Samuel 9–20 (and possibly chap. 24) as a distinct and well-constructed history emanating from Jerusalem, a history which he could describe as one of the most magnificent pieces of Israelite literature (1912: 334–35).

Other scholars saw in the Samuel books a loose compilation of individual narratives. Gressmann, for example, distinguished a series of *Novellen;* the conflict with Ishbaal (2 Samuel 2–5), the story of Amnon and Absalom (2 Sam 13:1–14:33), and the rebellions of Absalom and Sheba (2 Sam 15:1–20:22). At least in the case of the account of Absalom's rebellion. Gressmann defines the narrative as a *Novelle* in the specific sense of a historical account which is deepened by narrative art as opposed to a merely fictional account. This is expressed in part by the psychological depth given to the characters (Gressmann 1921: xiv, 181). Caspari had also singled out the story of Absalom's rebellion in 2 Samuel 15–20 as an independent narrative. This narrative is indeed history, incorporating the transition of the national literature from *Novelle* to history writing (1909: 317–48). Gunkel cited the narrative of Absalom's rebellion (chaps. 13–20) as a parade example of historical writing, *Geschichtserzählung* (1925: 75 [23]), describing it as "the finest gem ("*das köstlichste Kleinod*") of historical writing in Israel" (1964: 10; *Genesis* HKAT, xii). These scholars, although defining the limits of the narrative units somewhat differently, were in substantial agreement that these traditions collectively and individually be regarded as fine examples of reliable historical writing.

2. L. Rost and the Succession Theme. Modern scholarly discussion of the traditions in the book of 2 Samuel has been shaped primarily by Leonhard Rost's epochal study, *Die Überlieferung von der Thronnachfolge Davids,* which appeared in 1926. Rost isolated the materials of 2 Samuel 6:16 and 20ff.; 7:11b and 16; 9:1–10:5 (10:6–11:1); 11:2–12:7a; 12:13–25 (26–31); 13:1–14:24; 14:28–18:17; 18:19–20:22; 1 Kgs 1:1–2:1; 2:5–10; 2:12–27a; and 2:28–46 as a single literary unit dominated by the thematic problem of the succession to the throne of David (hence the designation "Succession Narrative"). Rost's study has been the touchstone for most subsequent investigation of these traditions and the basis for treating them as a discrete literary unit within the Deuteronomistic History (DH).

Rost's analysis was concerned with both the content and the style of the narrative. It is, however, clear that for Rost content was the decisive criterion for setting these materials apart as a discrete narrative unit. The author made use of the end of the originally independent Ark Narrative with its observation that Michal remained childless until her death (2 Sam 6:23) to introduce the question of who was to succeed David on the throne. The originally independent report on David's war with the Ammonites and the Arameans was used as a framework for the account of David's affair with Bathsheba. The question of David's successor is finally answered with the affirmation of Solomon's sovereignty in 1 Kgs 2:46. In addition to the concern to define the scope and limits of the Succession Narrative, Rost offered a date, provenience, and *Tendenz* for the composition. The author was a member of the royal court writing probably in the early days of the Solomonic era in order to glorify Solomon, "*in majorem gloriam Salomonis.*"

Echoing earlier assessments of the material in 2 Samuel 13–20, Rost characterized the succession narrative as "The finest work of Hebrew narrative art …" (1982: 115). Like his predecessors and contemporaries, he accorded "historical trustworthiness" as well as narrative artistry to the Succession Narrative. To be sure, he recognized that the problem of historicity was accentuated by the literary artistry of the narrator, which could be readily interpreted as evidence for regarding it as a fictional account.

Although Rost's analysis was criticized by Eissfeldt and others, his main thesis became the accepted view of the traditions centering on the court of David in 2 Samuel and 1 Kings 1–2, and gave widespread currency to the designation "Succession Narrative" for this body of tradition. This is due in large part to the acceptance of Rost's positions with minor modifications by Albrecht Alt, Martin Noth, and Gerhard von Rad. Alt and von Rad, in particular, emphasized the historicity of the narrative. Von Rad described the narrative as the "oldest specimen of ancient Israelite historical writing," stressing as well its theological contribution, the conception of Yahweh's activity as "concealed in the whole breadth of secular affairs, and pervading every single sphere of human life" (*PHOE,* 176, 204).

It is only within the last two or three decades that extensive criticism and reconsideration of Rost's position have emerged. These criticisms are focused in a variety of ways. Much of the discussion has addressed the question of the *Tendenz* of the narrative. Is the theme of the material really the question of who would rule after David, and is it really a pro-Solomon propaganda piece? This question was raised

sharply and effectively by Delekat (1967). He emphasized the negative reports about both David and Solomon. If the theme of the narrative was the succession to the throne of David, Delekat argued, it must be unfavorable to Solomon. If it was correct that Bathsheba was an adulteress, that Adonijah was generally and with David's approbation regarded as the crown prince, and that there was no divine oracle granting the throne to Solomon, the narrative is implicitly critical of Solomon and the process by which he came to the throne. Clearly then, the concern of the narrative is more generally the reign of David until the consolidation of the kingship in the hand of Solomon. The affirmation that the kingdom was secure in Solomon's hands (1 Kgs 2:46) begs the question, How did this come about? The narrator's view is hostile to the arbitrary exercise of royal power evident in both David and Solomon and he is generally an opponent of kingship. His intentions were to shake Israel's loyalty to Solomon, a loyalty which existed despite Solomon's exactions from the people (Delekat 1967).

Delekat's forceful critique of Rost's thesis was not immediately taken up in subsequent analyses of these traditions. Nearly a decade later Würthwein (1974) pursued the issues raised by Delekat, emphasizing the anti-Solomonic tone of 1 Kings 1–2 and the anti-Davidic tone of 2 Samuel 10–12. The account of Bathsheba's entrance into the Davidic court in its original extent clearly shows a critical *Tendenz* against the Davidic kingdom. David is a king who boldly violates the old Israelite commandments against adultery and murder. The narrative portraying David in this light surely is to be regarded as a critique of the form of the monarchy which developed under David. Würthwein's arguments depended in part on the isolation of a number of texts which are to be regarded as later additions and which provide a more favorable portrait of David and those connected with him while placing Solomon's opponents in a less favorable light.

Two other recent analyses of these traditions also delineate an antimonarchical perspective which has subsequently been modified by later additions. Veijola (1975) found evidence of an antimonarchical stance which was subsequently heavily edited within Deuteronomic circles in order to legitimate the Davidic monarchy, while Langlamet (1976) identified a pro-Solomonic redaction in 1 Kings 1–2. On the other hand, McCarter, while acknowledging the tension within the narrative, attributes that tension to the nature of apologetic writing which maintains a tension between apparently unfavorable details and circumstances on the one hand and, on the other, the favorable interpretation of these details by the writer (*2 Samuel* AB, 15–16). Conroy (1978: 102) has noted the omission of any mention of Solomon in the account of Absalom's rebellion (2 Samuel 13–20) and concluded that these chapters deal only with the causes and outcome of Absalom's attempted coup d' état, not with the issue of succession.

3. The Traditio-Historical Approach. Carlson (1964) has applied the traditio-historical methodology of the Uppsala school to 2 Samuel. Following Noth, he sees the traditions of 2 Samuel as a part of the DH, an exilic reflection on the history of Israel. Carlson stressed the importance of the final stage of the process of tradition, its "redactional history" *(Redactionsgeschichte),* the final shape of which is the result of the work of the D-group. The D-group joined units together on the basis of the principle of association by means of catchwords (*Stichworte* or *verba associandi*) used with groups of motifs to link up with earlier traditions, but consistent with the ideological concepts of the prologue, Deuteronomy. The Deuteronomistic approach is to use varied materials to demonstrate that Israel's misfortunes stem from her faithlessness. The D-group used the figure of David as an ideal figure "to give an authoritative demonstration of their faith in a future made possible by turning again to Yahweh and by devotion to him" (Carlson 1964: 26).

Carlson viewed the Samuel traditions in terms of two motifs: David under the blessing *(bĕrākāh),* 2 Samuel 2–5, 6, 7; and David under the curse *(qĕlālāh),* 2 Samuel 9–24. For Carlson, chaps. 9–24 as a whole constitute "a Deuteronomic commentary on the latter half of the Davidic epoch" (1964: 139). He understands 1 Samuel 10–12 as a Deuteronomistic ingress to 2 Sam 13:1–21:14, which is structured in terms of two seven-year periods. The curse introduced by the Bathsheba episode runs in two *šibʿātayim* phases which constitute the restitution called for in 12:6 (reading with many commentators the 's "sevenfold" versus the MT "fourfold"). In addition, 2 Samuel 10–20 as a whole reflects the Deuteronomic

laws governing adultery and affinity: Deut 22:22 (2 Samuel 10–12); 22:28–29 (2 Samuel 13–14); and 23:1 (cf. 2 Sam 23:1).

4. History or a Well-Told Story? Rost had himself stressed the importance of the stylistic features of the Court Narrative, although to some recent interpreters Rost's analysis appears idiosyncratic and inadequate. Recent interpretation has to a considerable extent focused on matters of genre and literary artistry. An early example of this recent revival of interest in literary artistry is Jackson's article, which appeared in 1965. For Jackson, the author of the succession story was not simply trying to answer the question of how it came about that Solomon sits upon David's throne. Rather, the author used the techniques of oral narrative along with some of his own to provide a portrait of the varied relations of individuals who contend for temporal power in the secular realm. These techniques include the skillful contrasts of two figures as in the case of David and Joab, the alternation of tension and relaxation, the alternation between terse brevity and wealth of detail, and the heightening of suspense towards a climax and gradual slackening of intensity (1965: 183–95). More recently, Conroy (1978) has focused on the narrative of Absalom's revolt and its aftermarth (2 Samuel 13–20), which he views as a self-contained narrative unity. His detailed analysis of selected pericopes pays close attention to the structural building blocks of the narrative, such as the narrative patterns "command/execution," "desire/fulfillment," and "request and refusal." Conroy also gives careful attention to the movement from complication to resolution within the narrative, as well as to the narrator's point of view and characterization of persons and events. The most elaborate recent literary analysis is that of Fokkelman (1981), whose overarching study finds a series of dominant themes including the dualities of piety-sin, illusion-truth, and unity-duality. Sacon (1982) has applied the insights of the Japanese sentence psychologist, Kanji Hatano, to the Court Narrative. This approach stresses the analysis of paragraphs as the key to clarifying a particular literary work. Sacon, for example, finds a concentric structure in 15:18–19:41 centered around the account of David's reign in exile in 18:1–19:9, which is itself composed of a concentric structure. These studies do not preclude the assessment of the Court Narrative as essentially historical.

However, some of the recent attention to narrative style has to a significant extent called into question the long-standing assessment of the Court Narrative as a fine early example of historical writing. The utilization of motifs and themes characteristic of popular or folk literature, the numerous intimate conversations, the lack of attention to public events, and connections with the Wisdom tradition have led some scholars to conclude that the Court Narrative is not history in intention or in fact. Recognizing that the references to Solomon and his mother in 2 Samuel 11 and 1 Kings 1–2 constitute an *inclusio,* Blenkinsopp distinguished between two separate but connected themes: the legitimation of the Davidic claim to the throne, and the struggle for succession. The *Thronfolgegeschichte* consists of 2 Sam 11:2–27; 12:15b–25; 13–15; 15–20; and 1 Kings 1–2 and is structured by the theme that sin externalized in a sexual form leads to death (1966: 48–49). Blenkinsopp's primary interest, however, was in the affinities with the Yahwist tradition, and he identified several themes common to the David narratives and the Yahwist. These traditional themes included the motifs of the beauty and divine wisdom of the king, brother killing brother, the wise counselor whose advice leads to ruin, and, more prominently, the woman who brings death. Traditional elements in the Court Narrative are also stressed by Gunn. In addition to the themes noted by Blenkinsopp, Gunn notes several traditional motifs: David and the sons of Zeruiah, the judgment-eliciting parable, the woman and the spies, the two messengers, and the letter of death. The author's use of these traditional motifs suggests that the narrative should be seen not as political propaganda but as "first and foremost a fine piece of story-telling" (1978: 37). Whybray (1968) has noted the lack of attention to public events and, *inter alia,* the numerous intimate conversations in the narrative, and on that basis he has characterized the narrative as a work comparable to the modern psychological novel which, in its concerns and perspectives, is linked to the Wisdom tradition. While the author might make use of historical facts, the work itself is not history.

5. Date of Composition. Rost dated the Succession Narrative to the early period of Solomon's kingship. Those scholars who have found evidence of subsequent editing by the Deuteronomist or others may date the finished document later. However, there has been little direct discussion of the widely held

assumption that the major part of the traditions contained within the Court Narrative or Succession Document are to be regarded as essentially contemporary with the events which are related. This is the case even though there is little evidence on the basis of which to date the narrative to the 10th century. There are, in fact, some indications of a later date, a number of which have been cited by Gunn. After the death of the child born of the adulterous union with Bathsheba, David goes into the "house" of Yahweh, which would indicate a date after the completion of the temple. There are a number of other references which also suggest temporal distance from the events described. The reference to the attire of the daughters of the king in 2 Sam 13:18 implies a time when this fashion was no longer widely known, and it cannot be easily dismissed as a gloss. There is also apparent confusion about the issue of whether Absalom had sons and about the various parties to Absalom's revolt (Gunn 1978: 32–33).

6. Synthesis. Rost's assessment of the unity and historical worth of 2 Samuel 9–20 and 1 Kings 1–2 as a unified political document stemming from the early days of Solomon's reign no longer reflects a consensus of scholarly opinion. Almost every aspect of Rost's analysis has required reassessment. While literary artistry (including the use of motifs from folklore) does not require rejection of the description of this material as history, it has led to a more critical assessment of its historical worth.

It is also no longer clear that one can talk about a succession document embracing all of 2 Samuel 9–20 and 1 Kings 1–2. The distinction between the themes of the legitimation of David's claims to the throne and the struggle for succession suggests a more complex history for the traditions contained within the document as well. Granted this distinction, the designation "Court Narrative" is beginning to displace Rost's designation of the material as "Succession Narrative." The way in which the references to Solomon, Bathsheba, and Nathan (2 Sam 11:1–12:25; 1 Kgs 1:1–2:46) form an *inclusio* calls into question Rost's definition of the extent of the Court Narrative. There is little reason to try to include 2 Samuel 9 as part of the larger composition, and few scholars have followed Rost in including 2 Sam 6:16, 20ff., and 7:11b, 16. Ironically, Rost's real legacy may be in the growing interest in the literary artistry of the composition, which is characteristic of much of the contemporary writing on the Court Narrative.

COVENANT. A "covenant" is an agreement enacted between two parties in which one or both make promises under oath to perform or refrain from certain actions stipulated in advance. As indicated by the designation of the two sections of the Christian Bible—Old Testament (= covenant) and New Testament—"covenant" in the Bible is the major metaphor used to describe the relation between God and Israel (the people of God). As such, covenant is the instrument constituting the rule (or kingdom) of God, and therefore it is a valuable lens through which one can recognize and appreciate the biblical ideal of religious community.

I. Conclusion

———

A. Underlying Problems in Approaching the Topic

At the outset it should be noted that two factors often inhibit the ability of many modern Western readers to appreciate fully the biblical portrayal of the covenant between God and Israel. The first is the problem of the so-called "sociology of knowledge" in the modern Western world. On the one hand, the English word "covenant" itself has largely fallen into disuse, and today is limited to certain highly technical legal matters. On the other hand, as a practical form of social organization and behavior, covenant-based relationships in the West have become almost obsolete, the fragile institution of marriage remaining the most noteworthy vestige of such relationships. Thus, one legitimate issue in the study of biblical covenant must be the extent to which modern and Western students of the Bible can conceive and imagine relationships built upon little more than promises reliably made and honorably kept.

The second is generally a problem associated ultimately with the "sociology of knowledge" in ancient Israel. How fully did the ancient Israelite scribes themselves understand what it meant to live in terms of a covenant? As we shall see, in the millennium during which ancient Israelite society and thought developed and changed, and in which the biblical documents were written, the same single term—*bĕrît*—came to be used to refer to many different types of oath-bound promises and relationships. Therefore, any study of covenant in the Bible must be sensitive to the varying social and ideological contexts associated with different types of oath-taking, and it must also be prepared to make careful distinctions between different phenomena underlying the singular use of the Hebrew word *bĕrît.* These phenomena may be roughly classified as "treaties," "loyalty oaths," and "charters." Especially in the later periods of biblical history and in connection with the subsequent utilization of covenant imagery within early Judaism and early Christianity (see H below), it is also necessary to distinguish between covenants as *socially enacted historical realities* that were expected to bring about functional changes in patterns of behavior, and covenants as *formal or symbolic dogmatic concepts* that were supposed to be the objects of tradition and belief.

In the past century scholars have rarely been sensitive to such ancient phenomena, and consequently there has been much debate recently as to whether the biblical covenant appeared at the beginning of the history of ancient Israel (the time of Moses) as an adaptation of Late Bronze (LB) Age suzerainty treaty forms, or later during the time of the monarchy (introduced either by the classical prophets or by Josiah) as an adaptation of Iron Age "loyalty oaths" (both McCarthy [1973] and Nicholson [1986] embrace relatively limited perspectives on covenant and opt for its relatively late appearance in Israelite religion).

B. ANE Treaties

1. The Nature of Ancient Covenants. The large number of international treaties preserved in texts from all over the ANE world is dramatic witness to the importance of covenants in ancient social and political life. See also TREATIES. For some periods, especially the Syro-Hittite LB Age, these treaties constitute a major source of our knowledge of the ancient history of the region. As instruments for the creation and regulation of relationships between different social groups, they seem to have been universal in the ancient world. Even the Greek historian Herodotus regarded the forms by which a society established binding covenants as an important element in the description of that culture (e.g. Hdt. 1.74).

By their very nature, covenants are complex *enactments.* As complex acts they combine: (1) historical events that create relationships, usually (though not necessarily) between unequal partners; (2) customary ways of thinking characteristic of both parties, especially common religious ideas associated with deities; (3) descriptions of norms for future behavior (which are often confused with "laws"); (4) literary or oral forms in which the agreement is couched; and (5) almost always some ritual act that is regarded as essential to the ratification of the binding promise. It follows that a covenant cannot be understood merely by regarding it as a rigid literary form, nor can it be understood by reducing it to a literary law code, a ritual act, or a theological or political idea or concept. Thus, most studies of OT covenant in the past

quarter century that have been delimited by one or another of such concepts have largely generated a great deal of unnecessary confusion.

Covenants in the form of international treaties appeared almost as soon as writing itself began to be used for literary purposes. From the EB Age at Ebla through the Iron Age a sufficient number of such treaties were recorded and have been preserved so that we can identify changes in the conventional contents and forms of treaties. It is highly probable that these instruments for the regularization of public relationships between sovereigns developed in prehistoric times from customary forms used for making behavior predictable between private persons. One such occasion for private agreements would be marriage contracts, and it is significant that marriage is one of the most pervasive and constant types of covenant throughout history.

Since covenants are typically enacted between parties to create relationships that did not previously exist, both the *substance* and the *form* of covenants must be valid and meaningful to both. Thus, covenants constituted a most important feature of ancient cultures that operated to transcend a narrow parochialism and so to prepare the way for a broader perspective on society and history.

As is the case in so many other features of ancient civilizations, it was the Bronze Age that produced the most highly developed structure of international treaties. Although these treaties are known primarily through Hittite sources, there is no reason to believe that the Hittites originated this treaty form. Since treaties are intrinsically cross-cultural in nature, the basic underlying patterns of thought incorporated in the texts would necessarily have been common property to most ANE cultures of the time. Note, for example, the (parity) treaty between Ḫattusilis and Rameses II (*ANET,* 199–203) which (however temporarily or ephemerally) was meaningful to both an Egyptian audience and a Hittite one. Indeed, the simple fundamental elements of the treaty structure are already found in a text from Byblos dating probably to the end of the EB Age (Mendenhall 1985, chap. 5).

2. The Structure of the LB Age Treaties. The structure of treaties in the LB Age was fully described already in 1931 by V. Korosec, but it was not until 1954 that the extraordinary similarity to certain OT traditions was pointed out (Mendenhall 1954a). Though there has been an enormous amount of discussion since that time, there still seems to be no consensus concerning the historical significance or even the validity of those similarities.

The "ideal structure" of LB Hittite treaties has been abstracted from numerous examples. It is not surprising that not every treaty exhibits all of the individual elements of the structure. The modern idea that all the covenants had to conform to some rigid form defined in advance is characteristic of a "strict law" type of legalistic mentality that not only is quite rare in the history of jurisprudence but also was probably foreign to the ANE historical reality.

a. Identification of the Covenant Giver. This introduction to the treaty text typically begins with the formula "The words of …," followed by the name of the Hittite king, his genealogy, and his various titles, ending with the epithet "the hero." The vast majority of the treaties preserved are suzerainty treaties in which the underlying ideology held that the great and powerful king was bestowing a gracious relationship upon an inferior. It followed, then, that the relationship of the vassal to the overlord had to be an exclusive one: the vassal could not engage in treaty or other relationships with other independent monarchs without being guilty of treason, and therefore becoming subject to the death penalty. (The similarity between this ideology centering upon the Hittite great king and the biblical monotheism seems obvious.)

b. The Historical Prologue. This section, in which the Hittite king recounted his past deeds of benefit to the vassal, is frequently so detailed and extensive as to constitute a major source for our knowledge of ANE history in this period. The motivation for this section was obviously not an academic interest in the past for its own sake, but rather to have that past serve as the foundation for the present obligation of the vassal to be obedient to the stipulations of the covenant. The implications of this element of the covenant structure are far-reaching, but it is difficult if not impossible to prove what those implications might have been. It can at least be suggested that certain concepts were presupposed as present in the minds of both parties to the covenant.

In the first place, the historical prologue is inseparable from the concept of *reciprocity* that is so prevalent in premodern cultures. The narration of the past history emphasized very strongly the benefits that the great king had already bestowed upon the vassal in the past. The implication is, of course, that the common decency of *gratitude* would place the vassal under *obligation* to comply with the wishes of his benefactor. The principles underlying this sort of relationship are illustrated by an old Arabic saying (which actually applies to persons who are equals in an egalitarian society): "If someone does you a favor, you never forget it; if you do someone else a favor, you never mention it." (The latter part of the saying of course does not apply to a king or to a god, who is in the position to specify what he wishes.)

These prologues are not unrelated to the question of the origin of history writing in the ancient world (a subject surrounded by obscurity, mystery, and controversy). This is even more true of the biblical tradition. In view of the fact that the earliest literary materials of the Hebrew Bible (e.g., Exodus 15 and Judges 5) are poetic descriptions of the acts of God, we should consider more seriously the practical purposes associated with the treaty prologues as the *ideological matrix* from which the biblical historiography developed. In short, just as in the LB treaties, so also even in the late repristination of the old covenant traditions of ancient Israel, the past was recounted for the specific purpose of instilling a sense of gratitude as the foundation and ground for future obedience.

c. The Stipulations. This section of the LB treaties, often phrased in the case-law format ("if …, then …"), described the interests of the great king that the vassal is bound to protect and obey under the covenant relationship. Already in this section there is an implicit distinction between what might be termed public vs. private concerns. The imperial control over vassals involved no interest in the internal affairs of the vassal state other than the obvious one of suppressing or controlling subversive activities and elements that might disrupt the harmonious relationship between the vassal and his overlord.

d. The Provision for Deposit and Periodic Public Reading. This segment of the treaty is again surprisingly sophisticated. Deposit of a copy of the treaty in the temple was an act that now placed that treaty within the interests of the local deity and under its protection. In more modern terminology, the treaty and its contents were to be incorporated into the operating value system of the vassal state, and thus to be internalized as determinants of future behavior. To put it in simplest terms, the treaty was a sacred act and object. (As is often the case, there was undoubtedly a considerable difference between this official doctrine and practical reality.)

The provision for periodic public reading implies that although the treaty was formally established with the vassal king himself, nevertheless it was also binding upon the population over which he ruled. The treaty became a part of the public policy of the king and thus was integrated into the "law" of his kingdom. Interestingly enough, the frequency specified for the periodic public reading varied, but it was usually scheduled from one to four times a year. (It would be interesting to know whether or not these public readings coincided with local festivals, and therefore became part of a public ritual form, but no such information is so far available.)

e. The List of Witnesses to the Treaty. These treaties also typically listed those "third parties" who would witness the enactment of the treaty. It is of especial interest that the witnesses were exclusively deities or deified elements of the natural world. The list of deities was frequently so lengthy as to justify the conclusion that it was intended to be exhaustive: all gods relevant to *both* parties were called upon as witnesses, so that there was no god left that the vassal could appeal to for protection if he wanted to violate his solemn oath. It is especially amusing that often the "*apiru* gods," i.e., even the gods of renegade rebel bands, were included in the list of witnesses.

The witnesses also included the heavens and the earth, and mountains and rivers, a fact of particular significance because the motif continues in the poetic and prophetic traditions of the Bible (Deuteronomy 32; Isa 1:2; Mic 6:1–2), but there is little if any trace of it in any other extrabiblical Iron Age covenant texts and ideologies centuries later. The witnesses were those entities that were called upon to observe the behavior of the party under oath and to carry out the appropriate rewards and punishments (the blessings and curses) connected with the treaty (see below). The fact that these enforcers are all supernatural beings reflects the underlying idea that in this covenant ideology strenuous (if not pretentious) efforts were made

to place the entire covenant complex outside the realm of political and military coercive force, and into the realm of a voluntary acceptance of a commonality of interest between suzerain and vassal. In other words, there is expressed here the hope that the vassal's obedience will be "self-policing," i.e., based upon a conscientious regard for higher principles (the gods) than simply upon the fear of superior military force.

f. The Blessings and Curses. This section of the treaty text described in detail the consequences of obedience and disobedience with which the witnesses to the treaty rewarded or punished the vassal. Because the witnesses were the supernatural entities mentioned in the previous section, the blessings and curses were appropriately (in large measure) those experiences that are beyond normal human ability to predict, much less control. Particularly in this prescientific age the most important concerns of humanity were clearly beyond mortal control: health, productivity of fields and flocks and wives, and freedom from external violence. See also BLESSINGS AND CURSES. Thus the treaty made an inseparable connection between ethical adherence to promises made and the consequences of economic prosperity, freedom from disease, and tranquil long life. The text of the treaty typically concluded with this enumeration of the consequences of obedience and disobedience.

It is important to observe that the LB treaty formulas included not only punitive threats to be carried out by supernatural powers but also positive rewards of similar origin. This aspect of international treaties was normal in the LB Age, but later Iron Age treaties typically contained nothing but the curses (see B.3 below).

g. The Ratification Ceremony. It would be extremely naive to think that the mere writing of a treaty text brought into existence the treaty and the relationship it stipulated. Even today a treaty must be signed, ratified, or otherwise formally accepted before it can become binding. In antiquity, the formal ritual by which a covenant came into force had such a variety of forms and procedures that no generalization can be made. These formal rituals are the customs that Herodotus specified for the societies that he described. There is no reason to believe, therefore, that some specified rigid formality was always carried out—indeed, it would be unthinkable in view of the variety of cultures and societies that are involved in the dozens of treaties preserved.

One observation, however, is probably valid: the ratification of the covenant was frequently associated with the sacrifice of an animal. The significance of animal sacrifice in general is a complex and intractable subject, and the problem becomes even more complex when it takes place within the framework of covenant relationships. An Iron Age Assyrian treaty, however (*ANET,* 532–33), makes perfectly clear that at that time and place (N Syria), the sacrificed animal represented, and was identified with, the vassal who was being placed under oath: just as the animal was slaughtered, so would the vassal and his dependents be slaughtered if he violated his oath. The same concept is attested for the earliest Roman covenant traditions (Mendenhall 1954a), so we may safely assume that this sacrificial identification was widespread in both time and space. Once the animal was killed, the vassal could expect the same fate if he violated his oath. Perhaps associated with sacrificial ritual as an enactment ceremony is the well-attested fact that covenants were often officially ratified by a common meal (see G.1 below).

It is characteristic of this period that the treaties do not contain a verbal oath formula. The oath is a conditional self-cursing: i.e., an appeal to the gods to bring certain penalties upon the oath taker if he violates the promise that he is swearing to keep. The sacrifice is thus the *enactment* of the oath; therefore, a verbal formula is unnecessary in the *text* of the treaty itself (though some such verbalization possibly accompanied the slaughter of the animal, as in the early Roman ritual).

h. The Imposition of the Curses. A final element in the entire covenant complex is one which, like the oath formula itself, is not provided in the treaty text but is implied at least by parallels from other cultures of the ancient world. This is the often delicate problem of imprecations and curses. Though there is no certain evidence for a ritual form that effectively imposed the curses for breach of covenant, it seems probable that such a custom did exist. Under what circumstances could a sovereign declare the curses to be in effect, thus depriving the vassal of the protection that the covenant relationship normally would provide? How flagrant must a violation be before the sovereign could legitimately muster his military

forces and attack the recalcitrant vassal? Although the treaty texts themselves make no provision for such punitive action *by the suzerain himself* (this would negate the entire ideology of the covenant!), there must have been some means by which the suzerain could proclaim that the covenant no longer existed, and that the vassal therefore could be dealt with by force. In such circumstances, the suzerain could legitimately claim to be the agent of the avenging deities, since the actions of the deities themselves were evidently unreliable (and therefore insufficient). As the ultimate curse for the breach of covenant was the complete destruction of the vassal kingdom, the logical instrument for realizing such a *historical* event (in distinction from the curses of the treaty text that represent *natural* events) would be the suzerain himself.

3. The Structure of Iron Age Loyalty Oaths. The treaties that have become known in recent decades especially from the late Assyrian Empire reveal that structurally and ideologically they belong to a different world from that of the LB Age (Parpola 1987; Grayson 1987). Gone is the historical prologue, except for one example, significantly enough, preserved in extremely rudimentary form in a treaty with an Arab political entity—a culture that we know also preserved Bronze Age linguistic structures. Gone also are most of the other sophisticated and elaborate elements of the treaty forms, such as the gratitude for previous benefits conferred, the blessings, and the provision for deposit and public reading. Instead, these Iron Age treaties give the strong impression that a promise to obey has simply been imposed by superior military force and is now being reinforced by an incredible elaboration of curses. Thus, these treaties have appropriately been termed "loyalty oaths" (Weinfeld 1976).

The structure of the Iron Age loyalty oaths known from Assyrian sources seems to have been very flexible, but usually it included these basic elements:

1. The preamble, giving the name and titles of the Assyrian king, and the name of the vassal who is placed under oath, together with his descendants and the population of his realm.
2. The designation of the Assyrian ruler or successor to whom loyalty is due.
3. The invocation of the deities in whose presence the vassal swears.
4. The definition of the acts of commission and omission that subject the vassal to the curses.
5. The curses, or evils, brought upon the disobedient vassal by each deity, some curses in *mašal* ("parable") form.

Compared with the treaties of the LB Age, these of the Assyrian period are simplistic and one might say almost brutal. Although the text emphasizes the various ills to be brought upon the disloyal by the panoply of gods, the fate of the disobedient vassal is depicted quite tangibly by the Assyrian annals themselves (e.g., *ANET,* 277–301). The ideological matrix of these loyalty oaths suggests that the only motivation for obedience was simply the *self-interested desire* to avoid the fate so graphically illustrated in the Assyrian texts and reliefs, in sharp contrast to the *gratitude* that was supposed to be the foundation of obedience in the LB Hittite treaties. Thus almost all pretense of any transcendent moral or ethical foundations for the suzerain-vassal relationship was abandoned in favor simply of brute military force. Even the power of the supernatural forces to punish violation of oaths was of little importance compared with the vindictive power of the Assyrian king himself to do the punishing (in which some of these Assyrian kings at least seem to have taken a sadistic delight). It is ironic that a major purpose of the 7th-century treaties was to guarantee the succession of the designated heir to the Assyrian throne. The pathetic reliance on subjugated vassals to assure such succession is vivid witness to the *internal* hostilities within the Assyrian court itself.

In conclusion, the LB international treaties exhibit a sophistication and elaboration of concepts that were very largely lost during the Iron Age. In comparison, the treaties of the Iron Age seem to have been based mostly on mere military power reinforced by superstition. It must be observed, however, that the political instruments of the Hittite Empire were precisely that: political instruments. They were devised and adapted from the age-old common property of ancient cultures in the vain hope that they could bring about the voluntary subservience of peoples who in fact had been subjugated by military force. Although the LB covenant ideology certainly represented an admirable attempt to place cross-cultural relationships on a basis of something other than sheer military superiority, the brute facts of the historical evidence lead inevitably to the conclusion that Hittite foreign policy was exclusively military (Goetze 1957). The

treaties, in other words, were imposed relationships in which the vassal had freedom to choose either capitulation under the covenant or annihilation; thus, the LB treaties were instruments of propaganda, not of practical reality. Nevertheless, as instruments of propaganda they appealed to a different matrix of ideas than did the (equally propagandistic) loyalty oaths of the Iron Age.

C. The Sinai Covenant

The ongoing scholarly debate concerning the relationship between the LB suzerainty treaties and the biblical traditions depicting a "covenant" in Israel before the monarchy centers on one fundamental point: whether the Sinai covenant was indeed a historical reality known to the Israelite population in the premonarchic period (ca. 1200–1000 B.C.), or whether it was instead nothing more than a pious literary fabrication of the later monarchic period, an attempt to "invent" a (fictitious) past (nevertheless) replete with religious "meaning." If the former applies, then the relationship between the LB treaties and the Sinai covenant traditions are historically significant, and one could justifiably conclude that the Sinai covenant was conceived to be a type of "suzerainty treaty" establishing Yahweh as king and Israel as vassal. If the latter applies, then any similarity between the Sinai covenant traditions and the LB treaties is coincidental, and the real source of inspiration for the biblical idea of covenant must be sought either generally in the monarchic period, specifically at the time of the Assyrian Empire (ca. 750–620 B.C.), or perhaps sometime in the postmonarchic period (after 586 B.C.).

Here it should be stated unequivocally that all of the various elements of the LB suzerainty treaties (presented above) in one way or another are either present or reflected in biblical traditions associated with the premonarchic (Sinai) covenant. But, as will be noted below, these traditions also bear the marks of later "creative writers" who embellished and reworked the traditions from the radically different perspective of the monarchic period. The first task is to delineate the *formal* elements of the premonarchic covenant, and then to establish the *function* that such a covenant could reasonably have been expected to perform in Israel in the century or two before the rise of the monarchy.

1. Formal Elements of the Sinai Covenant. a. Identification and Historical Prologue. The historical investigation of any cultural form must begin with the realization that forms are almost never transferred from one cultural context (such as the international political treaties of the LB Age) to another (such as the hill-country tribes of early Iron Age Palestine) without some modification or adaptation inevitably resulting. This is the "Law of Functional Shift." This principle is aptly illustrated in the first two formal elements of the suzerainty treaty: the identification of the covenant giver and the historical prologue, which have been fused together in the two forms of the Decalogue preserved in Exodus 20 and Deuteronomy 6. Unlike the "great kings" in the Bronze Age political treaties, the one God of Mosaic monotheism was not identified by heaping up divine epithets and attributes so characteristic of ancient polytheism; rather, at the very beginning God was simply identified in terms of what God had done: "… who brought you out of the land of Egypt, out of the house of bondage" (Exod 20:2). The identification of the deity thus became synonymous with the historical prologue, and although the entire structure of the Sinai covenant represented a continuity with age-old patterns of thought, both the deity and the historical prologue represented a complete discontinuity from earlier ways of thinking. The historical event that was crucial to the identification of the deity became inseparable from the historical event of the establishment of the covenant itself. As Huffmon (1965) has shown, attempts made by some scholars to separate entirely the Exodus tradition from the Sinai covenant tradition are based upon a rejection of and, at the same time, a failure to understand both the biblical traditions themselves and the ANE patterns of thought that underlie them.

Whether the name of the deity, Yahweh, was a continuation from some earlier tradition is a debated issue to which there is no clear answer (see YAHWEH); it is certain that if there was a god by this name worshipped earlier by some group, it could hardly have been associated with any of the well-known politically organized imperial powers or even city-states of the previous age. The suggestion that it was the name of a Midianite deity simply attempts to explain the obscure by the more obscure.

b. Stipulations. The biblical traditions insist that the text of the covenant established at Sinai (the stipulations) was the Decalogue, the Ten Words (Deut 10:4), and there is no modern evidence that would

disprove the ancient information. Virtually all scholars agree that the original Ten Words were the simple prohibitions plus the two positive obligations of sabbath observance and honoring of parents (without all the elaborations that were added at a much later period). According to the Exodus 20 tradition, these were written on two tablets of stone, and contained only the first three of the elements of the suzerainty treaty described above. Some scholars have recently argued that the lack of other LB treaty elements in this text is evidence that the Sinai covenant had nothing to do with the suzerainty treaty. However, this line of reasoning is fatuous because it attempts to draw a historical conclusion from an observation about mere literary forms: even if all the LB elements are not attested in the first 17 verses of Exodus 20 (they are not even all attested in many LB treaties!), virtually all of them are nevertheless reflected in the later elaboration of traditions associated with the Sinai covenant (see below). The most that one can conclude from the literary form of Exod 20:1–17 is that the author (or editor) responsible for its final canonical shape did not believe that he had to pattern the *text* of the Sinai covenant deliberately after LB suzerainty treaties (if he even knew what they were), and felt that it was sufficient simply (1) to identify Yahweh formally (even though contextually this is unnecessary), (2) to restate what Yahweh did on behalf of Israel (again, contextually this is unnecessary), and (3) to list Yahweh's Ten Words. What is surprising is not that the other LB treaty elements are absent in this text but rather that v 2 is present, even though it could just as easily have been omitted. It was included precisely because the *received tradition* already linked item (3) above to items (1) and (2); the only explanation for this linkage is to be found in the LB suzerainty treaties.

The Ten Words are not commands, nor are they couched in command (i.e., imperative) language. They are simple future indicative verbs that indicate the future action that is the expected consequence of the preceding prologue: "I am Yahweh your God who brought you out of the land of Egypt …, (and therefore) you will have no other gods before me …," etc. Later biblical tradition itself was utterly confused in its interpretation of the Decalogue, and subsequent postbiblical interpreters have added to the confusion, ranging from the traditional pious view that the phrase "I am Yahweh your God …" is the first commandment, to very recent views held by many scholars that the Decalogue is a classical example of an "apodictic" (as opposed to the "casuistic") legal form. See LAW (FORMS OF BIBLICAL LAW).

The confusion continues with the interpretation of the statements themselves, which traditionally have been classified as three (or four) "laws" having to do with obligations to God (Exod 20:2–8), followed by seven (or six) "laws" of obligations to fellow human beings (Exod 20:12–17). Although this classification is admirable in intention, it has nothing to do with ancient religious reality. *All* of the stipulations represent those characteristics of human behavior that constitute the definition of the will of God: they describe the highest value, the "ultimate concern" of the community formed by covenant, for they are the principles upon which the one God directs the historical fate of the community.

c. Deposit and Public Reading, Witnesses, Blessings and Curses. It is true that the Exodus 20 text does not include the provision for deposit and peridic public reading, the list of witnesses, or the curses and blessings. However, it is most inappropriate to conclude that the Sinai covenant therefore had no connection with LB treaty patterns, or that it was a later pious literary invention, or that the Decalogue was completely unrelated to covenant traditions. If these elements were truly absent from the complex of traditions about the very founding of the ancient Israelite community, it is indeed strange that in later times (when most of these elements had been completely forgotten in the process of ANE treaty enactments) some biblical scribes felt it necessary to add them to the complex of the Mosaic tradition.

Since early Israel did not have a temple in which to deposit the text of the covenant written on the tablets of stone, the tablets were deposited in the ark of the covenant (according to numerous variants of the tradition even in Exodus alone). Note also the formal deposit of a text in a "sanctuary" in Josh 24:26. Periodic public reading is not directly attested, but it is certainly implied in ritual customs, such as those described in Exod 23:17 and Deut 27:11–26; and practiced in late OT times and early Judaism ("The recitation of the *Shmaʿ* is the rabbinic covenantal renewal" [Levenson 1985: 86]). If these traditions did not ultimately derive from the LB/early Iron Age, from whence did the later Israelite scribes derive these motifs, and why would their later audiences find them meaningful?

The list of gods as witnesses was of course incompatible with the monotheistic community, and so the members of the community themselves became the witnesses (cf. Josh 24:22, but also v 27 where the stone is a witness; later tradition evidently did not quite know what to do with this otherwise bizarre *but inherited* element of the treaty structure). Thus the enforcers of the covenant became the members of the community themselves (when Yahweh's enforcement became regarded as not sufficiently predictable, or when it was believed that God was not sufficiently concerned to carry out the duties of reward and punishment [cf. Zeph 1:12]); consequently, the stipulations of covenant became socially enforced law. Again, if this tradition of witnesses was not derived ultimately from the LB/early Iron Age, what would inspire some later scribe to introduce otherwise awkward references to them?

The blessings and curses were enormously elaborated in Deuteronomy 28. In this late elaboration the blessings were enumerated in only 14 verses, while the remaining 68 verses enumerate in vivid detail the curses resulting from breach of covenant. At the later (Assyrian?) period when Deuteronomy 28 was composed, the multiplication of curses is not at all surprising (see MANASSEH); what is surprising in that later milieu is that any blessings were enumerated at all, something that could not have been predicted from the structure and content of the Assyrian loyalty oaths (see B.3 above). It is difficult to imagine how an Israelite scribe of that time could *invent* the covenant idea and include *blessings;* rather that element of the covenant tradition already had to have been preexistent in the earliest biblical tradition, and therefore at the disposal of the Deuteronomic writer (and also of the Priestly writer, who similarly wanted to append a list of blessings and curses to his distinctive version of covenant obligations [Leviticus 26]). On the other hand, the multiplication of *curses* that we find in Deuteronomy 28 (and Leviticus 26) represents later elaboration of a tradition similar to that which is universally found in the ANE (Hillers 1964). Though the text of the Decalogue (Exod 20:1–17) does not refer to either blessings or curses, the latter are implied in the narrative accounts that refer to sacrificed animals ("oxen" according to a later embellishment—inappropriate to a desert environment) and to a common covenant meal with Yahweh (Exod 24:4–8, 11).

d. The Ratification Ceremony. This seems to have two elements, the first a verbal assent to the covenant ("All that the Lord has spoken we will do," Exod 19:8; 24:3; cf. Josh 24:24 for a quite different formula), and the second a ritual act involving the sacrifice of an animal, the blood of which is thrown upon an altar and upon the people (Exod 24:5–8). The latter was a symbolic action in which the people were identified with the sacrificed animal, so that the fate of the latter is presented as the fate to be expected by the people if they violated their sacred promise (i.e., it is a form of self-curse). Thus the ratification ceremony was, in effect, the pledging of their lives as a guarantee of obedience to the divine will. (In time the ratification ceremony simply became a ritual form signaling membership in the ritual society; i.e., circumcision.)

Traces of other ratification ceremonies or covenant enactments have been preserved in later biblical traditions about the premonarchic period, but nevertheless these narratives correspond entirely to what might be expected in the process of the formation of the twelve tribe federation. Most important in this regard is the narrative in Joshua 24 that reproduces much of the content of the LB suzerainty treaty. It contains an elaborate historical prologue (of course in much later language, vv 2–13), an emphasis upon witnesses (the people themselves, v 22; but also the inscribed stone, v 27), and the warning of the curses of divine wrath in case of disobedience (v 20). (Entirely consistent with the late date of this garbled account is the fact that the blessings are entirely absent.) The formal verbal acceptance by the gathered population is accompanied by a brief recapitulation of the historical prologue (vv 16–18), and the stipulations are identified with the "statutes and ordinances" that Joshua wrote in the "book of the law of God" (vv 25–26).

Although the language is much later and the chapter does not reproduce the text of the treaty, Joshua 24 is a narrative description of a covenant enactment. In fact, in its present form the narrative is anachronistically modeled somewhat after the reform of Josiah and the Iron Age "loyalty oath" that was characteristic of that time (see F.1 below). The character of Joshua is a sort of literary prototype of Josiah, and the population is represented as having fallen away from Yahweh, as they had in Josiah's day. But the

original event of Joshua's time was that covenant enactment by which various population groups of Canaan proper (who had escaped the collapse of LB Age civilization) formally became members of the Yahwist confederation, and thus the "tribes" of Yahweh. Other features of Josiah's reform that were read back into the time of Joshua include the identification of the covenant stipulations with a written law code (a confusion that is perpetuated to the present day) and the emphasis upon the Abrahamic tradition (vv 2–4, 14–15) that was essential to Josiah's claim to rule over *all* the land of Canaan (after three centuries during which the Jerusalem regime governed only Judah).

The ritual of the recitation of the blessings and curses from Mts. Ebal and Gerizim in Deut 27:11–26 was probably a part of the Shechem covenant enactment recounted in Joshua 24 (cf. Josh 8:30–35, esp. v 34), although the present form of the tradition has completely severed any literary connection between the two, probably because the Deuteronomic tradition had become associated with the commands of Moses. The passage in Deuteronomy plus several others may well contain remote reminiscences of the fact that there had also been a covenant ceremony in Transjordan at the time of Moses, by which population groups of that region had become members of the Yahwist federation. This tradition of a Transjordanian ratification in Moses' latter days is perhaps also reflected in Deut 27:9 "Keep silence and hear, O Israel: this day you have become the people of Yahweh your God" (cf. Deut 32:6, 18).

e. Formal Procedures for Violation of Covenant. Just as later biblical texts such as Joshua 24 preserve certain premonarchic covenant elements discussed above, so they also unwittingly preserve the element pertaining to procedures in case of covenant violations. The narratives of Exodus and Numbers give many illustrations of procedures taken against such violators during the lifetime of Moses himself, but because these are embedded in the late Priestly narratives marked by substantial literary embellishment, it is very difficult to evaluate them historically. Nevertheless, even the very late literary ("envelope"?) structure of the Priestly motif of the "murmuring in the wilderness" illustrates the continuity of this ancient element: the people's complaints about lack of food and water while on the way *to* Sinai (Exod 15:22–17:7) characteristically induce Yahweh to respond favorably, but when they complain about the same things on the way *from* Sinai (Numbers 11; 14; 16) Yahweh characteristically punishes them. Why this reversal?

All historical considerations aside, it is evident even at the literary level that the Priestly writer believed that the status of the people was changed *at* Sinai (i.e., there they became subject to the covenant): consequently, they can no longer be viewed as being in "dire distress" but now rather in outright "rebellion." Therefore the way in which Yahweh (or the narrator) deals with Israel has changed: Yahweh no longer is portrayed as soliciting a relationship by multiplying favors that could potentially be listed in a covenant's historical prologue; he is now depicted taking punitive measures against those who have violated their covenant obligations. Murmuring (grumbling) against an overlord constituted violation of covenant in the Hittite texts, and it is listed (using the same verb, *lūn*) in a syllabic text from Byblos (ca. 2000 B.C.) as the acts against a sovereign that will result in a curse (Mendenhall 1985: 60). Thus, while the Priestly authors of these late biblical texts felt quite comfortable viewing the Sinai event as Yahweh's license now to punish "murmurings," they were probably completely unaware that this religious motif associated with covenant ultimately went back at least to LB notions about formal procedures for dealing with covenant violations.

2. Its Historical and Conceptual Context. The foregoing discussion by no means exhausts the formal similarities between the LB suzerainty treaties and the complex of traditions associated with Israel's premonarchic covenant. Yet in the final analysis the formal links are not the only connections, nor are they necessarily the most important ones (they are simply the ones that modern scholarly method is best equipped to handle). But studies that deal merely at the formal level will inevitably miss an important part of the historical process. Perhaps more important are the substantive links between the ideological matrix of those LB treaties (i.e., their rhetorical appeals to a common interest between suzerain and vassal, and to concepts such as the integrity of promises and the obligations of reciprocity) and the range of biblical concepts associated with the Sinai covenant relationship (such as the "knowledge" of God, the "love" of God, the "fear" of God, righteousness, mercy, justice, repentance, divine wrath, retribution, vengeance,

forgiveness, salvation, etc.). Thus, in the absence of any evidence that early Israelite society was defined by any ritual (e.g., "amphictyonic") or political organizations—and excluding outright the later and artificial biblical construct of an Israelite unity mystically based on some primordial blood kinship—the conclusion seems inescapable that early Israel existed largely because such an ideological matrix ceased being mere political rhetoric and became, however imperfectly and temporarily, the functional basis of community life for a vast diversity of villages in Palestine and N Transjordan. Our task here is to delineate that process and ideology, and to trace its subsequent development.

The context of the Sinai covenant was that of an extremely traumatic period in the history of the then civilized world, namely the transition from the LB Age to the early Iron Age (ca. 1250–1150 B.C.). After having been regarded for centuries as divine institutions ruled ultimately by gods or semigods, empires and states were crumbling and eroding, if not being altogether abandoned and destroyed. The attendant economic and demographic chaos is clearly attested or inferable from the historical and archaeological record. The heartland of the ancient Hittite Empire in central Anatolia was almost entirely depopulated (and would remain so for the next three centuries), and much of Syria experienced a significant drop in population that would not be recovered until much later in the Iron Age. But precisely at this time Palestine and Transjordan experienced a very rapid rise in population (this period also reveals the first settlements in the adjacent regions of the NW section of the Arabian Peninsula contiguous to Transjordan). The only conceivable source for this sudden rise of population was the region to the N whence came the Philistines, the "Sea Peoples," and no doubt many Arameans, to name only some identifiable groups. To add to the chaotic conditions of this period, the old power centers of the Canaanite cities were either drastically reduced or destroyed, and considerable segments of their population probably moved into the hill country, establishing new villages. See "Archaeology of the Israelite Settlement" under ISRAEL, HISTORY OF.

Such calamitous events cannot have taken place without an equally traumatic questioning and abandonment of the moral and religious as well as economic systems that undergirded those political institutions, although this is not so well attested outside the biblical record with its bitter condemnation of Baal-worship. This situation furnished an extremely favorable climate for the introduction and initial acceptance of different and "better" ways of envisioning and structuring life in a community that could not possibly be a mere continuation of the old that now lay in ruins.

The only surviving articulation of such a "better" way is that realized in the ancient Israelite covenant, which was initially enacted by a group of fugitive slaves led by Moses, presumably at a place called "Sinai." (Exodus 20–24 of course contains a very complex interweaving of much later, much garbled, and much embellished accounts of what actually transpired there.) The new understanding of the nature of deity and of the course of human experience, both of which were associated with this covenant, also proved attractive to much of the population of Palestine and Transjordan, who in the course of the previous two generations had witnessed the demise of virtually every venerable Bronze Age institution while managing to survive the wholesale destruction of cities and the ravages of war, epidemic disease, famine, and violent death. Thus, for many of these people the ancient Israelite covenant provided a framework within which they could effectively dispose of any lingering attachments to the old order now in ruins, and enact for themselves a new order of community and of self-understanding as the "people" of a transcendent God. Their enactment of the covenant apparently occurred at Shechem (again, Joshua 24 is a much later and distorted account of this event).

Given all that has been said above, and given the probability that there was no place in the ancient civilized world where the political ideology of empire and its mythological legitimation were unknown, the ancient Israelite understanding of a deity who ruled without a human intermediary and his standing contingent of soldiers and tax collectors was very welcome, and it was an understanding that was proclaimed ironically in a formal way similar to that of the old political suzerainty treaties. However, unlike those old and failed political policies, these of the new Sovereign were ones which met the needs of the population of the village farmers and shepherds that he governed: namely, the value and dignity of persons regardless of their social and economic status, the predictability that follows from reciprocity and

fairness in their interrelationships, and the reliability of the peace that would result (cf. Isa 32:17). Regardless of how practically these "policies of the new King" could be implemented, they nevertheless furnished an ideological matrix on which a broad and functional unity of hill-country tribes could be based.

For example, it is clear that most of the stipulations of the covenant (the Decalogue) represent the concerns that individuals in community legitimately expect in normal civilized human life (e.g., no lying, killing, stealing, adultery). The first two "commandments" are so specifically relevant to the historical situation of the LB/early Iron Age transition as to present difficulties for religious communities ever since. What was (and is) meant by "other gods" remains a perennial and insoluble problem in the history of religion (and in the modern ecumenical movement). However, the contrast to the one God, Yahweh, was clear and absolute ca. 1200 B.C. The "other gods" could hardly be anything other than the parochial symbols of existent political or tribal entities; Yahweh was the deity who represented concerns beyond the immediate interests of any petty political or tribal group, and who thus opposed the elevation of any political power structure to an object of worship wherein its policies took precedence over all other concerns, especially ethical ones.

Likewise the prohibition of "graven images," etc., represents an ancient iconoclastic movement that was a necessary corollary to the antimonarchic theology of the early Israelite movement. Such images, including those of gold and silver mentioned in Exod 20:23, were largely the product of the urban political establishments that were being destroyed; evidently these "images" were not highly valued anywhere in the E Mediterranean at the time. The graven images were essentially symbols of legitimacy for ancient political regimes in which the differences between gods and kings were always problematic and vague. As such, the images were incompatible with the value system of a community based not upon a monopoly of force but upon an ethical and moral consensus. But perhaps it is the final "commandment" that most powerfully underscores the fact that the *morale* of the early Israelite community (i.e., its ability to act consistently over a period of time and to meet crises effectively) was not dependent upon any political instruments of social control: how can any human control system hope to legislate against covetousness?

Thus arose the celebrated biblical "monotheism," the product not of philosophers and technical theologians but of people who could plainly see that the careful adherence to the stated will of a single God could guarantee community morale only if other competing value systems (represented by "other gods") were rejected as thoroughly as is humanly possible. In turn, this value system could become an operative and tangible reality only so long as a sufficient number of people accepted the suzerainty of Yahweh, so that together they could offer one another some measure of protection and security from those whose value systems were still symbolized by the old state idols of pagan imperialism. The idolatry of the political state and its symbolism of "graven images" of Baals and kings were incompatible with the sovereign rule of Yahweh (i.e., the kingdom of God).

3. History of the Sinai Covenant Tradition. Of course, we should legitimately question the extent to which such a LB/early Iron Age enactment (i.e., such a premonarchic covenant) actually succeeded in exorcising old attachments and in effecting a new self-understanding. For some it no doubt did succeed both deeply and permanently, and at least enough people were sufficiently committed to it so that this "religious experiment" functioned reasonably well for somewhat more than a century. But even later biblical traditions about the ensuing periods of the judges and the kings are quick to point out how many Israelites "fell back" into the old pagan ways. But the crucial point is that at one time *in history,* in the absence of any competing sociopolitical organizations, such a covenant was the practical and functional norm of Israelite self-definition. As such, this covenant would leave a lasting (indeed a permanent) imprint on Israelite traditions and self-understanding, even though at specific times and in particular places (e.g., Jerusalem during the monarchic period) it either failed to have a decisive impact or was grossly distorted.

Nevertheless, even centuries later in Jerusalem the Deuteronomistic Historian, attempting to "reconstruct" a premonarchic period that he little understood, could be found characteristically describing

Israelite apostasy in the same sentence that he would mention the past favors of Yahweh (Judg 2:12; 8:33–35). The net effect of this juxtaposition is to characterize the Israelites not simply as sinners but as *ungrateful* sinners. Even though the language of these passages is unquestionably Deuteronomistic and therefore quite late, this motif juxtaposing covenant violation with past favor reflects an ideological matrix quite foreign to the Iron Age loyalty oaths, and quite at home in LB Age treaties. The only conclusion is that this motif was already deeply embedded within traditions about the premonarchic period centuries before it fell into the hands of the Deuteronomistic Historian, and that the latter had little choice but to pass it on. If he considered it important to characterize Israelite covenant trespass in terms of ingratitude (and apparently he did; cf. 2 Kgs 17:7, 35–40; 21:15), he got this idea not from the Assyrian loyalty oaths of his day but because he learned it ultimately from the old Israelite traditions themselves.

Because both the *form* of Assyrian loyalty oaths and the *ideological matrix* to which they appeal is radically different from that of the LB treaties, two major problems would arise if we accepted the recent argument that biblical covenant concepts originated later under the influence of these loyalty oaths. First, how do we account for the presence of certain LB treaty elements in the biblical tradition complex, treaty elements that are not present in the Assyrian loyalty oaths (e.g., the historical prologue and the blessings; see C.1.a and C.1.c above)? Second, how did there arise in Israel a matrix of covenant ideas not reflected in the Assyrian loyalty oaths (e.g., the motif of a relationship based on gratitude and a sense of obligation to values shared by suzerain and vassal alike)? Or if these covenant elements and ideas arose *later than* the Assyrian period, how and from where did they emerge?

On balance, more problems are solved and fewer ones are raised by acknowledging that Hebrew covenant ideas emerged with the formation of the society itself in the premonarchic period and were adaptations of patterns of thought that even then were already centuries old.

This is not to say that this premonarchic covenant tradition was unaffected by the proliferation of Assyrian loyalty oaths of the later Iron Age. The extent to which the state of Judah was thoroughly integrated into ANE culture is indicated by the fact that these Assyrian loyalty oaths *did* have an impact on how some Judeans (particularly in the Jerusalem royal establishment) came to think of their own covenant traditions. In short, over the course of the Iron Age the tradition that God had established a covenant with Israel at Sinai (and at Shechem) was revised and transformed in such a way as to erase gradually (but not completely) the increasingly archaic suzerainty treaty features of that covenant. In the process this Sinaitic tradition was reformulated more along the lines of the prevalent oath-taking procedures of the later period (reflected particularly in the increasing emphasis on curses). In fact, it was precisely this late misunderstanding and reformulation that has led some scholars recently to the mistaken conclusion that the Israelite covenant tradition was actually *created* in this historical context of the Assyrian Empire and derived from its loyalty oaths. It is probably true that the concept of covenant obligations to Yahweh was not taken seriously by the political establishment of either Israel or Judah until the ephemeral attempt of Josiah to return to the past (see F.1 below), but it is simply wrong to conclude on this basis that earlier traditions of covenant did not exist, particularly outside the royal establishment. Some of those earlier covenant features are still reflected imperfectly in those later texts (see C.1 above and E below), a fact that cannot be explained away by appealing to some Iron Age "inspired creativity." See also MOSAIC COVENANT.

D. The Divine Charter

1. The Nature of the Divine Charter. A charter is, among other definitions, "a written grant of rights by a sovereign." This definition (deriving ultimately from English political history) applies remarkably well to three biblical themes that have traditionally been regarded as "covenants," but which now should rather be reclassified as "charters." (Even in modern American usage, the term "charter" has also come to mean "pact, treaty" among other things.)

The term "charter" is used here to refer to a number of ANE and biblical motifs wherein a deity or group of deities presents some special privilege, power, or status to a human being, almost always a king. There does not seem to be any specific literary form involved; rather the ANE charters are mythological statements about the actions of the gods who characteristically confer the power of kingship upon a

successful warrior. The historical background of such concepts is doubtless to be found in military history. The king had succeeded in expanding his economic and political power over realms remote from his home base (which was usually a city-state). In such circumstances, his legitimacy could not possibly rest upon the will of the governed (including the conquered!); now it had to be presented as being based upon the decision of the supernatural powers—especially those identified with his home base.

In the order of their emergence in the developing biblical tradition, these three "charters" are the promise to David (2 Samuel 7), the "covenant" of Abraham (Genesis 15), and the "covenant" of Noah (Gen 9:8–17). Only the latter two narratives specifically designate the divine promise as a "covenant." Although the promise to David is not termed a "covenant" *(bĕrît)* in the narrative of 2 Samuel, it is so designated in the associated traditions (and doubtless royal rituals) recorded in Psalm 89 (see vv 28 and 34; cf. also 2 Sam 23:5). See also DAVIDIC COVENANT. This use of the word *bĕrît* to include now a unilateral divine promise has resulted in enormous confusion in the modern scholarly world, as it probably did in the ancient world as well. (This is another example of the confusion that results from a failure to recognize the fact that verbal classifications often bring together into the same category very diverse historical phenomena simply because they share some important *formal* trait—in this case the fact that a promise is supported by a sworn oath.)

In all three of these biblical traditions—in sharp contrast to the Sinai covenant—it is God, not human beings, who is bound by oath. In all three, some promise is given: first to David and his dynasty (that they would enjoy perpetual rule, 2 Sam 7:12–16), then to Abraham and his offspring (that all Israel would possess the land, Gen 15:18–19), then to Noah and all those on the ark (that all creation need never fear another flood, Gen 9:8–11). The three exhibit an increasing (and very important) transition from covenant as a historical enactment that furnished the foundation of a community to a simple ideological (or theological) assertion. The first two especially presuppose not only an existing *religious community* already ostensibly in a relationship with Yahweh, but also a specific *sociopolitical and economic organization* that is given legitimacy in the context of the existing historical situation. In other words, unlike the ANE treaties and the Sinai covenant, nothing really new is created in any of these "charters"; they are all merely ideological legitimizations of the existing status quo—an expression in traditional theological terms of the value system of the dominant power structure that in the first place created the narratives and in the second place profited by their claims.

The source of this political/religious "charter" tradition is not far to seek (Weinfeld 1970). The old Amorite theory of kingship must certainly have had an elaborate ideology concerning this divine charter. It is specifically stated in the prologue to the Code of Hammurapi (*ANET*, 164–65), and is illustrated on that famous stele as well as elsewhere in ancient Mesopotamian and in Iron Age Syro-Hittite art. Always it is the deity of the king who grants to the king the symbols of sovereignty, for he is the "chosen" one of the committee of gods who in the first place established the kingship as a divine institution.

2. The Davidic Charter. In view of the significant Amorite cultural influence in the city of Jerusalem itself (Ezek 16:3), there is little reason to doubt that the prophet Nathan, in proclaiming the divine promise to David (2 Sam 7:1–17) at the outset of the monarchic period, was simply applying the age-old Amorite political theology of Jebus (now Jerusalem) to its new king (and now in the name of the new king's god, Yahweh). The historical conditions that brought about this fateful ideological development are clearly described, but typically the connections are not delineated—the ancient writer assumed that everyone knew these connections.

David had first become king by two distinct covenants enacted by the two major demographic groups of ancient Israel (each accompanied by the attendant rite of anointing): first with Judah in the S (2 Sam 2:4, though no covenant is specified), and subsequently with the elders of Israel in the N (2 Sam 5:1–3; clearly a suzerainty treaty in form!). Though it is precarious to draw conclusions from the very slight hints of evidence that we have, it is possible to argue that the ritual act of anointing signified the transfer of authority from a superior to his designated agent. For this reason, David's authority over all of the tribes of Israel had been confirmed by covenant.

There were two reasons it was politically necessary subsequently to promote an additional divine covenant that superseded these earlier tribal covenants. First, there had to be some ideological resolution of the latent conflict between the N and S tribes. Both groups in the first place presumably existed because of a prior commitment to Yahweh. Despite this, the narrative goes out of its way to emphasize the fact that the old antagonisms between them continued. Subsequently, however, each group on its own had presumably sworn allegiance to David; although it was an allegiance that could be abrogated for good cause (see 1 Kgs 12:16), both had nevertheless agreed on one fundamental thing: David should rule. Thus, common sense led to the inevitable conclusion that only in the king could the regional, tribal conflict be transcended: this king must therefore represent the will of Yahweh, who would want his people to be one. Nothing would so powerfully affirm this conviction as would Nathan's oracle (2 Samuel 7).

Second, as a result of his military conquests David now ruled over a population comprising far more than the original twelve tribes of Yahwist villagers. His realm now included most, if not all, of the old lowland Canaanite urban power centers that had never been incorporated into the community of Yahweh, and only now were beginning to recover from the ravages of the LB/early Iron Age transition period. These populations (as conditioned as they were to the inevitability and the propriety of ritually reinforced political organizations) could not possibly have had any understanding of the Mosaic tradition, or necessarily any sympathy with its belief that community can proceed directly from the will of God unmediated through ritual or political organizations. Since David and his son-successor Solomon could not afford to alienate further these subjugated peoples, it proved fortunate that in the religious ideology of Jerusalem there existed a type of (Amorite?) sanctification of political authority that David and Solomon could promulgate and that the non-Yahwist populations could comprehend (however grudgingly). This ideology persisted in Jerusalem for centuries after the death of Solomon, and we have every reason to believe that after the schism of 922 B.C. a similar type of ideology was adapted also in the N kingdom to legitimize the various regimes that ruled there over the next two centuries.

Thus the divine charter to David was introduced in an attempt to transcend these two political antipathies. By the proclamation that the king (and his dynasty) was established on the throne in perpetuity by Yahweh himself, it was hoped that the king's vulnerability to the tribal rivalries and conflicts would be greatly reduced. To the conquered Canaanite cities—as well as to the pagan, urban population of Jerusalem—the ideology was normal procedure just as it had been for probably a millennium or more. As far as the Jerusalem regime was concerned, the political doctrine was evidently successful. But although such pious propaganda was normal procedure in antiquity, it was also normal to expect that the behavior of the ruling regime would correspond to the reasonable expectations of the citizenry. Upon the death of Solomon, Rehoboam, his successor, refused to meet those expectations; therefore he was unable to retain the allegiance of the N population (whether Yahwist or urban pagan) and the Israelite kingdom split into two (2 Kgs 12:1–20).

The divine charter theology and literary motif are classified as a "covenant" in the biblical tradition simply because in these three traditions of promises (to David, Abraham, and Noah) it is Yahweh who swears to perform certain acts for the benefit of the recipient *and his descendants* in perpetuity. In all three cases, the recipient is *not* bound by oath, though it is clear that, in the case of the Davidic charter, later tradition attempted lamely to introduce the concept of accompanying conditions, i.e., "obedience to the Torah," that was itself the product of several centuries of development *after* the time of David and Solomon (cf. 2 Sam 7:14b, which is almost unanimously attributed to the Deuteronomistic Historian of the 7th or 6th century B.C.; an even more feeble attachment of obligations to the Davidic charter is evident in 1 Kgs 6:12; see also Ps 89:31–34—Eng vv 30–33; cf. also 1 Kgs 8:25 which is unquestionably [post-]exilic and now sees the Davidic charter as *entirely* conditional).

Despite this, the priority of the Sinaitic covenant structure is still evident in the fact that even this divine charter theology must include some provision for *witnesses* to enforce the stipulations. Just as the people themselves could be witnesses in the Sinai covenant, so also in the divine charter Yahweh is represented as swearing "by himself" as witness (Ps 89:36—Eng v 35), since obviously another deity could not serve in this capacity.

In summary, the Sinai covenant was a historical enactment involving two parties, Yahweh being represented by his agent Moses. In contrast, the divine charter was not something done in a two-party agreement at all, but in the case of David it was simply a prophet's (Nathan's) formal verbal proclamation of a message (privately) received from Yahweh. Similarly, the "covenants" with Abraham and Noah were not functional or historical realities but rather literary ideological motifs undoubtedly superimposed on ancient traditions.

3. The "Covenant" with Abraham. The basic biblical tradition about Abraham stems from the period of the united monarchy, for there is no trace of it in the premonarchic biblical sources (the archaic poetry in Genesis 49; Exodus 15; Numbers 23–24; Deuteronomy 32 and 33), and in those sources it is characteristically Jacob (= Israel), not Abraham, who serves as the common ancestor (cf. also Deut 26:5). On the other hand, recent attempts to see the Abraham traditions as originating late in the monarchy (or even later) have proved unconvincing, if only because they can just as well be explained in terms of a *renewed* interest in those traditions during the later periods (see especially the P materials). As a product of the period of the united monarchy, the covenant with Abraham is a part of that same ideological matrix that brought about the Davidic charter. In fact, it so closely resembles the Davidic charter as to justify the conclusion that they both ultimately come from the same source (see Clements 1967). In its original form, that source was probably the old Canaanite traditions of Jebusite Jerusalem, though certainly the tradition had a long and complex history before it was adapted by biblical writers.

It is probable that the Abrahamic covenant itself went through at least two versions, and more probably three (Mendenhall 1987). The original, Davidic version was not preserved after the demise of David's dynasty, and therefore it must remain hypothetical. In it the divine promise would have been to Abraham and his (Hebronite?) dynasty to which the Davidic dynasty could easily attach itself by the well-known ancient genealogical techniques (note also the association with Hebron and kingship in 2 Sam 2:1–5:5; 15:7–10; and even Josh 12:10).

With the discrediting of the monarchy at the fall of Jerusalem (586 B.C.), this charter had to be revised and depoliticized; now the *population as a whole* became the recipients of the promise as in Genesis 15, where the "seed of Abraham" is now much more than merely David and his descendants. (This transference of motifs from the ruling dynasty to the population as a whole is also illustrated in the development of the idea of the "chosen" of Yahweh. Originally it designated the king or high priest, but in the exilic/postexilic period it became increasingly applied to the community at large ["the chosen people"]). Despite these later revisions, the archaic source of the narrative in Genesis 15 is illustrated by the fact that only here is the divine charter "sealed" by a ritual form: the eerie vision of the smoking fire pot and flaming torch passing between the parts of the sacrificed animals (v 17) represents the manifestation of deity by which the deity identified himself with the slaughtered animals as a guarantee of the reliability of the promise. The similar ritual attested in Jer 34:18 indicates that this was a very archaic ritual form for the ratification of a covenant.

Yahweh's promise of the land (Gen 15:18–21) had nothing to do with the ancient Israelite enjoyment of their allotments under the Sinai covenant, which took place some two hundred years prior to David; rather, it was a religious legitimizing of the Davidic empire that had already been established by military force, and is specifically described in vv 18–21 as extending from the border of Egypt to the Euphrates River, most of it never having been Israelite.

The final adaptation of the Abraham tradition is illustrated in Genesis 17, where the covenant is sealed by the ritual of circumcision—a marker that designates the recipient of the promise. From this time on, into the postbiblical Jewish tradition, "circumcision" and "covenant" became virtually identical (the late Heb term *bĕrît* having both meanings). The historical context of this late reuse of the Abraham tradition seems to have been the continuity of the royal/priestly religious tradition in the postexilic period. This is suggested by the emphasis upon the ritual importance of circumcision, a practice that evidently had no particular religious significance in earlier times, since it is not even mentioned in early law collections (no doubt it was originally a folk custom, since it was very widespread in the ANE from the Chalcolithic of Mesopotamia on). It was especially emphasized in the prophecies of the priest of exile, Ezekiel (44:6–9).

In this context, "covenant" is hardly a functional reality that creates community by transcending old parochialisms, but is itself merely a formal, ritual demarcation of a particular preexisting group.

4. The "Covenant" of Noah. The narrative of the covenant established with Noah, his descendants, and all the occupants of the ark (Gen 9:8–17) perhaps illustrates the ultimate demise of the "covenant" tradition. The historical development of the covenant from a constitutive act instrumental in creating a new society and a correspondingly new value system in the time of Moses has, in this late narrative, become little more than a theological motif or literary device by which to confer religious value upon that which already existed, namely, the orderly process of the natural world. Even the oath that upheld a promise is gone, but in its place there is simply the *sign* that serves to remind God of his promise. In place of the rich complexity of the LB suzerainty treaty tradition and its function as a vain attempt to create orderly and peaceful relationships between political entities, the covenant has become a mere word-label giving religious value to an old folkloristic "explanation" of the rainbow.

E. Covenant Traditions in the Prophets

1. Continuity of the Sinai Covenant. On the basis of the politically motivated traditions of "covenants" associated with David and (originally) Abraham (as well as the subsequent politically motivated covenants of Josiah and Nehemiah; see F below), it would be erroneous to conclude that the form, purpose, and ideological matrix of the old premonarchic suzerainty tradition was everywhere forgotten or suppressed. As in any complex society, there was great social and ideological diversity within Israel and Judah, and it would be foolish to assume that the significant transformations of the covenant traditions in the hands of politically ambitious Jerusalem bureaucrats were accepted without question or protest in the rural hinterland where religious values and social processes tended to work differently. Indeed, if any vestiges of the old Sinai covenant tradition should be preserved relatively unadulterated, we would expect to see these emanating from the more conservative villages of the countryside. There the pattern of social life proceeded along lines not much different from that of the early Iron Age, except for the noteworthy intrusions of the kings' tax collectors; and in those villages one might not be too surprised to find an ongoing dissatisfaction with the basic premise of the (Israelite or Judean) state: namely, that meaningful community life must proceed from political bases.

However "theoretical" all this might seem, two points deserve mention. First, the introspective reflections of ancient village agriculturalists and pastoralists are rarely preserved by the "official" religious specialists (priests, scribes, and other functionaries), who tend to dismiss such reflections as unsophisticated and "backward." It is therefore not surprising that most of the biblical narratives dealing with covenant traditions come to us mediated through the minds and pens of various (usually Jerusalem-educated) scribes whom scholars usually identify as J, D, P, DH "Early Source," "Late Source," etc. Second, what *is* surprising is that the Bible preserves the utterances of certain "prophetic" individuals, a good number of whom came from small rural villages (Tekoa, Moresheth, Anathoth—indeed, Isaiah of Jerusalem is the anomaly!) and who encountered notable opposition from "establishment" officials. Nevertheless, it is within the Iron Age oracles of Amos, Micah, Jeremiah, and even Isaiah that we can find vestiges of the old Sinai suzerainty treaty.

These individuals were neither historiographers intent on recounting the role of covenant in premonarchic Israel (but cf. Jer 7:22–23), nor systematic theologians intent on outlining the various formal elements of premonarchic Israelite covenant theology. However, within their oracles we can discern not only surviving LB covenant forms but, more importantly, a surviving matrix of ideas about covenant that has antecedents in the Bronze Age.

Above, we noted that the LB treaties and some biblical traditions about covenant provide for certain formal procedures by which the suzerain declares the covenant to be broken and the vassal now to be susceptible to the imposition of the curses. In this regard we must examine briefly one recurrent procedural form often used in prophetic utterances: the *rîb*, "indictment, lawsuit." Probably the earliest and most dramatic illustration of such a procedure is preserved in Deuteronomy 32, although the date of this poem is much debated. (Decades ago Albright and Eissfeldt independently argued for an 11th-century date, but some recent studies [*CMHE*, 264, n.193] have unconvincingly opted for a later date.) Regardless

of its date, the poem illustrates a theological interpretation of historical processes incorporating virtually every single element of the old suzerainty treaties described above. This literary convention—which begins with an appeal to witnesses (heaven and earth) to hear the case, which recites the previous divine favors conferred upon the "defendant" (i.e., the "vassal"), which describes the defendant's subsequent violation of obligation, and which then announces the punishment—was undoubtedly a well-known form already by the time it was used by both Isaiah (chap. 1) and Micah (6:1–8) toward the end of the 8th century B.C. (see Hillers 1969, chap. 6). The entire structure presupposes that a covenant relationship had existed and was now being abrogated by the behavior of those subject to it. In short, the pattern of ideas represented in the *rîb* had to have existed long before these prophets made use of it, otherwise their contemporaries would not have had the slightest idea what the "message" was within the prophets' words. Simply stated, the prophets of the monarchic period did not invent the *rîb* lawsuit form.

But aside from the formal similarities between the *rîb* and the old suzerainty treaties, the most constant (and specifically biblical) motif shared by the old covenant and the later prophets is the inseparable link between the receipt of past benefits and the consequent obligations binding upon the recipients. The *rîb* form is entirely dependent upon this motif. Insofar as it makes appeal to one's sense of gratitude and obligation as a basis for (re-)establishing a covenant bond, the *rîb* exhibits an ideological matrix similar to that of the LB suzerainty treaties. Theologically, it means that divine "grace" precedes and becomes the foundation for human obedience to the divine will, a will that is revealed most clearly in the experience of "grace" itself and not in some fixed code of social and legal norms. (This lies at the heart of the Christian insistence that "gospel" supersedes "law.") Morally and psychologically, it implies that persons under covenant are capable of recognizing the fact that individually and corporately they have received benefits in their past that they have in no way earned. It furthermore implies that it is the good things in life that they have received in the past (and *not* some politically determined, legally defined, and socially enforced set of formal patterns of behavior) that provide the basis for defining the good they hope to realize in their future choices in community life and in their dealings with other people. It is probably also with regard to this matrix of ideas that we can begin to appreciate the well-known prophetic tendency to think of covenant obligations more broadly in terms of "social justice" than narrowly in terms of "sacred rites" (cf. Deut 24:17–22, esp. vv 18 and 22).

Since the obligations were to the giver of the covenant they were binding upon the individual no matter where and in what context he may find himself: they were not and could not be mere duties to obey culturally or politically prescribed norms and laws. This ethical transcending of political legal systems and ritual cultic systems had as its inevitable correlative the fact that normal social contrasts were also transcended: the community of God cannot be identified merely with the usual "tribal mentality" of political and social organizations that are themselves ephemeral within the broader vision of historical perspective: "Are you not like the Ethiopians to me?" (Amos 9:7).

2. Reappropriation of the Davidic Charter. Despite whatever attachments the Hebrew prophets had to the old Sinai covenant ideology, they were aware of the competing Davidic charter ideology being championed by the official establishment in Jerusalem. In some respects that ideology proclaimed certain "truths" that the prophets could in no way endorse, particularly the assertion that God for eternity had chosen to reconstitute his people as mere subjects of yet another political state. But instead of outright declaring the charter to be a fraud, the prophets instead chose to utilize certain superficial elements of the charter but to reconfigure them against the ideological matrix of the premonarchic covenant tradition. Such a practice of removing something (e.g., the tradition of the promise to David) from its original functional context (e.g., legitimizing a dynasty's political claims) and reapplying it in a new and different functional context is here called "reappropriation."

The dates of the few prophetic allusions to the Davidic dynasty and its privileged position have been the subject of much debate. It is clear, however, that regardless of their dates they have a significantly different point of reference than the two major "Davidic charter" texts of 2 Samuel 7 and Psalm 89. For example, Micah's vision of a David redivivus (5:1–3—Eng 5:2–4) clearly implies at least a major disruption of the political organization of Judah, since the "ruler who will come forth" is not identified

with Jerusalem (which will lie in ruins, Mic 3:12) but rather with the village of Bethlehem. It is not clear whether or not the "messianic prophecies" of Isa 9:1–6—Eng 9:2–7 and 11:1–10 originally focused their hopes on a political deliverer (e.g., Hezekiah?). However, the hyperbolic language in these texts heightens expectations for things that no political organization can realistically be expected to provide; the net (and perhaps intended?) effect of the prophecies therefore is ironically to delegitimize any *present-day* Davidic claim to be the fulfillment of God's purpose in the anticipation of some *future* (eschatological?) act of divine favor (note the ubiquitous prophetic phrases such as "in that day," "it will come to pass," and "the days are coming").

The major issue must therefore center on whether the Davidic covenant was so pervasive as to shift the major metaphorical image that Israelites had of their covenant relationship with God. The old Sinai covenant tradition claimed that God himself ruled as king over a religiously constituted body *(thesis).* The Davidic charter tradition held that God guaranteed that in perpetuity the Davidic dynasty would rule over a politically constituted body *(antithesis).* Prophetic "messianism" envisioned God eventually reestablishing his rule over his people, but through an ideal Davidite who governs not by any of the well-known "material" means of politics but through "spiritual" means and by the force of moral example (Isa 9:6b—Eng 7b; 11:2–5; Mic 5:3a—Eng 4a; Jer 23:5–6) *(synthesis).* One could argue that indeed the metaphor of covenant did shift decisively during the monarchic period, so much so that from that time on any attempt to envision the relationship between God and his people in some way had to accommodate the new synthesis incorporating some (usually vaguely defined) Davidic figure (cf. Jer 30:8–33; 33:14). But for the prophets this Davidic figure could not be simply another in a line of human politicians; and indeed it is noteworthy that not all prophets in their visions of the future benevolent acts of God felt it necessary to refer to any Davidic figure whatsoever. Indeed, when the Davidic figure is mentioned, often he is so vaguely defined that his identity and that of God merge together (cf. Ezek 34:11–16 with 34:23). The impact that this development had on early Christology and its understanding of Christ's person and role in the covenant between God and [new] Israel is transparent [see H.2 below].) Obviously, early rabbinic Judaism and early Christianity had radically different understandings of the meanings and even the significance of this subsequent prophetic synthesis.

The point is that the original blend of form and substance that made the old Sinai covenant uniquely recognizable and compelling began to dissolve during the monarchic period. Leaving aside the metaphysical forces that would naturally undercut any Israelite's ability to remain faithful to the covenant with God, it is noteworthy that all the significant social forces working against such faithfulness emanated from within official circles in Jerusalem. In the first place, the state-sanctioned Davidic charter forced upon the Israelites a competing way of conceptualizing the nature of their relationship with God. One could challenge its legitimacy only at the risk of his/her own life (Jeremiah 26).

In the second place, the bureaucratic scribes of the monarchy so distorted all Sinai traditions that the ideological matrix associated with the premonarchic covenant began to shift significantly. This is most evident in the Exodus traditions themselves, where originally deliverance from Egypt served ideologically to instill a sense of gratitude among Israelites, leading them to feel obligated to reciprocate accordingly in the future *moral* choices they would make in life (note how memory of the Exodus serves this function in the old "law codes" [Exod 22:21–24; 23:9; cf. also Lev 19:33–36; 25:35–38; Deut 15:12–15; 24:17–22]). Indeed, the prophets preserved this matrix, and a prophetic command to "remember" *(zĕkōr)* the Exodus characteristically envisioned such a *moral* response (Mic 6:4–5, 8). But in the hands of official Priestly historiographers, the memory of God's benevolent deeds during the Exodus became increasingly connected with the establishment of the cult, so much so that a Priestly command to "remember" *(zĕkōr)* the Exodus ideologically envisioned a *ritual* response (Exod 13:3–10). The traditions fared no better in the hands of Deuteronomistic historiographers; there the benevolent deeds of God associated with the Exodus became a literary (and ideological) foil against which to portray (stereotypically) an Israel fundamentally ungovernable by God (and therefore legitimately consigned to human rulers and managers? cf. Judg 2:11–12; 1 Sam 8:8–9). With the ideological matrix of the old historical prologue focusing on the Exodus so effectively dismantled, what remained to instill the requisite sense of gratitude

among the people? The prophets' ultimate answer was to envision a new and future act of benevolence by God, but one that must be preceded by the dismantling of the political state (Jer 16:14–15).

3. The "New Covenant." The date and authorship of Jeremiah's remarkable prophecy of a "new covenant" (Jer 31:31–34) are controversial and probably indeterminable, but there is no pressing reason to doubt the traditional attribution to Jeremiah himself. The context and content of the prophecy suggest that it comes from a time shortly after the destruction of Jerusalem in 586 B.C. See also NEW COVENANT.

It should first be noted that in the ancient concepts of covenant the ultimate curse for breach of covenant was the destruction and scattering of the body politic with which the covenant initially was formed. This had happened in 586 B.C. Thus the old covenant was no more—theoretically, there was no longer any body politic to which the covenant would apply. Therefore, if there was to be any continuity in the relationships between Yahweh and the former members of the body politic, it would have to be through the enactment of a new covenant with the people, not with a political organization through its king.

Thus the prophecy of the new covenant actually presupposed conditions much like those at the end of the LB Age, the time of the old Sinai covenant, in which there was likewise no body politic with which the covenant could be established. It was *persons,* not social organizations, who would receive the benefits and accept the obligations involved in the relationship with God. The "house of Judah and the house of Israel" (31:31) are deliberate uses of terminology deriving from family life, not from that of political institutions.

The substance of the prophecy itself emphasizes the discontinuity from the old covenant traditions. There is barely any formal similarity to the old Sinai covenant structure. As always, the covenant is granted by the divine sovereign, but there is no historical prologue—the destruction of Jerusalem and Judah was doubtless too painful a memory. Instead there is a prediction of the *future* acts of God, which consist not of the normal expectations of riches, territory, long life, health, and progeny, but rather of "forgiveness" (i.e., the restoration of a broken relationship; v 34). The restoration of the relationship with God is the only benefit mentioned. There are neither oath, nor curses and blessings, nor witnesses, nor any of the paraphernalia of externally enacted covenants (deposit, public reading, ratification rituals, etc.).

The single element of the Sinai old covenant retained in this "new covenant" is simply the stipulations (which are characteristically absent in divine charters). But no longer are they a set of prohibitions and injunctions, no code of laws or externally enforced and legalistically defined body of "commandments, statutes, and ordinances" such as depicted in the Deuteronomistic History. Instead the *tôrâ* ("teaching") of Yahweh "will be written on their hearts" (not on tablets of stone) and "placed in their inward parts" (v 33). It is a description of the complete internalization of the divine will that makes unnecessary the entire machinery of external enforcement.

Even more astonishing is the abrogation of the entire paraphernalia of religious indoctrination: "they shall no more teach each man his neighbor and each man his brother, saying 'Know Yahweh' " (v 34). Instead of the deposit and periodic reading of the covenant text, the knowledge of the divine will is deposited within the conscience of the members of the community. Special training in theology, doctrine, or *tôrâ* is irrelevant, since "they will all know me, from the least of them to the greatest …" Thus the knowledge of God cannot be identified with the accumulated written corpus of prestigious scribes or theologians: the knowledge of God possessed by the most humble is on a par with that of the elite. The community thus envisioned is not one subject to human social control but one that can only be monitored and maintained by the deity himself. In this regard, the vision and hope associated with this "new covenant" draw deeply from that originally associated with the old.

F. Later Biblical "Covenants"

1. The "Covenant" of Josiah. The narrative of Josiah's reform in 2 Kings 22–23 gives considerable detail concerning not only the events leading up to it but also to the royal acts that ensued; however, it contains virtually nothing concerning the nature of the "covenant" that Josiah made (23:3). Nevertheless, there are sufficient details in the narrative to make it impossible to regard this reform as the basis or origin of the OT covenant tradition. To the contrary, it is presented not as a *novum* (a creative writer could have

easily depicted a theophany in 2 Kings 22) but precisely as a *reform*, which by its very nature consists of a return to earlier traditions, or at least what were thought to be earlier traditions.

The chain of events began with the discovery in the Jerusalem temple of a "Book of the Law" (*sēper hattôrâ*; 2 Kgs 22:8–10), which is also called the "Book of the Covenant" (*sēper habbĕrît;* 2 Kgs 23:2–3). The king's distress upon hearing the words of the book indicates in the first place that the contents were previously unknown to him—and presumably unknown also to his whole bureaucracy, since in order to authenticate the document his bureaucrats had to turn to an otherwise obscure wife of a minor functionary resident in the city, who was known to be a "prophetess" (22:13–14).

The second and most important aspect of the king's distress is the fact that the entire procedure was carried out in order to *escape* the curses for violation of covenant that were evidently included in the document that had been found (2 Kgs 22:13). It is this fact that makes it impossible to regard Josiah's action as a mere loyalty oath patterned after Assyrian models. The latter is the procedure by which a vassal initially *becomes* subject to the curses for disobedience. Josiah, however, learned from the "Book of the Covenant" that they were *already* subject to the curses because of past disobedience to a covenant that was currently in effect and binding (even though they had been ignorant of its content). To avoid the curses it is merely necessary to obey the stipulations, which in the case of the Deuteronomic law conveniently enough demanded the extermination of any religiously or ritually based potential rival to his regime (e.g., Deut 12:1–14).

The narrative tells us that Josiah assembled the population to hear all the words of the "Book of the Covenant": at first it was the elders of Judah and Jerusalem (23:1), then it was all the men of Judah and the inhabitants of Jerusalem (v 2). The king then "made a covenant" to obey the commands in the Book of the Law, "and all the people joined in the covenant" (v 3). There is nothing in the narrative to indicate that the procedure was a "covenant" other than the fact that it is labeled as such. There is no reference to an oath, other than that implied in the phrase "to make a covenant." There is no evidence whatever of the old conviction that the ground for obedience was simple gratitude for benefits that had already been received; instead there is simply a concern to escape the curses for disobedience. There is no reference to any ritual or symbolic action that made the covenant binding, which seems to have been a requisite even in the Assyrian treaties of the time. All that is certain is that the king made some public commitment to obey the words of a document found in the temple, and that the people under the king made a similar commitment. In fact, the procedure more properly should be designated as a "vow," since there are not two parties to the process (other than possibly the king and people). The evidence thus seems to justify the conclusion that in Josiah's time "making a covenant" amounted to little more than the repetition of some verbal formula. In more modern terminology, it was simply royal legislation made binding by royal command, but ratified in some way by the assembled population's public promise to obey. It is small wonder that earlier Israelite traditions of covenant suffered under the pens of (Deuteronomistic) scribes who possessed such a limited understanding of what a "covenant" was.

It is quite probable that Josiah's reform was a politically inspired exploitation of an old religious tradition for the purpose of reestablishing old political ambitions (the empire of David) and destroying the religious institutions of any potential political rivals, whether of Israel in the N or of Judah in the S. The wholesale slaughter of the priests of the N shrines (23:20) is reflected in the Deuteronomistic concept that Moses had commanded the utter destruction of the pagan nations of the land (Deut 7:2, 16; 3:12–18). The empire of David was also marked by such wholesale murder of foreigners (1 Kgs 11:15–16, 24).

It should not be surprising that the prophets at that time (and later) barely, if at all, mention this major religio-political event that was carried out by monarchic bureaucrats who evidently had no real understanding of (much less any real commitment to) the religious tradition that derived from the premonarchic period. The reform was superficial and short-lived: after the untimely death of Josiah at the hands of Pharaoh Neco (the direct consequence of Josiah's ambitious dabbling in international politics), the situation in Jerusalem reverted to the normal pluralistic political ideology and policy that had existed previously and that in two short decades would lead inevitably to the destruction of Jerusalem and Judah, just as the prophets had predicted. Even more unfortunate because of its perpetual confusion of religion

with politics, however, was the fact that Josiah's hybridized ideas about the religious foundations of ancient Israel—canonized in the Deuteronomistic History—became the "normative" way that much of subsequent Judaism and Christianity (mis)understood the "Old Testament" tradition of Sinai.

2. The "Covenant" of Nehemiah. The latest exemplar of a "covenant" in ancient Israel is narrated in Nehemiah 9–10. Although most, but not all, of the motifs in this narrative have antecedents in earlier OT traditions, the entire description justifies the conclusion that with this episode we have entered an entirely different cultural world in which the underlying concepts and values of the old covenant of Sinai were completely foreign.

As in the covenant of Josiah, here also it is the highest political authority—Nehemiah, the governor appointed by the Persian Empire (10:2—Eng 10:1)—who exercises the initiative in the covenant making. A sort of "historical prologue" still appears, but in this case it is a long prayer by the priest Ezra, who is reminding *God* (!) of all his prior mighty acts (9:6–31). Curiously enough, with this historical narrative (a sort of "canonical version" of the history of Israel beginning now, of course, with Abraham), the prayer combines a repeated litany of covenant violations derived from the old *rîb* structure. The major purpose of the historical prologue/prayer seems to be a theodicy: to show that Yahweh was right in bringing all those curses upon the disobedient society (9:33–35). It certainly has nothing to do with the original purpose of historical prologues: reminding *the people* of past benefits received for the purpose of instilling in them a sense of gratitude as the motivation for future obedience.

Instead it is plainly stated that the reason for entering into the covenant is the fact that the Judeans' economic resources were being tapped by a foreign government in the form of taxes (Neh 9:36–10:1—Eng 9:36–38). This unfortunate situation was seen to be caused by their failure to obey the laws of the Torah; therefore they entered into covenant to remedy this regrettable situation. The motivation for the vow of obedience is thus very similar to that behind Josiah's reform, though in the case of Josiah it was fear of future calamity that prompted the covenant to obey the Deuteronomic law code, while here it is the concern to escape continued subjugation by a foreign empire. In both instances the "covenants" were entirely political undertakings that show concerns only for the political autonomy and ethnic exclusiveness of the society and for the ritual necessities that accompany it (10:33–40—Eng 10:32–39).

Yahweh had nothing to do with the entire procedure except to be the passive recipient of Ezra's long reminder of what he had done in times gone by (the text does not even indicate whether God was moved to respond to this reminder). There are not two parties to this "covenant," unless they be the governor Nehemiah and the rest of the people who are listed in a markedly hierarchical order of decreasing social status. Neh 10:30—Eng10:29 states that the people were to "enter into a curse and an oath," but no oath formula or ritual enactment is mentioned. The witnesses are completely absent; instead the notables of the time set a seal upon what seems to have been a written document (10:1—Eng 9:38).

By the time of Nehemiah the evolution of the covenant (and of the word *bĕrît*) had run full course from the actual and constitutive foundation of a community to a theological concept to little more now than a ritual form and legal document. In the process the transition was also made from a population seeking through the acts of God a "better" way than that of the economically and ethically bankrupt political empires to a group now ambitious for political power and prestige, for whom deity apparently was (as in the LB Age) a mere symbol for the body politic, legitimizing both its system of enforced legal norms and the social functionaries who presided over it. In some respects this transformation marks the end of "Israelite/ religion" (in all its complexity) and the rise of a distinctive and new religion called "Judaism" (which understood itself to be a continuation of Israelite Yahwism, and which itself underwent many transformations in the following centuries; see H.1 below).

G. Other Covenant Traditions

1. The Covenant Banquet. Eating and drinking together has been such a universal expression of social solidarities of various sorts that it is not surprising to find common meals appearing very frequently in connection with the creation of covenants, both in the ANE and in the biblical narratives. Their specific association with covenants, however, seems to be a rather archaic cultural trait. In the ANE there are references to such eating and drinking in the Mari documents, interestingly enough, referring specifically

to the partaking of bread and (presumably) wine as well as anointing with oil as symbolic acts sealing important legal transactions (ARMT 8:13). Similarly, in the problematic narrative of Genesis 14, the king of Salem brings forth bread and wine, though there seems to be little or no context for the act—the narrative is evidently only a fragment.

In the LB Age the Amarna Letters include one from the king of Egypt to his vassal king of Amurru, vigorously upbraiding him for having made a covenant with an enemy of the king by eating and drinking with him (EA 162: 22–25). In Gen 26:26–33, Isaac and Abimelech made a nonaggression pact that is represented as a parity treaty, in that both swore oaths, but the oath taking is preceded the evening before by a feast prepared by Isaac. A similar treaty of peace with a related meal is described in Gen 31:43–54 as having been enacted by Jacob and Laban, where mutual nonaggression is combined with a stipulation forbidding Jacob to mistreat Laban's daughters or take additional wives.

One of the several narratives of the Sinai event seems to have been inspired by this kind of covenant. In Exod 24:9–11 seventy of the elders of Israel went up the mountain to eat and drink in the presence of Yahweh, "and Yahweh did not lay a hand on them." The covenant with the Gibeonites narrated in Joshua 9 seems to have been a similar sort of peace covenant that was obtained by fraud and subterfuge; their offer of (moldy) bread and (old) wine was accepted by the Israelites, and the eating and the drinking seem to be related to the ratification of the peace covenant (vv 11–15). It is typical that the oath sworn was regarded as binding even though fraud was involved; instead the pact was downgraded from a parity treaty to a suzerainty treaty in which the Gibeonites became subservient.

2. Marriage as Covenant. The narrative of the covenant between Jacob and Laban mentioned above (Gen 31:43–54) seems to combine two quite distinct acts, one of which involves marriage relationships. Nowhere else in ANE literature is marriage associated with a sworn oath, although it is certainly the most common social institution by which new relationships are created. However, it is interesting to note Malachi's use of the word "covenant" (Heb *bĕrît*) in connection with references to "the wife of (one's) youth" (2:14–15). There, Yahweh is explicitly acknowledged to be a (third-party) "witness" between the two parties of the marriage, and there are clear allusions to (violated) obligations and to resultant curses (2:13). As we have seen, these elements also appear in LB suzerainty treaties.

Although marriage does not correspond formally to the covenant structure as we know it from LB suzerainty treaties, it was an important metaphor for expressing relationships that could also be expressed in political terms. For example, in biblical Hebrew verbs like "love" *(ʾāhab)* and "know" *(yādaʿ)* have nuances of meaning in both conjugal and political contexts (Moran 1963; Huffmon 1966), and biblical prophets often characterized Israelite foreign policy as a series of illicit sexual relations. Therefore it is not surprising that, in addition to the suzerainty treaty analogy, the relationship between God and Israel was also very frequently viewed as analogous to that of husband and wife (Hosea 1–3; Jer 31:32; Ezekiel 16). This metaphor continued in use not only in early rabbinic Judaism but also in NT Christology, where Christ is portrayed as "bridegroom" and the Church as "bride."

In conclusion, these other covenant traditions (banquets and marriage) are noteworthy because they demonstrate how pervasive covenant traditions generally were in the ANE, and how frequently they were utilized in any discussion or presentation of something so fundamental as "community" and "relationships."

H. Postbiblical Developments

In the discussion on Nehemiah (see F.2 above) we noted that by the 5th–4th centuries B.C. the old suzerainty covenant form had been virtually forgotten; even the prophetic *rîb* which was most persistent in preserving (elements of) that form tended to emphasize less the formal components of covenant than the accompanying ideological matrix. Thus, in moving now into a discussion of even later covenant ideas in early Judaism and early Christianity the focus must shift still further away from covenant *forms* and into covenant *ideas;* and in discussing covenant ideas, it must be prepared to distinguish between ideas that were largely *symbolic and rhetorical* and those that were *functional and operational.* In short, the issue now becomes the nature of the early Jewish and early Christian communities themselves: not so

much how their traditions formally preserved covenant ideas as how the respective communities themselves were constituted with respect to those ideas.

1. Covenant in Early Judaism. a. Preliminary Remarks. Comparatively little work has been spent on the subject of covenant in early Judaism. Part of the problem is that by the late Hellenistic–early Roman period there was really no such thing as an early "Judaism" in the E Mediterranean world; even within Palestine there were numerous "Judaisms," each claiming to be the legitimate continuation of the people of the God of Israel (perhaps one of the most sharply defined of these being the community revealed in the sectarian documents of Qumran). And yet any discussion of covenant in early Judaism cannot ignore the fact of this marked sectarianism; for if indeed covenant is a device for transcending old parochialisms and factions, then one may reasonably conclude that by the turn of the era it was no longer functioning in this respect. It seems largely to have been symbolic, and there seems to have been simply widespread disagreement as to what specifically it symbolized (i.e., which sect constituted the "true Israel" still in covenant with God?).

Another reason for the comparative lack of study of covenant in early Judaism is that most scholars still seem reluctant to expose one major form of early Judaism—rabbinic Judaism—to any sort of critical "history of religions" investigation. Perhaps there is an underlying fear that, because it is the antecedent of modern Judaism, such critical study will somehow be construed as being "anti-Jewish" (just as the application of this approach to the NT over a century ago was construed as being "anti-Christian"); if so, the reasons for this inhibition are obvious and understandable. Yet if we are to do justice to the history of covenant we cannot avoid subjecting early Judaism to the same level of critical inquiry to which we have subjected ancient Israelite religion. However, we must recognize that such endeavors are still very much in their infancy, and for that reason we offer here in preliminary fashion some of the crucial issues we feel must be addressed critically in any future study not only of covenant in early Judaism but also of the nature of early rabbinic Jewish religion.

First, there is virtually no evidence from the Second Temple period that the notion of "covenant" community was ever effective in transcending existing parochialisms. Indeed, the evidence to the contrary emerges as early as Zerubbabel's unwillingness even to consider searching for "common ground" with the Samaritans, who nonetheless professed devotion to the Judean God (Ezra 4:1–3; note also the tensions with "the people of the land," most of whom were fellow Judeans; see also AM HA›AREZ). The evidence from the Hellenistic period (books of Maccabees) and the Roman period (especially Josephus) goes even further to document how ineffective *anything* was for transcending the parochialisms that developed *within* Judaism itself. The point to be noted is that in fact the early Judean community (like most of post-Constantinian Christendom) was held together by a socially enforced prestige system, until this degenerated into competing systems within Judaism (as they eventually did within much of Christianity). We shall therefore focus particularly on one system, rabbinic Judaism, that emerged from the debacle of the Jewish War (A.D. 66–70).

b. The Antecedents of Rabbinic Judaism. By tracing itself from Moses and Sinai through the prophets to Ezra and then to subsequent Pharisaic sages *(m. ›Abot),* rabbinic Judaism formally laid claim to a certain connection with Hebrew covenant thought. Before examining the rabbinic Judaism that is most closely connected with the Mishnah (2d century A.D.) and subsequently with the Talmud, we need to trace this claim backward, examining each "link" in this rabbinic "chain" of tradition.

The Pharisees present a special problem owing to the nature of the historical sources, most of which are either much later (the Mishnah) or demonstrably polemical in tone (the NT). Since the 1960s much research has focused upon the parochial character of the Pharisaic *ḥeber* ("society"), which seems initially to have been based on peculiar class interests of an economic and political sort (Finkelstein 1962: vol. 1, esp. pp. 75–76; Neusner 1973a). It is arguable whether notions of "duty" (a formal equivalent to covenant "obligations"?) were taken more seriously by the Pharisees than by the other sects; however, there can be no doubt that obedience to religious law was paramount in the Pharisaic sect (note the Talmudic reference to "the Pharisee [who says,] 'What is my duty, that I may perform it?' " [*Soṭa* 22a]). It is also noteworthy that some Pharisaic leaders articulated their concept of religious duty more in prophetic than in priestly

terms: Rabbi Yohanan ben Zakkai is reported to have said: "We have another atonement as effective as [the temple cult]. And what is it? It is acts of lovingkindness, as it is said, 'For I desire mercy and not sacrifice' " (*ʾAbot R. Nat.* 4; cf. Hos 6:6).

However, Neusner (1973b, esp. pp. 24, 31) notes that for the most part these ideas of obligation were tied in with the Pharisaic sense of "purity," which in fact was morally neutral and unrelated to anything "prophetic." Finkelstein (1962: vol. 1, 31) underscores its parochial character by noting that, when Pharisees were scattered among the various towns and hamlets after the destruction of Jerusalem in A.D. 70, their "rules of purity meant separation from next-door neighbors, [and] refusal to mingle freely with fellow-villagers." If accurate, this suggests that, despite formal, ideological appeals to a "prophetic" sense of ("covenant"?) obligations to an ostensibly transcendent God, in practice the Pharisees were unwilling and therefore unable to transcend existing socioeconomic, political, and ethnic parochialisms (this gap between moral vision and moral practice may in part account for the polemical charges of hypocrisy that the various rival schools within Pharisaism often directed at one another; cf. *b. Ber.* 28a; *Assum. Mos.* 7.4 ff.; see also Matt 23:2). The religious obligations *(hălakt)* were in fact simply a distinctive mark of "in-group" status. As both Finkelstein (1962: vol. 1, 17–20, 266) and Neusner (1973b) point out, and as Josephus' references to the Pharisees seem to confirm (*JW* 1.107–14, 571; 2.162–66; *Ant* 13.171–73, 288–98, 399–418; 17.41–44; 18.11–17), Pharisaic religion in general was a secondary accretion to a group that was primarily constituted by socioeconomic and sociopolitical factors.

Ezra is held to have been the precursor of Pharisaic (and subsequently rabbinic) Judaism, and in that regard he has often been considered a "second Moses" (*b. Sanh.* 21b). If Ezra historically played such a decisive role, then rabbinic Judaism was heir to many of the same sorts of social processes that accompanied the Nehemiah loyalty oath (see F.2 above). In this regard it is noteworthy how in Ezra 9–10 the will of God—i.e., the dynamic equivalent to covenant obligations (intended originally to encourage the transcending of parochialisms)—has for Ezra been reduced to prohibiting intermarriage (reinforcing ethnic parochialisms).

The differences between this understanding of "covenant people" (an endogamous ethnic group) and that reflected earlier in the prophets and still earlier in the Sinai covenant (a unity of diverse tribes/peoples based on shared values) are both obvious and categorical. They perhaps reinforce the conclusion that the reputed links between Ezra and the prophets (and Moses/Sinai) are largely formal and secondary and not substantive or integral; this linkage appears to have been designed at a later time to enhance the prestige (and therefore the authority and power) of rabbinic institutions. (In antiquity the same technique was used by individuals to concoct personal genealogies.)

Early rabbinic Judaism's formal emphasis on the centrality of the Sinai covenant can be adequately understood in light of early rabbinic emphasis on ethnic exclusivity. In the first place, early rabbinic Judaism understandably avoided the prophetic synthesis and reappropriation of the Davidic covenant (see E.2 above) that its chief rival, early Christianity, had embraced and interpreted in light of Jesus. For that reason, it is not surprising that covenant ideas in early rabbinic Judaism characteristically avoided the topics of "messianism" and the Davidic "covenant," and focused instead almost exclusively on the Sinai covenant. In the second place, its understanding of the Sinai covenant (unlike that of the early prophets) was based largely on written Scripture, particularly the canonical Torah, which (as we have seen) depicts the Sinai covenant not as it really was in ancient Israel but as it was later (mis)understood by generations living in a much different (postmonarchic) social context. Chief among these distortions is the canonical sequence itself, which regards the Sinai covenant (Exodus 1–20) as a subsequent event in the history of a community already defined earlier (Genesis 17) in ethnic terms of blood kinship (the covenant of Abraham, understood to refer literally to Abraham's biological offspring; cf. how early Christianity embraced the same canonical sequence but emphasized Abraham's importance in terms of Gen 12:3).

In summarizing the connection between early rabbinic Judaism and earlier biblical covenant ideas, it seems that the chain of transmission in *m. ʾAbot* 1:1 linking rabbinic Judaism to Moses and Mt. Sinai functioned much as the Davidic charter functioned in monarchic Judah: to legitimize an existing social order. The ideological matrix it expresses is actually drawn more from the world of divine charters than

from the world of treaties and covenants. This suggests that, if rabbinic authorities realized the historical and *functional* significance of the Sinai covenant (and they probably did not), they chose not to embrace that as a practical means for self-definition and self-understanding. Their covenant ideas did not function practically to articulate a transcendent set of values that could potentially cut across and dissolve old parochialisms as these ideas did in early Israel; indeed they tended to function in just the opposite way—to reinforce and heighten already existing (and increasingly ethnic) parochialisms.

c. Post-Mishnaic Judaism. This is perhaps underscored by rabbinic Judaism's comparative inability to attract converts precisely at a time when the E Mediterranean world was most receptive to monotheism. Instead, in declaring the current inactivity of the Holy Spirit (*Seder ʿOlam Rabbah* 30), early rabbinic Judaism seems to have denied (at least for the time being) the reality of any *religious* forces beyond human control operating to *create* relationships and community where none had previously existed. Instead, early rabbinic Judaism seems to have been content to establish itself in terms of various (parochial) *social* forces operating to *delimit* and *define* an already existing community (note the rabbinic metaphor of "building a fence around the Torah"). These parochial criteria certainly had great "spiritual value" for specific pious Jews, and they received authoritative expression in the Mishnah (although the numerous legal norms contained therein were never regarded as ends unto themselves, nor would early rabbis dare regard them as primarily social or cultural in function). The triumph of parochialism (and the paramount importance of Genesis 17) is perhaps most obvious in the reduction of the term *bĕrît* ("covenant") to mean primarily "circumcision"; the rabbinic need to coin a new word in its place to refer to the Exodus "pact" between God and Israel (Talmudic *dĕyāytîqî*, loan word from Gk *diathēkē*) is evidence that the functional significance of "covenant" had been largely replaced by other concerns. In this context, "covenant" was hardly an operating reality that created community by transcending old parochialisms but was itself merely a formal, ritual demarcation of a particular existing group.

There is little doubt that formal covenant imagery continued to be valued within "orthodox" Jewish circles, and that one's religious obligations continued to be verbalized in prophetic terms as obedience to a transcendent God (cf. especially *b. Mak.* 23b–24a, quoted in Hertzberg 1962: 72–73). However, these obligations were now promulgated within a context that insisted that the orthodox Jewish "circle" be clearly (and ritually) circumscribed. In short, "covenant" was largely symbolic in early Judaism (i.e., a formal part of the tradition), although no doubt for some pious individuals it was a very meaningful symbol insofar as it attempted to inspire Jews to obey an ostensibly transcendent God. In the Talmud (*b. Yebam.* 47a–b) there is an interesting passage about people who convert to Judaism at times when Jews are being persecuted, a passage that implies certain latent covenant forms: the proselyte must first admit that he is not worthy (a statement that perhaps implies he has received some undeserved benefit?), then he is instructed in the lighter and more stringent commandments (obligations), and informed about rewards and punishments that follow from obedience/disobedience (blessings/curses). In lieu of an oath, he is circumcised and later ritually immersed. Despite the apparent survival of old covenant forms, one would have to note that the entire procedure is done in a setting where commandments have a clear social control function, and where circumcision becomes a marker of in-group status. Thus, covenant seems to remain largely symbolic.

The diversity within Judaism, of course, continues to the present; indeed, in the West even most Jews have repudiated as too parochial the rabbinic Judaism manifested in the Mishnah and Talmud. In this regard, a significant issue has been conflicting Jewish understandings about the nature of its covenant with God (Hertzberg 1962: 37–45). Consequently, some Jews have felt it possible to assimilate into a larger pluralistic community without feeling that they have severed their "covenant" bonds to a transcendent God. (This, of course, assumes that such Jews still believe in God; Jewish atheism is another modern Western paradox, perhaps suggesting that the orthodox forms of Judaism were actually counterproductive in their efforts to communicate transcendent values.) Indeed, some Jewish writers (e.g., Feuerlicht 1983) have recently argued that Diaspora and assimilation have been positive experiences (cf. Jer 29:7), enabling Jews to reclaim both the essentially moral character of (Israelite) religious obligations and the (prophetic) vision of a world universally committed to those obligations (cf. Isa 2:2–4).

Perhaps it is no coincidence that, in the West for example, a noteworthy number of Jews have been some of the most outspoken advocates for cultural pluralism. As such they have been in the vanguard of efforts to enact the same sort of "ideological matrix" found in the early Israelite covenant (i.e., a broad human community united by shared commitments to transcendent moral values). Often at some personal risk they have played instrumental roles in such "liberal" causes as the civil rights movement; more recently, a few have even become the most outspoken advocates of justice for the Palestinians (and not surprisingly their efforts have been met with hostile opposition from Zionists for whom the state of Israel has become the ultimate concern). Nevertheless, such Western "liberal" Jewish commitments to pluralism and justice—regardless of how compelling they may or may not be to others in the West—may well be a functioning survival of premonarchic covenant ideas insofar as they embody the same hopes and expectations of the premonarchic Israelite villagers: namely, the value and dignity of persons regardless of their social and economic status or ethnic background, the predictability that follows from reciprocity and fairness in their interrelationships, and the reliability of the peace that would result (cf. Isa 32:17).

2. Covenant in Early Christianity. Just as our treatment of early Jewish covenant ideas focused on the best-known form of early Judaism—"rabbinic Judaism" associated with the Mishnah and Talmud—so our treatment of early Christian covenant ideas will focus only on the best-known form of early Christianity—so called "apostolic Christianity" associated with the canonical OT and NT. The subject of covenant ideas in other early (especially gnostic) forms of Christianity will not be discussed here, although it should be pointed out that their dependence on other "scriptures" and other intellectual wellsprings signals that "covenant" was likely not a significant metaphor by which these early "Christian" groups understood their relationship to God and to Jesus.

a. Covenant and Sacrament. The first and most important context within which we encounter covenant ideas in the NT are the texts recounting the Last Supper Jesus had with his disciples (Matt 26:26–29 and parallels; cf. 1 Cor 11:23–25). In all the NT traditions concerning the Eucharist (except John, of course) it is reported that Jesus gave a cup of wine to his disciples, identifying it as the "covenant" or "new covenant." Here the NT tradition seems to be making some deliberate and conscious connection with older covenant traditions (especially Jer 31:31–34).

The subsequent ritual celebration of the Eucharist (or "Lord's Supper") that arose in conjunction with this Last Supper tradition became a fundamental (and perhaps even a definitive) feature of early Christian gatherings. Around A.D. 112, Pliny the Younger, writing to the Roman emperor Trajan, who was interested in keeping informed of the spread of the Christian movement, reported that the interrogation of a captured Christian yielded the information that Christians gathered *se sacramento obstringere,* "to bind themselves by an oath." The reference is almost certainly to the Eucharist ritual, which perhaps as early as the 1st century was already being identified as a *sacramentum,* "sacrament." Although the English equivalent "sacrament" has subsequently come to mean "having a sacred character or mysterious meaning" (and perhaps it meant such in early Christian mystery sects), the Latin *sacramentum* at the time of the early Church referred to a soldier's oath of loyalty to the Roman emperor.

Thus, a vast number of early Christians seem to have understood the Eucharist in some context associated with oath taking, specifically oath taking with respect to "Christ" (i.e., Jesus), whose interests were understood to transcend those of the Roman Empire (hence Trajan's concern). There was indeed widespread and growing disillusionment with the Roman Empire by the 1st century (not unlike the disillusionment with imperial powers that existed during the LB/early Iron Age transition), and it is in that context that we must note the growing body of diverse peoples throughout the E Mediterranean world who were now participating in this eucharistic rite and identifying themselves as "Christians" (followers of "Christ"). The Roman persecution of Christians indicates that Roman imperial officials took a dim view of their subjects' swearing oaths of loyalty to anyone but the emperor, although it is equally clear from the historical sources that the Christians were categorically different from those power groups seeking politically to unseat the Roman Empire (cf. Rom 13:1–7).

This brings us back to the late developments in ANE thought when covenants had come to be regarded primarily as "loyalty oaths." No doubt this formal similarity between Iron Age Near Eastern, Roman

imperial, and early Christian concepts of "covenant" facilitated the communication of early Christianity in the non-Palestinian environment of Mediterranean civilization. However, it would be a grave mistake to conclude (as Roman bureaucrats apparently did) that this formal similarity to political/military loyalty oaths explains the early Christian understanding of covenant.

There is no doubt that, in addition to the formal similarity to Iron Age loyalty oaths, the Christian Eucharist has significant formal connections to other ANE covenant motifs (see Herion 1982). First, its utilization of bread and wine is relevant not just because of general associations with covenant banquet imagery (see G.1 above). Bread and wine appear in ancient Mari in connection with the resolution of enmity and the restoration of personal relationships, and they were associated with the *internalization* of a vassal's obligations in the Assyrian loyalty oaths: "Just as bread and wine enter the intestines, so may the [gods] let this oath enter your intestines" (*ANET*, 539).

Second, some of the Semitic terminology used in the Last Supper narrative (reflected in Gk translation) betrays patterns of thought also attested in early biblical and ANE sources. Specifically, the noteworthy appearance of the word "remembrance" (Gk *anamnēsis*) has a significance in Semitic languages (root *zkr*) that is lacking in Greek (and in English). In the Code of Hammurapi the root *zkr* often means "to swear," and this root seems to convey that meaning in 2 Sam 14:11 (RSV "invoke"); its cognate is still used with this sense in modern village Arabic. The verb "to remember" in the context of (the new) covenant therefore does not mean merely "to call to mind"; it implies recalling some benefit received (in this case the atoning death of Jesus) as a basis for present and future action and decision making. In this we see the revival of the central motif in the ideological matrix of the Sinai covenant (and the earlier LB treaties): the basis for a covenant relationship is the grateful recognition and response to the receipt of an undeserved favor.

Third, the identification of the bread and wine with the body and blood of Christ ("this is my body/blood") in turn made possible the identification of the disciples (who eat and drink it) with the sacrificial victim (cf. Gal 2:20). This has a clear connection with the Iron Age treaties wherein the animal sacrificed is stated specifically to be not a sacrificial animal but the vassal being placed under the loyalty oath (cf. "this is the head/shoulder/etc. of Mat›ilu," *ANET*, 532–33). What is certain is that a central metaphor by which the early Church identified itself was "the body of Christ" (Rom 12:4–5; 1 Corinthians 12), and its individual members understood themselves to be the embodiments of the spirit of Christ (1 Cor 6:15ff.; 2 Cor 4:10–11). The "fruit" of this spirit that they were to manifest in their lives was typically those things that make it possible for a diverse body of people to live together in a community that transcends the typical culturally proscribed, parochial bases of social morale (Gal 5:22–25). In this respect, in contrast with the contemporaneous early rabbinic Judaism, there was no codification of culturally bound norms and practices to govern or regulate the behavior of persons in the community (and subsequent attempts to import such norms, whether Jewish or Greco-Roman, were met with strong resistance [Acts 15; Galatians, esp. 3:3]).

In the centuries prior to Constantine, when there was no social reward but often the threat of persecution and possible death for identifying oneself as a Christian, the Eucharist by and large could have been little else but the participants' *sacramentum* ("oath") in which they actually submitted to the lordship of Christ (i.e., to a transcendent, extra-social authority; the "kingdom of God"). This "submission" occurred not merely at the intangible "spiritual" level or simply at the "liturgical" level—both of which Rome would probably have tolerated—but at the tangible level of ethics and values finding expression in the social realm of interpersonal relations. In short, participation in the ritual was an "index" of submission to the transcendent lordship of Christ (on "indexical" rituals whereby participants transmit information about their own current physical, psychic, or sometimes social states, see Rappaport 1979, esp. pp. 179ff.). This would have been a concern to imperial officials, who would understandably want to monitor such a movement closely.

In other words, few Christians in those early centuries could have consumed the bread and wine unless they also really and tangibly became *constituted* as Christ's body in the world (i.e., they were, in fact, subject to something that transcended the interests of the major political powers of their day, or else they

would not have taken the risks associated with being recognized as "Christians"). Thus, as in early Israel, the "new covenant" was a socially enacted historical reality that brought into existence a pluralistic community of people from diverse ethnic backgrounds who were united by their commitment to some basic, transcendent values identified with "Christ." (The connection between this development and the OT hopes for the "ingathering of the gentiles" was not lost upon the early Church.)

The situation was, of course, radically reversed when Christianity (especially the church at Rome) became systematically associated with the institutions of political power after the time of Constantine. Under those very different social and historical circumstances, participation in the Christian Eucharist quickly became less constitutive of anything and became much more *symbolic* in nature. In other words, there were now tangible social rewards for participation in the Eucharist, and the distinction between a pledge of loyalty to a transcendent Christ and a pledge of loyalty to the temporal (but now "Christian") emperor in Rome became increasingly fuzzy. At the very least, the ritual was now an "index" of little more than the participants' acceptance of the rule of the new, "Christianized" Roman Empire, which could not be identical to the rule of Christ (on "symbolic" ritual and how it facilitates deception and hypocrisy, see Rappaport 1979).

In the following centuries the original meaning of the eucharistic *sacramentum* was entirely forgotten, and increasingly it came to be viewed either as a mysterious and mystical "communion" with Christ, or (particularly for the laity) as a sacrificial ritual that served to heighten the sanctity (and the authority) of the presiding priestly hierarchy. Despite its claim to transcendence, the bloody history that followed indicates that in practice Christianity by and large had now become the (parochial) handmaid serving the advance of Western culture.

b. OT Covenant Motifs in the NT. The preceding discussion of the covenantal associations of the Eucharist has begged the fundamentally important question: what exactly was this "Christ" with whom the early Christians identified themselves? The creation of the gospel genre seems, in part, designed to answer this question by presenting to the reader the identity and activity of Jesus of Nazareth, who was claimed to be the Messiah (or Christ) of Israel. From these narratives it is fundamentally clear that, while Jesus claimed for himself the title "king," Christians did not regard this as a political claim (John 18:36; supposedly "historical" studies claiming that Jesus *was* a political revolutionary have proven entirely unconvincing). Thus, a *sacramentum* taken with respect to Christ could not legitimately signal any movement of those ambitious for political power and prestige (Matt 5:5).

The complex issue of the historical Jesus need not detain us here, since our main object of study is early Christianity. However, we must point out that the entire NT tradition points to some very important *substantive* connections with the type of suzerainty treaty exhibited in the Sinai covenant. Those connections, however, are not the external, formal continuities that can be easily traced with the standard scholarly methods that compare and classify phenomena in terms of formal features and surface characteristics. For that reason, this tradition must be explicated in terms of its underlying ideological matrix, and not in terms of any formal covenant elements (which were already being atomized at least as early as the writings of the Deuteronomistic Historian). Scholars dependent upon methods of formal classification have sometimes been quick to (mis)understand the formal "new" -ness of Christianity as indicating its fundamental unrelatedness to earlier Hebrew religion. Indeed, comparatively few of the superficial "forms" of Israelite religion are present in early Christianity (as they are in rabbinic Judaism, whose continued reverence for the Hebrew language and onomastics, the rite of circumcision, the levitical dietary laws, and the liturgical calendar insured at least the formal appearance of continuity with [certain aspects of] Israelite religion). But early Christian community and thought each reflect sometimes subtle links with OT covenant traditions, and to appreciate this requires a scholarly sensitivity to something other than formal characteristics. It also probably requires the assumption that the historical Jesus played some role in articulating those old covenant traditions in a new idiom, although it is highly doubtful that even he understood the Sinai covenant in the formal terms of suzerainty treaty elements.

(1) Identification and Historical Prologue. The constant and crucial issue of the identification of the covenant giver is a good case in point. As the Eucharist tradition indicates, the early Church

unquestionably understood this to be Jesus himself. The gospel traditions presenting the person and deeds of Jesus of Nazareth assert the same thing, but in a more roundabout way. There, as in the Sinai covenant tradition (Exod 20:2), the identification of the covenant giver is integrally linked to the historical prologue: it is achieved through a narrative of "benevolent deeds" performed, not merely a heaping up of titles and epithets. The importance of this is evident in Matt 11:2–6, where John the Baptist asks Jesus, "Are you he who is to come, or shall we look for another?" The answer indeed identifies Jesus as such by quoting the manifestations of deity envisioned in the book of Isaiah (35:5–6; 61:1; cf. Luke 4:16–21). In other words, Jesus does the things that God does. It is significant that this is a functional rather than a formal identification, and perhaps is based on old concepts that tended to view the Messiah as servant (1 Kgs 12:7) rather than powerful overlord (1 Kgs 12:11; cf. Matt 20:25–28=Mark 10:42–45; Mendenhall 1986).

Thus, it appears that already during his historical ministry Jesus' identity was being linked to the tangible "benevolent deeds" he was seen to perform (especially the miraculous healings). However, for the early Christians who lived with the knowledge of Jesus' death and resurrection (which for them was a historical reality, not a metaphysical proposition), the most important "benevolent deed" performed by the covenant giver was intangible: the atonement, Jesus' offering of himself for the removal of sin and guilt. This suggests at least a formal connection with the prophecy of the "new covenant" in Jeremiah 31, where the forgiveness of sins is the only act of benevolence mentioned. (It is debatable whether the historical Jesus understood himself to be such an "intangible" [i.e., post-mortem] benefit to his followers.)

In sharp contrast to the use of the historical narrative in the prayer of Ezra, where God is supposed to remember his past deeds performed for the benefit of the corporate body Israel (Nehemiah 9), the historical narrative constituting the gospels emphasizes the direct and immediate benefits that God in Christ bestows on individuals. This understanding of historical events as acts of God that furnish the foundation for a lasting relationship is one of the most striking features of the formative period in early Christianity, and it constitutes a tangible reintroduction of the most fundamental religious feature of the OT tradition; namely, that a covenant relationship with God is based on the receipt of a prior and undeserved act of deliverance (whether physically from the grip of Pharaoh, or metaphysically from the grip of sin and death).

(2) Stipulations. The notion of covenant stipulations was subjected to a most important transformation in the NT traditions, or at least what appears to be a "transformation" with respect to postbiblical and early rabbinic Jewish traditions equating covenant stipulations with written (and oral) "law." But what on first glance appears to be a "transformation" was in fact a way of recovering and returning to early and authentic OT covenant traditions. As in the case of the historical prologue, there was a two-stage development: the first stage associated with the life and teaching of the historical Jesus, and the second associated with the understandings subsequently reflected in early Christian traditions.

Any understanding of Jesus' notion of religious "obligation" (cf. Pharisaic "duty") must begin by recognizing that for several centuries before Jesus there had been no unanimity among Palestinian Jews—indeed, there had been outright hostilities culminating in civil war—over who had the authority to define and enforce the law of God. It is therefore neither unusual nor surprising to find in the teachings of Jesus (and in the gospel narratives) polemical statements directed against most of the prestigious and ambitious *Jewish* power blocs of the time (Sadducees, scribes, and Pharisees). As a growing number of scholars are beginning to concede, this has nothing to do with "anti-Semitism" but rather emphasizes that the early Christian movement was an *inner-Jewish* phenomenon (and as such participated fully in inner-Jewish polemics). The necessary corollary to this hostile polemic is the fact that Jesus of Nazareth and the early Christian movement had no ideology for, and no intention to engage in, the centuries-old power struggle among Palestinian Jewry (Matt 20:25–27). As in the early Iron Age, the rule ("kingdom") of God was a reality that had nothing to do with the usual paraphernalia of social and political organizations that were based on little more than coercive force.

Jesus apparently did have a strong respect for the commandments (Matt 5:17–20). He was no libertarian, and in the Sermon on the Mount—as elsewhere throughout the gospel traditions—Jesus is

consistently portrayed as a "commanding" personality speaking in the imperative. It has long been noted that the essence of Jesus' teaching is not to advocate relaxing—much less abolishing—the Law (which subsequently became Paul's position) but rather just the opposite: to advocate a more stringent observation of the Law: "You therefore must be perfect as your Father in heaven is perfect" (Matt 5:48; cf. 5:20!). Of course, since no one can attain such perfection the net rhetorical effect of Jesus' teaching ironically is to condemn in advance anyone who seeks to earn covenant blessings by faithful adherence to the stipulations of the Law (which is a structural premise of the "old covenant" tradition). But while subsequent Christians, particularly Paul, used this as the basis for the classic Law/faith dichotomy (and for proclaiming the end of the "old covenant"), Jesus himself seems to have absolutized the Law for different—but reciprocally interrelated—reasons.

In the first place, he removed religious obligations from the realm of social monitoring and enforcement: thus, his absolutized redefinition of the commandments against killing (Matt 5:21–26) and adultery (5:27–30) effectively removes them from the realm of human monitors and sociopolitical authorities. In short, the concept of religious obligation could no longer be indirectly linked to the perfect *will* of God through a verbal listing of do's and don'ts that can be managed and overseen by imperfect human authorities.

In the second place, in exhorting to absolute moral perfection, Jesus now linked the concept of religious obligation directly to the *character* of God. In short, he advocated a total and complete commonality of interests between suzerain and vassal, and in so doing he (unknowingly) reasserted part of the ideological matrix of the LB treaties. The issue is not just reciprocity ("Do unto others as you would have them do unto you"); rather, it is the recognition that the ultimate character of one's religious obligations proceeds from the character of God as revealed in God's benevolent deeds (his "grace"), not as revealed in God's law (1 John 4:11). To state it covenantally, the ultimate will of the sovereign is manifested more deeply in the character of him whose benevolent deeds are recounted in the historical prologue than in him whose words are recorded in the stipulations. To put it more bluntly, God's actions *(character)* speak truer and deeper than God's words *(will)* (a point Jesus himself seems to make in Matt 19:3–9).

There is here the recognition that in the ongoing quest for a truly "blessed" community, the behavior of individuals ultimately must correspond directly to the "blessings" they have already received (and not to some impersonal codification of laws, statutes, and ordinances). The notion that the Christian's obligations should mirror past benefits is reflected in many NT traditions which define Christian "duty" in terms of what Jesus did: forgive, forsake worldly goods, preach, teach, heal (even raise the dead!), take up a cross, die. If the "new covenant" should require a "new commandment," such is given in John 13:34. What is significant about this is the context, definition, and example given for "love" —"… even as I have loved you." "Love" (the stipulation of the covenant) is not codified in words but is rather defined by example, more specifically, by the example of a benefit received ("the Word become flesh"). This suggests a return to the same ideological matrix as the prophets, who, like Jesus, understood obligations in absolute moral terms and were likewise considered to be threats to the social authorities, who reserved for themselves the right to define, interpret, and enforce obligations.

(3) Deposit, Witnesses, Curses and Blessings. The provision for deposit and periodic public reading in one respect was almost irrelevant in early Christianity, since there was no material object to deposit. But in another respect, certainly related to the "new covenant" vision of the internalization of the covenant (Jer 31:33), the early Church seems to have developed notions that the "covenant" was deposited within the believer.

The list of witnesses was also subject to drastic transformation of a most curious and almost inexplicable sort. Originally the witnesses were supposed to enforce the covenant stipulations by bringing to bear the covenant curses, including the death penalty. In the NT from the earliest time the "witness" is the "martyr" (Gk *martus,* "witness") who is put to death as a result of adhering (and thereby testifying) to the truth of the faith.

The formula of blessings and curses also underwent significant transformation. As was true also of pre-Christian Judaism, the rewards and punishments meted out by God were to be realized in the "world to

come"; the importance of this is very important to early Christianity as can be seen from the significant role that eschatology plays in early Christian thought. In addition to the eschatological meting out of rewards and punishments in the final judgment, blessings and curses are certainly connected to the "power of the keys" (Matt 16:13–20). The terms translated "binding" and "loosing" have meaning primarily in the ANE context of imposing, and freeing from, a curse. (It is not surprising that after the time of Constantine the Roman church—identifying itself with Peter—claimed for itself this power. In this regard, we see the Matthew 16 text being used as a sort of "divine charter" to legitimize the authority of the Roman priestly hierarchy, an authority that in reality had been conferred on it by imperial concordat.) The several references to the *anathema,* especially in the letters of Paul, probably bear on this same theme, but as in Matt 18:18 and perhaps a parallel in John 20:23 this is not a power given to an authority but is rather a characteristic of the community of the faithful.

c. Summary. At precisely the same time that rabbinic Judaism was "building a fence around the Torah" (and rationalizing such by a general appeal to the OT covenant tradition), apostolic Christianity was expanding. In early rabbinic Judaism, "covenant" was largely a formal or symbolic dogmatic concept that gave meaning mainly to those already within a group whose base of solidarity and cohesion was primarily ethnic. In early apostolic Christianity, on the other hand, "covenant" was largely a socially enacted historical reality that accompanied sufficient functional changes in old patterns of behavior so as to rupture old ethnic and political bases of social solidarity and cohesion and to replace these with a larger vision of the human community. Certainly the tenor here was initially set by Jesus himself, who not only sought relationships with people who were outside the "proper" cultural boundaries (e.g., eating with tax collectors and sinners), but also challenged the religious legitimacy of those boundaries (e.g., sabbath observance). In this we see the reappearance of the same ideological matrix found in the Sinai covenant and prophetic faith: that religious community can cut across old parochialisms and need not be defined in terms of legal norms backed up by coercive power.

The entire covenant complex of NT thought that has been only briefly sketched here illustrates the complete internalization of the ethic of the rule of God, ideally envisioned (but imperfectly realized) in the Sinai suzerainty treaty and so frequently pleaded for (largely in vain) by the OT prophets (Ezek 36:26–27). At the same time, this ethic became freed from the cultural parochialism and political arrogation that inevitably accompanies a defined code of norms and laws. It is clear enough that not all Christians (just as not all early Israelites) succeeded in grasping these points, as illustrated by the reversion to a canon law system in later centuries. In that respect, one could argue that even today the ability of most people to grasp the significance of what it means to be in a "covenant" relationship with a transcendent "God" has advanced little from the LB Age. Nevertheless, the radical transformation that constituted the early Christian Church remains an excellent example of what can happen when new wine is put into old bottles.

I. Conclusion

Because "covenant" is a central biblical metaphor for the relationship between God and his people, it is not surprising that the attempts of biblical theologians to find a thematic "center" *(Mitte)* of the Bible invariably return time and again to the subject of covenant, or to some particular aspect of covenant. But as long as theologians conceive their task as primarily elucidating biblical "ideas," they will continue to miss the fundamental significance of covenant in the biblical tradition. Covenant is not an "idea" to be embraced in the mind, and therefore religious community cannot be defined with respect to "orthodox" appraisals of that idea. Covenant is an "enacted reality" that is either manifested in the concrete choices individuals make, or not. The rule of God is defined with respect to those whose concrete choices arise out of certain positive values that actually transcend culturally bound norms and politically enforced laws.

Similarly, as long as biblical scholars remain content to deal with covenant "ideas" in terms of formal elements and rigidly defined categories, most of the matrix of ideas associated with covenant will remain unnoticed and unappreciated. Covenant form was apparently never that important anywhere in antiquity: even for the LB Hittites it was merely a device for communicating values envisioning human relationships proceeding along some moral plane higher than coercive force.

COVET, COVETOUSNESS. See WANTING AND DESIRING.

COWARDICE. See VIRTUE/VICE LISTS.

COZBI (PERSON) [Heb *kozbî* (כָּזְבִּי)]. A Midianite woman of high birth who engaged in an illicit activity with an Israelite, Zimri ben Salu (Num 25:15, 18). As a result, the priest Phinehas killed them both in a show of zealous fidelity to the Lord, thus staying a plague that had broken out in Israel. The name is from Akk *kuzbu, kuzābu,* "voluptuous, sexually vigorous," though likely understood by Israelites to derive from Heb *kāzab,* "deceitful." Some mss of the Sam. Pent. read *kozbît.*

Scholars debate the nature of Cozbi's offense. Was it a matter of mixed marriage, adultery, cultic prostitution, or some other form of apostasy? Mendenhall (1973: 110–16) reconstructs a multiphase ritual, including having sexual relations with "outsiders," which would alleviate plague. Accordingly, Cozbi's offense was enticing Zimri, through a sexual act, into covenant infidelity by trusting in the "tried and true" ritual methods of the past rather than in the faithfulness of Israel's God. More radically, Reif (1971: 205) has argued that the phrase *ʾel qŏbātāh* in v 8 does not refer to physical anatomy ("in her belly," etc.) but rather to locale ("in her shrine"). According to Reif, Cozbi was engaged by Zimri as a diviner and was installed in a *qubbāh* or tent shrine to divine a means of ending the plague. In its present form the story

serves the priestly redactor by legitimating the priesthood of Phinehas. For further discussion see *Numbers* WBC.

RODNEY R. HUTTON

COZEBA (PLACE) [Heb *kōzēbā*› (כֹּזֵבָא)]. Listed in the genealogy of Judah, Cozeba is the habitation of some of the sons of Shelah (1 Chr 4:22). Of the whole list of sons of Shelah, only Mareshah, in the Shephelah, is identified with certainty as Tel Ṣandaḥannah (M.R. 140111; *LBHG*, 248). Occupation of the Shephelah by the children of Shelah is suggested by the place names (‹Adullam, modern esh-Sheikh Madhkûr [M.R. 150117] and Timnah, modern Tel el-Baṭâshī [M.R. 141132]) that appear connected with him in Gen 38:1–14. Furthermore, in this passage, Shelah's birthplace is presented as Chezib (Heb *kĕzîb*), a possible variation of Cozeba. Mareshah also appears in Josh 16:44 along with Keilah (modern Khirbet Qîlā [M.R. 150113]) and Achzib as cities in the Shephelah that belong to the tribe of Judah. Achzib (Heb ›*akzîb*), which has been identified with Chezib and Cozeba (*EncMiqr* 1: 278), has been identified with modern Tel el-Beiḍa (M.R. 145116; Elliger 1934: 124), where remains from both the Iron Age I and Iron Age II have been found (*HGB,* 385). Though other site locations have been posited, such as Khirbet Küvayzibâ (M.R. 164112; Press 1952: 470) and Khirbet ed-Dilb (M.R. 164112; *IDB* 1: 724), the preferable site identification for Cozeba is this location in the Shephelah.

SUSAN E. MCGARRY

CRAFTSMEN, VALLEY OF (PLACE) [Heb *gê›haḥarāšîm* (גֵּיאהַחֲרָשִׁים)]. This location is mentioned in Neh 11:35 as part of a list of communities settled by the survivors of the tribe of Benjamin after their return from the Babylonian Exile. All the towns which can be identified in the list are located to the N and W of Jerusalem, in the old tribal territories of Dan and Ephraim, as well as in that of Benjamin itself.

Since the Valley of Craftsmen is listed along with Lod (M.R. 140151) and Ono (M.R. 137159) in Neh 11:35, it is possible that the area was located in one of the valleys to the E of those communities (*GP*, 405), although there is not sufficient evidence for a precise location to be determined. The portion of the list in which the Valley of Craftsmen appears is not included in the LXX. Simons (GTTOT, 390) notes that in the Talmud the term is used for the cities Lod and Ono.

A similar term, Heb *gê› ḥarāšîm,* occurs in 1 Chr 4:14 as one of the descendants of Kenaz, so named "because they were craftsmen." Myers (*1 Chronicles* AB, 29) has argued that the two references cannot be separated, noting that many scholars recognize that many of the people in the list in Chronicles are, in fact, toponyms. Aharoni (*LBHG,* 245) notes that the LXX reads Rechab for the Rechah of 1 Chr 4:12, and therefore he links the sons of Kenaz with the Kenites, who were known as smiths in antiquity. Aharoni, following Glueck (1940: 23), located the Valley of Craftsmen in the region of Jordan to the SE of the Dead Sea, along with the Irnasash (Khirbet en-Nashas, M.R. 190010) mentioned in 1 Chr 4:12. Both scholars felt that the copper deposits of the area make that region a likely location for a community of smiths.

While it is true the many of the Kenites and Kenizzites may have been smiths, it seems impossible to associate the references to a Valley of Craftsmen in Nehemiah 11 and 1 Chronicles 4. The passage in Nehemiah clearly refers to a postexilic settlement, and there is no evidence to support a contention that any of the returnees of that period inhabited the region SE of the Dead Sea. The context of 1 Chronicles 4 has no direct link to the period of the Second Temple. In addition, neither is the term "craftsmen" restricted to smith or metal worker, making the copper deposits in the Wadi Arabah irrelevant, nor is there

any indication in 1 Chronicles 4 that the passage is in any way connected with the region around Lod and Ono. If the term in 1 Chronicles 4 is a place name, it should be treated independently from the toponym in Nehemiah 11.

MELVIN HUNT

CRATES (PERSON) [Gk *Kratēs* (Κρατης)]. Seleucid commander of the citadel in Jerusalem, appointed by Sostratus to command the Cyprian troops in his absence. Crates was appointed as *diadochos,* which can mean either viceroy (cf. 2 Chr 28:7) or deputy. Deputy seems the obvious meaning from the context. Goldstein questions the significance of Crates in this passage and suggests that Jason of Cyrene, whose work was abridged by the author of 2 Macc, had treated Crates in greater detail (1 *Maccabees* AB, 237). That Crates commanded Cyprian troops despite the fact that Cyprus was a Ptolemaic province is not surprising. Launey noted that Cypriots played a minor role in Hellenistic armies as mercenaries (1949: 487–89).

MICHAEL E. HARDWICK

CRAWLING AND CREEPING THINGS. Generally small land animals such as rodents, reptiles, and insects, as well as water animals and flying insects.

The Hebrew Bible uses two essentially synonymous roots to describe these animals: *šrṣ* and *rmś.* The noun *šereṣ* usually refers to any small land animal such as small rodents, reptiles, and insects (Gen 7:21; Lev 5:2; Lev 11:29, 31, 41, 42, 43, 44; cf. 22:5), but also to water animals (Gen 1:20; Lev 11:10) and flying insects (Lev 11:20, 21, 23; Deut 14:19). The noun *remeś* mostly refers to small land animals (Gen 1:24, 25, 26; 6:7, 20; 7:14, 23; 8:17, 19 [cf. the Gk]; 1 Kgs 5:13; Ezek 8:10; 38:20; Hos 2:20; Ps 148:10; cf. Hab 1:14), but once to water animals (Ps 104:25) and perhaps once to all animals (Gen 9:3; cf. v 2). The verb *šāraṣ* (which appears only in the *Qal* verb form) usually describes the movement of water and small land animals as "swarming" or "crawling" (Gen 1:20; 7:21; Lev 11:29, 41, 42, 43, 46; Ezek 47:9). It also has a sense of "being abundant" (Gen 1:21; Exod 7:28; Ps 105:30; *šāraṣ* in the first two passages may actually be a denominative verb meaning "to produce *šereṣ* animals"). In the sense of "be abundant," the verb is also used of all land animals (Gen 8:17) and even humans (Gen 9:7; Exod 1:7). The verb *rāmaś* (it too only appearing in the *Qal*) indicates the "crawling" or "swarming" movement of water and small land animals (Gen 1:21, 26, 28, 30; 7:8, 14; 8:17; 9:2; Lev 11:44, 46; 20:25; Ezek 38:20; the verb in Gen 9:2 and Lev 20:25 may be denominative "to produce *remeś* animals"), but is also found several times of the movement of larger land animals (Gen 7:21; 8:19 [cf. Gk]; Deut 4:18; Ps 69:35; 104:20).

About three fourths of the instances of these words occur in the Priestly literature of the Pentateuch. This preponderance is due to this tradition's interest in the creation of all animals at the founding of the earth (Genesis 1), the destruction of land and air animals during the flood (Genesis 6–9), and the impurity of certain types of animals (Leviticus 11). All small land animals are prohibited from the Israelites' diet and several cause impurity by simple touch. Because of this, these animals sometimes receive a negative characterization. Leviticus 11 in many places calls the *šeqeṣ* "an abomination." Lev 7:21 uses *šeqeṣ* as a substitute for *šereṣ* (cf. 5:2). Cf. Ezek 8:10. In the NT, see Acts 10:12; 11:6; Rom 1:23; and Jas 3:7.

CREATURES, LIVING. See ZOOLOGY.

CREEDS, EARLY CHRISTIAN. Christian creeds have grown out of the life of faith itself. No council decided the church needed creeds, and no church assembly until quite recently appointed a committee to write a creed. The church has generally been very modest in writing creeds, doing so only when compelled by the demands of the community of faith itself.

The origin of creeds is rooted on the one hand in the nature of revelation itself, which elicits interpretations by those who receive it that are given expression in words, images, and propositions. Faith is the act of intelligible beings as well as of the human will and affections. Karl Barth has written, "Just because he is *intelligens,* the Christian of all men, has to learn to discern with agonizing clarity what is conceivable by him about God" (1960: 20–21). What cannot be thought clearly and expressed cogently cannot be the basis of life commitment.

Faith itself seeks intelligibility. On the one hand, it seeks the intelligibility of faith itself so that the content of faith can be communicated in intelligible images and in descriptive propositions. On the other hand, faith seeks to understand the world in the light of what it perceives to be the revelation of God.

Creeds are also rooted in and bear the marks of history. Situations in the life of the community of faith have called for creeds, such as heresy, persecution, and worship itself. Controversies within the community have demanded that the community clarify its own judgment as to the content of faith. In addition, great dangers from without which have pressured the church and challenged its deepest commitments have also compelled the church to declare unequivocally its deepest commitments. Creeds therefore bear not only the marks of the believing person, but also the marks of the history in which they have come to be.

Creeds are intentionally catholic. They may bear the marks of their particularity and of a specific perspective and place. The basic intention, however, is to state the faith not of a partisan group but of the one holy catholic church.

The authority of creeds varies. Generally the word "creed" is given to the short and brief statements of the ancient catholic church, such as the Apostles' Creed and the Nicene Creed. The comprehensive Reformed statements of faith are usually labeled confessions. However, there is no established terminology. Protestants in particular have always insisted that creeds are subordinate to Scripture, but at times Protestant churches have used creeds with an equivalent authority. The early Reformed creeds were written with the awareness that a creed ought to be a confession in a particular time and place, and that no one creed should have universal significance. Karl Barth in the 20th century has reiterated the same conviction. Creeds therefore may have normative authority, or they may be the occasional confession of the way the church understands Christian faith in a particular time with no claim to finality. At the other extreme, confessions may be regarded as simply descriptions of Christian belief and practice with no decisive authority.

A. Sources of Creeds

1. Liturgy and Worship. The liturgical life of the church called for creeds of various types. Rules of Faith, varied and without precise language, served the needs of preaching and teaching without stifling creativity. Declarations of faith by the worshiping congregation, in distinction from Rules of Faith, had to be precise, fixed, and economical in the use of words. Rules of Faith may be found in various forms in the writings of such early theologians as Irenaeus, Tertullian, and Origen.

Creedal statements from the beginning have been associated with baptism. Hans Lietzmann argued that the root of all Christian creeds is the formula for belief pronounced by the baptizands or pronounced in their hearing and assented to by them before baptism.

The creedal form that was used in baptismal rites in the 2d and 3d centuries was interrogatory. One of the best examples of the developed form of the interrogatory creed is found in the *Apostolic Traditions of Hippolytus* (ca. 215):

> Do you believe in God the Father all-governing? Do you believe in Christ Jesus, the Son of God, who was begotten by the Holy Spirit from the Virgin Mary, Who was crucified under Pontius Pilate, and died (and was buried) and rose the third day living from the dead, and ascended into the heavens, and sat down on the right hand of the Father, and will come to judge the living and the dead?
>
> Do you believe in the Holy Spirit, in the holy church, and (in the resurrection of the body)?

Creeds also became part of the liturgy of the holy communion in the 5th century. This practice gave the Nicene Creed widespread authority in the life of the church.

2. Education. The teaching ministry of the church also called for creeds. The mother creed of our Apostles' Creed developed in Rome in the 3d century when the interrogatory creed of baptism was turned into a declaratory creed. This became part of catechetical training when the bishop traditioned the creed to the catechumens and when the catechumens rendered it back as their own witness of faith. Creeds were also used as a basis of catechetical lectures, as in the case of the catechetical lectures of Cyril of Jerusalem.

3. Interpretation. Creeds were a useful hermeneutical guide. Biblical studies were carried on and theology was formulated under the guidance of rules of faith and creeds which were the church's best wisdom as to how the Bible should be understood and the faith expressed.

4. Apologetics. Heresy was still another occasion for creedal formulation. Older creedal scholars, such as A. C. McGiffert (1902), argued that the refutation of heresy was a primary factor in the development of the Apostles' Creed. For example, the affirmation that God created the heavens and the earth stood over against the conviction that the created world was evil and the work of a lesser god. Others have argued against McGiffert, that heresy was not a necessity for such Christian affirmations as the goodness of creation.

5. Evangelism. Christian witness made use of creeds as Christians defined themselves over against the pagan society. It also enabled the Christian to render a firm and clear testimony in the face of persecution.

B. Forms of Creeds

1. The Bible. Precise, fixed creeds did not appear until the 3d and 4th centuries of the church's history, but the process that culminated in them had its beginning in the historical credos (Deut 25:5–9 and 6:21–25) and in the declaratory affirmations of the OT (Deut 6:4–5 and 1 Kings 18:39). The NT church in preaching, singing, praying, and witnessing increasingly gave expression to Christian faith in more or less fixed formulas, for example, in 1 Cor 15:3–7; Phil 2:6–11; Matt 28:10; and Rom 10:9. Some creedal statements are simple christological affirmations declaring the lordship of Jesus Christ (Mark 8:9, 1 Tim 3:16, Romans 10:9). Others are two-article formulas confessing both God and Christ (1 Cor 8:6). Three-article statements affirming Father, Son, and Holy Spirit appear in Matt 28:19 and in 2 Cor 13–14, which is a pretrinitarian formulation.

2. Ecumenical Creeds. The creedlike statements of the NT and early Christian writers such as Ignatius, as well as the Rules of Faith, were replaced by precise creedal formulas which served the liturgical and catechetical needs of local churches. In the East, the creeds varied from church to church, but in the West, the creed of Rome exercised a dominating influence over the great churches in the West. One of the daughter creeds of Rome became the established version of the Apostles' Creed. It first appeared in southwest France sometime in the late 6th or 7th century. Its present text is found in the *De singulis libris canonicis scarapsus* of Priminius, which is dated between 710 and 724. This creed, which owed much to Rome, became the common creed of the Frankish empire and was finally adopted in Rome. It became the most universal creed in the West, but it was not known in the East. The first creed to have synodical authority was promulgated by the Council of Nicea (325) in response to the teaching of an Alexandrian presbyter named ARIUS concerning the deity of Jesus Christ. Christians had spoken of Jesus as Lord, Savior, the Word, Son of God, Son of man, prophet, and priest. All these refer to the activity of Jesus Christ and his relation to us.

Arius changed the question. He did not ask how Jesus Christ is related to us or what he means to us. He asks the prior question, "Who is Jesus?" Is he really God? Or is he a creature? Arius declared that he was a creature, but the Council of Nicea took a creed of an Eastern church and added to it four formulas which stated without ambiguity that Jesus Christ was truly God. The key formula was "of the same substance as the Father." The Nicene Creed, which is used in worship today, is dated from the Council of Constantinople in 381. All creeds that use the phrase "of the same substance (reality, being, essence) as the Father" were regarded as Nicene. The Council of Constantinople also eliminated the anathemas from the Creed of 325 and added a statement affirming the deity of the Holy Spirit as well as the one holy catholic church, the forgiveness of sins, and the resurrection of the dead. The Council of Nicea, in affirming that Jesus Christ was truly God, raised the question of the humanity of Christ, and therefore of

the doctrine of the person of Christ. The church of the 5th century, in an amazingly catholic theological endeavor, defined its understanding of the person of Jesus Christ at the Council of Chalcedon (431) in which it affirmed that Jesus Christ is truly God and truly man in one person (one acting subject).

The Athanasian Creed was not written by Athanasius but by some Augustinian theologians sometime after the middle of the 5th century. Its use has declined because of its anathemas, but recent studies by J. N. D. Kelly have pointed to its theological excellence. The Definition of the Council of Chalcedon (451) was the definitive statement of the ancient church on the person of Jesus Christ, but it was never used in worship as were the other three creeds.

3. Creeds of the Eastern Church. The Nicene Creed has always been used in the Eastern churches. Later doctrinal statements included the Orthodox Confession of Peter Mogilas (1643), the Answers of Jeremiah (Patriarch of Constantinople) to Lutheran Theologians (1576), the Confession Prepared by Metrophanes Critopolus to Explain Eastern Orthodoxy to Protestants (1625), the Russian Catechisms, especially the Longer Catechism of Philaret (1839), a confession appearing under the name of Cyril Lucar (1629), Patriarch of Constantinople, which was sympathetic to Protestantism and which was repudiated by the majority of Orthodox. The Confession of Dositheus, approved by the Synod of Jerusalem in 1672 in opposition to the Protestant sympathies of the previous document, is more representative of the Eastern church.

4. Roman Catholicism. The Canons and Decrees of the Council of Trent (1545–63) were formulated in the context of the Protestant Reformation. It also narrowed many of the options of the very fluid theology of medieval Catholicism. The creed of the Council of Trent (1564) is a short summary of the lengthy Tridentine document. The Council of Trent fixed the shape of modern Roman Catholicism. There have been other notable pronouncements of doctrine, such as the Dogma of the Assumption of the Virgin Mary (1950), in addition to numerous papal encyclicals of considerable importance. The whole shape of Roman Catholicism received a new interpretation in the work of Vatican Council II (1962–65).

5. Protestantism. Protestants were prolific writers of confessions. These include Martin Luther's Ninety-Five Theses (1517), the Augsburg Confession (1530), the Apology of the Augsburg Confession (1531), the Smalcald Articles (1537), the Treatise on the Power and the Primacy of the Pope (1537), the Small Cathechism of Dr. Martin Luther (1529), and the Large Catechism of Dr. Martin Luther (1529). Calvinists and Reformed Protestants wrote many creeds, the most typical of which are the Ten Theses of Berne (1528), the Gallican Confession (1529), the Scots Confession (1560), and the second Helvetic Confession (1566).

Seventeenth-century Protestantism produced the Westminster Confession (1647) and the Westminster Catechisms, which became the dominant Reformed statement for English-speaking Presbyterians, and also the Canons of Dort (1619). The Thirty-Nine Articles of the Church of England (1563) combined Calvinist and Lutheran influences, as well as an indigenous English tradition with that of the Catholic tradition. At the other extreme of the Protestant Reformation were statements of the radical Reformers such as Schleitheim Articles of 1527.

6. Contemporary Confessions. Numerous confessions have been written in the 20th century. Some of these, such as the Barmen Declaration (1934), were in response to National Socialism. The Confession of 1967 of the United Presbyterian Church (USA) was the attempt of a denomination to formulate its faith in contemporary idiom and in response to contemporary problems. Some of the most interesting of the 20th-century confessions have arisen in younger and non-Western churches, such as the creed of the Batak Church (Great Synod of the Huria Kristen Batak Protestant Church of Indonesia, 1956).

JOHN H. LEITH

CRESCENS (PERSON) [Gk *Krēskēs* (Κρησκης)]. A Christian, apparently a co-worker of Paul, who left him during his Roman imprisonment (assumably in Rome, although Caesarea has been defended) and went to Galatia (2 Tim 4:10). In mentioning Crescens, Paul indicates that he had likewise been left by Titus who went to Dalmatia. While most mss read Galatia as Crescens' destination, a few (e.g., Sinaiticus, C) have Gaul. A later tradition also reports that Paul sent Crescens to Gaul (cf. Eus. *Hist. Eccl.* 3.4.8), where he is thought to have founded the churches in Vienne and Mayence. That Crescens went to Gaul may be supported by the apocryphal *Acts of Paul* where Titus is said to have arrived in Rome from Dalmatia, and Luke (a substitution for Crescens?) is said to have come from Gaul (*Acts Paul* 11:1). Nevertheless, the reading "Galatia" is usually judged as the more strongly favored in the ms witnesses. This does not, however, settle the question of the Gaul tradition since there are instances of some Greeks using the name "Galatia" when they referred to Gaul (Dibelius and Conzelmann *Pastoral Epistles* Hermeneia 122, n. 3). Also to be considered is the context of 2 Timothy. If the imprisonment it portrays was Rome, proximity to Gaul makes it the more probable destination of Crescens; a Caesarean imprisonment, in contrast, would favor reading "Galatia."

CRESCENTS. See JEWELRY.

CRETE (PLACE) [Gk *Krētē* (Κρητη)*; Krētēs* (Κρητης)]. CRETANS. The largest and southernmost island in the Aegean Sea. Crete is 156 miles from E to W and 35 miles from N to S (at its broadest point). Mountains, reaching to 7882 feet, run the length of the island. By the 2d century B.C. a formidable Jewish constituency appeared on the island of Crete (Tac. *Hist.* 5. 2) which was centered in the area of Gortyna, lying in Crete's Messara plain. When the Cretans began oppressing the Jews, the latter secured Roman patronage (141 B.C.) and the Romans considered them to be loyal subjects (1 Macc 15:23). From this time through the New Testament era the Cretan Jews continued to flourish. Paul commissioned Titus to oversee the ministry on Crete, and to counteract Judaizing tendencies (Titus 1:5–14). In 67 B.C., Rome finally annexed Crete and Cyrene (Libya); they remained a joint Roman province until Constantine separated them.

Archaeology has revealed a flourishing Minoan civilization on Crete which reached its zenith in the Late Bronze Age (ca. 1700–1450 B.C.). Sir Arthur Evans headed these excavations, focusing on the central city of Knossos, which contains the palace of legendary King Minos. Similar labyrinthine palaces have been found at Mallia, Phaestos, and Zakro. Evans discovered Linear A and B tablets, but only the latter have been deciphered (by Michael Ventris in 1953), proving to be an archaic form of Gk. The Minoan civilization came to an end with a Myceneaen domination, and the cataclysmic eruption of Thera. The subsequent Dorian invasions ushered in Crete's Iron Age (ca. 1200 B.C.). From this time on, Crete was only known for its mercenary soldiers and traders until the Roman annexation.

The Cretan poet Epimenides (ca. 600 B.C.) describes all Cretans as "liars, evil brutes, and lazy gluttons" (quoted both in Titus 1:12 and Acts 17:28). This characterization is found in several ancient sources, e.g., Livy *Epit. Per.* 44:45; Callimachus *Jov.* 8; and Plutarch *Aem* 23. Evidently, after several generations of living in the turbulence of Cretan culture, these characteristics became manifest in the Cretan Jews as well (Titus 3:1).

CRIMES AND PUNISHMENTS. See PUNISHMENTS AND CRIMES.

CRISPUS (PERSON) [Gk *Krispos* (Κρισπος)]. A Corinthian Jew and ruler of the synagogue who, together with all his household, believed in the Lord because of Paul's preaching (Acts 18:8; 1 Cor 1:14). Crispus is named first, preceding Gaius and the household of Stephanas, as one of the few people baptized by Paul himself (1 Cor 1:14). For that reason, he was probably partial to Paul's position in the disputes among the Corinthians. As a ruler of the synagogue (Gk *archisynagogos*), Crispus' role was to see that

services were conducted in the proper order, to take care of the building, to cover the cost for its upkeep, and possibly to finance the construction of a new synagogue building (see Fee *1 Corinthians* NICNT, 62–63). Hence, he was probably a well-to-do person and highly respected by the Jewish community. His own conversion to Christianity probably led to the conversion not only of his household, but also to that of others from the synagogue. Among the Corinthians he knew, the "worshipper of God" Titius Justus, who lived next door to the synagogue, would have to be included.

Also named as a ruler of presumably the same Corinthian synagogue is Sosthenes (Acts 18:17). While synagogues normally had just one such leader, some had two or more for a time (cf. Acts 13:15). Thus it is not certain whether Crispus was the colleague or predecessor of Sosthenes. A conclusion often drawn—that Sosthenes became ruler because of Crispus' conversion—should be closely examined, for it cannot be assumed that at this early date a synagogue leader who became a Christian had to be replaced. Whatever the case, Paul felt it necessary to withdraw from that particular synagogue because of the opposition he faced (cf. Acts 18:6–7). It is probable that his converts, Crispus among them, followed suit by their own choice because of the animosity experienced.

CRUCIFIXION. The act of nailing or binding a living victim or sometimes a dead person to a cross or stake (*stauros* or *skolops*) or a tree *(xylon).* Generally Herodotus uses the verb *anaskolopizein* of living persons and *anastauroun* of corpses. After him the verbs become synonyms, "to crucify." Josephus uses only *(ana)stauroun,* Philo only *anaskolopizein.* The verb *stauroun* occurs frequently in the NT, which always employs *stauros* and never *skolops* for the cross of Christ (see *TDNT* 7:572–84).

B. Crucifixion under the Romans
C. Forms of Crucifixion
D. Jesus' Crucifixion
E. Christian Interpretations of the Crucifixion

———

A. Crucifixion among Non-Romans

In his *History,* Herodotus notes that the Persians practiced crucifixion as a form of execution (1.128.2; 3.125.3; 3.132.2; 3.159.1). He reports that Darius (512–485 B.C.) had 3000 inhabitants of Babylon crucified. Other ancient sources, which are not necessarily reliable, speak of the use of crucifixion among the people of India (Diod. Sic. 2.18.1), the Assyrians (*ibid.* 2.1.10; Lucian *Iupp. Trag.* 16), the Scythians (Diod. Sic. 2.44.2; Tert. *Adv. Marc.* 1.1.3), the Taurians (Eur. *IT* 1429–30), and the Thracians (Diod. Sic. 33.15.1; 34/35.12.1). Diodorus Siculus says that the Celts crucified criminals as a sacrifice to the gods (5.32.6). According to Tacitus, the Germans (*Ann.* 1.61.4; 4.72.3; *Germ.* 12.1) and the Britons (*Ann.* 14.33.2) practiced crucifixion. Sallust (*Iug.* 14.15) and Julius Caesar (*B Civ.* 66) report that the Numidians used this form of execution. According to many sources (e.g., Polyb. 1.11.5; 24.6; 79.4–5; 86.4; Diod. Sic. 25.5.2; 10.2; 26.23.1; Livy 22.13.9; 28.37.2; 38.48.13), the Carthaginians employed crucifixion. The Romans may have taken over the practice from them.

In the Greek-speaking world, criminals were at times fastened to a flat board *(tympanum)* for public display, torture, or execution. This form of punishment closely resembled crucifixion whenever the victims were nailed to the planks. According to Diodorus Siculus, Dionysius I of Syracuse captured and crucified some Greek mercenaries employed by the Carthaginians (14.53.4). Alexander the Great repeatedly resorted to crucifixion. On one occasion he had 2000 survivors from the siege of Tyre crucified. "Then the anger of the king offered a sad spectacle to the victors. Two thousand persons, for

whose killing the general madness had spent itself, hung fixed to crosses over a huge stretch of the shore" (Curtius Rufus *Hist. Alex.* 4.4.17). After Alexander's death Greece itself witnessed mass crucifixions. In 314 B.C. an administrator of Alexander's kingdom quashed a rebellion in the city of Sicyon (near Corinth) and had thirty of its inhabitants crucified (Diod. Sic. 19.67.2). In 303 B.C., after their town fell to Demetrius Poliorcetes, the commander of Orchomenus (in Arcadia) and eighty of his men were crucified (*ibid.* 20.103.6). Under Antiochus IV in 267 B.C. Judea saw the crucifixion of men who remained faithful to the Jewish law (Joseph. *Ant* 12 §256). During the pre-Roman, Hellenistic period in the Greek-speaking East, crucifixion was practiced in the context of war or for acts of high treason. After Roman rule arrived, crucifixion was also used as a punishment for slaves and violent criminals. As Plutarch (ca. A.D. 46–120) remarks, "every criminal condemned to death bears his cross on his back" (*Mor.* 554 A/B).

Among Jews, crucifixion was occasionally practiced during the Hellenistic-Hasmonean period. The Sadducean high priest, Alexander Janneus (in office 103–76 B.C.), had 800 Pharisees crucified and ordered their wives and children to be slaughtered before their eyes as they hung dying (Joseph. *Ant* 13 §380–83; *JW* 1 §97–98). According to Jewish law, the corpses of executed idolaters and blasphemers were hanged on a tree to show that they were accursed by God (Deut 21:22–23). In pre-Christian Palestine this text of Deuteronomy was applied to those who died by crucifixion, as the *pesher* of Nahum from Qumran Cave 4 shows. Another Qumran document (11QTemple 64:6–13) also connects Deuteronomy 21:23 with crucifixion, which was apparently an Essene punishment for some very serious crimes.

B. Crucifixion under the Romans

Cicero calls crucifixion the *summum supplicium* or most extreme form of punishment (*Verr.* 2.5.168). Josephus, who witnessed men dying by crucifixion during Titus' siege of Jerusalem, calls it "the most wretched of deaths" (*JW* 7 §203). In order of increasing severity, the aggravated methods of execution were *decollatio* (decapitation), *crematio* (burning), and crucifixion. At times *damnatio ad bestias* (throwing victims to wild animals) took the place of decapitation, but one needed the animals and an arena to organize such a form of execution. Crucifixion was much easier to carry out and could also serve as a public spectacle. For example, at the time of Caligula (A.D. 37–41) under the prefect Flaccus some Jews were tortured and crucified in the amphitheatre of Alexandria to entertain the people (Philo *Flacc* 72.84–85).

Among the Persians and to some degree in Greece, as we have seen, crucifixion could be a punishment for grave crimes against the state. At times the Carthaginians crucified generals and admirals who had been defeated or had failed in other such ways. Very occasionally Roman citizens were crucified for high treason, desertion during wartime, and similar serious offenses. For instance, just before the outbreak of the Jewish War in A.D. 66, the Roman procurator Gessius Florus had some Jews who were Roman knights flogged and crucified in Jerusalem (Josephus *JW* 2 §308). But normally Roman citizens and, in particular, members of the upper class were safe from the possibility of crucifixion, no matter what their crimes. Death on the cross generally was limited to foreigners and people of the lower class, particularly slaves.

In 63 B.C. Rabirius, a Roman nobleman and senator, was threatened with the penalty of crucifixion. In defending him Cicero argued that the very mention of the "cross" and of the executioner (who tied the criminal's hands, veiled his head, and crucified him) was intolerable for a respectable Roman citizen.

> How grievous a thing it is to be disgraced by a public court; how grievous to suffer a fine, how grievous to suffer banishment; and yet in the midst of any such disaster we retain some degree of liberty. Even if we are threatened with death, we may die free men. But the executioner, the veiling of the head and *the very word* "*cross*" should be far removed not only from the person of a Roman citizen but his thoughts, his eyes and his ears. For it is not only the actual occurrence of these things but *the very mention of them*, that is unworthy of a Roman citizen and a free man (*Rab. Perd.* 16; italics added).

This speech reflected the horrified disgust which "good" Roman citizens felt for any of their own being subjected to, or even threatened with, crucifixion. For such people, crucifixion was "that most cruel and disgusting penalty," (*crudelissimum taeterrimumque supplicium;* Cic. *Verr.* 2.5.165).

The Romans used crucifixion to bring mutinous troops under control, to break the will of conquered peoples, and to wear down rebellious cities under siege. Dangerous and violent robbers could be crucified—often near or at the scene of their crimes. Quintilian (ca. 35–95 A.D.) approved of crucifixion as a penalty for such criminals, and thought that this form of execution had a better deterrent effect when the crosses were set up along the busiest roads. "Whenever we crucify the guilty, the most crowded roads are chosen, where the most people can see and be moved by this fear. For penalties relate not so much to retribution as to their exemplary effect" (*Decl.* 274). The Romans used crucifixion above all as the *servile supplicium* ("the slaves' punishment"), a terrible form of execution typically inflicted on slaves, (*servitutis extremum summumque supplicium;* Cic. *Verr.* 2.5.169).

Plautus (d. 184 B.C.), who happens to be the first writer to provide evidence about Roman crucifixions, has more to say about the theme than any other Latin author. He writes of the "terrible cross" of slaves (*Poen.* 347; see *Capt.* 469; *Cas.* 611; *Men.* 66, 859; *Pers.* 352; *Rud.* 518; *Trin.* 598), and reflects the grim gallows humor of their subculture. From his time on, the lower classes used "*crux*" as a vulgar taunt. The much-quoted confession of Sceledrus in *Miles Gloriosus* (written about 205 B.C.) suggests that for a long time before Plautus slaves had been frequently crucified: "I know the cross will be my grave: that is where my ancestors are, my father, grandfathers, great-grandfathers, great-great-grandfathers" (372–73).

Livy reports that twenty-five slaves made a conspiracy in Rome (in 217 B.C.) and were crucified (22.33.2). In 196 B.C. the leaders of a slave revolt in Etruria were crucified (Livy 33.36.3). Especially during the 2d century B.C., crucifixion was used to deter rebellions among the masses of slaves who lived in Rome or worked on the great estates elsewhere in Italy. According to Orosius (5.9.4), the first slave war in Sicily (139–132 B.C.) saw the crucifixion of 450 slaves. Appian (*BCiv.* 1.120) states that after the final defeat and death of Spartacus in 71 B.C., Crassus had more than 6000 slaves crucified along the Via Appia between Capua and Rome.

Even under "ordinary" conditions slaves had little legal protection. Juvenal describes the Roman matron who wanted a slave crucified and overrode her husband's objections with the notorious response: *Hoc volo, sic iubeo, sit pro ratione volantas* ("This is my will and my command. If you are looking for a reason, it is simply that I want it" (*Sat.* 6.223). Horace may condemn a master who had his slave crucified for tasting the soup while bringing it from the kitchen (*Sat.* 1.3.80–83), but he can also toss off a cruel remark about slaves "feeding crows on the cross" (*Ep.* 1.16.46–48). At the time of Nero a decree of the Senate revived the custom of executing (often by crucifixion) all the slaves of a household if the master was killed (Tac. *Ann.* 13.32.1). A few years later this was done after the murder of a city prefect (ibid. 14.42–45). A slave called Mithridates was crucified for "having damned the soul" of Caligula (Petron. *Sat.* 53.3). Slaves who questioned astrologers about the future of the emperor, of the state, or even that of their own masters faced crucifixion (Paulus *Sent.* 5.21.3–4). Suetonius says that Caligula (*Calig.* 12.2) and Domitian (*Dom.* 11.1) capriciously crucified imperial slaves and even freedmen. In his *Histories* Tacitus reports the crucifixion of several freedmen (2.72.2; 4.3.2; 4.11.3).

Cicero (see above), Seneca (see below) and other Romans recognized that crucifixion was an atrociously cruel form of execution. Yet Varro (*Sat. Men. Fr.* 24) was practically alone in protesting against the barbarism of crucifixion. Most took it for granted that this frequent form of execution was needed to deter the lower classes from committing serious crimes. Although crucifixion was frequent in Roman times, cultured writers preferred to say little about it. Unlike Josephus, Tacitus does not mention the innumerable crucifixions in Palestine (*Hist.* 5.8–13).

C. Forms of Crucifixion

Generally the victims were crucified alive; at times it was a matter of displaying the corpse of someone already executed in another way. Polycrates of Samos exemplifies the latter case. He was treacherously seized by the Persian satrap Oroites, killed "in an unspeakably cruel way," and his body fastened to a stake (Hdt. 3.125.3). Whether living or already dead, the victims suffered a degrading loss of all dignity by being bound or nailed to a stake. Herodotus offers a few details when reporting the way the satrap Artayctes was crucified by the Athenians at the Hellespont: "They nailed him to planks and hung him

there. And they stoned Artayctes' son before his eyes" (9.120). Normally ancient writers were reluctant to describe particular crucifixions in much detail.

Under the Roman Empire, crucifixion normally included a flogging beforehand. At times the cross was only one vertical stake. Frequently, however, there was a cross-piece attached either at the top to give the shape of a "T" *(crux commissa)* or just below the top, as in the form most familiar in Christian symbolism *(crux immissa).* The victims carried the cross or at least a transverse beam *(patibulum)* to the place of execution, where they were stripped and bound or nailed to the beam, raised up, and seated on a *sedile* or small wooden peg in the upright beam. Ropes bound the shoulders or torso to the cross. The feet or heels of the victims were bound or nailed to the upright stake. As crucifixion damaged no vital organs, death could come slowly, sometimes after several days of atrocious pain. See also *IDBSup,* 199–200.

Executioners could vary the form of punishment, as Seneca the Younger indicates: "I see crosses there, not just of one kind but made in many different ways: some have their victims with head down to the ground; some impale their private parts; others stretch out their arms on the gibbet" (*Dial.* 6 [*Cons. Marc.*] 20.3). In his account of what happened to Jewish fugitives from Jerusalem, Josephus also lets us see that there was no fixed pattern for crucifying people. Much depended on the sadistic ingenuity of the moment.

> When they [the fugitives] were going to be taken [by the Romans], they were forced to offer resistance, and when the fighting ended it seemed too late to sue for mercy. Scourged and subjected before death to every torture, they were finally crucified in view of the wall [of Jerusalem]. Titus indeed realized the horror of what was happening, for every day 500—sometimes even more—fell into his hands. However, it was not safe to let men captured by force go free, and to guard such a host of prisoners would tie up a great proportion of his troops. But his chief reason for not stopping the slaughter was the hope that the sight of it would perhaps induce the Jews to surrender in order to avoid the same fate. The soldiers themselves through rage and bitterness nailed up their victims in different postures as a grim joke, till owing to the vast numbers there was no room for the crosses and no crosses for the bodies (*JW* 5 §449–51).

Nero's persecution of the Christians in Rome exemplified a similar capricious cruelty: "Mockery of every sort was added to their deaths. Covered with the skins of wild beasts, they were torn to death by dogs. Or they were fastened on crosses and, when daylight faded, were burned to serve as lamps by night" (Tac. *Ann.* 15.44.4).

In the course of a debate on happiness, Plato's *Gorgias* indicates various kinds of torture that a condemned man might suffer before dying by crucifixion:

> If a man is caught in a criminal plot to make himself tyrant, and when caught is put to the rack and mutilated and has his eyes burnt out and after himself suffering and seeing his wife and children suffer many many other signal outrages of various kinds, is finally crucified or burned on a coat of pitch, will he be happier than if he escaped arrest, established himself as a tyrant and lived the rest of his life a sovereign in his state, doing what he pleased, an object of envy and felicitation among citizens and strangers alike? (473 bc).

Different tortures that could precede crucifixion appear again when Plato describes the fate, not of a would-be tyrant, but of the perfectly just man: "The just man will have to be scourged, racked, fettered, blinded, and finally, after the most extreme suffering, he will be crucified" (*Resp.* 361e–362a).

In Epistle 101 to Lucilius, Seneca argues that it is better to commit suicide than face such extreme and drawn-out suffering as death by crucifixion. To press his argument he describes what such a death was like:

> Can anyone be found who would prefer wasting away in pain dying limb by limb, or letting out his life drop by drop, rather than expiring once for all? Can any man be found willing to be fastened to the accursed tree, long sickly, already deformed, swelling with ugly weals on shoulders and chest, and drawing the breath of life amid long-drawn-out agony? He would have many excuses for dying even before mounting the cross.

D. Jesus' Crucifixion

All four gospels record that Jesus foretold his own death. Matthew specifies that it would be by crucifixion (Matt 20:19; 26:2) and that some of Jesus' followers would suffer the same fate (Matt 23:34).

Jesus' crucifixion is recounted in Matthew 27; Mark 15; Luke 23; and John 19; and is often referred to elsewhere in the NT (e.g., Acts 2:36, 4:10; 1 Cor 2:8; Gal 3:1; Rev 11:8). According to the Synoptics, Simon of Cyrene was forced to carry Jesus' cross. The crucifixion took place at Golgotha or "Place of a skull." It seems that Jesus was nailed to the cross by his hands (Luke 24:39; John 20:25) and feet (Luke 24:39). Two robbers were crucified on either side of Jesus, whose cross carried a sign saying "the King of the Jews," indicating the crime for which he was being executed. Jesus refused the drugged wine offered to deaden his pain. He was taunted by some of the passers-by, used the opening words of Psalm 22 to cry out "My God, my God, why hast thou forsaken me?" and died around three in the afternoon—his death being hastened by the severe scourging he had previously undergone. With Pontius Pilate's permission, Joseph of Arimathea took Jesus' corpse down from the cross and gave it honorable burial.

Beyond doubt, devout reflection on Jesus' death and the desire to find prophetic anticipations of it introduced some details into the passion narratives. Nevertheless, the version just given is a defensible historical account of his crucifixion.

As we saw above, the Romans frequently employed the sadistically cruel and utterly shameful death by crucifixion to uphold civil authority and preserve law and order against troublesome criminals, slaves, and rebels. In Palestine crucifixion was a public reminder of Jewish servitude to a foreign power.

Hence Jesus' cross was a sign of extreme "shame" (Heb 12:2). Paul did not exaggerate when he called the crucified Christ "a stumbling block to Jews and folly to Gentiles" (1 Cor 1:23; see 2:2; Gal 5:11). Nothing in the OT or in other Jewish sources suggests that the Messiah could suffer such a fate. On the contrary, a crucified person—so far from being chosen, anointed, and sent by God—was understood to be cursed by God (see A. above). The nonbelievers it seemed "sheer folly" (1 Cor 1:18) to proclaim the crucified Jesus as God's Son, universal Lord, and coming Judge of the world. The extreme dishonor of his death by crucifixion counted against any such claims. A century after Paul, Justin Martyr (ca. 100–65) noted how utterly offensive it was to acknowledge the divine status of a crucified man: "They say that our madness consists in the fact that we put a crucified man in second place after the unchangeable and eternal God, the Creator of the world" (1 *Apol.* 13.4). In a liturgical rather than an apologetical setting, Melito of Sardis (died ca. 190) also recognized the strange "scandal" of Christian faith in the crucified Jesus.

> He who hung the earth [in its place] hangs there, he who fixed the heavens is fixed there, he who made all things fast is made fast upon the tree, the Master has been insulted, God has been murdered, the King of Israel has been slain by an Israelite hand. O strange murder, strange crime! The Master has been treated in unseemly fashion, his body naked, and not even deemed worthy of a covering that [his nakedness] might not be seen. Therefore the lights [of heaven] turned away, and the day darkened, that it might hide him who was stripped upon the cross (*Pass.* 96–97).

The utter disgrace of crucifixion encouraged Celsus to dismiss derisively the redemptive role of Jesus, who had been "bound in the most ignominious fashion" and "executed in a shameful way" (Origen *Cels.* 6.10). Gnostic docetism eliminated the scandal of the death on the cross by alleging that the living, spiritual Christ remained untouched and laughed when his image was crucified (e.g., *Apoc. Pet.* 82.1–83.15). Against such theorizing Ignatius of Antioch insisted that Christ did not merely appear to suffer but was "truly crucified" (*Trall.* 9.1).

Nothing expresses more forcefully the paradoxical Christian claims about the crucified Jesus than the hymn in Philippians 2:6–11. Whether it existed as a pre-Pauline element or was added by Paul himself, the phrase "even death on a cross" (2:8) presents the extreme contrast between Christ's glory (2:9–11), on the one hand, and the shameful death when he was crucified like a slave *(supplicium servile),* on the other.

E. Christian Interpretations of the Crucifixion

Paul sees in the crucifixion the revelation of Jesus' obedience (Phil 2:8) and love (Gal 2:20). The crucifixion discloses God's power and wisdom (1 Cor 1:24; 2 Cor 13:4). It brings deliverance from sin (Col 2:14) and "the curse of the Law" (Gal 3:13); it effects reconciliation and peace (Col 1:20; Eph 2:16).

Becoming Jesus' follower means the crucifixion of one's former, sinful self (Rom 6:6; Gal 2:20; 6:14). The Law has no more claim on those who have died with Christ (Gal 2:19). They renounce sin and leave behind the ungodly world (Gal 6;14). Paul is persecuted because in these terms he accepts and preaches the cross of Christ (Gal 6:12).

To convey what discipleship metaphorically (and sometimes literally) entailed, the Synoptic Gospels spoke of "taking up one's cross" and following Jesus (Mark 8:34; Matt 10:38; 16:24; Luke 9:23; 14:27). "Taking up one's cross" may have been a profane and/or Zealot expression which then was applied to Christian discipleship. For the Synoptics it meant saying no to oneself, accepting suffering, and even surrendering one's life for and with Jesus—in short, being a cross bearer all one's life.

GERALD G. O'COLLINS

CRUSE [Heb *ṣappaḥat* (צַפַּחַת)]. A translation for a Hebrew word which in several other passages is rendered "jar" (1 Sam 26:11, 12, 16; 2 Kgs 19:6). As "jar," the Hebrew term clearly designates a water container and probably refers to the two-handled lentoid containers known as pilgrim flasks. Such containers are found archaeologically in Late Bronze through Iron II contexts (for illustrations, see Amiran 1969: 166–67, 276; pls. 51, 93–95; Photos 167, 168, 296–98). The biblical passages which use the term for "jar" indicate its portability. The 1 Samuel verses suggest that it functioned as a canteen for soldiers. Travelers too would have carried water in canteens since the mouth of the flask was narrow and convenient for drinking and stoppering (Kelso 1948: 30).

The pilgrim flask makes the most sense as the ceramic vessel meant by *ṣappaḥat,* since the root of that word in other Semitic languages apparently involves flattening or spreading out. The Arabic cognate, e.g., means "to make wide, broad." However, the term *ṣappaḥat* is also used to designate a different vessel, a container used for oil in the story of the oil jar of Elijah and the widow of Zarephath in 1 Kings 17. In that context, it refers to a small container, which contained just a little oil. If this be so, "cruse" designates a small cruet-size ceramic vessel meant for oil as opposed to the larger oil jar (*ʾāsûk;* 2 Kgs 4:2), or to a large storage jar *(nebel)* that could hold oil but also grain or wine. Small juglets used to dip water or to hold oil or another commodity appear in archaeological contexts going back to the Early Bronze Age. Early in the Iron II period, the time of Elijah and the widow's cruse, such small juglets were often black (a black burnished slip) and had rounded bodies, long narrow necks, and handles attached at the middle of the neck (Amiran 1969: 256, 258; pl. 86:12–13; 87:13).

The biblical story of the oil cruse contributes to the characterization of Elijah as a prophetic figure with special powers from God. During a drought, Elijah asks a widow for food and drink. She protests that her supplies are meager (only "a little oil in a cruse," 2 Kgs 17:12). Elijah then assures her that her supplies will not be used up until God ends the drought and her stores can be replenished; and indeed, the cruse of oil [did not] fail" (1 Kgs 17:16).

CAROL MEYERS

CTESIAS. Fifth-century Greek physician in the Persian court who authored a history of Persia *(Persika)* in twenty-three books, a geographical treatise *(Periodos)* in three books, and a book about India (*Indika)*.

Scion of a medical family from Cnidus in Asia Minor, Ctesias sojourned for several years in the court of Artaxerxes II. His biography still admits a few obscurities. One of his users, Diodorus of Sicily, thus presents his source in the *Historical Library:* "Ctesias of Cnidus lived during the time of Cyrus'

expedition against his brother Artaxerxes; he was taken prisoner, and as he had distinguished himself by his medical knowledge, he was received at the king's court, where he lived seventeen years heaped with honors" (2.32.4). The details here are not clear, however. Diodorus suggests that Ctesias was made a prisoner at the Battle of Cunaxa, possibly in 405, while it is known from other sources that Ctesias' residence in Persia ended in 398. That is why it has been frequently proposed that Diodorus' texts should be corrected to read seven years instead of seventeen. But doubts continue because other sources seem to indicate that Ctesias was part of the royal entourage even before Cunaxa. Photius notes elsewhere that Ctesias attained his *acme* (40 years of age for the Greeks) at the time of Cyrus II (that is, between 408 and 401 B.C.E.); Ctesias thus probably was born around 445.

In the course of his service at the Persian court, he amassed materials for his works that he drafted after his return to Cnidus. Among his known works figures the *Indika*, a sort of ethnographic description of India, of the country and its inhabitants. (A somewhat fantastic ethnography, as notes the epitomizer Photius.) Two other of his works have unfortunately disappeared almost totally; not even the contents would be known if not for the scattered citations made by later authors to whom Athanaeus refers. One of these books gave an account of the stages and relays on the royal road between Ephesus, Bactria, and India. Even the title of the work shows that Ctesias had an administrative and geographical horizon greater than that of Herodotus, who limited the Royal Way to the itinerary between Sardis and Susa. It is not impossible that Ctesias could have used official sources on the subject.

The other book—*Phoroi*—went into particulars of the produce levied by the royal administration to provision the Royal Table. It is an interesting testimony to the ideology of tribute in the Achaemenid empire. Ctesias possibly had access in this case as well to official registers preserved at the court.

His most important work for the historian of ancient Persia was a history of the dynasties that succeeded from Ninos to Semiramis until Artaxerxes II. It is entitled *Persika*, but in reality the first 6 books, extensively cited by Diodorus, concern the history of Assyria. Only books 7 through 23 can be properly considered *Persika* in the strictest sense of the term. Of the 18 books that form this work, 6 of them were dedicated to the activity of the first Persian kings: Cyrus, Cambyses, the magi, Darius, and Xerxes (ca. 550–465). Books 16–17 deal with the reign of Artaxerxes I (465–424). Books 18–20 deal with the reigns of Xerxes II, Sogdianos, and Darius II (424–405/4). Finally the last 3 books (20–23) were devoted to the first seven years (405/4–398) of Artaxerxes II's long reign.

The use of this work poses many problems for historians. Foremost, we don't have access to the text composed by Ctesias' own hand. Outside of a few scattered fragments, we have available only a copious summary compiled by the Byzantine patriarch Photius in the 9th century C.E. It is not always easy to distinguish what belonged to the original work and what has been given prominence by the selection of the abridger. Nonetheless, it appears clear that Photius did not disturb the general structure of the work, which is organized according to a strict annalistic framework, from king to king. The relative importance accorded to each reign seems to derive from Ctesias himself.

Since antiquity, the credibility of Ctesias' information has been doubted. Plutarch, who relied on him heavily in preparing his *Life of Artaxerxes*, criticizes him several times; for, according to him, Ctesias "had introduced in his works incredible and extravagant tales." Photius too stresses Ctesias' tendency toward fabrication, in particular in his work on India. One can point out numerous errors in his accounts of the reigns of earlier kings, in particular in the narrative of the Median Wars; he even inverted the battles of Salamis and Platea! The errors result in part, no doubt, from Ctesias' undisguised desire to polemicize with Herodotus in order to better compete with him. But the comparison is most often to the advantage of the historian of Halicarnassus. For all that, the opposition between the two historians need not be maintained in a systematic fashion. Herodotus resorts to stories and fables too. For example, there is no reason to choose between the respective versions of Herodotus and Ctesias on the origins of Cyrus: both transmit one of the many versions of the legend of the dynast that circulated in their day. In short, to borrow A. Momigliano's expression, there isn't just invention in Ctesias: he is above all marked by the tradition with which he familiarized himself during his days in the Achaemenid court.

It is clear, in fact, that Ctesias did not simply use the works of his precursors. He also did original work. On which documents did he rely? Diodorus tells that Ctesias himself acknowledged using the royal annals; but such a claim seems hardly plausible, least of all for the *Persika;* it had above all the aim of conferring upon the work a pseudoscientific character. Moreover, Photius takes account of nothing but oral testimony: "Ctesias pretends to have seen with his own eyes most of the facts that he records and to have heard them from the Persians themselves when he wasn't a direct witness: it is from these sources that he would have constructed his history." The recourse to oral sources can only cast doubt. Ctesias explicitly indicates as much himself, in making reference to information given by the queen Parysatis, whose health he looked after. Everything also leads one to believe that the long tormented history of Megabyzus was elaborated from information given by representatives of the family: the narrative form given to the story of Megabyzus also contradicts the oral tradition recognizable in numerous passages of *Persika*.

One can only note as well the central importance accorded to the actions and deeds of the kings, queens, and eunuchs. It has less to do with Persian history than with tales of struggles for succession and conflicts of factions within the court. But one should not ask of Ctesias what he never dreamed of offering. In all, his contribution is far from negligible. It can be shown, for example, that the account he gives of the troubled period begun by the assassination of Artaxerxes I and ended by the succession of Ochos-Darius II is in agreement with the conclusions that one can infer from the analysis of Babylonian tablets. In a more general way, he furnishes irreplaceable information on the royal family and on periods of succession.

Historians today have a tendency to accord only little value to Ctesias' information. It is true that comparison with Herodotus and Thucydides devaluates considerably his accounts of the Median Wars or of the struggle between the Athenians and the Persians in Egypt, to give only two examples. But one must remember that the objective of Ctesias was not to write a Persian history in the sense that we understand it. Living at the court, he writes chronologically ordered histories centering around kings and princesses, officers of the court, and nobles. Hence the importance given, for example, to Megabyzus; such a story allows one to show in a quasi-emblematic manner that the power of a noble, as powerful as he might be, depended exclusively on royal favor. It was also a story about a tragic destiny to which Ctesias knew he could attract impassioned readers. In the account of Megabyzus' return from exile, Greek readers could even find a plot close to a model that the return of Ulysses to Ithaca had made familiar to them.

Historiographically, the greatest damage caused by Ctesias comes from the presentation that he give of political life at the Persian court, which he presents as dominated by palace intrigues led by queens and eunuchs who manipulated incapable and irresolute kings. The work is thus dominated by a series of feminine protagonists, in general not very sympathetic; this is particularly true of Parysatis, sister-spouse of Darius II, all of whose actions seem to be inspired by a desire for vengeance against the enemies of his dead son Cyrus and against the representatives of the family of Hydernes, including his own daughter-in-law, the queen Stateira, whose horrible assassination at the hands of Parysatis Ctesias narrates in detail. In doing this, Ctesias conferred on the Persian princesses a political authority that they had never had. In addition, he was one of the creators of the myth of "Persian decadence," which is witnessed in particular by the feminization of the palaces. This myth was obligingly developed after his example by other authors like Plato, Xenophon, and Isocrates, and willingly taken up again in the modern age. This interpretation corresponds to a Hellenocentric vision of the history of the Near East, exacerbated by Greco-Persian conflicts of the 4th century.

CUCUMBER. See FLORA.

CUMMIN. See FLORA.

CUN (PLACE) [Heb *kûn* (כּוּן)]. Town from which David took much bronze after his defeat of Hadadezer of the kingdom of Zobah in 1 Chr 18:8 (= 2 Sam 8:8). Instead of Cun, 2 Sam 8:8 mentions Berothai. Cun is, according to Albright (1934: 60), the *Ku-nú* found in a catalogue of Ramesses III. The mention in Roman sources of towns named *Conna* and *Cunna* in the N Beqaʿ Valley of Lebanon at or near Rās Baalbek (34°16′N; 36°28′E) has led many scholars to equate the latter with Cun. Dussaud (1927: 271) accepts that *Conna* may be Rās Baalbek, but he argues that *Cunna* is identical with neither of these. Intense survey of Rās Baalbek in 1972 yielded only a few sherds of the Iron Age or earlier (Müller 1976: 93). Rās Baalbek should not be confused with Baalbek (34°00′N; 36°13′E) about 20 miles to the S. Josephus (*Ant* 7.105) renders the place in 1 Chr 18:8 as *Machōni,* indicating that the *mem,* which the MT regards as a preposition, may be part of the name. Accordingly, one should not overlook the Bronze and Iron Age site of Tell Maqna (34°05′N; 36°13′E), known also as *Mighni* in various sources (cf. Dussaud 1927: 553), as a possible location of the place in 1 Chr 18:8.

CUNEIFORM. From the Lat for "wedge-shaped," the term describes writing systems in which signs were rapidly impressed with a reed stylus on a soft writing surface. The native terms for cuneiform writing, Sum GU-SUM = Akk *miḫiltum/mihiṣtum/mihištum* (Vanstiphout 1988), refer to the stroke of the stylus. The most suitable and ubiquitous writing material was clay; over 99 percent of all cuneiform documents are clay tablets (rarely other shapes, such as cones, prisms, barrels, or vessels) ranging in size from 2×2 cm to 30×30 cm. The only other suitable medium for accepting the stroke of the stylus was wax; wax-covered writing boards are attested from the 2d millennium (one was recently found in a Bronze Age shipwreck off the Turkish coast), and were extensively used in the 1st millennium (Parpola 1983), from which, however, only one, plus some fragments of others, have survived (*RLA* 4: 458–9). For purposes of commemoration or identification, cuneiform signs could be chiseled into stone, engraved in metal, and painted or scratched on wood or ceramic. The cuneiform writing system was used from ca. 3100 B.C. into the first century of this era, originally and finally in Babylonia, but at various times in Iran, Upper Mesopotamia, Anatolia, Armenia, Syria, Palestine, Cyprus, and Egypt.

———

A. Origin and Development

The widely publicized theories of D. Schmandt-Besserat (1986, 1988), building on the work of P. Amiet, call our attention to small clay tokens found at sites throughout the Near East from the 9th to 2d millennia, which she claims are the earliest form of human record-keeping. Certain tokens are even said to be the direct forerunners of specific cuneiform signs, but these identifications, except for certain numerical signs which may well go back to token shapes, remain highly speculative. However, Schmandt-Besserat has been able to reconstruct a remarkable and convincing sequence that, beginning in the mid-4th millennium, leads from a crude system of numerical notation to the first cuneiform documents.

The sequence begins with hollow clay balls containing clay tokens of various shapes, which have been impressed on the balls before the balls were sealed. The number and shape of the tokens inside the ball matches the impressions on the outside, and one or more seals may have been rolled over the ball. The tokens record a transaction, and have been sealed in the ball to protect the integrity of the record, but have usually also been impressed on the outside for easy consultation. The seal impressions would prevent both tampering with the token impressions and the undetected opening of the clay ball. It was soon recognized that the seal impressions alone could, when necessary, secure the integrity of the impressed numerical data. The tokens were no longer necessary, and the clumsy ball could be flattened into a cushion-shaped tablet. Both tokens and impressions signified quantities, perhaps of specific commodities. Additional information pertaining to the object of the transaction or the individuals and organizations responsible for it were conveyed by the seals (Dittmann 1986). These clay balls and impressed tablets are known best from late 4th millennium Uruk and Susa, but they have also been found at various sites along an arc stretching from the great bend of the Euphrates to southeastern Iran, in assemblages that characterize the Uruk Expansion (Algaze 1989).

The contrast between the clay balls and numerical tablets, and even the earliest inscribed tablets, is striking. They have numerical notation in common, but the inscribed tablets, in addition, have an array of complex signs that is vastly more capable of signifying people, organizations, operations, and commodities than any system of tokens or tokenlike impressions and fixed seal impressions. The elaboration of this writing system was effected by the extension of the substitution of stylus impression for token evidenced in the numerical tablets, to the use of the stylus to produce the kind of pictorial and symbolic representations heretofore best known from seals (Buccellati 1981).

The earliest tablets appear at Uruk around 3100 B.C. (Nissen's Stage IV; see Nissen 1986a–b; Green and Nissen 1987). The bulk of the archaic tablets from Uruk follow immediately on these earliest tablets, and are similar to archaic tablets found outside of Uruk at Jemdet Nasr, Tell ʿUqair, and Tell Asmar (Nissen's Stage III). The presence of the earliest type at Uruk only seems to confirm Uruk as the point of origin for the writing system, which fits well with Uruk's position as the largest urban center, by far, in Babylon at the end of the 4th millennium. The increasing economic and political complexity of urban society was the prime stimulus for the development and implementation of the information storage system represented by the tablets. Curiously, in its archaic stages, cuneiform writing never spread beyond Babylonia to the areas that had been so heavily influenced by Babylonia in previous periods (Algaze 1989), although Elam developed a different archaic writing system of its own, probably through stimulus diffusion from Babylonia (Vallat 1986).

Each sign stood for a Sumerian word of one (the majority) to three syllables. Although most signs were originally pictograms, even if we cannot always determine exactly what a given sign depicts, there were abstract signs as well in the archaic repertoire. For example, in contrast to the cattle signs, which indeed look much like animal heads, the signs for sheep and for goats consist of various combinations of circle, cross, and rectangle, with cross-hatching on the interior or exterior to mark the adult females and female kid, and lozenges to mark the males (Green 1980). See Fig. CUN.01. Pictographs could have an iconic relationship to their signifieds, as GU^4 "ox," SAG "head," or TI "arrow", or could point to them in various ways: KA "mouth" seems to be a SAG "head" with added lines about nose level; DU, a foot-shaped sign is used for Sum DU "to go" and GUB "to stand"; AN, a star, stands for Sum AN "heaven" and DINGIR "god." Signs could be combined to form a new sign, whose meaning would be indicated by the sum of its parts: SAG ("head") or KA ("mouth") + NINDA ("food," a pictograph of a ration bowl?) = GU^7 "to eat" (fig. 1:5);

MINUS (pubic triangle = "woman") + KUR (schematically drawn mountains = "mountains, foreign land") = GEME^{2} "slave woman" (slaves were frequently foreign captives). As the system evolved, one (or more) of the combined signs might be inscribed within another, as in GU^{7}, or the combined signs might be written side-by-side, as GEME^{2}.

This originally pictographic basis accounts for two characteristic features of cuneiform writing—polyphony and homophony. On the one hand, a given sign may have two or more readings (e.g. /DU/ and /GUB/ for DU). On the other, there may be several signs that have the same reading (e.g. GU^{4} and GU^{7}; the subscripted index number is the scholarly convention for distinguishing homophonic signs in transliteration). The latter phenomenon was exacerbated both because the Sumerian language had a large number of homophones (perhaps distinguished by tone), and because final consonants often drop in Sumerian in word final position (e.g., GU^{4} is /GUD/ when followed by a vocalic affix).

The signs on the earliest archaic tablets (Stage IV) were *drawn* in the clay, a relatively slow and cumbersome procedure. By archaic Stage III, signs were beginning to be composed out of individually *impressed* strokes. Impression was both rapid and efficient, and imparted the characteristic wedge-shaped head to each stroke in a sign: the wedge was formed by the tip of the stylus, and the trailing line by the stylus's sharpened edge (Green 1981: 351–59). The replacement of drawing by impression quickly led to the signs' loss of pictorialness; within a few centuries of writing's invention, most signs bear little, if any, resemblance to their pictographic antecedents. Other developments obvious from Fig. CUN.01 are the broadening of the wedge at the head of each stroke, the diminution in the number of strokes per sign, the restriction of the possible angles at which a given stroke could be made, and later in Assyria, the resolution of certain groups of angular wedges *(Winkelhacken)* into parallel horizontals (Labat 1988: 1–7). The absolute number of cuneiform signs also declined over time, but not as much as previously thought. A well-educated scribe in 3000 B.C. would know ca. 770 nonnumerical signs; 2300 years later, an Assyrian scholar could be familiar with as many as 600 signs. Although a certain number of signs fell out of use through obsolescence or coalescence with other signs, there was also, over time, a certain amount of differentiation of one sign into two, and the creation of new compounds.

It is immediately apparent from Fig. CUN.01 that the proper orientation of the pictographs is 90 degrees to the right of the normal orientation of the signs in later periods. The motivation and the time of the shift in direction is disputed, but it certainly occurred on tablets by the last centuries of the 3d millennium. Monumental inscription on stone, in keeping with its more solemn and archaizing character, was written to be read in the original orientation well into the 2d millennium (*RLA* 5: 546–67, Powell 1981). In the following discussion, even archaic tablets will be described as if held in the later, "normal" orientation.

Tablet format has an important semiotic as well as organizational role. The use of position, spacing, and horizontal and vertical rulings can convey information not made explicit by the signs alone, and can ease interpretation and help avoid or resolve ambiguities. Although some archaic tablets contain only a few signs deployed on an undifferentiated surface, most already enclose words or phrases in rectangular cases. On larger tablets, these cases can be arranged in vertical rows or columns, read from top to bottom, beginning at obverse left. The tablet was turned on its horizontal axis, and at least by 2500 B.C. but probably earlier, the columns on the reverse were read from right to left. An experiment in very complex columnar subdivisions was abandoned after archaic Stage III (Green 1981).

Within each case, signs originally could be arranged haphazardly, but by ca. 2450 their arrangement, from left to right, corresponded to the order in which they were read. By ca. 2300, the boxlike cases began to evolve into the horizontal lines that are standard by the end of the 3d millennium. The scribes were afflicted with a *horror vacui* at line's end, and spaced the signs on a given line so that the last sign would rest up against the right margin. Words were never broken at the end of a line; if a scribe reached the right margin before finishing a word or a phrase that he wanted to complete on one line, the line would be continued below, indented to the right.

Whereas a pictographic system can adequately represent concrete objects and, as shown above, express certain abstract notions, a writing system in which every word was represented by a different sign would be quite unwieldy. Furthermore, a system with over 700 signs that could give no clue to their reading

would be difficult to learn and use. And grammatical features necessary for complete linguistic representation cannot be expressed by a writing system whose individual signs represent lexemes only. The early emergence of rebus phoneticism solved these and other problems, and was essential to the successful development of the cuneiform system. On the lexical level, a sign TI (Fig. CUN.01), originally a picture of an arrow (Sum TI), could be used to write the nearly homonymous abstract verb TIL "to live." As a phonetic indicator, the sign MA (a type of fruit) was combined with an animal head to indicate the final /*m*/ for the reading as Sum ALIM "bison" (Green and Nissen 1987: 174), or the sign EN is inscribed in GA ^{2} to create the sign for Sum MEN "crown" (Green and Nissen 1987: 245). This separation of phonetic from semantic content then made it possible to use, say, GA (Sum GA "milk;" pictogram originally a milk jar) to write the Sum verbal prefix GA- "let me," or RA (Sum RA "to strike") to write the dative postposition (possibly incipient at archaic Uruk; see Green and Nissen 1987: 264).

Another aid to distinguishing and reading the signs is the semantic classifier or determinative, a sign set before or after the sign that it classifies to indicate the semantic category to which the sign belongs. Thus GIŠ (Sum "tree, wood") is set before the sign(s) for a tree or wooden object, and KI (Sum "place") follows a toponym. The use of such determinatives is already well attested in the archaic texts from Uruk (Green 1981: 360).

B. Linguistic, Geographic, and Generic Extension

The possibility of using cuneiform signs to express phonetic syllables divorced from any semantic meaning, that is, as syllabograms rather than logograms, created the potential for using the cuneiform writing system to phonetically write languages other than the Sumerian language for which it was originally invented. The first non-Sumerian words to be written, were, no doubt, personal names and toponyms, people and places whose names were not Sumerian but had to be included in the records of the bureaucracies in Babylonia that utilized cuneiform. Some of these names were Semitic; Semitic-speaking peoples were in Babylonia from at least the early 3d millennium, and by 2500 B.C., 50 percent of the scribes known from Abu Salabikh (near Nippur) bore Semitic names, and another thirty Semitic names are known from the Fara tablets (Biggs 1988, Westenholz 1988). A few administrative and literary texts from Abu Salabikh seem to have been meant to be read in Semitic.

The earliest significant corpora of connected texts written in Semitic are arrested from ca. 2400 B.C. at Mari, on the Euphrates near the present Syro-Iraqi border (Charpin 1987), and Ebla in northwestern Syria (see the bibliographies in Cagni 1987, Krebernik 1988). But although personal names and the Semitic words in the bilingual Sumero-Semitic word lists found there are written phonetically, connected Semitic texts rely heavily on Sumerograms, Sumerian logograms meant to be read as Semitic, supplemented by phonetically written Semitic prepositions and pronouns. The language of the Semitic texts and names from Syria and Babylonia ca. 2500–2400 B.C. seems to form "an unbroken linguistic continuum, a cluster of closely related dialects, despite the numerous local peculiarities" (Westenholz 1988: 101). It is closely related to, but not identical with, the Old Akkadian that emerges in Babylonia ca. 2350.

The Semitic Old Akkadian texts known from the time of Sargon of Akkad and his successors in Babylonia (Gelb 1961), in contrast to the Presargonic Semitic texts, write most nouns and nearly all verbs phonetically. A paradigm for writing Akkadian was established that persisted in all subsequent periods: phonetic representation using a restricted corpus of monosyllabic signs, supplemented by a limited number of Sumerograms representing very common terms, such as "king" or "earth," legal and administrative formulas, and technical terms. The major exception is the high frequency of logograms found in certain categories of Akkadian technical literature, especially in the 1st millennium, where the use and spatial deployment of the logograms makes the texts much easier to scan than they would be if written phonetically.

Despite the large number of signs known by academic scribes in any given period or center of cuneiform literacy, the number of signs that a scribe needed to master for everyday purposes was relatively small. There are no studies of how many signs were normally employed by, say, a clerk writing in Sumerian under the 3d Dynasty of Ur (ca. 2100–2000 B.C.), but an OB or OA scribe writing Akkadian could function well with 100–150 signs, and manage to get by with even less (*RLA* 5: 561–62; Larsen

1989: 132–33). Each period and region has its own particular syllabary, or selection of signs, and orthographic practices.

By the middle of the 2d millennium B.C., several of Mesopotamia's neighbors had adapted the Akkadian syllabary together with Sumerian logograms to write their own languages. These include the Elamites in southwestern Iran; the Hurrians, spread in an arc stretching from the Zagros in the east to the Taurus and the Mediterranean in the west; and the Hittites, who controlled a large empire from their capital in central Anatolia. From the early 2d millennium, but especially between 1500–1200 B.C., cuneiform Akkadian was the lingua franca of the Near East and was used regularly in diplomatic communications between capitals and between rulers and their vassals. It was also the language of local law and administration in such non-Akkadian speaking milieux as Mari, Alalakh, Ugarit (alongside Ugaritic), and Emar.

In the first millennium, Sumero-Akkadian cuneiform was used to write other languages only in Elam and Urartu. In Syria and Palestine, cuneiform, stylus, and clay tablets were replaced by the easier-to-learn alphabet, pen, and ink, and papyrus or leather, a process that was occurring in Mesopotamia as well. The change in writing system and medium was accompanied by a change in language, as Aramaic took over the role that Akkadian had played in the preceding millennium.

The earliest cuneiform texts are the records of the bureaucratic organizations whose needs spawned the writing system, and the lexical lists necessary to educate the scribal bureaucrats who used the system. These early records have been aptly characterized as aide-mémoire (Bottéro 1987: 89–112); they listed quantities, commodities, individuals, and sometimes operations, but depended on the user's prior knowledge of context and procedures to ascertain the relationships between those elements. It was only the systematic development of phonetic writing to express the grammatical elements of language that made written literature, letters, and commemorative inscriptions possible. This began ca. 2600, but the earliest literary texts (mainly from Abu Salabikh) are hardly intelligible unless a later version of the same composition exists, and many are written in a peculiar allographic orthography that is only partially deciphered (*RLA* 7: 36–37, Krebernik 1984: 267–86). Full or nearly full expression of grammatical elements, and long, complex narrative texts, begin ca. 2400. Technical and scientific topics (e.g., omens, ritual compendia, astronomy, mathematics, medicine, glassmaking, and grammar) first find written expression in the 2d millennium.

Sumero-Akkadian cuneiform inspired two completely new and radically simplified writing systems utilizing configurations of wedges impressed on clay tablets. From the mid- to late 2d millennium, a cuneiform alphabet, known chiefly from Ugarit, was used to write Ugaritic and other Semitic languages in Syria and Palestine, and presupposes the existence of a linear alphabet (Dietrich and Loretz 1988). In the middle of the 1st millennium, the Achaemenid Persians developed a cuneiform syllabary of 36 signs and 6 logograms for writing Old Persian, which they used for commemorative purposes only; their administrative records are in cuneiform Elamite or alphabetic Aramaic (*RLA* 5: 563–65).

C. Decipherment

Cuneiform first drew the attention of Europeans through artifacts and reports brought back by 17th and 18th century visitors to the Near East, especially Persepolis, the ancient Persian capital. Copies of Achaemenid royal inscriptions on stone were circulated, and it was soon established by formal criteria that some were trilingual. One of the three languages was written in a much simpler writing system, which by the early 19th century was correctly assumed to be the Old Persian language of the Achaemenids. The first steps toward decipherment were taken by the Göttingen scholar Georg Friedrich Grotefend (1775–1853). Substantial progress could be made only when a sufficiently long inscription was found and copied. This was accomplished by the Englishman Henry Rawlinson (1810–1895), who copied the inscription of Darius I on the cliffside at Bisitun. In 1848 he published his decipherment of the Old Persian version, and by the mid-1850s the third language of the inscriptions, Akkadian, had been deciphered through the efforts of Rawlinson, the Irishman Edward Hincks (1792–1866), and the Frenchman Jules Oppert (1825–1905). This was possible only when it was realized that Akkadian was written both syllabically and logographically, and that syllabic Akkadian writing was both polyphonic and homophonic. Because Akkadian was revealed to be a member of the well-known Semitic language

family, rapid progress in decipherment followed, in turn facilitating the decipherment of cuneiform texts in a variety of languages during the following decades (Friedrich 1957).

The second language of the Achaemenid inscriptions, Elamite, is without any known relation and is still only imperfectly understood. Sumerian, whose existence was established only after study of the tablets excavated by the British at Nineveh, also has no known cognate languages, but its decipherment was aided by the large corpus of Sumero-Akkadian bilingual literary and lexical texts. Hurrian and Urartian, related to one another, are still far from completely understood, after a century and more of study. Cuneiform Hittite was deciphered in 1915—less than a decade after the first lot of tablets was excavated—by the Czech scholar Bedrich Hrozny (1879–1952). The decipherment of Ugaritic was even more rapid. Soon after the first tablets were discovered by French excavators in 1929, independent decipherments were offered by the French Scholars Charles Virolleaud (1879–1968) and Edouard Dhorme (1881–1966) and the German Theo Bauer (1896–1957). The first Eblaite tablets were published by the Italian scholar Giovanni Pettinato after their discovery in 1974, and work on them has been continued by him and other scholars (Friedrich 1957, Cagni 1987).

D. Myth of Origin and Divine Patrons

The invention of cuneiform is the subject of an episode in the Sumerian epic tale *Enmerkar and the Lord of Aratta* (Cohen 1973). Enmerkar, mythical ruler of the Sumerian city of Uruk, whose historical prototype would have ruled ca. 2700 B.C., demands submission and tribute from the ruler of the distant Iranian city of Aratta, rich in the natural resources that Sumer lacked. Enmerkar's demands are communicated in a series of long messages delivered by a courier. When one message is too long for the courier to remember, Enmerkar invents "writing on clay tablets" to assist him. When the ruler of Aratta was given the tablet he grew angry, because, as H. Vanstiphout has shown (1988: 159), "the words were [just] nails."

This native etiology of writing is implausible, since we know that the earliest use of writing was for information storage, and it was only after many centuries that it was used for long-distance communication (letters). Interesting, however, is that the ancients perceived the wedge shape of the cuneiform signs as moderns do. Before "cuneiform" became a standard term, "nail writing, *Nagelschrift*" were sometimes used, and the equivalent still is in Dutch *(spijkerschrift)* and several other languages (*RLA* 5: 544).

The Sumerian god of wisdom was Enki (Akk Ea), but writing proper was the domain of the goddess Nisaba, tutelary deity of scribes and the scribal academy. By the first millennium, this role had been transferred to the god Nabû, whose emblems were the scribe's stylus and tablet.

E. Cuneiform in Palestine

Although the Hebrew Bible seems not to have recognized cuneiform writing as a phenomenon worthy of particular mention, cuneiform was a fact of life in Palestine from at least the 18th century B.C. to the period of Assyrian domination in the 7th–6th centuries B.C. Biblical authors or redactors might have seen it used by Assyrian officials, such as the two damaged scribes on Sennacherib's relief celebrating the capture of Lachish (Ussishkin 1982: 86–87), or would have surely come across some of the stelas erected by Assyrian kings to celebrate their victories.

It is surprising how little has been found in Palestine: working from Jucquois' list (1966: 32–36), for example, and adding more recent finds, we can estimate that there are between 85 and 100 tablets known to have originated in Palestine in the 2d millennium, but only 32 from that same period have actually been found there. A complete inventory of cuneiform artifacts found in Palestine can be found in Galling (1968: 13–14 and 61). Subsequent finds and bibliography are Rainey 1975, and Owen 1981 (Aphek); Shaffer 1970 and Becking 1982 (Gezer); Hallo and Tadmor 1977 (Hazor); Anbar and Na'aman 1986 (Hebron); Sigrist 1982 (Keisan); Böhl 1974 (Shechem); and Glock 1971 (Ta'anach).

At present, it cannot be determined if Ebla represented the extreme southwestern corner of the cuneiform world in the mid-3d millennium B.C., or if the prolific use of cuneiform known there extended southward as far as Palestine. The earliest cuneiform found in Palestine dates to the 18th to 16th centuries B.C., contemporary with the Mari archives and the later tablets from Alalakh level VII, which correlates

well with evidence from Mari showing Hazor to be a participant in a vast network of diplomatic and commercial relations reaching as far east as Babylonia and Elam. Only four or five tablets and an inscribed liver model used for extispicy have been found from this period, at Gezer, Hazor, Hebron, and possibly Shechem, as well as some seals and a jug with a name scratched on its side in cuneiform. But certain of these materials—legal and scholarly texts—never occur as isolated artifacts, and we can safely assume that there were multiple centers in Palestine where cuneiform Akkadian was, as at Alalakh, the language of legal, administrative, and business documents.

The same mix is found in much larger numbers for the first half of the 2d millennium B.C. Twenty-seven tablets of this period have been found, the bulk of which are from Aphek (8) and Ta'anach (13), with others from Gezer, Hesi, Jericho, and Megiddo. To these must be added the letters of Palestinian vassals found in the Egyptian archive at Amarna. Again, we must imagine situations similar to Alalakh, Ugarit, or Emar. We know that at Ugarit the local language, written in a cuneiform alphabet, was used for many of the same purposes as Akkadian. A small number of alphabetic cuneiform tablets have been found in Palestine (Dietrich and Loretz 1988), and one wonders to what extent letters and documents were executed there in local languages, in either cuneiform or linear alphabetic writing.

Cuneiform was not an element of the new cultural paradigm that emerged after the upheavals in the Levant at the end of the 2d millennium B.C. Its reappearance in Palestine coincided with Assyrian domination in the 8th–7th centuries B.C., exemplified by the stela fragments of Sargon II of Assyria found at Ashdod and Samaria. Four legal and administrative tablets were found at Gezer, Keisan, and Samaria, and at the last, an inscribed bulla with the Assyrian royal seal was excavated. Significantly, no school texts were found, suggesting that cuneiform was a device of the conquerors not much propagated on Palestinian soil.

JERROLD S. COOPER

CURSE. A term associated with a substantial semantic range of concepts and vocabulary in the Bible. The English verb "to curse" renders several Hebrew words *(ʾārar, qālal, ʾālâ, heḥĕrîm, nāqab, qābab, bārak* [a euphemism, lit. "bless"]), and Greek verbs *(kataraomai, anathematizō, katanathematizō, kataraomai, katalaleō).* The English noun "curse" may render any of the Hebrew nouns *ʾalah ḥerem, meʾērāh,* and *taʾalah,* as well as the Greek nouns *katara, epikataratos, anathema,* and *katathema.* We may summarize the predominant usage of the various verbs as follows: to curse is to predict, wish, pray for, or cause trouble or disaster on a person or thing. Correspondingly, the predominant noun usages may be summarized in the following manner: a curse is the expression of such a prediction, wish, prayer, or causation; or the result thereof; or, rarely, the object (person or thing) thereof.

In the Mosaic Law, one means of divine enforcement of the covenant stipulations incumbent on Israel was the curse. Leviticus 26 and Deuteronomy 28–32 contain the sanctions portions of the covenant structure relative to their respective statements of the Law, and in these passages much is made of the many types of curses that will attend the Israelites if they abandon the covenant. Twenty-seven types of curses are found in these contexts, representing virtually all the miseries one could imagine occurring in the ancient world (Stuart *Hosea-Jonah* WBC, xxxi–xlii), but these may be summarized by six terms: defeat, disease, desolation, deprivation, deportation, and death. Such curses are warnings of what God will cause to happen to Israel if they sin. Thus, Jeremiah speaks of the curse that attends the Law (e.g., Jer 11:3) as does Paul (Gal 3:13), with the ultimate curse being that of death, as Rom 6:23 implies. The close relationship between covenant and curse led to a metonymic use of "curse" for "covenant" in Deut 34:12 and Zech 5:3.

As the arbiter of values, God was free to curse those who offended him. Human beings did not have that prerogative. Cursing by people could have serious consequences for themselves depending on who or what it was they had cursed. Cursing one's parents (Exod 21:17; Lev 20:19), the handicapped (Lev 19:14), a king (because he is God's anointed; 2 Samuel 16), or God (Lev 24:11–24) were all crimes or sins punishable by death. In such cases it was the object of the curse that made it wrong rather than the process; pronouncing harm on the innocent was forbidden; pronouncing harm on the evil was appropriate. Thus prophets could utter a curse sinfully (e.g., Balaam against Israel; Num 22:6–17) or righteously (e.g., Joshua on Jericho and Gibeon; Josh 6:26 and 9:23) depending on the object.

It was assumed in ancient times that curses derived their power from the gods (1 Sam 17:43). Merely expressing negative wishes had little force. For the orthodox Israelites, whose God Yahweh was universally sovereign (Gen 12:8, 9; Exod 9:14; Ps 95:3; Amos 1–2), no curse could have effect without

Yahweh's superintendence, including that of a foreign or false prophet (Num 23:8). Yahweh could turn a curse against its speaker (Gen 12:3; 27:29) or turn a curse into a blessing (Deut 23:5). In the latter sense he is said by Paul to have made Christ "a curse for us," i.e., a blessing via his taking the penalty of the Law's curse upon himself in his crucifixion (Gal 3:13).

God's word is his deed; it was inconceivable to orthodox believers, whether Christian or Jew, that what God ordered or predicted would not come true either instantly or according to whatever timing he chose. His curses dominate nature (Gen 3:14, 17; Isa 24:6; Mark 11:21) and nations (Gen 9:25; Jer 24:9). They can affect the family (Prov 3:33) or the individual (Matt 25:41; Acts 5:1–11).

When a divine curse has been announced as generally applicable (e.g., Deut 11:26, "I set before you this day blessing and curse …") violators of the warning automatically bring upon themselves the miseries implied in the curse (Deut 28:15; Zech 5:1–4; 2 Chr 34:24). Indeed, whenever God so chooses, he may as a punishment bring the intended effect of a curse upon the very individual who uttered it against someone else (Gen 27:12, 13; Ps 109:17).

Curses could accompany any sort of covenant, as part of the oaths made to bind all parties. Individuals who then broke such covenants would be subject to the curses they had agreed to in binding themselves to the covenant (Judg 21:18; Neh 10:29; cf. Matt 26:74; Acts 23:12). A ceremony related to the covenant of marriage could involve the uttering of curses as a part of the process of determining marital infidelity (Num 5:18–27).

Individuals could compose their own curses against other individuals, desiring thereby to hurt them (Job 31:30). They could, as well, give strength to a promise (Gen 34:41) or a legal testimony (1 Kgs 8:31) by an oath.

Words involving the Hebrew root *ḥrm* are sometimes translated "curse" in the sense of a thing banned or made off-limits from society, thus bringing a curse upon the person who breaks the ban and makes contact with it. In so-called Holy War, the enemy and anything belonging to him was *ḥerem*, off-limits, and under penalty of death could not be taken as plunder by victorious Israelite soldiers (Josh 7:1, 12; 1 Sam 15:23). The curse of Mal 4:6 uses the term *ḥerem* in reference to the fate of the land if the future Elijah is not heeded, implying that those who reject the word of God will suffer the same fate as did those who violated the ban in Holy War, i.e., death.

Because cursing was intended to produce negative results, the notion of reversal of cursing in the NT conveys the sense of the dawning of a new age of behavior and expectations. Jesus' teaching, "Bless those who curse you" (Luke 6:28), called for a reversal on the part of his followers of millennia of tradition about personal response to cursing. Revelation 22:3 predicts the cessation of "the curse," i.e., the results of the Genesis fall (sin, disease, death).

CUSH (PERSON) [Heb *kûš* (כּוּשׁ)]. CUSHITE. Two persons in the OT bear this name.

1. The son of Ham, and father of Seba, Havilah, Sabtah, Raamah, Sabteca, and NIMROD (Gen 10:6–8). This Cush is the eponymous ancestor of the Cushites, but also apparently of a Mesopotamian group, given the relationship to Nimrod in v 8. Thus, in addition to the Ethiopian Cush, Cush has been seen as the

ancestor of the Kassites (Gk *Cossaea*), who ruled Babylon until the 12th century B.C. (*Genesis* 66, 72) or of the *Kash,* who conquered Babylon in the 18th century B.C. (*Genesis 1–11* TBC, 119).

2. Benjaminite mentioned in the superscription of Psalm 7 as the person whose activity gave occasion for the composition of the psalm. The LXX reads *chousi* (Heb *kušî*), which may indicate a relationship with 2 Samuel 18:21–32, where the messenger who brought to David word of the defeat and death of Absalom is called *kušî* eight times. This name has been understood as a gentilic, "the Cushite," with no Israelite tribal affiliation. Kyle McCarter, Jr. (*2 Samuel* AB, 402, 408) points out that, in the MT, the second of these eight occurrences of *kušî* does not employ the definite article (thus treating *kušî* as a proper name, Cushi), and that the LXX, Syr, Vg, and Tg. treat *kušî* in all eight occurrences, not as a gentilic, but as a personal name. His conclusion is that it is not impossible to identify the "Cush" of Psalm 7 with "the Cushite" of 2 Samuel 18. Against this view, the "Cush" of Psalm 7 has generally been understood as an enemy of David, e.g., Dalglish (*IDB* 1: 751) describes him as a "calumnious foe of David." This understanding of Cush clearly does not fit the Cushite of 2 Samuel 18, who is no enemy of David, but only a messenger to David from Joab. However, the idea that Cush is David's enemy is based, not on the superscription itself, but rather on the content of the psalm. The superscription reads, "A Shiggaion of David, which he sang to the LORD concerning (Heb *ʿal dibrê*) Cush a Benjaminite." Taken in its plain sense, *ʿal dibrê* means "upon [because of] the words of …" So translated, Psalm 7 does not imply an antagonistic relationship of Cush to David, but only states that Cush's words provided the impulse for the composition of the psalm.

SIEGFRIED S. JOHNSON

CUSHAN (PLACE) [Heb *kûšān* (כּוּשָׁן)]. In the description of a theophany in which Yahweh comes in wrath (Hab 3:3–15), two specific places are pointed out as being distraught, "the tents of Cushan" and "the tent curtains of Midian" (Hab 3:7). The tent dwellings indicate nomads, and such were the Midianites. They are associated with several areas to the S and E of Israel (Gen 37:28, 36; Num 10:29–30; 22; 25). Since this mention of Cushan is unique in the Bible, evidence concerning its location is usually sought elsewhere.

Cush in the OT often is associated with S Egypt and Ethiopia (Gen 10:6; 2 Kgs 19:9), but this appears to be too far S for the context in Habakkuk. Cush is also associated with a more northerly location in its association with the Gihon, one of the four rivers flowing from Eden (Gen 2:13). This seems to place it in the area of Mesopotamia or N Syria. This is also the place of origin of one of Israel's oppressors during the period of the judges, Cushan-rishathaim (Judg 3:8, 10), whose name includes the word under discussion. He comes from Aram-naharaim, "Aram of the two rivers," in the area of the Upper Euphrates and Habur rivers (*MBA,* 4).

Earlier in the 2d millennium B.C., Mesopotamia was controlled by the Kassites (Akk *kaššu;* Gadd *CAH*^{3} 2/1: 224–27; Drower *CAH*^{3} 2/1: 437–44; Gadd *CAH*^{3} 2/2: 34–44). They are referred to in the Amarna Letters from the 14th century B.C. as *kaša/u.* These people could also be those referred to as the *kwšw* "Cush," in an Egyptian execration text (Cazelles *POTT,* 13). In inscriptions of Ramesses II and Ramesses III, reference is made to *qsn-rm,* "Kusan-rom" in N Syria (Edgerton and Wilson 1936: 110; cf. *ARI,* 205, n. 49). The site is not identified, but it fits in the same area as the other pieces of evidence.

The trouble with these identifications is that the Habakkuk reference to Cushan seems to place it to the S of Israel in the Sinai and Red Sea area based on the allusions to the Exodus events (3:3–15). Cushan could be either an alternative name for the Midianites, or a subgroup of them. They seem to have such names or subgroupings elsewhere as well (Gen 37:27, 28, 36; Judg 8:24; see Baker *Nahum, Habakkuk and Zephaniah* TOTC, 72). If the name is to be understood as indicating an ethnic group rather than a geographical location, it might be expected to occur in association with any number of locations which were within the scope of nomadic travel. Therefore locations in the Sinai and in N Syria are not mutually exclusive.

DAVID W. BAKER

CUSHAN-RISHATHAIM (PERSON) [Heb *kûšan riš‹ātayim* (כּוּשַׁן רִשְׁעָתַיִם)]. A name which appears in the OT only at Judg 3:7–11, telling how in the Judges period Yahweh sold the Israelites into the hand of Cushan-Rishathaim, king of Mesopotamia (Heb *›ăram nahărāîm*), from whom, after eight years' servitude, they were delivered by Othniel the son of Kenaz, Caleb's younger brother. According to Josh 15:16–19 and Judg 1:12–15, Caleb took Hebron for himself and Othniel captured Debir. Othniel thus belonged to S Judah. In view of this, and because it seems unlikely that this minor figure attacked and defeated a king from N Syria, many scholars have located Cushan (by minor emendation) in Edom, not Aram, excising *nahărāîm* as a gloss (Malamat 1954: 232). The name *riš‹ātaîm* was explained in talmudic tradition as meaning "of double wickedness" (Malamat 1954: 232). Marquart (1896: 11), however, explained it as *rôš ‹āṯaîm*, "chief of 'Athaim,' " a name he took from the LXX version of the Chronicler's rendering (1 Chr 1:46) of Hadad's city Avith (Gen 36:35). Gray (*Joshua, Judges and Ruth* NCBC, 214–15, 260–61), proposed *rôš hattĕmānî*, "chief of the Temanites"; compare the association (Hab 3: 7) of the name "Cushan" with the land of the Midianites. However, while it seems likely that Othniel was involved with some more local opponents than one from N Syria, these suggestions remain speculative, and even if the compiler of the collection of deliverance stories in Judges wrote Edom where Aram (-naharaim) now stands (Judg 3:8, 10), he may not have had any reliable information at hand. Further, the emendation from "Aram" to "Edom" remains doubtful; if the story was composed, as Mayes (*IJH,* 311) suggests, to give an example of God's saving activity by way of introduction to other such stories of deliverance in Judges (and perhaps to provide a suitable deliverer for the tribe of Judah), then the author may have intended to write "Aram," not "Edom," in which case we can draw nothing of any significance for 12th–11th century B.C. Edom from the story. Accepting the reading *Ăram-nahărāîm*, Malamat (1954: 231–42) proposes to identify Cushan-Rishathaim with a certain Arsu or Irsu, a Syrian ruler mentioned in Papyrus Harris 1/75: 1–9 (*ANET,* 260), who, according to Malamat, seized the Egyptian throne in an anarchic period at the end of the 19th Dynasty, about 1200 B.C. The identification of Cushan with Irsu, however, seems highly speculative. E. Taübler (1947: 136–42) argued that the name "Cushan-Rishathaim" derives from a literary attempt to associate the Midianite Cushan with Babylon (the home of wickedness) and so to bring Cushan into contempt. More prosaically, R. Boling (*Judges* AB, 81) suggests that the place name Aram-naharaim results from the mistaken redivision of an original *›rmn hrym*, "fortress of the mountains"; but where was this? The identity of Cushan-Rishathaim and his connection, if any, with Edom remain totally obscure.

J. R. BARTLETT

CUSHI (PERSON) [Heb *kûšî* (כּוּשִׁי)]. The name "Cushi" appears to be cognate with the personal name "Cush," the eponymous son of Ham (Gen 10:6–8; 1 Chr 1:8–10), and the unknown personage mentioned in the title of Psalm 7. It is also conceived to be a geographical or ethnological term in Isa 11:11. The term *kûšî* is used not only as a proper name but also as a *nomen gentilicium* (2 Sam 18:21–23, 31–32). The feminine form "Cushite" (Heb *kūšît*) appears twice in Num 12:1, which the Gk renders *gunè tēs aithiópissēs.*

1. The great-grandfather of the princeling Jehudi. This courtier was dispatched to summon Baruch, the amanuensis of Jeremiah, to appear before the royal cabinet and to read the words of the scroll which Jeremiah had dictated and which Baruch had just read to the people (Jer 36:14). In the enjoinder the ancestry of Jehudi is traced back to the third generation, to Cushi, his great-grandfather, a fact which indicates both the aristocracy of his family lineage and the importance of the assigned mission.

2. The father of Zephaniah, the Judean prophet. The genealogy of the prophet Zephaniah is traced back some four generations to Hezekiah, presumably, the king of Judah. This superscription is unique in the

presentation of what appears to be a royal lineage of the prophet. The importance of Cushi can be measured from the above implications suggesting a place in the Judean aristocracy and a deeply committed religious personality. Unfortunately, beyond this, we know no further details of his life.
EDWARD R. DALGLISH

CUTH (PLACE) [Heb *kût* (כּוּת)]. Var. CUTHAH. A city in S Mesopotamia (2 Kgs 17:24). Inhabited continuously at least from the 3d to the 1st millennia B.C., this city is best known as the center for the cult associated with the realm of the dead and the chief deity of the Mesopotamian underworld, Nergal. The name "Cuthah" (Heb *kûtâ;* Sum *Gu-du-a,* of unclear etymology) itself may be used in Akkadian as a name for the underworld. The modern Tell Ibrahim, 20 miles NE of Babylon, seems the most likely location for Cuthah, but since extensive excavations have not yet been undertaken, information about Cuthah comes primarily from written sources outside the city. (For further discussion, see Edzard and Gallery *RLA* 6: 384–7.)

When Assyria subdued rebellions in both Israel and Babylonia in the 8th century B.C., the conquered populations of these two lands were resettled elsewhere in accord with Assyrian policy, the Cuthites being relocated 500 miles westward to the territory of subdued Israel and its former capital Samaria (2 Kgs 17:24). Even after being settled in Israel, the former inhabitants of Cuthah continued to venerate their patron deity Nergal (2 Kgs 17:30), presumably maintaining the cult associated with the dead and the underworld with which he was associated. The Assyrian king who was responsible for the deportation of the Cuthites may have been Sargon II if the Babylonian rebellion is to be associated with that of the Merodach-baladan of 2 Kgs 20:12–19. The designation "Cutheans" was later employed by Jews in the first centuries A.D. as an insulting epithet to describe the Samaritans who lived in the region centering on Samaria (Josephus *Ant* 9.14.3; *b. Qidd.* 75–76; *b. Ḥul.* 5b–6a) where the exiles from Cuthah had been settled by the Assyrians.
SAMUEL A. MEIER

CUTHA (PERSON) [Gk *Koutha* (Κουθα)]. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (1 Esdr 5:32). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (see Ezra 2:52; Neh 7:54). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.
MICHAEL DAVID MCGEHEE

CYAMON (PLACE) [Gk *Kyamōn* (Κυαμων)]. Site mentioned in the book of Judith whose exact location is unknown (Jdt 7:3). The verse places it in the vicinity of Esdraelon. It has been identified with modern Tell Qeimon (M.R. 160230), which is located near Geba, on the slopes of Mount Carmel, at the N end of the plain of Esdraelon. It is possible that the name "Cyamon" is a corruption of the Hebrew name "Jokmeam" (Heb *yoqmŏʿām*), which appears at 1 Kgs 4:12 as part of the boundary list for one of Solomon's tax districts. Jokmeam is also identified with modern Tell Qeimon, so the hypothesis that Cyamon is a corruption of Jokmeam is plausible. Of course, given the genre of the book of Judith, it is possible that the name is fictitious.

A. Historical Outline

1. Early Cynicism. Cynicism began in the 4th century B.C.E. with Socrates' student Antisthenes (ca. 446–366 B.C.E.) and thus is one of the Socratic schools of Greek philosophy. There soon followed Diogenes of Sinope (ca. 404–323 B.C.E.) and his student Crates of Thebes, who flourished during the 113th Olympiad (i.e., 328–324 B.C.E.) (D.L., 6.87) and who died as late as 270 B.C.E. (Susemihl 1891: 1.29–30). No Cynics after them ever eclipsed these three as the school's chief representatives (Lucian, *Fug.* 20; Julian, *Orat.* 6.188B), even though Cynic teachings continued to attract adherents for a thousand years. A brief review of these adherents will draw attention to many of these lesser known Cynics and underscore the long history of this important, if not always appreciated, philosophical movement.

Cynicism's early representatives—from Antisthenes on down to about 200 B.C.E.—are conveniently catalogued by Diogenes Laertius, whose sixth book of *The Lives of the Eminent Philosophers* is our principal source for early Cynicism (Mejer 1978: 1–59). The lives of these early Cynics vary greatly in length, but all tend to include some biographical data; anecdotes of their memorable sayings and actions; summaries, or at least samples, of their teachings; and lists of their writings. Not surprisingly, Diogenes Laertius reserves the most space for Antisthenes (6.1–19), Diogenes (6.20–81), and Crates (6.85–93, 98). He emphasizes Antisthenes' attachment to Socrates (6.2) and his role as founder of Cynicism (2.47), a claim which some scholars doubt (Dudley 1937: 1–16) but without convincing others (Höistad 1948: 8–13; Kusch *RAC* 3: 1063). Diogenes Laertius (6.85–86) illustrates Crates' considerable literary talent with snippets of his poetry, such as the description of a Cynic island utopia called *Pēra* "Begging Bag" (Stenzel *PW* 22: 1625–31, Dudley 1937: 42–53). But he reserves the most space for Diogenes and so clearly announces the importance of this follower of Antisthenes. This longer treatment is justified, as Diogenes became, as it were, the second founder of Cynicism, in that he, more than either Antisthenes or Crates, stamped the movement with his personality and continued to be the point of reference for Cynics of all kinds down through the centuries (Gerhard 1912; von Fritz 1926; Kusch *RAC* 3: 1063–67).

Diogenes had many students. In addition to Crates (D.L., 6.85), he attracted Monimus of Syracuse (late 4th century B.C.E., von Fritz *PW* 16/1: 126–27) and Onesicritus of Aegina or of Astypalaea (6.84), though more probably the latter (Brown 1949: 2–4). Diogenes Laertius treats both Monimus and Onesicritus very briefly, even though the latter in particular was of some significance. He knows (6.84) that Onesicritus was both a student of Diogenes and an admiral and historian on Alexander's campaigns to India (Brown 1949; cf. Strasburger *PW* 18/1: 460–67), but only Strabo (15.1.63–65) reports Onesicritus' meeting with Indian philosophers, which may have been the source of a radical asceticism in Cynicism (Höistad 1948: 135–38; cf. Brown 1949: 38–53). And other followers of Diogenes are little more than names to Diogenes Laertius: Phocion (6.76), Menander, Hegesias, and Philiscus (6.84), though he seems to make Philiscus the son of Onesicritus (6.75–76) and knows that Satyrus attributed to him some tragedies of Diogenes (6.80; von Fritz *PW* 19/1: 656–63).

Crates likewise had many students, the most famous of which is Zeno of Gitium (333–261 B.C.E.), who eventually left Crates and started the Stoic school (D.L., 7.2–3). Others include: Metrocles of Maroneia (6.94–95; von Fritz *PW* 15/2: 1483–84) and his sister Hipparchia, who later became Crates' celebrated and unconventional wife (6.96–98; von Arnim *PW* 16: 1662); Monimus, who, as already noted, had been a follower of Diogenes (6.82); and perhaps Bion of Borysthenes (ca. 335–245 B.C.E.; 4.51 and Kindstrand 1976: 10–11). At this point, however, Diogenes becomes ambiguous. Scholars usually assign the next Cynics named by Diogenes—Theombrotus (Modrze *PW* 5A/2: 2033–34) and Cleomenes (von Arnim *PW* 11/1: 712)—to the circle of Metrocles, as they are named immediately after the report of Metrocles' death

(6.95; Zeller 1922 2/1: 286; Helm *PW* 12: 4). But M.-O. Goulet-Cazé (1986) argues plausibly that the material on Metrocles (6.94–95) is merely a digression in the longer treatment of Crates, so that the reference to "students" here still refers back to Crates. If so, then the dates of Theombrotus and Cleomenes must be pushed back to the late 4th–early 3d century B.C.E. Their students—Demetrius of Alexandria (von Arnim *PW* 4/2: 2842), Timarchus of Alexandria (Nestle *PW* 6A/1: 1238), and Echecles of Ephesus (Natorp *PW* 10:1909; 6.95)—thus belong to the 3d century, though they are little more than names. More, however, is said about the last two Cynics named by Diogenes Laertius: Menippus of Gadara (6.95, 99–101, Helm *PW* 15/1: 888–93) and Menedemus (6.95, 102, von Fritz *PW* 15/1: 794–95).

Diogenes Laertius has not catalogued all the early Cynics. For example, he omits such 3d-century figures as Teles of Megara, whose diatribes are partially preserved in Stobaeus (O'Neil 1977), and Leonidas of Tarentum, whose epigrams are preserved in the *Greek Anthology* (A.P. 6.293, 298, for fuller lists of early Cynics, see Zeller 1922: 2/1.281–87; Helm *PW* 12: 3–5). And he is often too brief about those Cynics he does include, as was seen above in the case of Onesicritus. Still, despite these shortcomings, the account in Diogenes Laertius is invaluable, and not only in bringing some chronological order to the various early Cynics. For he has also preserved important early materials—fragments of New Comedy which record public perceptions of Cynics (6.83, 93) and summaries of Diogenes' educational and political views (6.70–73; Höistad 1948: 37–47, 138–46).

In fact, the value of a Diogenes Laertius becomes immediately apparent when trying to write the history of Cynicism after 200 B.C.E., the point at which Diogenes' survey ends. The evidence is so sparse that some scholars have claimed that Cynicism died out in the last two centuries B.C.E. (Zeller 1922: 2/1.287). While this claim is not justified (Dudley 1937: 117–24), the little evidence that remains is difficult to pin down. For example, some of the letters attributed to Diogenes belong, according to V. Emeljanow (1967: 4–5), to these centuries (so *epp.* 1–29 [Malherbe 1977: 92–132]), and some Cynic materials on papyrus may belong to this general period too (Dudley 1937: 123). Only Meleager of Gadara (ca. 135–50 B.C.E.) stands out from this period (Garrison 1978: 71–93).

2. Imperial Cynicism. With the beginning of the imperial period, however, the evidence for Cynicism begins to become more plentiful, though again there is no Diogenes Laertius to catalogue them (the fullest lists are in Zeller 1922: 3/1.793–804; Helm *PW* 12: 5–7). The reemergence of evidence has led some scholars to speak of a revival of Cynicism during the early Empire (Billerbeck 1982: 151–58). At the very least, Cynics begin to appear in the 1st century C.E. with some regularity. To be sure, the evidence is often very brief, sometimes little more than a name (so a Plenetiades in Plutarch, *De def. orac,* 413A) and sometimes not even that (so an unnamed Cynic in *AP* 11.158). The evidence is fuller, however, for those Cynics who got caught up in imperial politics—for example, an Isidorus under Nero (Suet. Ner. 39) and a Diogenes and Heras under Vespasian (Dio Cass. 66.15). But the fullest evidence for any 1st-century Cynic is that regarding Demetrius. He, too, played a role in politics which has continued to fascinate scholars (Dudley 1937: 125–42; Moles 1983). He was also a friend of the Stoic philosopher Seneca, whose letters and essays permit a detailed, if also Stoicized, portrait of Demetrius' habits and teachings to emerge (Billerbeck 1979; Kindstrand; cf. Billerbeck 1982: 158–68).

The fullest documentation, however, awaits the scholar of 2d-century Cynicism. To be sure, many of the Cynics are again little more than names: Agathobulus of Alexandria, the teacher of Demonax (Lucian, *Dem.* 3) and of Peregrinus (Lucian, *Peregr.* 17, von Arnim *PW* 1: 745); Honoratus (Lucian, *Dem.* 19, von Arnim *PW* 16: 2276); Pancrates (Philostratus, *VS* 526); and Rhodius (Lucian, *Tox.* 27). Others, however, do emerge more clearly: Demetrius of Sunium (Lucian, *Tox.* 27–34; Jones 1986: 56), Theagenes of Patras (Lucian, *Peregr.* 3 *et passim,* Jones 1986: 131), and especially Oenomaus of Gadara (Dudley 1937: 162–70). Particularly detailed portraits by Lucian of Samosata of the Cynics Demonax of Cyprus and Peregrinus Proteus are useful, even though the former portrait is largely made up of anecdotes (Lucian, *Dem.* 12–67; Jones 1986: 90–98) and the latter, the *De morte Peregrini*, is a vicious attack (von Fritz *PW* 19/1: 656–63; Jones 1986: 117–32). Hence all the more important for a understanding of 2d-century Cynicism is the extensive evidence about Theodorus, nicknamed Cynulcus, in the *Deipnosophistae* of Athenaeus (1.1d *et passim*); scholars, however, have largely ignored him.

Deserving mention, finally, are many Cynics, who, while not necessarily restricted to the 2d century, seem especially prominent during this period, due in large part to the preservation of many more 2d-century sources. These are the false Cynics whom Lucian in particular attacked; he sometimes lashed out at individuals, such as Alcidamas (*Symp.* 12–14, 16, 19, 35, 44–47), but usually at groups (*Fug.* 12–21; *Pisc.* 44–45; *Vit. auct.* 7–11). And joining Lucian in the condemnation of these Cynics for their abusive, shameless, and greedy behavior which, it was thought, brought reproach on philosophy are Epictetus (*Diss.* 3.22.10–12), Alciphron (*epp.* 2.38; 3.19), and Dio Chrysostom (*Orat.* 32.9) (Malherbe 1970: 204–16; Billerbeck 1978: 1–3, 56–59 *et passim*).

After the 2d century, however, the evidence once again becomes less plentiful, although the emperor Julian is an exception. Writing in the 360s, Julian, like Lucian, is especially bent on attacking Cynics of his day, in particular a Heracleios whose mythmaking Julian found offensive (*Orat.* 7.204A–205A *et passim*). Others who were attacked include an Asclepiades, Serenianus, and Chytron (*Orat.* 7.224D); an Iphicles (*Orat.* 6.198A); and an unnamed Cynic who criticized Diogenes for eating a raw octopus solely for publicity (*Orat.* 6.180D *et passim*).

A century later another Cynic, Maximus of Alexandria, emerges in the record, though in the context of his involvement in ecclesiastical affairs (Dudley 1937: 203–6). And still another century later there is the Cynic Sallustius, who, however, is apparently the last Cynic and who therefore brings an end to the Cynic millennium (Dudley 1937: 206–8).

B. Name

Some people, says Diogenes Laertius (6.13), derive the name "Cynic" (Gk *kynikos*) from Kynosarges, the name of a gymnasium at Athens where Antisthenes lectured. But not only is this derivation linguistically unlikely, it is also historically suspect, in that Antisthenes is the only Cynic associated with this gymnasium and only in traditions claiming this derivation (Antisthenes, *Frag.* 136; see Caizzi 1966: 63). What is more, the derivation seems artificial since it looks like an attempt to establish an architectural locus for the school on the analogy of other philosophical schools—Platonists with another Athenian gymnasium, the Academy; Stoics with the city's colonnade known as the Painted Porch (Gk *stoa poikilē*); and Epicureans with their founder's house in Athens, known as the Garden.

A far more likely explanation—indeed, one that is clearly assumed in other passages of Diogenes Laertius and throughout Greco-Roman literature—derives "Cynic" from *kyōn,* the Greek word for "dog." Hence the term "Cynic" refers to a "doggish philosopher" (Gk *kynikos philosophos*). The specific connotation of the term, however, depends on the characteristics of dogs which were applied to these philosophers. Thus the connotation is positive if the point of the comparison were the desirable characteristics of dogs—their protecting and guarding (Dio, *Orat.* 9.3; Lucian, *Fug.* 16).

But all too often it was the undesirable characteristics of dogs—their constant barking, scavenging, urinating, and mating in public—that lay behind the use of the name "Cynic" (Lucian, *Fug.* 16; Athenaeus, *Deipnos.* 13.611b–d; ps.–Lucian, *Cyn.* 5; Julian, *Orat.* 6.182A). Thus a scholiast on Aristotle's *Categories* explains the term "Cynic" by saying that the prime reason for this designation was these philosophers' *adiaphoria,* their shocking disregard of the conventions of social behavior. Like dogs, the scholiast says, they do such things in public as eat and engage in sex, walk around barefoot, and sleep in large storage jars or at street corners (for the whole text, see Caizzi 1966: 121; cf. von Fritz 1926: 48–49).

And indeed such *adiaphoria* frequently characterizes Cynics in Greco-Roman literature. Lucian refers to Peregrinus' masturbating in public as a demonstration of his *adiaphoria* (*Peregr.* 17; cf. Lucian, *Hermot.* 18). Alciphron illustrates Pancrates' *adiaphoria* by having him urinate and later mate with a flute girl during a symposium (*ep.* 3.19.9). And other examples of such shameless conduct are not hard to find (*AP* 11.153; Quintilian, *Inst.* 4.2.30; Lucian, *Conv.* 46).

Just when the term "Cynic" arose, and precisely with this connotation, however, is difficult to determine. The term, though, is clearly early, as it appears in a fragment of Menander's *Twins* with reference to Crates and in the context of the unconventional marriage to Hipparchia (D.L., 6.93). But the term may well be earlier, originating with Diogenes, if not with Antisthenes (*pace* D.L., 6.13). In any

case, the term is especially associated with Diogenes. His practice of sleeping in a large storage jar (D.L., 6.23) is clearly alluded to in the scholiast's remarks discussed above, and many other traditions only confirm this association. Thus he is depicted as eating in public (D.L., 6.58; *Gnom. Vat.* 196; see Sternbach 1887–89: 79), as urinating and doing other bodily functions in public (D.L., 6.46, 56; Dio, *Orat.* 8.36; Julian, *Orat.* 202C), and as engaging in sex acts in public (D.L., 6.69; Dio, *Orat.* 6.17; ps.-Diogenes, *ep.* 44; Malherbe 1977: 174; Julian, *Orat.* 6.200A). Put more generally and also more delicately, Diogenes Laertius says that Diogenes did the works of Demeter and Aphrodite in public (6.69, 76).

In addition, the tradition has Diogenes taunted with the name "dog" (D.L., 6.61; ps.-Diogenes, *ep.* 2; see Malherbe 1977: 92), or has him thrown bones (D.L., 6.46; Dio, *Orat.* 9.9). Diogenes can also turn these taunts around (Aelian, *VH* 14.33; *Gnom. Vat.* 194; see Sternbach 1887–89: 79), and he can even use the term to express his own self-understanding: "Once when Alexander stood over him and said, 'I am Alexander the Great King,' he said, 'And I am Diogenes the Dog' " (D.L., 6.60; Stobaeus, 2.8.21). No wonder then that the Corinthians adorned his grave with a dog carved in stone (D.L., 6.78; *AP* 7.64; Pausanias, 2.2.4).

C. Appearance and Manner of Life

Not only did the name "Cynic" (and its associated shameless behavior) characterize Diogenes and his followers, but appearance and manner of life characterized them just as much. For example, the Cynic typically wore the poor man's threadbare cloak (Gk *tribōn*), carried a begging bag (Gk *pēra*) over his shoulder, and had a staff (Gk *baktēria*) in his hand. These items seem to have characterized Cynics from the beginning—perhaps Antisthenes himself (D.L., 6.13), probably Diogenes (6.22–23), but certainly his students Monimus and Crates, as the testimony for the last two comes from the near contemporary witness of New Comedy (D.L., 6.83, 93). And from then on this garb is commonplace: Metrocles (Teles, *Frag.* IV^{A}; see O'Neil 1977: 42), Hipparchia (*AP* 7.413), Bion (D.L., 4.51), Sochares (*AP* 6.298), and Menippus (Lucian, *D. Mort.* 20.2). Likewise for the early empire—for example, Demetrius (Seneca, *ep.* 62.3), Demonax (Lucian, *Dem.* 5), Alcidamas (Lucian, *Conv.* 19), and Peregrinus (Lucian, *Peregr.* 15). To be sure, there was some variation: Honoratus wore a bearskin (Lucian, *Dem.* 19), Cantharus a lionskin (Lucian, *Fug.* 33), and Menedemus dressed like an Erinys (D.L., 6.102). Nevertheless, the *tribōn, pēra,* and *baktēria* were so typical (*AP* 11.158; Lucian, *Peregr.* 37; Epictetus, *Diss.* 3.22.10, 50) that Julian called them the *gnōrismata,* the identifying tokens, as it were, of the Cynic philosopher (*Orat.* 6.200D; cf. ps.-Crates, *ep.* 33.2 [Malherbe 1977: 82], and Kindstrand 1976: 161–64).

Of lesser import for, but still characteristic of, Cynic appearance were long hair (ps.-Crates, *ep.* 23 [Malherbe 1977: 72]; Epictetus, *Diss.* 4.8.34; Julian, *Orat.* 6.201A) and beard (ps.-Socrates, *ep.* 9.3 [Malherbe 1977: 246]; ps.-Lucian, *Cyn.* 1; *AP* 11.154). In addition, Cynics often went barefoot (Dio, *Orat.* 6.15; ps.-Socrates, *ep.* 13.2 [Malherbe 1977: 250]; *AP* 11.153) and frequently presented a rather filthy appearance (Lucian, *Vit. auct.* 7; ps.-Socrates, *ep.* 13.2 [Malherbe 1977: 252]; Epictetus, *Diss.* 3.22.89; *AP* 11.156).

But just as characteristic as the Cynics' appearance was their manner of life, and however put, their life was hard. It meant, as Epictetus says, a life without a house, wife and children, or even a bed, an undershirt, or utensil (*Diss.* 4.8.31). It meant a life at the bare minimum, as illustrated by the anecdote told of Diogenes in which he, on seeing a boy drinking water with his cupped hands, threw away the cup in his *pēra* and said, "A boy has vanquished me in living simply" (D.L., 6.37). It meant, in short, a life of constant hunger and thirst, of being cold, and of sleeping on the ground (ps.-Menippus, *ep.* 1 [Hercher 1876: 400]; cf. Dio, *Orat.* 6.8; Lucian, *Vit. auct.* 9; ps.-Crates, *ep.* 18 [Malherbe 1977: 68]). And this regimen was even recommended for the babies and children of Cynic couples (ps.-Crates, *ep.* 33 [Malherbe 1977: 82]).

What little the Cynic really needed was readily at hand. Temples provided shelter (Plutarch, *An vit. ad inf. suff.* 499A), the furnace of a smith provided some heat (Teles, *Frag.* IV^{A}; see O'Neil 1977: 42), the quiet of a shoemaker's shop a place to sit and read (Teles, *Frag.* IV^{B}; see O'Neil 1977: 48). Moreover, drinking water was available at springs or fountains (Athenaeus, *Deipnos.* 10.422c–d; ps.-Socrates, *ep.*

9.2 [Malherbe 1977: 246]), and edible plants grew by the roadside (D.L., 2.68). Usually, though, Cynics got their daily bread from begging—a practice again especially associated with Diogenes (D.L., 6.6, 38, 46, 49, 56, 59, 60, 62, 67) and popular, if not always welcomed, thereafter (D.L., 6.99; Epictetus, *Diss.* 3.22.10; Dio, *Orat.* 32.9; Aulus Gellius, *NA* 9.2.1–11).

To sum up: Half-naked, filthy, exposed to the elements, and living from day to day—no wonder Epictetus cautioned a would-be Cynic from taking up this manner of life (*Diss.* 3.22.1). Indeed, an epigram in the *Greek Anthology* dramatizes the outcome of such a life. The epigram describes the Cynic Sochares' penniless *pēra* and his few other possessions hanging from a bush, the spoils dedicated to the personified deity Hunger (*AP* 6.298).

D. Cynic Teachings

In his apology for Diogenes, the emperor Julian emphasizes the unity of Greek philosophy, in that all the schools can be seen as attempts, say, to carry out the Delphic injunction, "Know thyself" (*Orat.* 6.182D–186A). Still, Julian admits that while Plato did his philosophy with words, Diogenes did his with actions (*Orat.* 6.189A).

Julian's distinction is useful. On the one hand, Cynics often dispensed with many of the intellectual disciplines emphasized in the other schools (ps.-Crates, *ep.* 21 [Malherbe 1977: 70]). Both Antisthenes and Diogenes are claimed to have said that logic and physics, two of the traditional subjects of philosophy, were not necessary, but only the third, ethics (D.L., 6.103). What is more, the study of music, geometry, astronomy, and grammar is ridiculed, and some Cynics had no formal education at all (D.L., 6.27, 73; Lucian, *Fug.* 12; Julian, *Orat.* 6.187D). In this way Cynicism was a shortcut to the happiness which philosophy offered (ps.-Crates, *ep.* 21 [Malherbe 1977: 70]).

On the other hand, the Cynic's manner of life in general and Cynic actions in particular were themselves didactic. Thus the various "doggish" actions discussed above served as illustrations of Diogenes' own Delphic injunction to "alter the currency" (D.L., 6.20–21, 71), to challenge all values and opinions, and to live instead according to nature (Kusch *RAC* 3: 1064). And the simple life also demonstrated, say, the Cynic's claim that he was superior even over Fate (ps.-Diogenes, *ep.* 26 [Malherbe 1977: 118]; Stobaeus, 2.8.21; D.L., 6.93).

And yet, Julian's distinction notwithstanding, Cynicism was more than actions; it, too, had teachings. And, not surprisingly, some of the teachings were as shocking or unconventional as the Cynic's "doggish" actions. Thus Diogenes is held to have advocated having wives and sons in common and to have permitted stealing from temples and even eating human flesh (D.L., 6.72–73; Höistad 1948: 138–49).

Still, Cynic teachings were usually not so shocking as they were sharply critical of misplaced values and human folly. For example: "Diogenes used to say that things of great value were sold for next to nothing and vice versa. At any rate, a statue is sold for three thousand drachmas, but a daily ration of barley for only a couple of copper coins" (D.L., 6.35). Or: "Diogenes observed one of his students associating with scoundrels and said: 'It is absurd that when we wish to sail we select sailors who are our superiors in navigation, but when we decide to live uprightly we choose just anybody to share our life' " (*Gnom. Vat.* 197; see Sternbach 1887–89: 79).

Other Cynic teachings are critical of cooks and feasting (D.L., 6.28, 86), of parasites and courtesans (6.85, 90), of prodigals (6.47), of the rich (6.24), and of tyrants (6.50), and herein lies the principal focus of Cynic teachings: its unrelenting attack on the dominant aristocratic ethos of Greco-Roman society, an ethos that so valued good birth, reputation, and wealth (D.L., 6.72, 104). But it was especially wealth which received censure, as it allowed the satisfaction of every desire and so produced enslavement and immorality (Stobaeus, 3.8.20; ps.-Diogenes, *ep.* 26.5–6 [Malherbe 1977: 122]; cf. Lucian's *Gallus* and *Cataplus*, and Hock 1987: 467–52). Hence the Cynic's wish that his enemies have wealth and a life of pleasure (Lucian, *Gall.* 30; D.L., 6.8), and conversely his praise of toil and poverty which produced a life of virtue—of freedom *(eleutheria),* self-sufficiency *(autarkeia),* and self-control *(sōphrosyne)* (Dio, *Orat.* 7.66; D.L., 6.104; ps.-Socrates, *ep.* 12 [Malherbe 1977: 250]).

E. Impact of Cynicism

1. Cynicism and Greco-Roman Intellectual Life. In the course of a thousand years the Cynics, not surprisingly, had a widespread and, at times, profound impact on those around them. Their impact on other philosophical schools is well known, beginning with Stilpo and the Megarians (Dudley 1937: 95–96). But their influence on Stoicism was especially significant. This influence is natural, as Zeno, the founder of Stoicism, was, as has been said, a student of Crates (D.L., 7.2–3). Cynic features are readily apparent in Zeno's simple life (D.L., 7.16, 27), in his emphasis on living according to nature (6.104), and in his writings (7.4). Thereafter, however, influence varies, in that some Stoics took a Cynicizing direction (so Ariston of Chios according to Diogenes Laertius, 7.37, 160) and others deliberately moved away (so Panaetius of Rhodes according to Cicero, *De fin.* 3.20.68; cf. Dudley 1937: 96–102). In the early empire, though, Cynic influence is once again strong, as is clear in the cases of Attalus, Seneca, Musonius Rufus, and Epictetus (Billerbeck 1982: 156–72).

The impact of Cynicism on Greco-Roman literature is also well known, and particularly influential were the satires of Menippus and the diatribes of Bion (Helm *PW* 12: 15–22). And even if some of the earlier claims of influence of, say, Menippus on Lucian were overstated (Helm 1906), more recent assessments still show clear influence (Hall 1981: 64–150). And the appearance of Cynic anecdotes, usually of Diogenes, in Greco-Roman literature is especially widespread (see the list in Kusch *RAC* 3: 1066). One reason for Cynics being so prevalent in literature is that writers were introduced to Cynics early on, during their school days. Anecdotes of Diogenes have shown up in educational texts preserved on papyri (Collart 1926: 23–24), and the anecdote itself (Gk *chreia*) became a form for exercises in composition called *progymnasmata* and so was learned by all students who went beyond the literary stage of education (Bonner 1977: 250–76). And among the examples of the *chreia* the most popular was this one: "Diogenes the Cynic philosopher, on seeing a boy eating delicacies, struck the paedagogus with his *baktēria*" (Theon, *Progymn* 5 [Walz 1832 1: 205]). In fact, this *chreia* became a favorite topic for a student essay in which Diogenes is presented as a moral "watchdog" (Gk *sōphronistēs*) (Nicolaus, *Progymn.* 3 [Walz 1832 1: 275–76]; cf. Hock and O'Neil 1986: 313–22).

2. Cynicism and Early Christianity. Scholars have long noted similarities between Cynic behavior or teaching and various early Christian texts. Kusch (*RAC* 3: 1067–68) provides a convenient summary of earlier scholarship's identification of such similarities, such as the Diogenes anecdote in which a child teaches the philosopher a lesson in simple living (D.L., 6.37) and the similar function of a child in the gospel tradition (Mark 9:33–37; 10:14–16). Still, many scholars, including Kusch himself (*RAC* 3: 1068), have been, and continue to be, reluctant to posit any direct influence of Cynicism on the NT Gospels (Schottroff and Stegemann 1978: 133–35).

A. J. Malherbe, however, inaugurated a new era in the study of the relationship of Cynicism and early Christianity, although his focus has been on Paul, not on the Gospels. In numerous studies (esp. Malherbe 1968; 1970; 1983) he has provided a careful and sophisticated analysis of Cynicism itself and of such Pauline images as "fighting with beasts" (1 Cor 15:32) and "being gentle as a nurse" (1 Thess 2:7), showing that Paul reflects precise and self-conscious knowledge of important debates going on among Cynics and that such debates are the contexts for understanding Paul's images. And that knowledge extends to other aspects of Paul's teaching and behavior (Hock 1980: 37–42, 52–59).

Scholars have also renewed the study of the gospel tradition from the perspective of Cynic conduct and teaching. Some scholars have focused on specific texts, arguing for Cynic influence on, say, the injunction for disciples to go barefoot in Luke 10:4 (Vaage 1986), or the teaching on wealth and poverty in the Parable of the Rich Man and Lazarus (Luke 16:19–31; see Hock 1987). But of special significance is the thesis of B. Mack (1988: 67–74, 179–92) that the earliest layers of the gospel tradition depict a Jesus whose themes and style of teaching as well as his social role of critic are closest to those of Cynics.

After the NT period the influence of Cynicism becomes explicit, as Church Fathers frequently cite Cynic figures and teachings. Kusch (*RAC* 3: 1069–74) has collected many such references from a variety of Greek and Latin fathers. While Cynic *adiaphoria,* or shamelessness, comes in for frequent censure (*RAC* 3: 1072–73), it must also be stated that many fathers judged Cynics positively, with Clement of

Alexandria and Gregory Nazianzus in particular making extensive use of the Diogenes traditions and of the Cynic philosopher as a pagan paradigm of virtue (*RAC* 3: 1069–72).

CYPRESS. See FLORA.

CYPRIAN. Rome had brought with her in her colonization of North Africa a class structure where good education, property, and a say in government tended to remain the privilege of a select few. Cyprian of Carthage was a man of such property and education (Pontius *Vit. Cyp.* 2, 15), and his secular acquaintances included men who belonged to the local governing circles; they came from families of curial, equestrian, and senatorial station (Pontius *Vit. Cyp.* 14). Cyprian's trial and martyr's death followed, accordingly, the course proper for an *honestior*, a man of the upper classes (house arrest, despite the extreme gravity of the charge, and execution by the sword as the method of death); and his style at the very end—twenty-five gold coins *(aurei)* to be presented to his executioner (*Acta procons. Cypriani* 5.4)—continued to be in the manner of handsome public benefaction and patronage traditional in (and

expected of) such a level of society. Cyprian was a man with a sense of his position, conscious of his role as a *persona insignis,* a figure of prominence (cf. [Cyp.] *ep.* 8.1.1, written by Roman clergy).

The family of the man is, however, otherwise unknown and his nomenclature (*Caecilius Cyprianus qui et Thascius: ep.* 66 *incipit, ep.* 66.4.1, *Acta procons. Cypriani* 3.3) remains of the obscurest. But the sort of property he possessed in Carthage—it included well-known horti or suburban estates (*ep.* 81.1.1, *Acta procons. Cypriani* 2.1) suggests strongly that he was from a local, established family of some wealth and had inherited the property.

When we meet Cyprian in the 240s, he is living on this estate in Carthage, he has won for himself (according to later, but not uninformed, sources: Hieron. *vir. ill.* 67, 53) reputation and renown as a *rhetor* in a society which prized highly oratorical skills and achievement—and Carthage was *the* center for rhetorically passionate Africa. Late in that decade he is to appear, even though a very recent convert to Christianity, as a man of an authority and stature appropriate for replacing the recently deceased bishop Donatus; the Christian laity urged his candidature with enthusiastic, and successful, acclaim (Pontius *Vit. Cyp.* 5). That suggests a man of some maturity—possibly, to hazard a guess, he was at the time at least into his forties—used to holding a prominent place in his society. Certainly, later as bishop, he gives the appearance of dealing with his laity, his *plebs* as he calls them (clients who had supported his candidacy as bishop) with much greater ease and assurance as their episcopal patron than he does with his more immediate clerical colleagues.

What information of any reliability we have points to Cyprian's secular life as *rhetor* being spent not so much in legal activities in court as an *advocatus* (though some sections in the *Ad Donatum* [on which see below] could suggest this) as in training hopeful devotees in the highly elaborate and stylized art of the public declamation of the time. At all events Cyprian was well equipped for his later episcopal role as preacher and homilist.

Cyprian had not married, and his biographer suggests—no doubt idealistically but perhaps also not without some truth—that there was in him a scholarly dedication to the pursuit of higher learning and accomplishments (Pontius *Vit. Cyp.* 2). Hindsight furthermore suggests that he shared with many of his pagan contemporaries an earnest moral mindedness, espousing exacting and sometimes rigorously unyielding, even puritanical, high principles of behavior and manner. A strong sense of sin, of virtuous living, of moral imperatives, as well as an intense awareness in the reality of a spiritual world, were not notions exclusive to the adherents of Christianity, nor were they confined only to the more thoughtful and philosophic among the pagan members of this society.

By about the middle of the 240s, Cyprian, possessed of such a background, had become attracted to Christianity under the influence and friendship of an aging Carthaginian presbyter Caecilianus (Pontius *Vit. Cyp.* 4; Hieron. *vir. ill.* 67 [garbled]). Conversion, baptism, renunciation of his worldly estate, and advancement to clerical office, which involved withdrawal from his secular profession (cf. *ep.* 1), followed in swift succession, until by about Easter 249, and probably earlier, he had been installed as bishop of Carthage (see *ep.* 59.6.1 and *ep.* 29.1.2 for the dating). Some older clerics had openly opposed the appointment of this novice Christian and despite a public *refus de pouvoir* and gestures of generosity from the eventual victor toward the defeated, the animosity engendered by this opposition continued to rankle (Pontius *Vit. Cyp.* 5). It sounds as if Cyprian was an unusually well-placed and educated convert for this church; he was too competent and prominent a figure to pass by in filling the vacant *cathedra* of Carthage. Indeed some of the clerical resentment to Cyprian's unusually rapid promotion may well have been roused precisely because of his superior class, education, and manner. To judge from the little evidence we have (e.g., *ep.* 24 [Caldonius]), Cyprian may well have found for company relatively few Christian clerics in Africa who could match his accomplishments. Our closest contemporary social picture is of the Christians in the literary dialogue of Minucius Felix, the *Octavius,* which Cyprian appears to have read; in every probability the protagonists came from African Cirta or thereabouts—but they are of the laity and two of the three are depicted as domiciled in Rome (Min. Fel. *Oct.* 2). In the absence of satisfactorily controlling evidence, it is easy to form an exaggerated perception of the social and cultural isolation which Cyprian may have needed to face in becoming a Christian; but it would be fair to assert

that disagreement with his clergy over other issues could readily be sharpened if there were social differences. In an irretrievably class-conscious society it was not possible to overlook such class distinctions.

But on the other side, some of the popular enthusiasm for Cyprian's promotion may have been not just for his eloquent tongue in public oratory and his qualifications for church administration and leadership. This was a man of demonstrable dedication. The gesture of wishing to sell all his worldly goods for the benefit of the Christian poor (so Pontius *Vit. Cyp.* 2, 15) may indeed be in the tradition of the munificent nobility (as of the gospel precepts), but it was nevertheless a personal act of humane charity as well as of total commitment: Cyprian would be selling his secular social status along with his patrimony. For a remarkable feature about Cyprian is how fully a churchman he became in response to his new episcopal role, finding his total career (so far as we know) inside the church, with his talents and energies fully absorbed in the duties of clerical office and ecclesiastical activities. Though others had lived such a life before him, Cyprian's letters allow us to see this new type of churchman clearly delineated for the first time in early church history.

Along with that absorption in church affairs came, it would appear, a corresponding cultural and intellectual absorption; Cyprian was prepared to sell not only his patrimony but much of his cultural birthright as well. All the quotations, allusions, and verbal reminiscences of classical letters, the poets and writers of the past, which richly embellished the compositions of an accomplished rhetorician of the day are astonishingly absent from his churchman's prose, and even the traditional classical *exempla*, the rhetorical stock-in-trade for illustration and elaboration on a theme, are severely limited. This can only be the result of conscious rejection and restriction. Instead, Virgil and Ovid, Cicero and Sallust are replaced by the "sacred letters" to which he devoted study even as a catechumen (Pontius *Vit. Cyp.* 2). Despite the inelegance of quoting verbatim, and often, texts from a Latin version of the Bible which was painfully disharmonious with his own style, Cyprian consistently treats his biblical text with meticulous and exacting reverence; he avoids, by and large, any rewriting of his citation to suit his own paragraph, and even the oblique biblical reference or allusive phrase is relatively rare for one so steeped in the *lectio divina.* In the face of stylistic disadvantages his conscious choice is the direct biblical quotation, normally prefaced by some introductory formula. He has joined a church with a tradition of deep respect for the hallowedness of the sacred word, "the holy and adorable words of the Scriptures," as one of his contemporary African bishops describes his Bible (*Sent. Episc.* LXXXVII. 31). Cyprian has joined a church of *The* Book.

Religious conversion into this church for a man of such dedicated temperament seems to have entailed a kind of linguistic conversion as well. By contrast with other African writers with similar rhetorical backgrounds, say a Minucius Felix a little earlier or an Arnobius or a Lactantius somewhat later, Cyprian is unusually lavish in the range and variety of words with a Christian formation or connotation which he liberally makes his own, not only the almost inevitable technical terms but sometimes ugly Christian neologisms and specialized usages that had been engendered in this close-knit and somewhat beleaguered and separate community. So closely and so wholeheartedly has he identified himself with his new society, and put his literary talents to its service.

Before the year 250 had begun, he had already turned his vigorous pen to the composition of the apologetic essay, the *Ad Donatum,* a rhetorically overblown essay on the marvelous effects of divine grace on his own conversion and regeneration in baptism. Quite probably within the last twelve months he had composed the tractate *De habitu virginum (On the Dress of Virgins),* warning those who have dedicated their virginity to Christ of the perils which beset them from the pagan world with all its vanities and vices. And he had been responsible for the compilation of the three books of biblical *testimonia,* the *Ad Quirinum,* the first book acting as an apology against the Jews, the second as a compendium of christology, and the third (composed later than the first two) as a guide to the Christian duties and virtues.

When in late 249 (or very early 250) the emperor Decius issued orders that all the inhabitants of the empire should make sacrifice to the gods, Cyprian promptly made himself scarce. This action (interpreted by a number as cowardly) was to occasion much, and enduring, criticism (e.g., *ep.* 8, *ep.* 20, *ep.* 66, Pont.

Vit. Cyp. 7–8), but it was also to occasion Cyprian to correspond from his place of hiding with members of his congregation (clergy, confessors, and laity) as well as with Rome during his sojourn away from Carthage (lasting over twelve months, *ep.* 43.4.1). Hence we have the rich collection of letters numbering from *ep.* 5 to *ep.* 43, nearly half the corpus of correspondence that survives.

In the aftermath of this persecution, his church—as were others—was beset by dispute and schism. Dispute arose everywhere over the treatment appropriate to those who had apostatized during the persecution (perhaps the majority of the Carthaginian flock, *ep.* 14.1.1): the treatise *De lapsis* (*On the Fallen*) expatiates on this penitential dispute and strives hard to find an acceptable pastoral solution to the sin of idolatry, traditionally regarded as irremissible. Schism arose when parties who advocated a more lax discipline, or those who advocated a more severely purist discipline in penitential matters (Novatianists), split off into schismatic churches: by the year 252 Cyprian had two rival bishops of these two different persuasions in Carthage (*ep.* 59.9.1–3). The influential treatise (or to be more accurate the first version of it) *De ecclesiae catholicae unitate (On the Unity of the Catholic Church)* was penned against this background of disunity and disharmony as was probably also the *De dominica oratione (On the Lord's Prayer).* By this appears the context for three further tractates, *Ad Demetrianum* (defending Christians against the charge of being responsible for natural calamities like plague, famine, and drought), the *De mortalitate (On Mortality),* and *De opere et eleemosynis (On Good Works and Almsgiving)*.

But the turbulence was to continue. Further, and intense, dissensions over the status of schismatic churches (centered on the validity of Novatianic baptism) were promptly to follow both within the North African communities themselves and then with churches elsewhere (especially with Rome). Cyprian adhered staunchly to an inherited view of the church as an enclosed garden outside of which flowed no source of salvation: the strongly contested issue occasioned a spate of pamphleteering (one sample survives in the anonymous *De rebaptismate* [On Rebaptism]) and in Africa at least a series of conciliar meetings and a flurry of letters (the bulky section of the surviving correspondence from *ep.* 69 to *ep.* 75 is all concerned with this matter). The tracts *De bono patientiae (On the Virtue of Patience)* and most probably *De zelo et livore (On Jealousy and Envy)* as well as a revised version of *De ecclesiae catholicae unitate* (less favorable to the status of Rome) are products of this period. Relations between Rome and many churches elsewhere in the East as well as in Africa had reached the point of breakdown over this issue (*ep.* 75.25.1) when persecution broke out anew under Valerian. Cyprian was relegated to nearby Curubis in August 257 (there perhaps composing the *Ad Fortunatum,* a compendium of scriptural texts on persecution and martyrdom), and when the persecution was intensified in the summer of 258 (*ep.* 80), he was recalled to Carthage, tried, and went to his martyr's death on September 14, 258.

We are fortunate in having not only a dozen pamphlets from Cyprian's own pen, but a body of some 82 letters (including 16 by his correspondents and 6 which are synodal or collective) as well as a short and apologetic biography purportedly written by his deacon Pontius and the *Acta Proconsularia,* which embody transcripts of his trials as confessor and martyr. We thus catch an illuminating glimpse via Cyprian into daily church living of the mid-3d century and witness his struggle (and that of others) to find acceptable pastoral solutions to new challenges as the church found itself more and more required to come to terms with its secular environment.

G. W. CLARKE

CYPRUS (PLACE) [Heb *kittim* (כִּתִּים); Gk *Kypros* (Κυπρος)]. A Mediterranean island located 43 miles S of Asia Minor, 76 miles W of Syria, and 264 miles N of Egypt.

The Hebrew name probably derives from the city of Kition (Roman Citium), which Phoenicians colonized on the SE coast of the island. It may also have been known as Elishah in the OT (Gen 10:4; 1 Chr 1:7; Ezek 27:7). Most, though not all, agree that this is the similar-sounding place often referred to as Alashia or Asy in texts from the ANE. It appears in connection with copper (for which the island was well known in antiquity) on tablets from Alalakh in the 18th century B.C. and Mari in the 17th century B.C. The name occurs frequently in the 14th century B.C., especially in the correspondence between the Egyptian Pharaoh Akhenaten and the king of Alashia, which also refers to a land that produced copper. In the 11th century B.C., an Egyptian priest, Wenamon, sought refuge in Alashia after suffering shipwreck on his return to Egypt from Byblos. This corroborates the location of Alashia to be in Cyprus rather than in Syria. In the *Iliad* (11.21) and the *Odyssey* (4.83; 8.362; 17.442, 443, 448) as well as the NT (i.e., Acts 4:36; 11:19, 20; 13:4; 15:39), the island is known as *kupros* (Cyprus).

Cyprus is the third largest island in the Mediterranean, after Sicily and Sardinia, and only slightly larger than Crete. Its maximum length, E-W, is 138 miles and its maximum width, N-S, is 60 miles, encompassing an area of 3584 square miles. The W half of the island is mountainous, where the Trodos and Kyrenia Mountains reach a height of about 3300 ft and are snow-capped three months out of the year. The E half consists of the Mesaoria Plain and the Karpass Peninsula.

Favorable climate and topography produced a primarily agricultural society on the island throughout its history. However, its most important resources have always been its copper mines and pine forests. These, coupled with a salt industry that undoubtedly flourished in antiquity (from the salt lakes of Limassol and Larnaca), supported the construction of a number of important harbor towns around the island.

The earliest inhabitants of Cyprus, who settled in the SE part of the island and around its central and E coastlines, have been dated by carbon 14 testing to the Pre-Pottery Neolithic period (ca. 7000–6000 B.C.). Circular houses, called *tholoi,* were constructed of mudbrick on stone foundations, and have been found in several settlements around the coastal perimeter of the island (e.g., Khirokitia and Kalavassos-Tenta). They have floors of beaten earth, hearths, platforms built against the walls for sleeping, and posts in the center of the room to support domed ceilings. The inner walls were plastered, and one of them contained a painting of a human figure with uplifted arms. Their dead were interred in the fetal position beneath the floors of their houses or immediately outside. The infant mortality rate was apparently high.

In the Late Neolithic (ca. 4500–3800 B.C.; there are no carbon 14 dates between 6000 and 4500 B.C.), pottery was developed and houses were constructed with greater diversity of forms including wooden structures, stone buildings both circular and rectangular, and partial or total subterranean dwellings like those in Beer-sheba in S Palestine. These people, like those in the PPN, were primarily farmers, but they also hunted wild animals and probably had some domesticated livestock. There was cultural continuity from the Neolithic into the Chalcolithic Period (ca. 3800–2500 B.C.), but settlement patterns shifted to the W side of the island, the central plain, and the Karpass Peninsula.

The EB Age (Early Cypriot, ca. 2500–2000 B.C.) is represented in most of the island except the W half of the Trodos Mountains. Wealthy tomb offerings and beautifully made pottery in a variety of imaginative styles indicate a prosperous culture, supported by an increasing international trade in copper. Tin was imported, probably from Mesopotamia or Asia Minor, evidenced by the production of the many bronze implements which have been found in excavation. Models of sanctuaries show the worship of bulls (after cattle were imported to replace pigs for economic reasons), and testify to a well-developed polytheism.

The MB Age (Middle Cypriot, ca. 2000–1650 B.C.) was brief and continued the basic culture of the earlier period, although the N began to decline when settlement patterns shifted to the SE with the construction of important harbor cities such as Enkomi and Kition. Several forts have been found in the N half of the island, but are completely missing in the S. Apparently hostilities were internal and/or confined to the N, and the S felt no need for such defenses. A clear separation between the E and W is inferred

from the differences in pottery produced in each section. The economy of the W was based primarily on copper, while that of the E was based on agriculture.

An abundance of Cypriot pottery from the MB Age has been found in Cilicia, Megiddo, Ras Shamra (Ugarit), and along much of the Syro-Palestinian coast. From this artifactual evidence and later textual evidence (i.e., Tell el-Amarna letters and the library of Boghazkoy), it is clear that trade between Cyprus and countries such as Egypt, Anatolia, and Syria flourished in both the MB and the LB.

A script was developed in Cyprus around 1500 B.C. and was labeled Cypro-Minoan by Sir Arthur Evans. Three forms of the language (Cypro-Minoan 1, 2, and 3) have been found on clay tablets, incised or painted on vases, engraved on votive objects, etc. Whether its roots lie in the west (Crete?) or the east (Ugarit?, etc.) is debatable, but all attempts to decipher the language have been unsuccessful. The fall of Minoan Knossos on Crete to the Mycenaeans, ca. 1380 B.C., brought Mycenaean settlers to Cyprus, (perhaps the "Sea Peoples," some of whom settled in S Palestine) and with them a new type of pottery which is found extensively in Cyprus and the Syro-Palestinian littoral.

Aegean influence continued in Cyprus well into the Iron Age (Cypro-Geometric Age, ca. 1050–750 B.C.), when the Phoenicians arrived around 850 B.C. and established colonies on the island. These colonists from Tyre and Sidon (cf. Isa 23:1, 12; Ezek 27:6) built temples to Astarte and tried to establish close ties between Cyprus and their homelands. One of the largest temples erected to Astarte in the Phoenician world was constructed in Kition around 850–800 B.C. on the ruins of an LB temple.

In the beginning of the Cypro-Archaic Period (ca. 750–475 B.C.), epigraphic evidence records the submission of Cyprus to Sargon II of Assyria. This event, which occurred in 707 B.C., is recorded both on a stele from Kition and in inscriptions from the Assyrian palace at Khorsabad. Ten cities of Cyprus are named on the prism of the Assyrian king Esarhaddon (613 B.C.), among which are Paphos, Idalion, Kourion, and Salamis. Extraordinary tombs made of ashlar blocks (perhaps royal ones) were found at Salamis, and date to the 8th and 7th centuries B.C. Life under the Assyrians seems to have been good, and Mycenaean culture continued to dominate.

Egyptian influence was felt for a brief time when Egypt took advantage of Assyria's decline and invaded the island. In 545 B.C. Cyprus submitted to the rising power of Cyrus, king of Persia, helped him in his war against Babylon, and thereby continued to enjoy considerable autonomy (Hdt. 4.162) until 499 B.C., when the island, identifying with its Greek heritage, joined the unsuccessful Ionic revolt against Persian rule. Two hundred years of slavery followed.

Cyprus suffered often during the early part of the Cypro-Classical Period (475–325 B.C.), when Greeks, who considered Cyprus to be part of the Greek world, attempted repeatedly and unsuccessfully to free the island from Persian control. Greek influence was strong on the W part of the island, while Phoenician and Persian influence continued in the E part. Stasikypros, king of the city of Idalion, repulsed efforts by the Persians and Phoenicians to conquer his city. Archaeologists have recently identified his palace in excavations at Idalion (Stager and Walker 1989). The most influential Cypriot of the period was Euagoras I of Salamis, who introduced the Greek alphabet on the island through his coins. He tried, without success, to unify all Greeks and make Salamis the Athens of the East. He was responsible for spreading the Hellenization at Cyprus into the E Mediterranean world.

Cyprus assisted Alexander the Great in his conquest of Tyre (332 B.C.) and subsequently became a part of his empire, enjoying considerable favor from the conqueror. After Alexander's death and throughout the Hellenistic Period (ca. 325–50 B.C.), Cyprus was controlled by the Ptolemies of Egypt. Hellenistic culture was dominant during this time, manifesting itself especially in the sculpture of Cyprus. Excellent examples found in excavations include a 3d century B.C. limestone head of a woman from Arsos and a 2d century B.C. marble statue of Artemis. Greek trends are also seen in the production of jewelry, pottery, and terra-cottas.

With the rise of Roman power, Cyprus was made a province after 67 B.C. and, nine years later, was added to the province of Cilicia. After the civil wars ended, Octavian assumed the title of Augustus and controlled most of the area from Britain to Mesopotamia. He combined Cyprus and Cilicia with the province of Syria. After 23 B.C., Cyprus was made a senatorial province and placed under proconsuls.

Many of the proconsuls of Cyprus are known for the Roman period (50 B.C.–250 A.D.), although no Cypriot evidence yet exists to attest the proconsulship of Sergius Paulus (Mitford 1979: 1301), who is said to have been one (Acts 13:7) when Paul visited the island in about 47 A.D.

Peace and prosperity existed throughout the early part of the empire, supported by a flourishing trade in wine, copper, shipbuilding, and agriculture. The chief cities of the time were Salamis, Paphos, Lapithos, and Amathus. The Roman way of life is evidenced by the presence of theaters at Paphos, Salamis, Curium, Soli, and Citium, the last attested only epigraphically. Those at Salamis and Soloi are beautifully restored. Further evidence is seen in the presence of gymnasiums preserved at Salamis and Paphos. Others are attested epigraphically for Citium, Curium, Chytri, Lapethus, and Carpasia. There was an amphitheater at Salamis and an odeion at Paphos. A large Roman bath has been found beside the theater and gymnasium at Salamis, and one is also known for Curium.

Roman roads were built around the island, evidenced by numerous milestones and a map drawn up sometime between the 2d and 4th centuries. Inscriptions show that the roads were maintained until the 4th century. Temples of civic gods such as Apollo at Hyle, Aphrodite at Paphos, and Zeus at Salamis, along with floor mosaics such as those in the houses of Paphos testify to the prominence of polytheism. None of these seem to have survived the more immediate appeal of the deified Severan emperors. No evidence exists that any of them outlived the reign of Caracalla (211–17 A.D.). The spiritual vacuum thus created was filled by Christianity, whose presence is seen in the remains of basilical church buildings such as the one at Salamis.

The New Testament mentions two Christians from Cyprus. One was Barnabas, the traveling companion of Paul (Acts 4:36) and the other was Mnason, who lived in Jerusalem and hosted Paul on one occasion (Acts 21:16). Men from Cyprus shared in the evangelizing of the Greek population of Antioch of Syria (Acts 11:19–20). Barnabas and John Mark visited Cyprus following a dispute with Paul (Acts 15:39).

JOHN MCRAY

CYRENE (PLACE) [Gk *Kyrēnē* (Κυρηνη)]. CYRENIANS. The capital of the Roman province of Cyrenaica (Libya) in North Africa. Its name stems from the nature goddess (Kyrana), whose name was given to a perennial spring nearby. The city was founded by Greek colonists from the island of Thera near the end of the 7th century B.C. (Herodotus 4.150–58; *SEG* 9.3). The leader of the expedition, Battus, became its king, and thus instituted a dynasty that lasted nearly two centuries (until ca. 440 B.C.). For the next century it was a republic and subsequently came under the control of Ptolemy I, heir to the North African portion of Alexander the Great's empire, who gave it a constitution (*SEG* 11.1; copy in the museum at Cyrene) establishing a liberal oligarchy, an extensive citizenry, two councils, and a popular court. Under the Ptolemies, the city became an important intellectual center with a celebrated medical school, a classical academy, and a school of philosophers (the "Cyrenaics") who pioneered what came to be known as Epicureanism. Eratosthenes (276–ca. 194 B.C.), a geographer who calculated the circumference of the earth within 50 miles of the presently accepted figure, and Callimachus (ca. 310–240 B.C.), a poet who had a great impact upon the development of Latin poetry, especially that of Catullus and Ovid, were among its famous sons. Both moved to Alexandria, which tended to dominate Cyrene culturally. By the will of Ptolemy Apion (d. 96 B.C.), the city and its territories became Roman; and in 67 B.C. it was united with Crete to form the senatorial province of Cyrenaica. Following a Jewish revolt

during the reign of Trajan and its brutal suppression (A.D. 115; see Dio Cassius 68.32), the city embarked on a period of economic and intellectual decline. Its history ended with the Arab conquest in A.D. 642.

Throughout most of its history, Cyrene was very prosperous. Located in the midst of very fertile countryside, it was rich in grain, wool, olive oil, and especially silphium, a spice that was much prized for both culinary and medicinal purposes. According to Herodotus (4.199), the city's climate provided it with three harvest seasons annually. From the time of Ptolemy I, Jews were an important part of its population (Josephus, *AgAp* 2.4; *Ant* 14.114; cf. 1 Macc 15:23; 2 Macc 2:23), which, of course, is why the city is mentioned in the Bible. The noted Jewish writer, Jason (2 Macc 2:19–23), one book of whose five-volume history of the Jewish wars of liberation was abridged in 2 Maccabees, and Ezekiel the Tragedian came from Cyrene.

A citizen of Cyrene by the name of Simon, perhaps a pilgrim to the Passover festival in Jerusalem, is identified in the passion narrative as having been compelled by the Roman soldiers to carry Jesus' cross (Matt. 27:32 = Mark 15:21 = Luke 23:26). Jews from Cyrene are included in the list of those who witnessed the remarkable events resulting from the coming of the Spirit upon the earliest Jerusalem church on the day of Pentecost (Act 2:10). Acts 6:9 suggests that those Jews who "returned home" to Jerusalem from Cyrene and Alexandria were numerous enough to have their own synagogue. Some from this group were active in debate with Stephen and (presumably) the other "Hellenists" and were possibly involved in his lynching; the same group was also numbered among those early Jewish-Christian believers who began to bear witness to gentiles in Syrian Antioch (Acts 11:19–20), the third city of the empire, which was to become so important in the missionary development of the early Christian community. One of the prominent prophets and teachers from the earliest days of the church in Antioch was Lucius of Cyrene (Acts 13:1). With so many Jews moving back and forth between Jerusalem and Cyrene, and between Antioch and Cyrene, it is likely that there was a church established there at a very early date.

The ancient site of Cyrene has been extensively excavated during the present century by Italian, British, and Libyan archaeologists. It has provided a wealth of information concerning ancient Greco-Roman art and architecture, civic and social life, numismatics, and epigraphy. Among the many monuments are a Greek theater; a Roman theater; temples of Zeus, Apollo, and Isis; the agora (marketplace); Roman forum; baths; magnificent houses; a circus (for chariot races); and two early churches (6th century). Two modern museums, one of them devoted primarily to sculpture, house some of the more important artifacts.

W. WARD GASQUE

CYRIL OF JERUSALEM, 20TH DISCOURSE OF. See VIRGIN, ASSUMPTION OF THE.

CYRUS (PERSON) [Heb *kōreš* (כֹּרֶשׁ)]. A great conqueror and statesman, Cyrus II was the founder of the Achaemenid empire. He was born ca. 590/589 B.C., most probably in Parsa, the modern Iranian province of Fars, but we know nothing historical about his early life (the stories of his childhood related in Herodotus can be dismissed as charming legend).

Much more is known of Cyrus after he came to the throne of Persia in 559 B.C. His career divides into four phases: (1) the triumphant war against Astyages and the Medes in 550 B.C.; (2) his successful campaigns against Lydia in 547 B.C. and the operations against Ionia following the fall of Sardis; (3) campaigns to the NE of the Iranian plateau between 546 and 540 B.C.; and (4) the conquest of Babylon in 539/538 B.C.

Herodotus reports Cyrus as king of Persia was a vassal of Astyages, the last king of the Medes. The basis of his kingdom was several Persian tribes, including his own, the Pasargadae. The extent of his territorial control is unclear, but it certainly included the city of Anshan (modern Malyan). The conflict between Cyrus and Astyages is the first well-documented fact in Achaemenid history. Our two best sources on this event are Herodotus' *Persian Wars* and the Babylonian Chronicle. Herodotus reports that Cyrus successfully rebelled against his master, Astyages. The Babylonian Chronicle suggests that the war with the Medes began with Astyages attempting the conquest of Cyrus, called the King of Anshan. Whatever the cause of the war, the Medes were defeated.

Cyrus spent three years between his defeat of Astyages and war with Lydia (550–547 B.C.) consolidating his control over Medea. His victory had brought under Persian control all of central W and NW Iran, the N and probably the NE parts of the Iranian plateau, some sections of N Mesopotamia and Syria, and large parts of Anatolia, perhaps as far W as the Halys river.

Herodotus tells us the crossing of the Halys by Croesus of Lydia was the cause of the Persian-Lydian war. Cyrus may have been the aggressor. There was an initial and indecisive battle between the two kingdoms in Cappadocia. After the battle Croesus, assuming that it was too late in the autumn to continue campaigning for that year, withdrew his troops to winter quarters in Sardis. Cyrus, on the other hand, continued his advance. A second battle was fought before the walls of Sardis, the Lydians were bested, and withdrew into the citadel in hopes of withstanding a siege. The Persians discovered a way to climb an undefended section of the wall, and a daring assault led to the capture of Croesus and the conquest of Lydia. Cyrus marched on westward from Sardis and, through a combination of war and shrewd diplomacy, conquered most of Ionia.

We know almost nothing in any detail of Cyrus's activities between 547 B.C. and his conquest of Babylon in 539/538 B.C. There are hints in the record that he campaigned extensively to the E and the NE of the Iranian plateau, greatly expanding his new empire in those directions. He almost certainly at this time also undertook the ongoing task of organizing the empire and establishing the administrative controls necessary to command such a vast territory effectively. He may also at this time have begun construction of his imperial capital, Pasargadae, in his home province of Parsa.

Cyrus' defeat of Babylon and the Babylonian empire, along with his previous conquests, brought the whole of the Near East within the Persian empire with the exception of Egypt. Strategically Cyrus's defeat of Babylon began when he conquered Lydia, thus greatly increasing the political and military isolation of Mesopotamia. Tactically the campaign began when Cyrus was fighting in the E and NE, for the Persians mounted a propaganda campaign against Nabonidus, the unpopular king of Babylon, prior to their invasion which proved so successful that the Neo-Babylonian empire ultimately fell almost without a battle. We have evidence of this propaganda campaign in native Mesopotamian cuneiform sources, but probably our best evidence comes from Second Isaiah. In Isa 45:1–3 the prophet speaks of Cyrus as the anointed of Yahweh who is destined to subdue all nations before him. In return for this favor, of course, the prophet notes (Isa 45:13) that Cyrus will restore the Jewish exiles to their native land. In short, Cyrus has been called by God to capture Babylon, to free the Jews from their bondage, and by inference to permit them to return to Jerusalem. It is suggested that Isaiah could so prophesy because he knew of the discontent with their own government among the Babylonians.

Babylon having been successfully softened up, war actually began early in October of 539 B.C. The decisive battle took place at Opis. The Babylonian army apparently did not stand long before retreating in total chaos. While Cyrus marched to the conquest of the important city of Sippar, another detachment of the Persian army peacefully took Babylon itself on October 12. Cyrus then entered the great city, welcomed by his own troops and (to judge from the Babylonian sources) by the people of the city. Cyrus seized the hands of the statue of the city god, Marduk, and announced that it was his intention to leave local culture and customs undisturbed and to rule the city and the empire as the legitimate successor of the ancient kings of Babylon.

This policy of Cyrus to rule his empire by maintaining respect for local cultures and traditions is, of course, further documented in his famous decree, probably issued in Ecbatana (modern Hamadan),

permitting the Jews of Babylon to return to their native land and to rebuild their temple in Jerusalem (Ezra 1:1–4). Such a policy of remarkable tolerance based on a respect for individual people, ethnic groups, other religions, and ancient kingdoms must have seemed amazing to people who had grown accustomed to the governing techniques of the Neo-Assyrian and Neo-Babylonian empires, in which ruthless destruction, the deportation of people, and the forced integration of the conquered into the conqueror's political system had been common practice.

Herodotus reports that Cyrus died in battle in 530 B.C. fighting against the tribe of the Massagetai on Iran's NE frontier. All we really know of the end of his reign is that he was buried in a simple gabled stone tomb at Pasargadae. It is reported that this structure once bore an inscription reading: "Oh man, I am Cyrus the son of Cambyses, who founded the empire of Persia, and was king of Asia. Grudge me not therefore this monument." Standing before the tomb some two centuries later, Alexander the Great is reported to have ordered that it and its supposed treasure be restored, because he was so impressed that Cyrus, founder of the Achaemenid power, creator of the largest empire then known, was the kind of man who would ask so small a favor of posterity.

D

D. The abbreviation used by scholars to designate the Deuteronomic source in Pentateuchal source criticism. This source is essentially the book of Deuteronomy. See DEUTERONOMY, BOOK OF.

DABBESHETH (PLACE) [Heb *dabbešet* (דַּבֶּשֶׁת)]. On the S border of the territory of Zebulun (Josh 19:11), Dabbesheth (lit. 'hump') may indicate a settlement site or a geographical landmark. Dabbesheth has been tentatively identified with Tel Shem (M.R. 164230), N of Jokneam, though many other sites in the near vicinity may qualify. See Kallai *HGB,* 179–192.

RAPHAEL GREENBERG

DABERATH (PLACE) [Heb *dāběrat* (דָּבְרַת)]. A levitical city allocated to the tribe of Issachar (Josh 21:28 = 1 Chr 6:57—Eng 6:72). Daberath is also listed as defining part of the border of Zebulun, which went in the direction of Chisloth-tabor and then followed the watercourse to Daberath (Josh 19:12). From this description most scholars argue that Daberath was situated on the border of Issachar and Zebulun. In the Issachar distribution list in Joshua 19, Daberath does not appear. However, Albright (1926: 230) has suggested that Rabbith (19:20) should be emended to Daberath on the basis of LXX^{B}. If Albright is correct, what this means is that the Greek scribes read Daberath and that the present reading of the Hebrew text arose from an easy misreading of the *dalet* as a *reš*.

Daberath has been identified with Khirbet Dabbura (M.R. 185233), located on the NW side of Mt. Tabor, less than.5 km E of the modern village of Daburiyeh, which today has nearly engulfed the ancient site with modern buildings and orchard groves. Daberath thus lies at the extreme NE corner of the Esdraelon plain, an area that has been called the Nazareth basin. The site has an important position, nestling between Mt. Tabor and the most S low hills of lower Galilee, connecting two major valleys. Daberath is at the gateway of the Trunk Road as it enters the Esdraelon plain from the Sea of Galilee. This road was one of the main passages from Damascus to the Mediterranean via Megiddo.

Since the mid-1930s inspection visits from the Department of Antiquities and archaeological surveys have been conducted at Khirbet Dabbura. Most of the pottery that has been studied from this site belongs to the Roman, Byzantine, and Arabic periods, although there is also evidence of pottery from the Hellenistic, Persian, Iron, and Bronze Age periods (Peterson 1977: 168–76). Daberath was an unwalled city, and further archaeological work must be done on the NW corner of the base of Mt. Tabor before the occupational history of the site can be established with certainty.

JOHN L. PETERSON

DABRIA (PERSON) [Lat *Dabria*]. One of the five scribes whom Ezra was instructed to take with him in restoring the Scriptures (2 Esdr 14:24). In the 14th chap. of 2 Esdras God speaks to Ezra out of a bush, bidding him to reprove the living generation. Ezra accepts the responsibility but is apprehensive of those who are yet to come. The holy Scriptures had been burnt (2 Esdr 14:21; cf. 2 Kgs 25:8–9), and those who wish to live in the end time may be left in darkness without the light of Torah. Ezra prays for inspiration to restore the Scriptures. God directs Ezra to prepare many writing tablets and to employ the five scribes, Sarea, Dabria, Selemia, Ethanus, and Asiel, whose expertise was to write rapidly. At Ezra's dictation they take turns writing for 40 days in characters which they do not know (2 Esdr 14:42), probably in the square Hebrew characters.

DAGON (DEITY) [Heb *dāgôn* (דָּגוֹן)]. Dagon is attested as the patron deity of the middle Euphrates region centered around Tuttul, Mari, and esp. Terqa, from the 3d millennium B.C.E. The earliest reference to the worship of this god is in the inscriptions of Sargon of Akkad, though proper names containing the Dagon element are common from the middle of the 3d millennium B.C.E. throughout Mesopotamia (Roberts 1972: 18; Pettinato and Waetzoldt 1985: 239–48). As divine ruler of his land, Dagon was responsible for king and people; this is well attested in spheres of military expansion, fertility, living and deceased human rulers, and divine advice (Kupper 1947: 150–52). A number of messages from Dagon to his territory have survived. By dream, by ecstatic possession, and by oral command, male and female prophets and commoners related Dagon's messages on topics ranging from war and peace (Dossin 1978: 9, 122–23, no. 80; 1948: 128–32) to preparations for a funeral (Kupper 1950: 64–65, no. 40).

Whether or not the cult was adopted from the area around Terqa, Dagon was a popular and enduring deity in Mesopotamia (Menzel 1981: 51–53) and Syria (Schaeffer 1935: 155–56); the Assyrian king Shamshi-Adad I honored the deity by building the temple Ekisiqa in Terqa (*GARI* 1: 24–25). The cult appears to have been established in Palestine by the second half of the 2d millennium B.C.E. since a name with the Dagon element appears in the Amarna Letters (Artzi 1968: 163–64). There is little information on Dagon and his cult along the E Mediterranean. While the god's name appears in the texts of Ugarit (Del Olmo 1981: 69–70; Xella 1981: 388), little information is provided aside from the fact that he is Baal's father and a ritual reference. Furthermore, the name is lacking from some Ugarit god lists altogether (de Moor 1970: 219). Two inscriptions which might refer to the existence of Dagon in Palestine include the word *dgn*, but it is uncertain what this word means in this context (*KAI* 14:19; Montalbano 1951: 390–91).

All biblical references to Dagon appear in literary narratives and may not be considered primary data. Temples are reported for Dagon as a Philistine deity (1 Sam 5:1–7; Judg 16:23; 1 Chr 10:10; 1 Macc 10:83–84; 11:4) in the cities of Ashdod, Beth-shan, and perhaps Gaza. Yet, no archaeological evidence has independently confirmed such a temple to Dagon in any of these sites. Several place names also include Dagon's name (Montalbano 1951: 391), thus confirming the deity's importance for the area. This importance may also be assumed from the use made of Dagon in biblical texts through the end of the 2d century B.C.E.

Aside from Dagon's attributes as a patron deity, this god's cosmic character remains unknown. Three major theories have been posited for the function of Dagon. It was long thought the god was related to the Semitic root *dg* 'fish' (*ERE* 4: 387); this understanding was supported by references in Jerome and in the Talmudic tradition (Montalbano 1951: 394; Holter 1989: 145). A case was made that Dagon was related to Odakon, a fish-man character in Berossus' *Babyloniaca* (*ERE* 4: 387; Fontenrose 1957: 278). Though both arguments were rejected early in the 20th century (*ERE* 4: 387; *RLA* 2: 101), they were later revived. The fish aspect is still argued to be a secondary attribute (Fontenrose 1957: 278–79; Holter 1989: 146–47), while the Odakon connection (Fontenrose 1957: 278) is now considered highly improbable given that the Berossus mss are not uniform in the name of the fish-human (Burstein 1978: 19 n. 42; Montalbano 1951: 395).

The Semitic root *dgn*, when translated as "grain," is also seen as the original meaning of the name Dagon (Langdon 1931: 78; Dhorme 1950: 135; *EncJud* 5: 1222). The equation of Dagon with *sitōn* in Philo of Byblos (recorded in Eus. *P.E.* 1.10.16) supports such a theory, yet the notion of Dagon as a god of grain finds no solid evidence in the ANE. Albright, followed by several others, argues that Semitic "grain" may have been named after the god Dagon rather than the other way around (Albright 1920: 319 n. 27; Montalbano 1951: 395–96; Wyatt 1980: 377; Attridge and Oden 1981: 87 n. 87); but this suggestion depends on an unknown chronology (Holter 1989: 142).

The Albright note suggested that Dagon was named as a storm god on the basis of an Arabic root *dg*, which he translated "be cloudy, rainy," and argued that the fertility aspect of Dagon was related to this weather aspect. This theory has been widely accepted (Montalbano 1951: 394; Caquot and Sznycer 1980:

15; Wyatt 1980: 377–79; Holter 1989: 142); yet the name must be derived from a root not attested in the ancient world and the fertility aspect is as likely to be related to a patron deity as to a storm deity.

Thus the cosmic character of Dagon eludes definition. The deity is equated to too many foreign deities to posit that any of them really was seen as the same "kind" of divinity (Fontenrose 1957: 277; Laroche 1968: 524; Wyatt 1980: 379; Baumgarten 1981: 195; Lipiński 1983: 308, 309; Pettinato and Waetzoldt 1985: 235–36). Whatever the god represented for his devotees, however, he certainly endured through the centuries.

LOWELL K. HANDY

DALET. The fourth letter of the Hebrew alphabet.

DALIYEH, WADI ED- (M.R. 189155). A deep, steep-sided ravine that cuts into the rim of the Jordan rift in the desolate E edge of the central hill country on the W of the Jordan river. It was the site of major discoveries in the early spring of 1962, especially a cache of ancient papyri found in one of its many caves, namely the Mughâret ʿAbū Shinjeh, which penetrates the side of the wâdī at a point some 14 km N of ancient Jericho (Tell es-Sulṭân) and 4 km SW of Khirbet Fasāyil, the Phasaelis of Herod the Great. The cave is about 1500 feet above the Jordan.

The finds, which included hoards of coins, jewelry including seal rings, scores of bullae, and vast quantities of pottery, virtually all dating to the 4th century B.C.E., were associated with hundreds of skeletal remains, all buried under millennial deposits of bat guano.

The initial discovery of papyri and artifacts in the Wâdī ed-Dâliyeh was made by bedouin. Purchase of the papyri and associated finds took place in November 1962 through the agency of the American Schools of Oriental Research; in 1963 and 1964 two seasons of excavations in the caves of the Wâdī ed-Dâliyeh were undertaken by P. W. Lapp on behalf of the Schools. Two caves were thoroughly excavated,

Mughâret ʾAbū Shinjeh (Cave 1), and ʿArâq en-Naʿsâneh (Cave 2). The latter contained very significant remains of EB IV occupation as well as artifacts left by squatters of the Second Jewish Revolt against Rome. Cave 1 proved to be the cave of the papyrus finds, and bits of papyri, bullae, coins, cloth, jewelry, and pottery discovered in excavation firmly established the place of origin of the materials acquired from the bedouin. Save for a few bits of miscellaneous pottery from the surface of the cave floor, the deposits (beneath the surface) were homogeneous.

Most of the papyri of the Wâdī ed-Dâliyeh prove to be slave conveyances, although deeds of property and similar legal documents also belong to the corpus. Perhaps ten of the papyri can be reconstructed wholly or in large measure, but most are highly fragmentary. The owners of the papyri, men and women, were evidently patricians from Samaria. Whenever the place of execution of a papyrus is preserved, it is recorded that the contract was drawn up "in Samaria the city (or Samaria the acropolis) which is in Samaria the province" and normally the deed was executed before the governor of Samaria or a high official of the chancellery. Hence the papyri have been designated SAMARIA PAPYRI. The dates recorded on the papyri range from ca. 375 to March 19, 335 B.C.E., and associated coins date as well from the late pre-Alexandrian era.

The historical occasion for the flight of Samaritan nobles from their capital city into the cave in the cliffs and wasteland of the Jordan can be specified with some confidence. In 331 B.C.E., shortly after Alexander the Great conquered Palestine, the Samaritan leaders rose up in an abortive revolt against their Macedonian overlords. According to Curtius the Samaritans burned alive Andromachus, Alexander's prefect in Syria. In the aftermath the Samaritan conspirators were hunted down, and the city of Samaria was destroyed and resettled as a Macedonian colony. The papyri and associated finds owe their preservation to the massacre of their Samaritan owners in theMughâret ʾAbū Shinjeh.

The finds in Cave 1 in the Wâdī ed-Dâliyeh furnish welcome light on a little-known era in Palestine. The papyri are the first substantial discovery of legal documents from the soil of Palestine. They provide a sample of late 4th-century Aramaic and of its legal formulas and usages, and they reveal substantial differences from the legal formularies in use in the Aramaic papyri from Jewish sources in 5th-century Egypt. Of special interest, too, are the sealings from the papyri. The bullae preserve the impressions of exquisite signets, many showing scenes from Greek mythology, some engraved with motifs familiar from Achaemenid Persia, one inscribed with the name of Sanballat II, governor of Samaria, a hitherto unknown figure, presumably the grandson of biblical Sanballat, adversary of Nehemiah in the late 5th century. The penetration of Greek art motifs in pre-Alexandrian times in glyptic is surprising but adds to a growing accumulation of data for extensive Greek influence in Syria-Palestine before the advent of Alexander.

The finds of Cave 2, if less spectacular, are also of no little importance for the historian. The repertoire of EB IV pottery used by inhabitants of the cave dates probably to the mid-21st century B.C.E. and is further testimony to the poor and relatively obscure culture which intervened between the great urban civilizations of the EB and MB. The finds of the era of the Second Jewish Revolt against Rome (132–135 C.E.) are the first evidence of an outpost or hiding place of Bar Kokhba's Jewish adherents to the N of Jerusalem and Jericho. Hitherto their remains have been found chiefly in the great caves of the canyons S of Jericho which drain into the Dead Sea. Recovered in excavation was a corpus of pottery of substantial size (e.g., 65 storage jars), mostly domestic wares, together with fragments of cloth, keys, and a coin of the Second Revolt. No skeletons or written materials were found. However, papyrus bits of Second Revolt date, claimed to originate in the Wâdī ed-Dâliyeh, but mixed with materials evidently from the S caves, and of dubious provenance, were offered for sale by bedouin. The fate of the Jewish rebels, who, like the Samaritan fugitives four centuries earlier, sought safety in the desolation of the Dâliyeh wilderness, is unknown. Given the ruthless efficiency with which the Romans sought out the rebels, however, it is doubtful that they escaped captivity or death. See also SAMARIA (PAPYRI) .

DALMANUTHA (PLACE) [Gk *Dalmanoutha* (Δαλμανουθα)]. This name occurs once in Mark 8:10 in the majority reading (codices Alexandrinus, Sinaiticus, and Vaticanus). It was apparently located on the NW shore of the Sea of Galilee (cf. Mark 7:31), since the majority reading in the parallel text in Matt 15:39 is "Magdala." The minority reading in Matthew, "Magadan," is actually better attested (original reading of codices Sinaiticus, Vaticanus, Bezae, the Latin, and the Syriac), but a place name otherwise unknown.

It is easy to see that the copyists of Mark did not understand the name, for they consulted Matt 15:39 or otherwise simply "corrected" what lay in front of them. Also, they were not sure whether the place was a mountain, a district, or a territory, as all three terms appear. Aside from "Dalmanutha," they variously recorded the place name in Mark 8:10 as Dalmanountha (Codex Vaticanus), Dalmounai (Codex Washingtonus), Mageda (minuscules 28 & 565), Magedan (Syriac Sinaiticus and the OL), Melegada (the first hand of Codex Bezae), Magdala (families f1 and f13; Codex Tiflis), or with other variants (Metzger 1971: 97).

The place name Dalmanutha is unknown outside the NT. It seems to have a genuine Aramaic locative ending in *-tha* or *-tah* (as in Anabtah in Samaria, Canatha in Tyre, or Gabatha in lower Galilee). However, the root **dlm* is otherwise unattested in biblical Aramaic, though it appears in adverbs in targumic Aramaic. Probably the most ingenious linguistic explanation for the name is that of Nestle (1906: 406), who derived the name from the Aramaic particle *dy* 'which' + *l* 'belonging to' + *mnatah* or *manah* 'portion' or 'lot' in the Syriac Bible, cf. Josh 14:1, 15:1. This implies that Mark had an Aramaic text before him with a phrase something like "which belongs to the territory of …," but Mark understood it as a place name. Mark characteristically preserves bits of Aramaic but elsewhere always in the speeches of Jesus.

The word *dylmʾ* meaning "wall" occurs in the Jerusalem Talmud, which appeared about 400 C.E. (*j. Kil.* 32d). Thus it is at least possible that Mark knew a genuine place name or an Aramaic phrase.

In 1970, when the shores of the Sea of Galilee were exceptionally low, it became possible to investigate several ancient anchorages below the modern surface of the lake. These were walled enclosures built of stone blocks in the water but near the shore. There is one at Capernaum and another at Magdala, among others. A possible third is to be found N of and near Magdala and W of Capernaum. This may be ancient Dalmanutha (Nun 1971). If so, Dalmanutha was a small anchorage, likely in the district of Magdala. On the other hand, it is also possible that the Aramaic word meant "enclosure, anchorage" and came to be understood as a proper name. Thus the oral tradition may have had either "… the anchorage of the district of Magdala" or "Dalmanutha of the district of Magdala." There is no scholarly consensus.

DALMATIA (PLACE) [Gk *Dalmatia* (Δαλματια)]. A region along the modern Yugoslav coast of the Adriatic Sea which in apostolic times was the SW part of Illyricum. This ill-defined mountainous district was a nemesis to Rome. By the time of Paul's epistle to Timothy (ca. A.D. 67) the name denoted at least

the region between the Macedonian frontier to the S and the river Titius (Kerka) and oftentimes the entire province of Illyricum (2 Tim 4:10). The broader definition was definitely used during the Flavian era. Main Dalmatian cities included Salona, Scodra, and Delminium—the capital.

The Romans established a protectorate over Dalmatia in 228 B.C. but never realized an easy or peaceful suzerainty. The name Dalmatia originally indicated the land of a warlike tribe—the barbarous Delmatae or Dalmatae. The region, true to its name, remained rebellious even through the fall of Rome. In 157 B.C. the Dalmatians openly mistreated Gaius Fannius, the leader of a Roman embassy. Subsequently, Marcius Figulus burned Delminium. Already by 119 B.C. the Romans deemed it necessary to send additional forces, this time led by Caecilus Marcus, to put down Dalmatian revolts. And the Dalmatians would revolt a generation later and defeat Caesar and Gabinus (50–48 B.C.). Augustus thought it noteworthy to list Dalmatia (Illyricum) among his accomplishments: "I extended the frontier of Illyricum to the bank of the Danube" (Augustus *Res Gestae* 30; App. *Ill.* 11–12, 28; Suet. *Aug.* 21, 23). But late in his reign (A.D. 6–8) he faced more Dalmatian resistance and sent Tiberius to squelch Bato's revolt. Dalmatia, partly because of its N location, but mainly because of its semi-independence, became a haven for refugees and enemies of Rome, e.g., Aetius in A.D. 433 and Emperor Julius Nepos in A.D. 475 (Jones 1964: 3: 244). Paul highlights its remoteness in Rom 15:19: "… all the way around to Illyricum." However, the N coastal location attracted both merchant and military interest. The Dalmatians made little use of coinage but, nonetheless, remained an important tax base for the Romans (Strabo 7.315). Romans would display their military skills in Dalmatia (Ferrill 1986: 159), and their enemies saw the region as the gateway to the Roman Balkans. Alaric capitalized both on Dalmatia's tax problems, gaining support among Roman Dalmatians (Claudian *De Bello Gothico* 536), and on the location (Ferrill 1986: 95), en route to his sack of Rome in A.D. 410.

The Dalmatian church was infiltrated by both cults and Greco-Roman religious factions. A dedication "to the gods and goddesses" appears in the wall of a Dalmatian church (Fox 1986: 194), and Ramsay MacMullen lists Dalmatia as a cult center (MacMullen 1981: 13, 127).

DALPHON (PERSON) [Heb *dalpôn* (דַּלְפוֹן)]. One of the ten sons of Haman (Esth 9:7). On problems surrounding the list of names see ADALIA (PERSON). The etymology of Dalphon (LXX *delpōn*, A-Text *adelphon*—due to inner Greek corruption, so Tov 1982: 5) remains unclear (Paton *Esther* ICC, 70 and Gehman 1924 offer some possibilities).

DAMARIS (PERSON) [Gk *Damaris* (Δαμαρις)]. A convert of Paul in Athens portrayed in Acts 17:34. That she is mentioned by name suggests that Luke or his sources considered her a prominent convert, perhaps one who made a name for herself in the Christian community. Since it was uncommon for an ordinary Athenian citizen-woman to be present at such public gatherings as Paul addressed in Athens, W. M. Ramsay (1920: 252) suggests that Damaris was one of the Athenian *heitarai*, i.e., women who provided companionship for Athenian men in public as well as in private. Normally these "companions" were foreigners and some were better educated than citizen-women (Witherington 1988: 6–9). Beyond this possible conjecture we know nothing of Damaris' life or background. If Luke's audience considered Damaris a "companion," then this story may be included in Acts to show that the gospel frees one from

such a lifestyle. Finally, we do see at Acts 17:34 the typical Lukan male-female parallelism, where Luke attempts to show that the gospel affects and benefits men and women equally.

The name Damaris is not found elsewhere in Gk literature with the spelling we find here, and thus some scholars have suggested that it is a mistaken reading for the common name Damalis (found in the African Latin ms Codex h at Acts 27:34). Other forms of the name Damaris are known in the relevant Gk literature, and the later Latin evidence is too slender a basis for concluding that the text originally read Damaris (Foakes Jackson and Lake 1933: 220). It is noteworthy that the Western text of Acts, on which the KJV is based, does have a marked antifeminist bias (Witherington 1984: 82–84), e.g., Codex D omits any reference to Damaris at all and focuses only on Dionysius. On the other hand, Codex E attaches the description "of honorable station" to Damaris, not to Dionysius (Bruce *Acts* NICNT, 363).

BEN WITHERINGTON, III

DAMASCUS (PLACE) [Heb *dammeśeq* (דַּמֶּשֶׂק), *dûmmeśeq* (דּוּמֶּשֶׂק), *darmeśeq* (דַּרְמֶשֶׂק)].

DAMASCENE. A city of S Syria, which is not only the capital of modern Syria, but was the capital of the nation of Aram during the 10th through 8th centuries B.C.E. Aram was a constant rival to, and sometimes an ally of Israel, until it was incorporated in the Assyrian Empire in 732 B.C.E. See ARAM (PLACE). It is the city to which Paul went after his encounter with the risen Christ, and it is where he became converted to Christianity (Acts 9).

PRE-HELLENISTIC HISTORY

A. Location

Although on the border of the great Syrian desert, the city is located along the banks of the Barada river, the only major perennial water source in the region. The water, combined with the rich soil of the basin, has made the area of Damascus one of the richest agricultural regions in the Near East. The city has also been a major station on the main N-S caravan route since ancient times. These factors partially explain the importance of Damascus over the centuries.

The site of ancient Damascus is located under the present "Old City," and no excavations into the pre-Roman levels have yet taken place. (On what is known of the topography of the ancient city, see Sauvaget 1949 and Watzinger and Wulzinger 1921). Because of the status of the excavation work, most of our information concerning the ancient city comes from historical sources of neighboring cultures, including those of Israel, Egypt, Hatti, Assyria, and Babylonia. These documents deal with Damascus only when the international affairs of their countries brought them into contact with the city. Thus we know very little about the domestic situation and internal affairs of Damascus.

B. Damascus in the Late Bronze Age

Although there is a popular tradition that Damascus is the oldest continuously occupied city in the world, no clear evidence for the existence of the city before the 15th century B.C.E. has yet been found. There were reports in the late 1970s that the name Damascus occurs in the Ebla tablets (ca. 2400 B.C.E.), but this has not been confirmed, and many scholars have expressed strong doubts that its name or any S Syrian or Palestinian town names actually occur at Ebla. Neither reference to Damascus in Gen (14:15 and 15:2) can be used to argue for the existence of the city during the MB Age (ca. 2000–1550), even if the patriarchs are to be dated to that period (Pitard 1987: 9).

The first undisputed occurrence of the name is in a list of Syro-Palestinian cities inscribed on the walls of the temple of Amun at Karnak in Egypt and dating from the reign of Thutmose III. This list provides the names of towns the kings of which were said to have been captured at Megiddo after Thutmose defeated their coalition in battle, ca. 1482. Damascus is also mentioned on a statue found in the funerary temple of Amenophis III (ca. 1417–1379), which names several cities and states which were subject to (or

at least had friendly relations with) Egypt. The name occurs in three of the Amarna Letters (14th century) and a tablet found at Kamid el-Loz (ancient Kumidi) and also from the 14th century. These sources give little information about the city besides the fact that it existed, that it was ruled by a "king," and that it was usually within the political sphere of Egyptian influence.

Damascus in the LB Age (ca. 1550–1250) was a city of the land of ʾĀpu/ʾŌpu (conventionally vocalized by scholars in its genitive, cuneiform version, Upi—*māt ú-pî*). A larger number of sources exist which refer to this land, and these give us a bit more information about events in the Damascus region.

The earliest reference to this land occurs in texts which date some three centuries before the first attestation of the city of Damascus. It is listed among the enemies of Egypt in the Execration Texts found at Saqqara (18th century B.C.E.), in the Egyptian form *ʾipwm*, probably to be vocalized as *ʾĀpum*. In these texts the land of Apum is described as being divided into a N and a S part, each of which was ruled by its own prince.

During the LB, the land of Upi was normally a vassal state in the Egyptian Empire. It was, however, usually at the NE boundary of Egypt's regular sphere of influence and therefore often found itself in the midst of the power struggles between Egypt and Mitanni or Hatti for dominance in Syria. Damascus and Upi are mentioned in four Amarna Letters, which center around a Hittite attempt to remove S Syria from the Egyptian sphere of influence, sometime during the reign of Akhenaten in Egypt (EA 53, 107, 189, 197). The Hittites do not appear to have been particularly successful in Upi, for a 13th-century letter of Rameses II to the Hittite king Ḫattusilis III indicates that Upi was under Egyptian control at that time.

C. Damascus in the Iron Age

1. The State of Aram. Nothing is known about events in S Syria and Damascus during the "dark age" which covered most of the Near East between ca. 1200 and 1050 B.C.E. When historical sources begin to reappear, the area of Damascus is one of a number of small Aramean states which had been established to the N and E of Israelite territory among a few surviving Canaanite states. The first Iron Age reference to Damascus in written sources is found in the account of David's war with the Aramean kingdom of ZOBAH (2 Samuel 8 = 1 Chronicles 17). Zobah, probably to be located in the N Biqaʿ valley in Lebanon, appears to have been the dominant power in S Syria early in the reign of David. When Zobah came into conflict with the expanding Israelite state under David, two important battles were fought (2 Sam 8:3–8 = 1 Chr 18:3–8 and 2 Sam 10:15–19 = 1 Chr 19:15–19), in which David defeated Hadadezer of Zobah. According to the account in 2 Samuel 8, following the battle with Hadadezer, David was confronted with an army of Arameans from Damascus which arrived to support Zobah. David defeated this army, took control of Damascus, and incorporated it into his empire.

Damascus remained under Israelite control until sometime during the reign of Solomon, when Rezon, the son of Eliada, a former servant of Hadadezer of Zobah, took an army of malcontents, captured Damascus, and there proclaimed himself king (1 Kgs 11:23–25). Solomon was apparently unable to regain control of Damascus. This was the beginning of Damascus' rise to political power as the capital of the state called ARAM in the OT.

During the 9th and 8th centuries Aram-Damascus was often a major rival to the N kingdom of Israel. Under Bir-hadad I (biblical Ben-hadad), Aram attacked Israel after making an alliance with King Asa of Judah and plundered much of its N territory (1 Kgs 15:16–22 = 2 Chr 16:1–6). Aram's stature in the political sphere grew during the second quarter of the 9th century, when its king, Hadad-ʿiḏr, became the leader of a 12-state coalition which opposed the westward expansion of Shalmaneser III of Assyria in the battle of Qarqar, 853 B.C.E. According to Shalmaneser's account of this battle, King Ahab of Israel was one of the allies in the coalition (*ANET*, 278–79). The coalition was successful in keeping Shalmaneser out of central and S Syria for over a decade.

There has been considerable scholarly discussion concerning the accounts in 1 Kings 20 and 22 of wars between King Ahab of Israel and a "Ben-hadad" of Aram-Damascus. Many scholars have identified this Ben-hadad with Hadad-ʿiḏr of the Shalmaneser III inscriptions and have assumed that the battle of Qarqar took place during the period between the battles described in 1 Kings 20 and 22. But recently a number of scholars (Miller 1966; and Pitard 1987: 115–25) have proposed that the stories about the Aram-Israel

wars did not originally give the name of the king of Israel and that they have been misattributed to Ahab's reign. It has been proposed that they are actually the accounts of the battles between King Joash (or perhaps Joahaz) of Israel and Bir-hadad (Heb Ben-hadad), the son of Hazael of Aram, during the early 8th century (cf. 2 Kgs 13:14–19, 24–25).

The preeminence of Aram-Damascus among the states of S Syria and Palestine continued during the reign of Hazael, a usurper who seized the throne sometime around 842 B.C.E. (2 Kgs 8:7–15). After having been initially weakened in disastrous confrontations with Shalmaneser III in 841 and 838 (and possibly again in 837), Hazael quickly consolidated his power and began an imperial policy which led to the creation of a substantial empire. By the time of his death, Hazael controlled most of S Syria and Palestine, including Israel (the areas both E and W of the Jordan), Judah, Philistia, and probably the other states in Transjordan (2 Kgs 10:32–33; 12:17–18).

Hazael was succeeded toward the end of the 9th century by his son, Bir-hadad, during whose reign the empire of Aram disintegrated. Joash of Israel was able to defeat Bir-hadad in battle (2 Kgs 13:24–25 and also probably 1 Kings 20—see above). From extrabiblical sources we learn that Aram was also defeated in a conflict with King Zakkur (formerly vocalized as "Zakir") of Hamath and Luash to the N (*ANET,* 655–56) and that the Assyrian king Adad-nirari III besieged Damascus in 796 and forced Bir-hadad (called Mar›i in the inscriptions) to render a heavy tribute.

Throughout the first half of the 8th century, Aram-Damascus continued to decline and, in fact, may have become a vassal of Israel during the reign of Jeroboam II (ca. 782–748. See 2 Kgs 14:25, 28). Damascus, however, took a leading role in an anti-Assyrian coalition one last time, ca. 735 B.C.E., along with Tyre, Israel, and others. See SYRO-EPHRAIMITE WAR. Raḏyan (biblical Rezin) of Aram and Pekah of Israel attempted to force the young King Ahaz of Judah into joining them, but he refused (2 Kgs 16:5–9; Isa 7:1–9). When the kings of Aram and Israel attacked Judah to remove Ahaz and replace him with a more pliant puppet king, Ahaz sent a large gift to Tiglath-pileser III of Assyria and asked him for help. Before the siege of Jerusalem could succeed, Tiglath-pileser III marched into Syria, where in 733 and 732 his army attacked Aram. After destroying virtually all the towns in Aram (his annals claim 591 towns destroyed in the 16 districts of Aram; *ANET*, 283), Tiglath-pileser finally captured Damascus, killed Raḏyan, and annexed Aram into the empire. Damascus became the capital of a province (suitably called "Dam̲ascus"), while the rest of Aram was divided into other provinces, including Hauran, Qarnini, Manṣuate, and Ṣubate.

In 720 Damascus, along with several other cities, joined Hamath, the only independent Syrian state not yet annexed into the Assyrian empire, in another anti-Assyrian coalition. But the new Assyrian king, Sargon II, met and defeated their forces at the city of Qarqar. Hamath was incorporated into the empire and we hear of no other rebellions by Damascus for the rest of the Assyrian period. In 717 Sargon settled exiles from the cities of Papa, Lullukna, and perhaps some others in Damascus.

2. Under Assyrian, Babylonian, and Persian Control. Little is known about Damascus during the succeeding centuries. That it remained under Assyrian control during the first half of the 7th century seems fairly certain. The Assyrian governor of Damascus is listed in the eponym canon for the year 694 and apparently for a year ca. 650. During the course of a campaign against a number of Arabian tribes, Assurbanipal of Assyria found Damascus a loyal and convenient location in which to spend a short period of time before engaging in a battle with the Arab confederation (640s). But Damascus presumably regained its independence temporarily with the collapse of the Assyrian Empire.

As did most of the states in S Syria and Palestine, Damascus came under Babylonian domination in 604. But the extent of its involvement with the various rebellions in the succeeding decades is unknown. Damascus remained a provincial capital under the Persians, but very little specific information has been preserved about its role in the events of the period.

A few other pertinent facts may be gleaned from the texts. The patron deity of Damascus was the storm-fertility god Hadad, who was given the epithet *rimmōn*, probably better vocalized as *rammān* 'the Thunderer.' The temple of Hadad-ramman was the chief temple of Damascus (cf. 2 Kgs 5:18), and it is thought to have been located on the site of the Umayyad mosque in the current Old City of Damascus.

The wine of the region of Damascus, particularly of the area of Helbon, a few miles N of Damascus, was famed in antiquity throughout the Near East. It is mentioned in Ezek 27:18, as well as in Strabo xv.3.22. For further discussion see *POTT:* 134–55.

WAYNE T. PITARD

THE GRECO-ROMAN PERIOD

Aramean Damascus, the most important of the Aramean states in Syria, was destroyed by the Assyrians in the 8th century B.C. but was subsequently rebuilt to such an extent that in the Persian period it was described by Strabo as "a noteworthy city, having been, I might almost say, even the most famous of the cities in that part of the world in the time of the Persian empire" (16.2.20). Darius was so impressed with the city that he sent the greater part of his valuables there for security before the battle of Issus (Arrianus *Alan.* 2.11). After the battle Parmenio, the general of Alexander the Great, took the city without a struggle, and it remained a significant cultural center throughout the Hellenistic period.

Following the death of Alexander, his empire was divided among his generals and eventually their successors. In the E Seleucus I Nicator emerged as founder of the Seleucid Dynasty in 312 B.C. After the defeat of Antigonus at Ipsus in 301, when a new partition of the Macedonian Empire was made, he added Syria to his empire. He built Antioch on the Orontes as his new capital, which during the succeeding periods of Greek and Roman control overshadowed Damascus.

The city fluctuated between Seleucid and Ptolemaic control until the Nabateans took advantage of the growing weakness of the Seleucids and moved into Syria about 85 B.C. and took control of Damascus. In 63 B.C. Rome entered the arena of conflict with Pompey mounting an expedition against the kingdom of the Nabateans to restore order to Syria's perpetual anarchy and to the civil war in Judea. He allowed the king of the Nabateans to remain in control of Damascus, but after the victory of Octavian and Mark Antony over Cassius and Brutus, Antony gave Damascus to Cleopatra (34 B.C.). After the deaths of Antony and Cleopatra, the city, along with all of Syria and Palestine, remained under the control of Rome.

Roman coins from Damascus date until A.D. 34 in the reign of Tiberius, then skip a number of years and resume in A.D. 62, in the reign of Nero. During this gap Rome apparently did not exercise direct control over the area, but Caligula allowed Aretas IV to govern Damascus, along with the E side of the Jordan from Arabia to Damascus until his death in A.D. 39 or 40.

The importance of Damascus for NT studies lies in the fact that Paul was converted on its outskirts around A.D. 34 (Acts 9; 22; 26:12–23) while en route to the city to persecute Christians (Acts 9:2). Apparently in the synagogues there were Christians who maintained their Jewish identity. There was in Damascus a large Jewish community which may in some way have been affiliated with the Qumran Community (Essenes) near the Dead Sea (CD 6). Josephus records (*JW* 2.561) that during the First Revolt, the people of Damascus slaughtered 10,500 Jews (A.D. 66).

The Damascus of the NT is located in the SE section of the modern city and was laid out on a typical Hellenistic grid of *insulae* measuring 300 feet (E-W) by 150 feet (N-S) and which is still discernible in the modern street plan. There was a 50-foot-wide, colonnaded *cardo maximus* (probably the "street called Straight" of Acts 9:11) running E-W. Some of the columns of this street have been excavated, and others stand amid the modern-day shops. Remains of a theater, a monumental Roman arch, and perhaps a palace have been found along this street.

Part of the Roman wall has been found about a thousand feet S of the E Gate (Bab Sharqi) beneath St. Paul's Chapel and Window. A small chapel was built by Greek Catholics under the present Ottoman

gateway, where a gate from the Roman period once stood. It is with this gate that tradition associates Paul's escape, when he was let down in a basket through a window in the wall (2 Cor 11:33).

JOHN MCRAY

DAMASCUS RULE (CD). The "Damascus Rule (CD)"document was first discovered in the genizah (storeroom) of the Qara'ite synagogue in Old Cairo by S. Schechter, who brought it to the University Library, Cambridge, where it remains. First published as "Fragments of a Zadokite Work" (Schechter 1910) because of its references to "sons of Zadok" (4.1, 3) and "Zadok" (5.5)—and hence often referred to as the *Damascus Document* and officially denoted by the siglum CD (= Cairo: Damascus) on account of its allusions to Exile and covenant-making in the "land of Damascus" (6.5, 19; 7.19; 19.34; 20.12). CD consists of two incomplete mss, designated A and B, and dating respectively from about the 10th and 12th centuries C.E. A contains eight sheets, each with two columns; and B a single sheet with two columns. Schechter numbered the A columns 1–16 and the B columns 19–20—rather confusingly, for 19 contains a slightly different version of 8, while 20 follows 19 but has no counterpart in the A ms. There are also fragments of this work from Qumran Caves 4, 5, and 6 (4QD$^{a–g}$, 5QD and 6QD).

A. Contents

It is now customary to divide CD into two parts, the "Admonition" consisting of cols. 1–8–19–20 and the "Laws," cols. 9–16. The "Admonition" opens with reflections on the present condition of Israel in the form of three discourses about the history of God's dealings with his people (1.1–4.12a); from the beginning, mankind, then Israel, strayed after its own desires, and the "covenant of the former ones" (i.e., the preexilic Israel) was abrogated with the divine punishment of desolation of the land and Exile. In the "age of wrath" which has followed, Israel is forsaken by God and misled into continued departure from the true law, despite its belief that it was following God's will. However, God has renewed a covenant with the remnant of the "former ones" and revealed to them through their founder, the "interpreter of the law" (*doreš hattôrâ*) "the hidden things in which all Israel had gone astray—his holy sabbaths, and his glorious festivals, his righteous testimonies and his true ways" (3.14), so that these might "inherit the land." An invitation is issued to outsiders to join this "remnant" community before judgment descends upon Israel. The next section (4.12b–7.9) deals with matters of *halakah,* which separate Israel from the remnant community, beginning with the three "nets of Belial," unlawful marriage, illicit wealth, and sanctuary defilement, which Israel mistakes for "righteousness." By contrast, the community's laws, of which a sample is given, stress the distinction between holy and profane, limited contact with the temple cult, and love for one's "brothers" (fellow members of the covenant community). The third section (7.10–8.21–19.1–20.34) issues warnings about the coming judgment on the wicked, drawing a parallel with Ephraim's secession from Judah and the successive fates of the two kingdoms; one was lost forever. The final part of this section focuses on apostasy from the community itself and emphasizes loyalty to the "teacher" whose recent death is also reflected. This last part of the section may be addressing a later situation and a different audience from the rest of the "Admonition": not outsiders to be invited, but other members of the community to be admonished. It has been suggested (Davies 1983: 48–55) that the three elements of history, law, and warnings in the "Admonition" correspond to the structure of the "covenant formulary" (*Bundesformular*) known in the ANE and believed to exist also in the OT.

The "Laws" deals with a variety of issues governing life within the covenant community, including judicial processes, sabbath and sacrificial observances, officers within the community, support for the needy, oaths, and vows. The principles of arrangement are inscrutable and the compilation is incomplete. However, it seems that two orders of community life are ordained, in "cities" and in "camps." Among the more important aspects of these laws are those which acknowledge temple offerings and those which presuppose considerable contact with gentiles.

On the basis of the Qumran fragments a fuller outline of the document has been proposed (Milik 1959: 151–52; cf. Fitzmyer 1977: 90–92) with additional material at the beginning of the "Admonition" and the beginning and end of the "Laws." But the fragments to be edited by Milik have yet to be published (see, provisionally, Milik 1966), while those already published from Cave 6 (Baillet 1956) contain no additional material or significant deviation from CD. For the time being, judgment must be reserved on this matter.

B. Identification and History of the Community

CD is evidently the product of a Jewish community at variance with its fellow Jews. Its identity was disputed for many decades, although a wide consensus correctly placed it in the Hellenistic-Roman era. The references to "Zadok" and "sons of Zadok," as well as the apparently non-Pharisaic *halakhot* led many to suggest Sadducees (e.g., Charles *APOT* 2: 785–834; Lévi 1911–12), though Ginzberg's minute analysis of the *halakhot* led him to prefer Pharisees (Ginzberg 1970); Essenes, though considered (Lévi 1911–12; Meyer 1919), were rejected. The discovery of the Dead Sea Scrolls apparently supplied the answer. Even before the recovery of fragments of the document from Qumran, phrases like "teacher of righteousness" and "man (or spouter) of lie(s)," present in CD, had reappeared in the Cave 1 *Pesher on Habakkuk*, while other terminological parallels emerged between CD and the *Rule of the Community.* Both the Qumran community and that of CD have subsequently come to be widely regarded, with good reason, as Essene.

However, although a simple equation of the community of CD with the inhabitants of Qumran was widely accepted at first, it is now recognized that the relationship is not so straightforward. Yet it is widely believed to hold the key to the origin and/or the history of the Qumran community, a fact which affords CD a crucial place in Qumran studies. The key differences between the community of CD and that of Qumran are as follows:

1. Damascus. CD's historical summaries place the foundation of the "remnant" community in the wake of the "destruction of the land" by Nebuchadnezzar while it was exiled in "Damascus" (6.5). While pre-Qumran scholarship interpreted "Damascus" literally, there is hardly room in what we know of the history of the Qumran community for such an Exile. The suggestion that "Damascus" is a cipher for Qumran (Cross 1961), once widely favored, is no more than a wishful guess; CD speaks of exiles who "went out of the land of Judah," which is hardly true of the inhabitants of Qumran; and CD never associates "Damascus" with the "teacher of righteousness," who seems to have been the founder of the Qumran group.

2. The Founder of the Community. For CD the founder of the community is the "interpreter of the law" (6.7), whose rules will be followed for the "period of wickedness" until there arises one who will "teach righteousness at the end of days." This passage might appear not only to separate the "interpreter" and the "teacher" but to place them in a clear temporal and ideological relationship. This relationship appears to be obscured by 1.11, which refers to a past "teacher of righteousness" who came to an already formed but "blind" group; however, it is not so much the relationship between the two *characters* which is altered as the relationship between the characters and the *writer:* CD 1 seems to come from a later period and from a post-"teacher" community; CD 6 does not. Where does the rest of CD stand? The majority of scholars still regard all of CD as Qumranic; Davies (1983) regards it as originally pre-Qumranic, but subject to a Qumranic recension, partly following the lead of Murphy-O'Connor (1970–74), who sees pre-Qumranic sources and Stegemann (1971), who concluded that the "Laws" of CD reflected the circumstances of the Qumran community's parent movement, which he identified with the Maccabean Hasidim.

3. Organization and Ideology. CD and other Qumran documents, notably 1QS, share important similarities alongside significant differences. CD depicts life in "camps" or "cities" (14.3; 12.19), including women and children (7.7), governed by "judges" and involving participation in the temple cult. Personal property seems permitted. At Qumran celibacy seems to have been the rule, and its organization (on which the texts offer a confusing picture) had no "judges." The Qumran community apparently

boycotted the temple and permitted no personal property. (For a convenient comparison and contrast, see Vermes 1977: 105–6.)

Two main hypotheses are offered to explain both the similarities and the differences. Each assumes that both types of communities are Essene, though this is not essential. The long-established view is that the Essenes began at Qumran (implying identification of the "interpreter of the law" and "teacher of righteousness") and later formed settlements elsewhere which developed their own rules, with Qumran possibly remaining as a "mother house." It is these other communities which CD describes. The second, more recent theory, first advanced by Murphy-O'Connor (1970–74) on the basis of a series of analyses of CD, is that the Essenes as a movement predated Qumran, and that the Qumran community was a splinter movement, which remained alongside, but presumably in disagreement with, the non-Qumran Essenes. For Murphy-O'Connor, "Damascus" is a cipher for Babylon, where the Essenes originated before migrating to Palestine in the Maccabean period and subsequently withdrawing from its society because of differences over *halakah* and high priesthood. The crucial difference between the two theories, each of which conforms well with Josephus' description of two kinds of Essene (*JW* 2 §119–61), lies in the explanation of Essene origins; the former theory sees the formation of the Qumran community as the starting point, the latter opens the way to an earlier origin, possibly described in CD. For the latter theory the community to whom the "teacher of righteousness" came (CD 1.11) was Essene; for the former, it has to be some other group, usually the Hasidim. Each theory poses different reasons for the origin of the Essenes, though not necessarily for the origin of the Qumran community.

The resolution of this crucial problem involves other elements in CD, notably the laws and the relationship to other literature found in the Qumran caves. Several detailed studies of the CD *halakah* have been undertaken (e.g., Ginzberg 1970; Rabin 1954; Schiffmann 1975) but without conclusive results; in many cases failure to distinguish the laws of CD from those of 1QS reduces the usefulness of the study. But important parallels exist between CD and *Jubilees*, a book to which CD probably refers at 16.3, but which is not thought to be a Qumran composition. Other parallels with *1 Enoch* and the *Temple Scroll* are also evident, lending weight to the suggestion that CD has much in common with other movements related to—and possibly earlier than—the Qumran community.

C. Qumran and the Qara'ites

A further aspect of CD, perhaps rather underemphasized in recent research, is its relationship to the Qara'ites, in one of whose synagogues it was found and by whom it was presumably copied. Al-Qirqisani (10th century C.E.) mentions "Zadokites" who opposed "Rabbanites" and whose doctrines, as he reports them, resemble both those of the Qara'ites and of CD (Schechter 1910: XVIII–XX; Driver 1965: 260–61). Two possible explanations are available for the apparent continuity of these traditions. One is that the Essene movement continued after the end of the Qumran settlement—quite probable if non-Qumran Essenism was a substantial movement and if it existed also outside Palestine; the other is that the discovery of texts in the Dead Sea region in ancient times (see Driver 1965: 6–15) led to the adoption in some circles of doctrines and laws contained in them or even to the creation of Jewish sects devoted to their teaching. While there seem to be strong links between CD and the Qara'ites, the question is far from resolved and invites further research. A detailed and balanced assessment has been made by Wieder (1962; the most recent and very positive discussion is by Wacholder 1985: 148–55).

PHILIP R. DAVIES

DAN (PERSON) [Heb *dān* (דָּן)]. DANITE. The fifth son of Jacob and Rachel's maid, Bilhah (Gen 30:1–6), and the brother of Naphtali, and as such the eponymous ancestor of the tribe of Dan.

The various genealogies and lists which mention Dan are extremely problematic and the center of considerable debate as to their respective dates and purposes. Wilson (1977: 37–45) has shown that the primary purpose of biblical genealogies was not to preserve historical information. Rather they had a variety of economic, political, and religious functions. The fluidity of Dan's position in these lists and genealogies may reflect changes in political and social relationships between various groups at different times. Dan and Naphtali, the two Bilhah tribes, usually appear in tribal lists together (Gen 35:25; 46:23; Exod 1:4; cf. 1 Chr 2:2). The relative position of Dan in the lists varies considerably from fourth (Num 34:22), fifth (Gen 30:6; Josh 21:5, 23–24; 1 Chr 6:46, 54—Eng 6:61, 69), seventh (1 Chr 2:2), the more frequently ninth (Gen 35:25; Num 1:38–39; 2:25–26; 7:66–71; 10:25; 13:12; 26:42–43), eleventh (Gen 46:23) to twelfth place (1 Chr 27:24). In Ezek 48:1 Dan is placed in the most northerly position, presumably reflecting its later geographical location. However, "the gate of Dan" (Ezek 48:32) is placed in sixth position but separated from Naphtali in twelfth. The size of Dan is also confused in the biblical traditions. In Num 26:43, the census after the plague in the wilderness, Dan is the second largest tribe with 64,400: this is remarkably attributed to one family. The equally large census figures (Num 1:39; 2:26) are at odds with the tradition that Dan was able to muster only 600 men for the expedition to capture Laish (Judg 18:11).

The treatment of Dan in Chronicles differs significantly from that in the Pentateuch. Dan and Zebulun are omitted from 1 Chronicles 2–8, suggesting that the Chronicler wanted to deemphasize Dan. The MT of 1 Chr 6:46—Eng6:61 omits any mention of Dan but is emended by some commentators to read "… the tribe of Ephraim and from the tribe of Dan and from the half-tribe of Manasseh" on the basis of Josh 21:5, 25. The same is true of 1 Chr 6:54—Eng6:69, where the MT is often emended to read "… from the tribe of Dan, Eltekah and its common land, Gibbethon and its common land, …" with Josh 21:23. This tendentious aspect of the genealogies and lists in 1 Chronicles 2–8 is further seen in the omission of Dan in 1 Chr 7:12. On the basis of Genesis 46 and Numbers 26, it is reasonable to expect Dan and Zebulun to be mentioned. Braun (*1 Chronicles* WBC, 106) reads "… and Shuppim and Huppim. The sons of Dan: Hushai, the sons of Aher." This seems reasonable since Hushim is mentioned in Gen 46:23 as the son of Dan. It is at this point in the genealogy that one would expect Dan and Zebulun. This is further indicated

by the next verse which begins with "the sons of Bilhah," i.e., Dan and Naphtali. In 1 Chr 12:24–38, Dan and Naphtali are relegated to a position following Issachar and Zebulun; but Dan is relegated to last place in 1 Chr 27:22, having been separated from Naphtali.

The traditions of Dan's migration have been used by historians to show that Israel was originally confined to the hill country and prevented by stronger Canaanite city-states from settling in the Shephelah and coastal plain. The relevance of the list of towns in Josh 19:40–46, which indicates that the Danite settlement stretched well into the coastal plain, is disputed. However, many scholars believe that this list dates from the monarchic period, particularly the reign of Josiah, and thereby does not provide evidence for premonarchic Dan. In Judg 1:34–35, Dan is said to have failed to conquer Aijalon, Harhares, and Shaalbim. They were pressed back by the "Amorites" out of the Shephelah and forced back into the mountains. Many scholars view this as reliable information from the premonarchic period indicating that Israel was forced to settle in the central hill country owing to the military superiority of the Canaanite city-states. The stories of Samson (Judges 13–16), a Danite, are also thought to preserve traditions of Philistine pressure on early Israelite settlement. The narrative of Dan's migration and capture of Laish in Judges 17–18 is seen by Malamat (1970) as based on a pattern like the Conquest traditions. Dan's search for a new settlement culminates in the capture of the isolated city of Laish and its renaming after the eponymous ancestor of the tribe (Judg 18:29). Josh 19:47 preserves a similar tradition but names the city Leshem. These traditions of migration and the "conquest" of Laish/Leshem have been used as evidence that the Israelite settlement was a protracted process. Yadin (1968) has argued that the reference in Judg 5:17 to Dan's remaining with the ships may indicate that the Danites had their origins among the Danuna as part of the Sea Peoples. Spina (1977) interprets these traditions in light of the revolt hypothesis: he proposes that the tribe of Dan had its origins in a new social synthesis of indigenous Canaanites and groups of the Sea Peoples. Similarly, Gottwald (1979) also believes that these traditions contain much material which supports the revolt model. Other scholars argue that the sources are late or are literary creations which preserve little usable historical information.

The narrative of Judges 17–18 is important for its negative appraisal of the founding of the sanctuary at Dan and of its priesthood (Soggin *Judges* OTL, 263–78). The cult symbol is made from stolen silver (Judg 17:2) and is then stolen from the Ephraimite. The narrative implies that the cult of Dan was syncretistic. The origins of the Danite priesthood are called into question since the Levite is taken under the threat of force. Its claims to Mosaic descent (Judg 18:30) are called into question in the MT of Judg 18:30, which describes Jonathan as the grandson of Manasseh. The use of a suspended *nun* in the name *mnšh* has led many commentators to accept the reading "Moses" (*mšh*) along with some LXX mss, the Vg, and the OL. The ambiguity casts doubt on the legitimacy of the priests of Dan to be descendants of Moses. The polemical aspects of this narrative need to be understood in light of the Deuteronomistic condemnation of the cult of Jeroboam I, with its bull images, set up in Bethel and Dan to rival the Judean royal cult in Jerusalem (1 Kings 12; cf. Exodus 32). The puzzling reference in Judg 5:17, complaining that the Danites did not take part in the Israelite coalition against Sisera, indicates a negative attitude towards Dan. It is in line with the other negative references to Dan throughout the Hebrew Bible. Thus the blasphemer in Lev 24:11 was the son of an Egyptian and a Danite mother. In the blessing of Jacob (Gen 49:16) Dan is said to judge his people as one of the tribes of Israel but then is said to be "… a serpent in the way, a viper by the path, that bites the horse's heels so that his rider falls backward" (49:17). It is not clear if this is a commendation of Dan's military prowess or is a denigration of its trustworthiness. When considered in the light of the criticism of Judg 5:17, it might be read negatively. However, the military prowess of Dan is acclaimed in the Blessing of Moses (Deut 33:22) in the imagery of a young lion that leaps from Bashan. The stories of the Danite Samson (Judges 13–16), of the Danite migration, of the theft of the Ephraimite priest, and of the graven image (Judges 17–18) imply a negative appraisal. Klein's literary analysis (1988) of Judges 17–18 highlights the use of irony whereby Dan, the judge, in the book of Judges is shown to violate the laws of hospitality.

A Danite, Oholiab, was involved in the construction of the tabernacle with Bezelel (Exod 31:6; 35:34; 38:23). They were both skilled metal workers, designers, and craftsmen. A further interesting comparison

comes in 2 Chr 2:13 where Huramabi (see HURAM), the son of a Danite woman, is said to be a skilled craftsman from Tyre (2 Chr 2:13). This is a significant variation from 1 Kgs 7:13–14, where Huramabi is reported as the son of a woman from Naphtali. Dillard (*2 Chronicles* WBC, 20) believes that the alteration was deliberate in order to draw a parallel with Oholiab. In fact, rabbinic exegesis made the connection even more apparent by declaring Huramabi to be a descendant of Oholiab. He points out that the Chronicler parallels the construction of the tabernacle with that of the temple. In so doing, Solomon is compared with Bezalel and Huramabi with Oholiab.

KEITH W. WHITELAM

DAN (PLACE) [Heb *dān* (דָּן)]. Tel Dan, formerly Tell el Qadi, is identified with ancient Dan of the phrase "from Dan to Beersheba" (i.e., 1 Sam 3:20). The identification was first suggested by E. Robinson in 1838 (1841: 358) and has been universally accepted. A bilingual inscription mentioning the "god of Dan," found in 1976 in the course of the archaeological excavations, confirms the identification.

Dan is first mentioned in the Bible in Gen 14:14. At that time, the name of the city was Laish (Josh 19:47; Judg 18:29). The name Laish appears in the Egyptian Execration Texts of the 18th century B.C.E. and in Mari. Thutmose III lists Laish among the cities he conquered. See also LAISH (PLACE). The tribe of Dan, after conquering Laish, changed the city's name to Dan. A few decades afterward the city was attacked by Arameans. In the days of the prophet Amos, the people of Israel swore "by the god of Dan" (cf. Amos 8:14). The last biblical reference to Dan is in Jeremiah (4:15; 8:16).

B. History of the Excavations
C. History of the Settlement

———

A. Location and Topography

Tel Dan is located in the N of Israel (M.R. 211294), at the foot of Mt. Hermon and near one of the main sources of the Jordan river, and the tel itself has several perennial springs. It is also on the main crossroads from the Mediterranean to the E and Damascus. Tel Dan is a large mound of some 50 acres, rising close to 20 m above the surrounding plain, with a 40° sloping rampart. A gentle slope from the high circumference of the mound towards the center of the site gives a slightly concave appearance to the mound.

B. History of the Excavations

Excavations began in 1966, initially as a rescue operation, and have continued almost without interruption under the direction of A. Biran. By 1987, 20 seasons of excavation had taken place.

The very nature of a rescue excavation dictates the strategy of the excavation; and at Tel Dan it also determined, to a large extent, the strategy of subsequent seasons. Thus for a number of seasons work concentrated on the S slopes of the mound in area A, where a trench was cut from top to bottom in 1966 and in a number of squares opened on the mound itself in area B.

In 1966 the excavations in area A revealed the MB glacis and a flagstone pavement. This flagstone pavement was discovered later to have formed part of the Iron Age gateway. To study further the method of construction of the MB ramparts discovered in 1966, a trench was opened in 1972 on the NE slope of the mound (area Y) and another on the SE corner in 1978 (area K).

In the third season of excavations, area H was opened E of area B and on the N side of the mound near the spring area T, where the cult center was discovered. A number of squares were opened in 1980 in the center of the mound (area M), an area which was undisturbed by later burials. The main areas of excavations from 1982–86 have been in areas B and T, at the S and N edge of the mound respectively.

C. History of the Settlement

Tel Dan was first settled in the Pottery Neolithic period, around 5000 B.C.E. Evidence for this conclusion came from a small section in area B where bedrock was reached. Because of the small area excavated, the nature of the settlement could not be determined. It may be assumed, however, that it extended to other parts of the site. The abundant water supply would justify such an assumption.

There followed a gap in the history of occupation until the EB II, approximately the 27th century B.C.E. Undisturbed levels of occupation of the 3d millennium were reached in a number of sections spread over an extensive area, and we concluded that the EB remains cover the entire 50-acre site. This conclusion was supported by the fact that in practically every basket of excavated material EB shards were found. These, together with the complete vessels found in the stratified areas of excavation, indicate that a large and prosperous city, probably called Laish, with a rich material culture, existed at our site around the middle of the 3d millennium B.C.E. Storage jars with combed patterns, a decorated bone handle, platters with a red burnished slip, jugs, and juglets some of which are of the Abydos type, animal figurines, and a large number of seal impressions are but a tantalizing indication of the wealth of the city in the EB II and III periods still to be excavated.

The following period, EB IV, is not well represented at our site. Nevertheless, sufficient evidence was brought to light to indicate that the site had not been abandoned, although the nature of the settlement cannot be determined at this stage of our research.

The beginning of the 2d millennium B.C.E. witnessed the gradual development of the city we know was called Laish in the 18th century B.C.E. Three strata of occupation belonging to the MB I period were found. A stone-built tomb with a characteristic MB I juglet and decorated vessels similar to the so-called Khabur ware from N Syria precede the massive fortifications, which gave the site the shape it has to this day.

This system of defenses consisted of a central core with sloping earthen ramparts against both sides of the core. The earth for the ramparts came from the debris of earlier strata (esp. from the large EB city) and from the natural soil of the surrounding plain. The core on the S slope was 6.3 m thick and built of undressed stone. It is preserved to a height of about 10 m. The same principle of construction was discovered on the NE side of the mound, where the builders used an existing sloping stone structure as the core. In area K the core was built of stone and mudbrick. The base of the rampart construction is about 50 m wide. It is estimated that in order to build the ramparts about 800,000 tons of material had to be used, a task which would require a thousand workers three years to complete. The most remarkable feature of this construction was the triple-arched gate discovered at the SE corner of the rampart in area K. See Fig. DAN.01 and Fig. FOR.01.

The gate is built of sun-dried mudbrick with stone steps approaching it from the E plain and similar steps descending into the city on the W. The gate structure, the N half of which was partially excavated, stands 7 m high and consists of two towers, each about 5.15 m wide, which flank on the E and W a recessed arched gateway 5.15 m wide. Some 47 courses of mudbrick are preserved and the remains of white lime and calcite plaster which covered the brick still adhere to the joins between the courses. The interior of the gate is bisected by a N-S brick wall found standing to a height of approximately 4 m. In the center of this wall is an archway. A third arch was uncovered on the W side of the gate structure. The passage through the arches divides the gate into four chambers. The length of the passage is 10.5 m and that of the entire structure 13.5 m. Examination of the pottery found in the composition of the mudbricks, on the steps, and on the floor of the gate lead us to conclude that the gate was built around the middle of the 18th century B.C.E., the date we had ascribed originally to the construction of the ramparts. The gate and ramparts may belong to the city of Laish mentioned in the Egyptian Execration Texts. Possibly they represent the historical memory reflected in Gen 14:14.

The gate apparently was not long in use. The discovery of retaining walls and of stone structures built to support the walls of the towers suggests structural defects; and, with these, it was still necessary to abandon the gate. The passageway and chambers were filled with compacted earth, and the entire structure was buried. Entrance to the city was then through one of the gates which no doubt existed in other parts of the rampart. Remains of such a gate were found in the course of the excavations on the S side of the city.

During the MB, the city was about 30 acres and was a city with a rich material culture, evidence for which comes in the offerings found in well-built stone tombs and jar burials. A large assemblage of pottery vessels (some with a close affinity to the N), bronze weapons, and ivory cosmetic boxes were found. Especially numerous were the large open bowls, jugs and juglets, and carinated bowls of all sizes. Also found were Yahudiyeh type juglets and two scarabs. The vessels are to be dated to the MB II and III. Evidence of a destruction at the end of this period comes from two squares in which a thick layer of destruction by fire was found, containing cooking pots, bowls, and juglets of the end of the MB III.

While Laish appears in a historical context in the lists of Thutmose III, the excavations have so far shed no light on this campaign, but two finds reflect contacts with Egypt. One is a red granite statuette of a man in a sitting position, Nefertem by name, found in secondary use in a wall of the Israelite period. The statuette is of a well-known type used in the ritual of the dead, dated to the 19th Dyn., ca. the 14th century B.C.E. Another fragment of an Egyptian statuette was found on the surface. Originally from the Middle Kingdom, it bears a secondary inscription of the Ptolemaic period.

The LB is represented by a large building the stone walls of which are preserved to a height of 1 m. The S and E walls have been exposed to a length of 6 and 7 m respectively. The floor is of flat stones. A female ceramic figurine, possibly a mask, was found in the debris. See Fig. DAN.02. Other remains from the LB period were found in practically all areas excavated. Area B yielded a tomb built of rough basalt stones which contained 95 vessels (26 of which were imported), 4 basalt bowls and 2 stone vessels, 4 ivory boxes, 6 bronze bowls, a bronze shovel, a bronze oil lamp, 2 daggers, 2 swords, numerous arrowheads, and silver and gold jewelry; these indicate the wealth and cosmopolitan character of the city in the LB. Especially significant is the discovery of a complete charioteer vase.

In area Y a scarab of Rameses II and a stirrup jar were found. A large krater with four handles, two decorated storage jars, imported bichrome ware, a unique plaque of a dancer playing the lute, and remains of metal workshops (all from area B) add to our knowledge of the LB city.

The evidence for the arrival of the Danites is both textual and archaeological. Judges 18 gives a detailed account of the migration of the tribe of Dan and the conquest of Laish the name of which they changed to Dan. The excavations did not reveal the devastation implied in Judg 18:27, but the appearance of a stratum of occupation characterized by pits implies a drastic change in the material culture of the population. The new inhabitants, like their predecessors, lived within the ramparts, but their lifestyle was different. The new Danite inhabitants probably lived in tents and huts and stored their food in pits. These stone-lined pits were dug into the earlier levels of occupation and contained Iron Age cooking pots and a new type of storage jar, the “collared-rim” jar. The arrival of the Danites and the conquest of Laish took place around the beginning of the 12th century B.C.E.

According to Judges 18 the Danites brought with them a priest as well as the *pesel*, the *ephod*, the *teraphim*, and the *masekhah*. It is probable that the Danites erected a structure to hold these cult objects, possibly a temple, where the priests could also officiate. While the remains of this early sanctuary have not yet been found, its existence must have prompted Jeroboam to establish one of the golden calves at Dan towards the end of the 10th century B.C.E.

The seminomadic character of the tribe of Dan did not last long. Soon after settling in their new locale, they built houses of stone and developed a metal industry. A large number of crucibles containing bronze sediment and slag, clay tuyeres, basalt slabs, and tools were found in enclosed areas which served as workshops. Although some evidence for metallurgical activity occurs in the LB, the development of the metal industry into a major economic enterprise seems to have been the result of Danite initiative.

The Danites were to enjoy a period of relative peace and prosperity until about the middle of the 11th century B.C.E., when the city was destroyed in a fierce conflagration. The city, however, was not abandoned, and the houses were soon rebuilt using the original walls. The vessels continue the tradition of the previous period. Peace followed for about two centuries.

Toward the end of the 10th century, Jeroboam established the N kingdom and made Dan the main cult center in the N of the country. He set up a golden calf at Dan, which apparently became a more important sacred site than Bethel (1 Kgs 12:30). Remains of the sanctuary built by Jeroboam were uncovered in area T at the N edge of the site.

A rectangular platform, ca. 7 × 19 m, built of large dressed limestone blocks was discovered; also found were parts of large storerooms in which were two large pithoi (ca. 300 liters each) decorated with a snake motif and numerous vessels. A decorated incense stand, chalices, a bowl with a trident incised on its base, and the broken head of a male figurine form part of an assemblage of a cultic nature dated to the late 10th or early 9th centuries B.C.E. Further S an installation consisting of a sunken basin flanked by two basalt slabs and two plastered jars was uncovered and found to contain faience figurines. North of the basin another pithos with a snake decoration was found. In a paved courtyard S of the basin, broken parts of a clay tub were discovered. The tub, 1.5 m long,.6 m wide, and.5 m deep, had a seat at one end. The stone pavement extended to the edge of a rectangular pool fed through a channel from the nearby spring. We believe the entire installation served as part of water libation ceremonies.
